Presented at the Annual ASIS&T Meeting in Newport, RI. On November 15, 2004

We have previously reported on the development of the *HistCite*TM software for use in algorithmic historiography.^{1,2} The initial system has gone through a number of changes. In this poster demonstration we will illustrate the most recent version and emphasize its mapping and bibliometrics features.

The *HistCite* system was developed to help users evaluate the output of topical and citation-based searches. Once "marked lists" are created on the *Web of Knowledge*,SM text files (.txt) are generated similar to those used for exporting records to citation managers such as *Reference Manager*. By executing the *HistCite* software, a series of tables and graphics is created. The tables include chronological sorts as well as frequency rankings by author and journal. In addition, files can be sorted by local or global citation frequencies. More recent features include vocabulary analyses which display the frequency of singleton terms as well as title word pairs.

Once a list of articles is collected, the *HistCite* system permits the user to customize selection of individual papers (nodes) to be included in the graphical displays called historiographs. Ordinarily, default maps are based on selecting the top 15 to 25 papers in the local collection, which are, by definition, those with the highest citation impact in the topic, either by local or global citation scores. Time frequency histograms may also be generated. In addition to the selective mapping capability, there is a searching and marking facility (by author, title or abstract word, journal, citing or cited node, publication year, etc.), which permits creation of subsets of the collection for separate analysis, e.g., for evaluating different time periods, or by deletion of individual nodes or groups of nodes. New bibliometric features include the ability to generate frequency distributions, percentiles of citation

scores, and other quantitative parameters such as the number of references, number of authors, publication years of nodes, and "outer references". The latter can now be sorted by author or journal which allows better characterization of the bibliography under analysis and supplements the editing feature which is used to correct variations and errors in cited references.

The poster will include examples from historical (Watson and Crick²) and topical (microarrays³) perspectives. Several dozen HTML files can be accessed to review different applications of the *HistCite* software at:

Historiograph *HistCite* Guide

HistCite is a system designed to help selectively identify the significant (most cited) papers retrieved in topical searches of the Web of Science (SCI, SSCI and/or AHCI). Once a marked list of papers has been created, the resulting Export file is processed by HistCite to create tables ordered by author, year, or citation frequency as well as historiographs which include a small percentile of the most-cited papers and their citation links.

The COLORED boxes are components of the Historiograph Compilation. Clicking on a box will describe the specific component in more detail.

For more information on the HistCite™ software, contact Dr. Eugene Garfield at Garfield@codex.cis.upenn.edu

OUTER REFERENCES or OUTER NODES

The 'Outer References' (or 'Outer Nodes' on earlier compilations) identifies references from papers in the collection to papers or books outside the collection. SEE IMAGE BELOW. The number to the left (LCS) shows how often this specific reference is cited. The example shows that 37 papers cited Zuckermans's 1971 article in *Minerva* Vol9 p66. Clicking on the number 37 brings up the list of 37 Citing Papers. The *WoS* Hot Link on the right of each reference will take you directly to the Cited Reference section of ISI's Web of Science, but in order to do so you must be a subscriber and insert the access URL in the *Web of Science* Location box.

The screenshot shows a Microsoft Internet Explorer browser window titled "HistCite - Outer References: Topic Search: Peer Review". The address bar displays "http://garfield.library.upenn.edu/histcomp/peer-review/out-refs.html". The page content includes a search bar for "ISI Web of Science location:", a topic search for "Peer Review", and a list of 15 references sorted by LCS. Each reference entry includes a rank, an LCS value (a blue hyperlink), the citation text, and a "WoS" hot link.

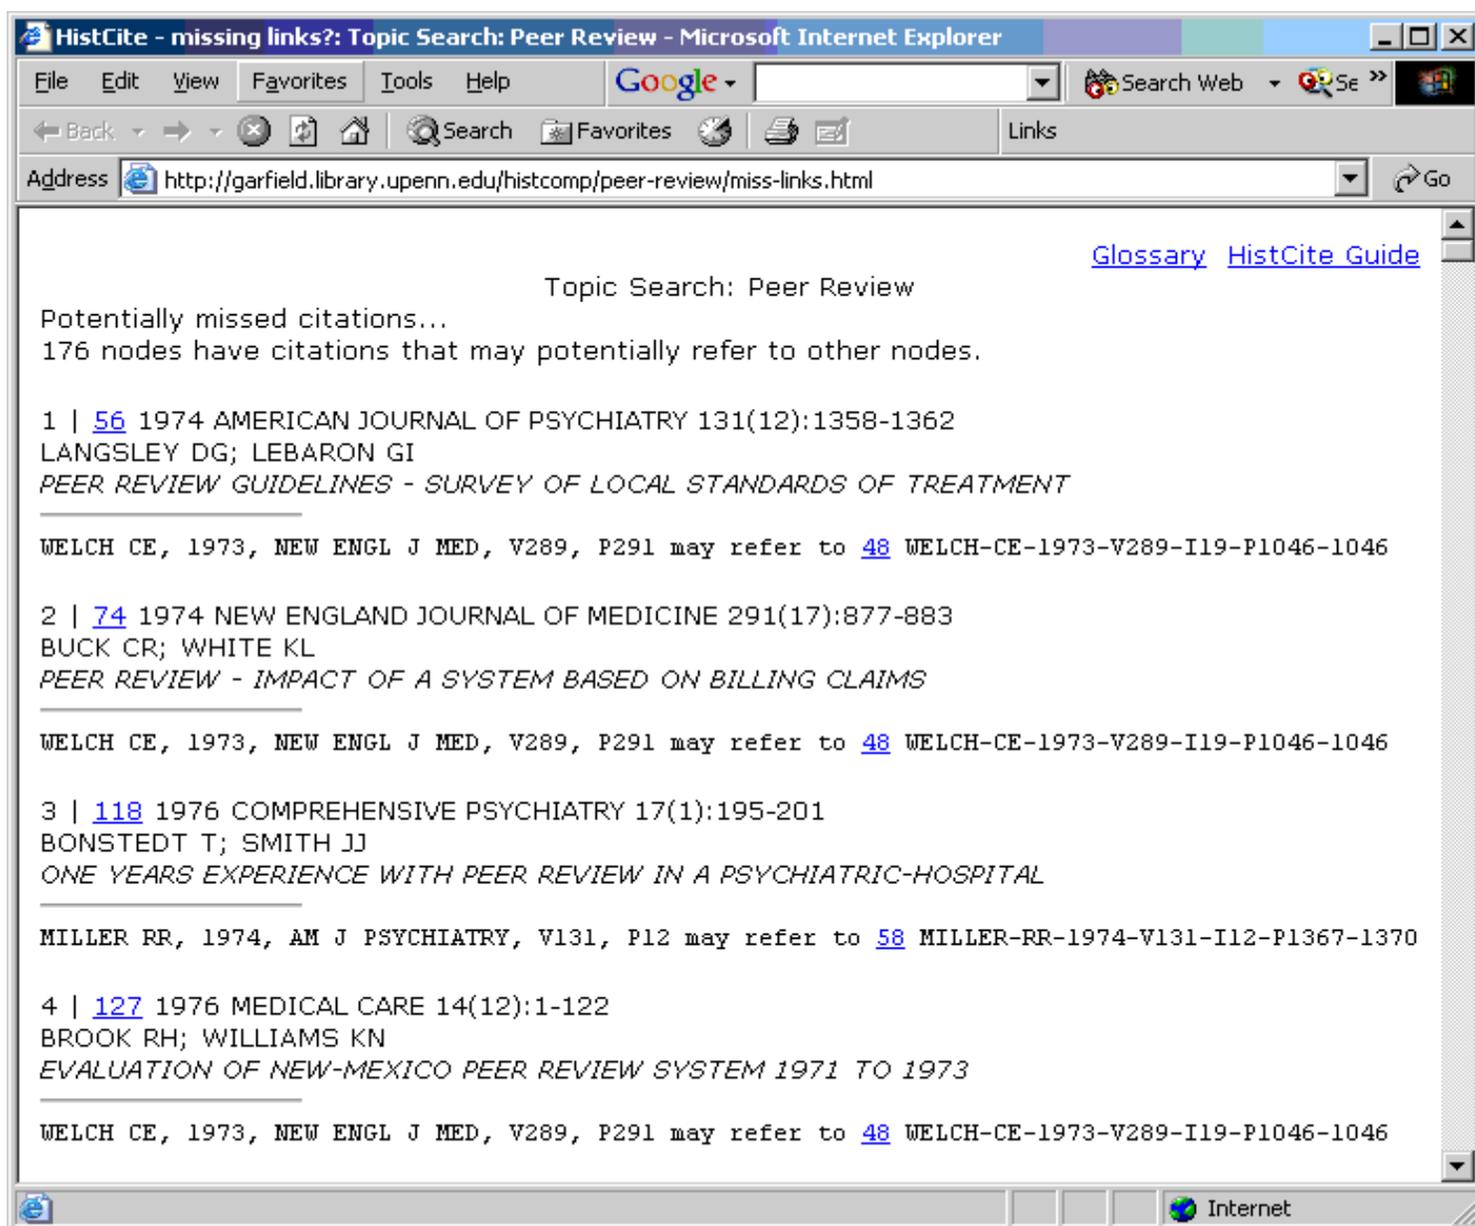

ISI Web of Science location:

MISSING LINKS

MISSING LINKS identified possibly erroneous or variant missed citations that MAY refer to papers in the collection. This expert system makes a best guess as to which paper was meant by the author. In the example below node #1, Langsley's article "Peer Review Guidelines...." cites Welch CE, New England J Med, V289, P291 which is not found in the main collection. HistCite did find, however, a 1973 paper by Welch CE that almost matches the parameters of the citation. You can click on node #48 to investigate further. If you think this reference does refer to the paper identified here, you must edit the reference to create a match.

The screenshot shows a Microsoft Internet Explorer browser window with the title bar "HistCite - missing links?: Topic Search: Peer Review - Microsoft Internet Explorer". The address bar contains the URL "http://garfield.library.upenn.edu/histcomp/peer-review/miss-links.html". The main content area displays the following information:

JOURNAL LIST

JOURNAL LIST/SOURCE LIST shows a ranked list of all of the journals that appear in the Main Bibliography. The example shows that the topic was covered in 1040 different publications. Below the Total is the list of journals in descending order by frequency of articles in collection. By clicking on the number of articles in the collection, you can see a list of those articles. It is possible to sort the sources according to TGCS (Total Global Citation Score) or TLCS (Total Local Citation Score) by clicking on the appropriate linked header.

The screenshot shows a Microsoft Internet Explorer browser window with the title bar 'HistCite - Source list: Topic Search: Peer Review'. The address bar contains the URL 'http://garfield.library.upenn.edu/histcomp/peer-review/list/so-pubs.html'. The page content includes a 'Topic Search: Peer Review' header, a 'Ranked Source list' with a total of 1040 publications, and a table sorted by the number of publications. The table has columns for '#', 'Name', 'TLCS', 'TGCS', and 'Pubs'. The top 14 journals are listed, with JAMA being the most frequent at 120 publications.

Topic Search: Peer Review

Ranked Source list.
Total: 1040
View: Overview. Sorted by **number of publications (Pubs)**.
Page 1: 1 2

#	Name	TLCS	TGCS	Pubs

ALL-AUTHOR LIST

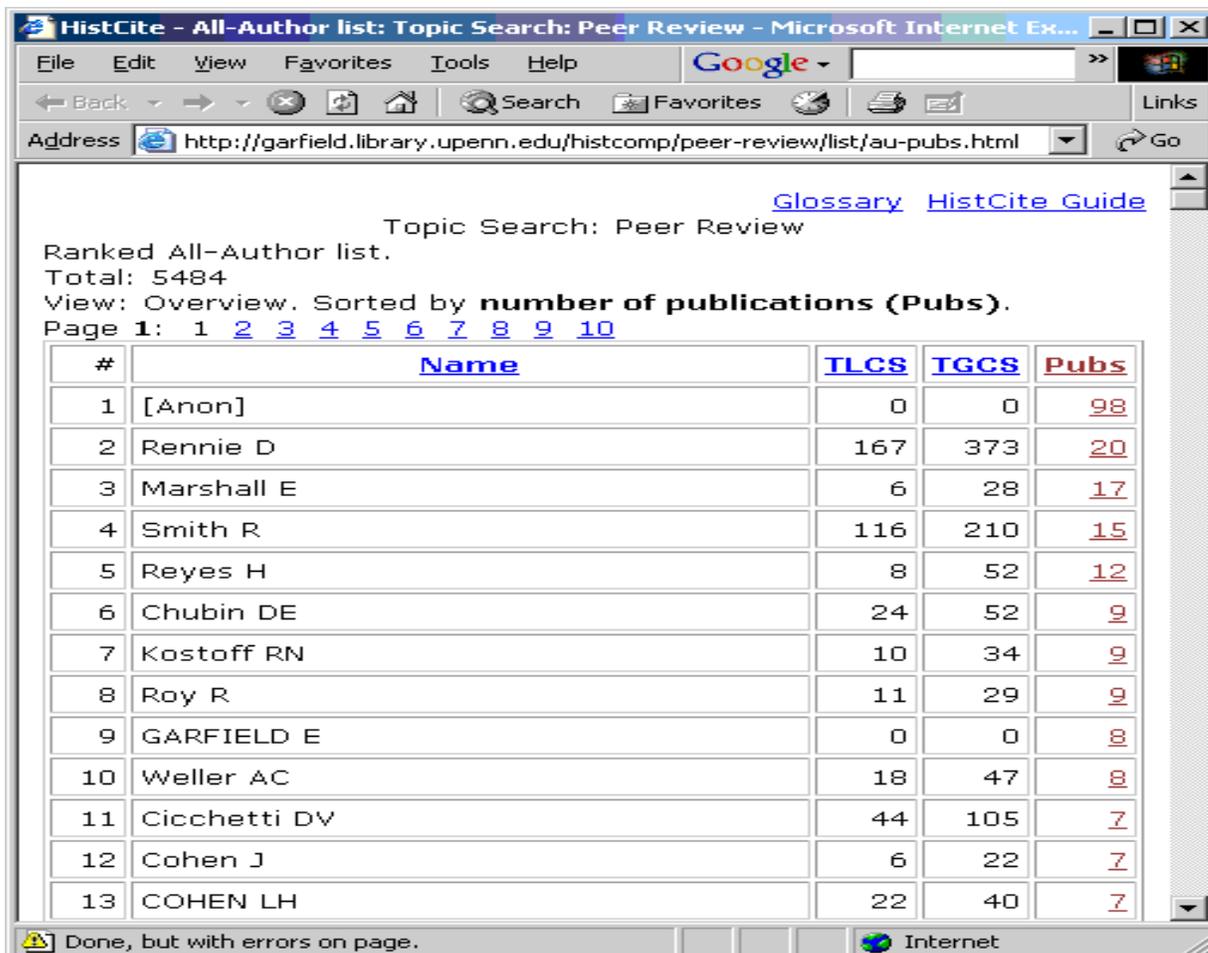

ALL-AUTHOR LIST shows a ranked list of all the authors that appear in the collection. The example shows that there were 1836 different authors in the bibliography. Below the Total the hot links enable you to sort as follows:

Name - Sorts the list Alphabetically by last name.

TGCS (Total Global Citation Score) - How many times the author's papers included in this collection have been cited. This score is calculated from the Times Cited score retrieved from the Web of Science. Also see [GCS](#)

TLCS (Total Local Citation Score) - How many times the author's papers included in this collection have been cited by other papers also in the collection. Also see [LCS](#)

Pubs - The number of articles by this author in the collections. The second author "Rennie D" has published 20 articles in the bibliography. Clicking on the hot linked number under Pubs, in this case 20, shows a list of the 20 articles by Rennie D.

The screenshot shows a Microsoft Internet Explorer browser window with the address bar displaying <http://garfield.library.upenn.edu/histcomp/peer-review/list/au-pubs.html>. The page content includes a title "HistCite - All-Author list: Topic Search: Peer Review" and navigation links for "Glossary" and "HistCite Guide". Below the title, it states "Topic Search: Peer Review", "Ranked All-Author list.", "Total: 5484", and "View: Overview. Sorted by number of publications (Pubs)". A pagination bar shows "Page 1:" followed by links for pages 1 through 10. The main data is presented in a table with columns for rank (#), Name, TLCS, TGCS, and Pubs. The Pubs column values are underlined and colored red, indicating they are clickable links. The table lists 13 authors, with Rennie D at rank 2 having 20 publications.

#	Name	TLCS	TGCS	Pubs
1	[Anon]	0	0	98
2	Rennie D	167	373	20
3	Marshall E	6	28	17
4	Smith R	116	210	15

10	Weller AC	18	47	8
11	Cicchetti DV	44	105	7
12	Cohen J	6	22	7
13	COHEN LH	22	40	7

CITATION MATRIX

CITATION MATRIX - For use in creating co-citation and other visual maps or flow charts of the collection.

The "Nodes" column is the master column; all information is in reference to the paper identified here. Click on the [node number](#) to see the full bibliographic information of the node.

The "Cited Nodes" column lists the unique nodes numbers (as links) of the papers that the paper under the "Nodes" column cites.

The "Citing Nodes" column lists the unique nodes numbers (as links) of the papers that the paper under the "Nodes" column is cited by.

SORT OPTIONS

These are additional sort options.

Nodes sorts the main bibliography in ascending order by **year, journal, volume, page** on the node. This is the default order.

Authors sorts the collection by last name of the first author.

Date sorts the collection by the date of publication. All nodes may not have the complete date such as month and day, but all should have the year.

LOCAL CITATION SCORE

LOCAL CITATION SCORE is the number of times a paper is cited by other papers in the local collection. By clicking on "LCS" you can sort the collection by it. By clicking on the LCS number for a particular node (or paper), you can see a list of of the papers citing this node.

GRAPHS

Two types of graphs can be created, GCS and LCS. The type of the graph determines the criteria by which the graph is created. The example below is the LCS type graph and the discussion that follows will be in reference to this.

The circles represent papers. The size of the circle is relative to that paper's LCS score (or by GCS score if a GCS graph). The number inside the circle is the [node number](#). Clicking on the circle brings up the detailed source record of that paper. Leaving the mouse cursor over the circle shows the abbreviated source data identifying that paper. Normally located below the map is the list of papers included in the graph. The "LCS >= 21" indicates that this graph contains all those nodes (papers) which have an LCS of 21 or higher. [See LCS for more info.](#) The number in parenthesis beside the year indicates the number of nodes in the main bibliography that were published in that year. An arrow pointing from one node to the next, usually to an older paper, indicates the citational relationship between papers.

The program for generating the HistCite(tm) Historiographs is a customized modification of the AT&T Labs [GraphViz](#) graph drawing open source software.

OTHER INFORMATION

Collection span lists the years that the collection spans.

View list the type of view the HistCite is displayed in.

There are two possible views, "overview" and "bibliometric." In general the bibliometric view offers more statistical data.

Sorted by displays the current sort of the main collection. By clicking on any of the headers in the main table (GCS, LCS, etc), HistCite will resort the collection according to that criteria.

JASIST

HISTCITE COLLECTION

A search of the *Web of Science* retrieved 4,194 papers published in *American Documentation*, the *Journal of the American Society for Information Science*, and the *Journal of the American Society for Information Science and Technology* from 1956 to present. The analysis shows that within *JASIST* itself, the most cited paper (LCS) is the 1975 paper by Tefko Saracevic. It was cited by 63 papers in *JASIST* and 213 times globally, that is within the entire *Web of Science* database. In contrast, when the *HistCite* file was sorted by Global Citation Score (GCS), the paper by Deerwester et al moves to the top of the list.

The 1976 paper by Robertson is the second most cited paper both by GCS and LCS.

The third most cited paper is by Henry Small on “Cocitation in Scientific Literature – New Measure of Relationship between 2 Documents.” For about two decades this was the most cited paper in the journal. Users may wish to refer to the *HistCite* collections of Small’s work:

INFORMATION SCIENCE

HISTCITE COLLECTION

(Title only)

In contrast to a search on *JASIST*, we did a general *Web of Science* search on “information sci*”. There were 3306 papers retrieved with this phrase in the title from 1957 to present. The most cited paper (LCS) is the 1968 paper by Hal Borko in *American Documentation*. It was cited by 21 papers within the collection and 30 times globally. The second most cited paper is by B. C. Brookes, published in *JASIS* in 1980, which was cited 18 times locally, and 80 times globally.

In contrast, when the *HistCite* file was sorted globally, a 1975 paper in *JASIS* by Tefko Saracevic was at the top of the list, followed by a 1992 paper by Steve Harter, also published in *JASIS*.

GCS HISTORIOGRAPH ON INFORMATION SCIENCE

DIGITAL LIBRARIES

A general search on *Web of Science* was done on “digital librar*” with the following papers from the outer references added:

SALTON G, 1983, INTRO MODERN INFORMA,
SALTON G, 1989, AUTOMATIC TEXT PROCE,
LESK M, 1997, PRACTICAL DIGITAL LI,
MARCHIONINI G, 1995, INFORMATION SEEKING,
BUSH V, 1945, ATLANTIC MONTHLY, V176, P101
KAHN R, 1995, FRAMEWORK DISTRIBUTE,
BATES MJ, 1989, ONLINE REV, V13, P407
NIELSEN J, 1993, USABILITY ENG,
ARMS WY, 2000, DIGITAL LIB,
BAEZAYATES R, 1999, MODERN INFORMATION R

There were 1195 papers retrieved from 1945-2004 when the *HistCite* program was run. The LCS most cited work is the 1983 book by Salton and McGill which was cited 35 times by papers within the collection. This is followed by the 1995 article by Levy and Marshall in *Communications of the ACM* and the 1997 book by Lesk.

The 1983 book by Salton and McGill was also at the top when the file was sorted by global citation Score (GCS). It was followed by a 1989 book by Salton, and then Vannevar Bush’s classic 1945 *Atlantic Monthly* article.
