Profile/Kurzcharakteristik

BioMolecular Concepts is a peer-reviewed journal fostering the integration of different fields of biomolecular research. The journal aims to provide expert summaries from prominent researchers, and conclusive extensions of research data leading to new and original, testable hypotheses. Aspects of research that can promote related fields, and lead to novel insight into biological mechanisms or potential medical applications are of special interest. Researchers are encouraged to submit review articles, in particular conceptual overviews that cultivate novel ideas and scientific views across disciplines. Original research articles reporting new data of broad significance are also welcome.
