

eRA Assembly of the SF424 (R&R) Application (Forms Version 2 & 2a)

An applicant using the SF424 (R&R) for application submissions to NIH and other PHS agencies will complete data entry into all applicable form components, attach the appropriate PDF attachments within the various components, and upload the package into Grant.gov. Applicants will *not* actually construct an application. Once the application data goes through Grants.gov, the eRA system will compile the data fields and attachments into a single grant application. Applicants will be able to see the entire grant application for the first time in the eRA Commons.

A system-generated table of contents will be part of that grant application. The order of the application will be as stated in the table of contents sample below. Following that sample we've provided a chart that gives a cross-reference to where each section actually resides in the R&R Forms; as either a separate form component or as a specific PDF attachment within a component. Not all sections noted in the sample below will always be used. The system will generate a customized table of contents based on each submission. This document represents an application using either Version 2 or 2a of the SF424 (R&R) forms. The version number is noted in the "Competition ID" field of the forms package. The only difference between Version 2 and 2a is that Version 2a includes the use of the Senior/Key Person (Expanded) component allowing up to 40 individuals to be entered as structured data instead of the non-expanded component which limited structured data entry to only 8 individuals. The Senior/Key Person information will appear in the same place in the grant application regardless of whether Version 2 or 2a is used.

Applications generated using Version 1 of the forms may appear a bit different since not all the items noted below were in Version 1 of the forms.

This guide is provided for informational purposes only. Applicants do not need to build an application using this order. This will be totally constructed by the eRA system.
