**RAD 797A Radiology MSK** (2.5) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2016 Ending: Summer 2016

Last Import from UCM: July 23, 2016 3:00 AM

## Real Estate (R EST)

R EST 515 (I B 515) **Property Rights in a Global Economy** (2) Analysis of economic, financial, legal, and political factors affecting international real estate decision making.  
Effective: Summer 2011

R EST 560 **Real Estate Financial Analysis** (2) This course provides a modern framework for the valuation and analysis of real property using both theoretical and empirical approaches.  
Effective: Summer 2011  
Prerequisite:

R EST 570 **Institutional Real Estate Investment** (2) A survey of the latest developments of real estate as an institutional investment.  
Effective: Summer 2011  
Prerequisite:

R EST 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 2011

R EST 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.  
Effective: Summer 2011

R EST 599 (IL) **Foreign Study--Real Estate** (1-12) Full-time graduate-level foreign study at an overseas institution with whom linkages have been established.  
Effective: Summer 2011  
Prerequisite:

R EST 600 **Thesis Research** (1-15) No description.  
Effective: Summer 2011

R EST 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Summer 2011

R EST 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) No description.  
Effective: Summer 2011

R EST 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Summer 2011

Last Import from UCM: July 23, 2016 3:00 AM

## Real Prop/Envrml Law (RP&EL)

**RP&EL 960 Environmental Law (3)** This course introduces some of the most important concepts, issues, and statutes in environmental law. After discussing the economic and ethical bases for environmental law. After discussing the economic and ethical bases for environmental law and briefly reviewing the relevant principles of constitutional and common law, students examine a representative selection of federal statutes, including the National Environmental Policy Act, the Endangered species Act, "Superfund," and the Clean Air Act.  
Effective: Summer 1999

**RP&EL 962 Environmental Litigation (2)** This course explores the various aspects of litigation, client counseling, and regulatory work that arise in the day to day practice of environmental law. Emphasis is on the practical aspects of the practice of law, with active class participation using problems designed to duplicate situations faced by environmental attorneys in their practices. Among other things, students will cross-examine scientific experts, prepare a plant manager for a deposition, and negotiate a civil penalty for environmental violations. Although environmental law is used a basis for the mock exercises, prior environmental classes are not a prerequisite, and the skills taught in this course will translate well to other types of litigation.  
Effective: Spring 2013

**RP&EL 964 Real Estate Negotiation and Drafting (3)** Students will learn to negotiate and draft multiple standard documents used in commercial real estate transactions.  
Effective: Spring 2011

**RP&EL 965 Oil and Gas Law (3)** This course will address the basic concepts in oil and gas law within the United States as well as the specific legal issues associated with the development of the Marcellus Shale formation. This specific topics to be covered include the ownership of oil and gas, oil and gas leasing, oil and gas conservation laws, oil and gas interests, and government regulation of development.  
Effective: Summer 2012

**RP&EL 966 Law and Policy of Shale Gas Development (3)** This course will address current legal and policy aspects of shale oil and gas development.  
Effective: Spring 2015

**RP&EL 967 Water Law & Policy (3)** This course provides an overview of U.S.-focused law and policy related to water.  
Effective: Spring 2015

**RP&EL 973 Land Use Controls (3)** The public regulation of private property raises some of the more interesting and difficult questions in property law. On one side of the debate is the government, which seeks to regulate land use in ways that it believes promote the public interest. On the other side are private property owners who often object to restrictions placed on their ability to use their property as they deem best. In studying this tension between public goals and private rights, the course will explore the constitutional limitations placed on governments in the area of land use regulations as well as topics such as variances, special use permits, vested rights, subdivision controls, exactions, and impact fees, exclusionary zoning, the rebuilding of urban cores, and the managing of growth in suburban areas.  
Effective: Summer 2011

**RP&EL 980 Construction Law (2)** This course examines the peculiar legal problems encountered on construction projects. It covers contract, tort and statutory law as adapted specifically to the construction industry. It analyzes the perspectives of an owner, developer, architect/engineer, contractor, subcontractor and bonding company, both in the context of private and public construction projects, commercial and residential. the principal areas of inquiry are contract structure, public bidding, theories of liability, payment and security mechanisms, claims related to time, disruption and extra work, and claims arising from construction defects. This course is designed to enable you to become familiar with construction law and the construction industry so that, whether you work in the public sector or private practice, you will be able to offer practical legal advice to construction professionals.  
Effective: Fall 2014

**RP&EL 988 Natural Resources Law (3)** This course provides a basic overview of federal and state regulations and the common law affecting title to and exploitation of such resources as water, coal, oil, gas, and public lands. Common mineral leasing provisions are given particular emphasis.  
Effective: Summer 1999

**RP&EL 997 Special Topics (1-9)** Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Spring 2005

Last Import from UCM: July 23, 2016 3:00 AM

## Recreation, Park and Tourism Management (RPTM)

**RPTM 410 Marketing of Recreation Services** (3) Theoretical/practical application of marketing/advertising strategies in the development/delivery of recreation services.

Effective: Spring 2005

Prerequisite:

**RPTM 415 Commercial Recreation Management** (3) Planning, developing, and managing profit-oriented recreation opportunities.

Effective: Spring 2005

Prerequisite:

**RPTM 425 Principles of Interpretive Materials** (3) Principles, practices, application of non-personal interpretive activities common to natural/cultural history, including exhibits, audio-visual and illustrative materials.

Effective: Spring 2005

Prerequisite:

**RPTM 430 Environmental Education Methods and Materials** (3) Methods and materials for developing, implementing, and evaluating environmental education programs within formal and non-formal educational settings.

Effective: Summer 2011

Prerequisite:

**RPTM 433W Program Evaluation and Research in Recreation Services** (3) Systematic, structured problem-solving process for decision making in recreation and parks. Research techniques/evaluation procedures; quantitative, qualitative methodologies; deductive, inductive reasoning.

Effective: Spring 2005

Prerequisite:

**RPTM 435 Recreation Facilities Planning and Management** (3) Planning and management of selected facilities with emphasis upon maintenance, activity, and support provisions.

Effective: Spring 2005

Prerequisite:

**RPTM 440 Adventure-based Programming and Administration** (3) Utilization of wilderness/backcountry environments and participant challenge; history, models, theories; survey of organizations; program design, administration; and issues.

Effective: Spring 2005

Prerequisite:

**RPTM 460 Political and Legal Aspects of Recreation Services** (3) Role of local, state, federal government in provision of recreation services. Legislative and judicial systems.

Effective: Spring 2005

Prerequisite:

**RPTM 470 Recreation and Park Management** (3) Management of recreation and park services in public/non-profit settings; planning, budgeting fiscal development, resources allocation, decision-making, computer applications.

Effective: Spring 2005

Prerequisite:

**RPTM 480 Senior Management Seminar** (1) Current management issues will be examined relative to professional management strategies, ethics, and leadership in leisure services.

Effective: Spring 2005

Prerequisite:

**RPTM 494H Senior Honors Thesis** (1-6 per semester/maximum of 6) Senior Honors Thesis

Effective: Summer 2011

**RPTM 495A Internship in Recreation Services** (12) Meet educational objectives through participation in organized practical experience; direct observation and professional supervision in full-time work experience.

Effective: Spring 2005

Prerequisite:

**RPTM 495B Internship in Golf Management** (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

Effective: Spring 2005

Prerequisite:

**RPTM 495C Internship in Golf Management** (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

Effective: Spring 2005

Prerequisite:

**RPTM 495D Internship in Golf Management** (1-4) Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

Effective: Spring 2005

Prerequisite:

**RPTM 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an

individual basis and which fall outside the scope of formal courses.  
Effective: Spring 2005

RPTM 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.  
Effective: Spring 2005

RPTM 497A **Advanced Arena Management** (3) The Advanced Arena Management course will provide in-depth and experiential learning opportunity in Arena Management. Learning objectives will build on topics covered in RPTM 370 and will include arena marketing and promotions, ticketing, risk management, budgeting and strategic planning and guest relations in the arena/stadium field of service and in the live entertainment setting.  
Effective: Summer 2016 Ending: Summer 2016  
Prerequisite:

RPTM 498 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.  
Effective: Spring 2006

RPTM 499 (IL) **Foreign Studies** (1-12 per semester/maximum of 12) Foreign Studies in RPTM.  
Effective: Summer 2012  
Prerequisite:

RPTM 501 **Leisure Studies Foundations** (3) This course provides general background knowledge about the literature and research methods central to the field of leisure studies.  
Effective: Spring 2008

RPTM 510 **Tourism Behavior: An interdisciplinary Approach** (3) An exploration of the various approaches that have been taken in the social sciences to understand tourism behavior.  
Effective: Spring 2008  
Prerequisite:

RPTM 525 **Behavioral Patterns of the Outdoor Recreationist** (3) Patterns of time and space use; user characteristics; meaning of participation; facilitation of environment-use enhancement.  
Effective: Spring 2008

RPTM 527 **Social Psychology of Leisure** (3) Application of the methods, constructs, and theory of social psychology to the study of leisure, outdoor recreation, and therapeutic recreation.  
Effective: Spring 2008  
Prerequisite:

RPTM 530 **Research Methods in Leisure Studies** (3) Research techniques, including methods, research design, techniques for data collection, as applied to relevant problems in the leisure studies field.  
Effective: Spring 2008

RPTM 533 **Leisure Studies, Surveys, and Appraisals** (3) Advanced procedures related to leisure, recreation, and park research.  
Effective: Spring 2008  
Prerequisite:

RPTM 540 **Public and Private Recreation Lands and Waters** (3) Public and private roles and interactions, allocation of resources, use policies, open space concepts, private enterprise developments, legal controls.  
Effective: Spring 2008

RPTM 545 **Philosophical and Social Bases of Leisure** (3) Philosophical and social bases of leisure; analysis of critical issues of leisure for philosophical and social implications.  
Effective: Spring 2008

RPTM 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Spring 2008

RPTM 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.  
Effective: Spring 2008

RPTM 600 **Thesis Research** (1-15) No description.  
Effective: Spring 2008

RPTM 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Spring 2008

RPTM 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.  
Effective: Spring 2010

RPTM 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Spring 2008

RPTM 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Spring 2008

Last Import from UCM: July 23, 2016 3:00 AM

## Religious Studies (RL ST)

RL ST 400 **Theories of Religion** (3) Comparative and interdisciplinary study of two or more systematic theories of religion: anthropological, psychological, sociological, philosophical/theological.

Effective: Fall 1983

Prerequisite:

RL ST 405 (IL) (J ST 405) **Jews and Food** (3) Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times.

Effective: Spring 2016

RL ST 407Y (IL) (HIST 409Y, J ST 409Y) **Antisemitisms** (3) Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present.

Effective: Fall 2015

RL ST 408 (US;IL) **Hindu Studies** (3) Special topics in Hindu studies.

Effective: Summer 2005

Prerequisite:

RL ST 409 (US;IL) **Buddhist Studies** (3) Special topics in Buddhist studies.

Effective: Spring 2006

Prerequisite:

RL ST 410 (US;IL) (HIST 410, J ST 410) **Jews in the Medieval World** (3) Trends in medieval Jewish society under Islam and Western Christendom.

Effective: Spring 2006

RL ST 411 (US;IL) (J ST 411) **Jewish Studies** (3) Study of the life and thought of a particular period or movement in the history of Judaism.

Effective: Spring 2006

Prerequisite:

RL ST 412 (J ST 412) **American Judaism** (3) The development of Jewish religion and culture in America from the colonial era to the present.

Effective: Summer 1999

Prerequisite:

RL ST 420 **Major Christian Thinkers** (3) Systematic inquiry into the religious thought of one or more Christian thinkers, such as Paul, Augustine, Luther, Calvin, Kierkegaard, or Tillich.

Effective: Fall 1983

Prerequisite:

RL ST 422 (GH;US) (AM ST 422, HIST 422) **Religion and American Culture** (3 per semester/maximum of 6) Selected topics, problems, or historical movements in American religion. Relation between religion and American culture.

Effective: Fall 2015

Prerequisite:

RL ST 423 (GH;IL) (HIST 423) **Orthodox Christianity: History and Interpretations** (3) Examines Orthodox Christianity from origins to present using critical historical analysis of primary and secondary sources.

Effective: Spring 2015

Prerequisite:

RL ST 424H (HIST 424H, J ST 424H) **Monotheism and the Birth of the West** (3) The birth of monotheism and its relation to social organization, the idea of individuality, and science.

Effective: Fall 2012

Prerequisite:

RL ST 425W (CAMS 425W, J ST 425W) **Books of the Bible: Readings and Interpretation** (3 per semester/maximum of 12) Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship.

Effective: Summer 2015

Prerequisite:

RL ST 440Y (US;IL) **The Orthodox Christian Tradition** (3) History, culture, and beliefs of the Eastern Orthodox religious tradition with special reference to Russia.

Effective: Summer 2011

Prerequisite:

RL ST 461 (US;IL) (SOC 461) **Sociology of Religion** (3) Contemporary religion in the global perspectives: beliefs, structure, and function of major religious traditions, denominations, and cults.

Effective: Fall 2013

Prerequisite:

RL ST 471Y (IL) (HIST 471Y) **Classical Islamic Civilization, 600-1258** (3) Pre-Islamic Arabia; Muhammad; Arab conquest; Islamic beliefs and institutions; literary, artistic, and scientific achievements; relations with Europe; breakdown of unity.

Effective: Spring 2006

RL ST 478 (J ST 478) **Ethics After the Holocaust** (3) Explores the philosophical effects of the Holocaust for thinking about the primary question: Is ethics possible?

Effective: Summer 2012

Prerequisite:

RL ST 483 (IL) **Zen Buddhism** (3) The development and current state of Zen Buddhist thought and practice.

Effective: Spring 2006 Ending: Summer 2016

Prerequisite:

RL ST 483 (IL) (ASIA 487) **Zen Buddhism** (3) The development and current state of Zen Buddhist thought and practice.

Effective: Fall 2016 Future: Fall 2016

RL ST 494 **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 1994

RL ST 494H **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Fall 2007

RL ST 495 **Internship** (1-18) Supervised off-campus, non-group instruction, including field experience, practica, or internships.

Effective: Summer 2004

Prerequisite:

RL ST 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

RL ST 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

RL ST 499 (IL) **Foreign Study--Religious Studies** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2005

RL ST 590 **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Spring 1987

RL ST 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1987

RL ST 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Spring 1987

RL ST 603 **Foreign Academic Experience** (1-12) Foreign study and/or research constituting progress toward the degree at a foreign university.

Effective: Spring 2002

RL ST 611 **Ph.D. Dissertation Part-Time** (0) No description.

Effective: Fall 1983

Last Import from UCM: July 23, 2016 3:00 AM

## Renal Medicine-Hy (REN)

REN 713 **Renal Medicine** (3) Course provides exposure to basic concepts in histology/pathology, biochemistry, physiology and clinical medicine related to fluid, electrolyte and acid/base homeostasis.

Effective: Summer 2014

Prerequisite:

REN 728 **Hematology** (3) Some of the areas studied will be: Renal Pathology and Congenital Disorders; Renal Physiology; Renal Function Testing; Glomerular Disease I and II; Urinary Tract Pathophysiology/Urinary Tract Infection; Urinalysis; Acid-Base; Pathology of the Prostate; Testicular/Penile Neoplasm; Salt and Water; Diuretics; Acute Renal Failure; Potassium; Calcium/Phosphorous; Chronic Renal Failure; and Inflammatory Disease of the Male Genital Tract.

Effective: Fall 2001

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Reproductive Medcn-Hy (REP)

REP 723 **Reproductive Medicine** (2) Course provides exposure to basic concepts in histology/pathology, biochemistry, physiology, pharmacology and clinical medicine related to reproductive medicine.  
Effective: Summer 2014

REP 730 **Reproductive Medicine** (4) Some of the areas studied will be: Menstrual Cycle; Sexually Transmitted Diseases; Hormonal Contraception; Non-hormonal Contraception; Amenorrhea and Galactorrhea; Pathology of Cervix, Vulva, and Vagina; Cytology; Ectopic Pregnancy; Normal Pregnancy; Cancer of the Cervix; Pathology of the Breast; Perinatal Pathology; Prenatal Genetics Screen; Pathology of the Ovary and Fallopian Tube; Menopause; High Risk Pregnancy; Trophoblastic Tumors; Carcinoma of the Breast; Pathology of the Uterus; and Ovarian Cancer.  
Effective: Fall 2001  
Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## **Respiratory Medicine (RESP)**

RESP 723 **Respiratory Medicine** (1-2) Introduction to normal and abnormal structure and processes of the respiratory system, principles of therapeutics and factors affecting disease treatment and prevention.

Effective: Summer 2014

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Rural Sociology (R SOC)

R SOC 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 2013

R SOC 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.  
Effective: Summer 2013

R SOC 499 (IL) **Foreign Study--Rural Sociology** (1-12) Study in selected countries of rural social institutions and current rural sociological problems.  
Effective: Summer 2013

R SOC 502 **Use of Theory in Rural Sociology** (3) Examine and evaluate metasociology of alternative theoretical systems applicable to rural society, with emphasis on American society.  
Effective: Summer 2013  
Prerequisite:

R SOC 508 **Sociology of Agriculture** (3) Sociological analysis of changes in the organization of agriculture and food systems in the United States and developing countries.  
Effective: Summer 2013

R SOC 513 **Research Methods in Rural Social Sciences** (3) Scientific method in planning and conducting research.  
Effective: Summer 2013

R SOC 514 **Qualitative Research Methods** (3) Learn core approaches for collecting, interpreting and analyzing qualitative data within rural sociology.  
Effective: Spring 2014

R SOC 516 (CEDEV 516) **Change in Rural Society** (3) Social change in rural society, emphasizing prediction and control of the change process. Even years.  
Effective: Summer 2013

R SOC 517 (CEDEV 517) **International Rural Social Change** (3) Implications of planned change for international rural societies, considering basic structural constraints, known institutional linkages, and potential synergetic consequences.  
Effective: Summer 2013

R SOC 522 **Data Analysis in Rural Sociology** (1) Analysis of research data in rural sociology using computer library programs.  
Effective: Summer 2013  
Prerequisite:

R SOC 525 **Fertility, Population Change, and Development** (3) Fertility and population growth in less-developed countries; theories of fertility change, agricultural development, and population policies.  
Effective: Summer 1987  
Prerequisite:

R SOC 530 **Sociology and Demography of Poverty in the United States** (3) An in-depth treatment of sociological and demographic dimensions of poverty in rural and urban areas of the United States.  
Effective: Summer 2013

R SOC 552 **Theoretical Frameworks for Rural Community Research** (3) Application of community theories to the study of communities in rural areas.  
Effective: Spring 2015  
Prerequisite:

R SOC 555 **Human Dimensions of Natural Resources** (3) Identification of the interrelationships and influence of human behavior and natural resources.  
Effective: Summer 2013

R SOC 573 **Methods of Survey Data Analysis** (3) Use of multivariate procedures in the analysis of survey data in the rural social sciences.  
Effective: Summer 2013  
Prerequisite:

R SOC 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2013

R SOC 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Summer 2013

R SOC 597G (WMNST 597G) **Gender, Justice, and Environment** (3) This course will examine how gender and environment are tied to national and international struggles for justice and sustainability. We will explore gender issues in climate change justice, food justice, and water justice as well as other environmental concerns. Students will examine these issues in light of feminist science studies, theories of environmental justice and sustainability, and intersectional feminist theories. The course focuses on both U.S. and international issues and addresses both policy and activism.

Effective: Fall 2016 Ending: Fall 2016 Future: Fall 2016

R SOC 600 **Thesis Research** (1-15) No description.

Effective: Summer 2013

R SOC 601 **Ph.D. Dissertation Full-Time** (0) No description.

Effective: Summer 2013

R SOC 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Provides advanced standing graduate students from a research oriented curriculum the opportunity to receive experience/supervision in resident instruction in higher education.

Effective: Summer 2013

R SOC 610 **Thesis Research Off Campus** (1-15) No description.

Effective: Summer 2013

R SOC 611 **Ph.D. Dissertation Part-Time** (0) No description.

Effective: Summer 2013

Last Import from UCM: July 23, 2016 3:00 AM

## Russian (RUS)

RUS 400 (IL) **Senior Seminar in Russian Culture** (3) Senior seminar devoted to topics in Russian culture; conducted in Russian.

Effective: Spring 2006

Prerequisite:

RUS 401 **Advanced Russian A** (3) Advanced Russian grammar, conversation, and composition.

Effective: Summer 2012

Prerequisite:

RUS 402 **Advanced Russian B** (3) Advanced Russian grammar, conversation, and composition.

Effective: Summer 2012

Prerequisite:

RUS 403 **Advanced Russian Conversation and Composition** (3) A conversation and composition course that includes situational topics as well as complex academic discourse.

Effective: Summer 2013

Prerequisite: Concurrent: RUS 400 RUS 401 RUS 402 RUS 405 RUS 412

RUS 404 **Advanced Reading and Composition** (3) Advanced Russian Reading and Composition.

Effective: Summer 2012

Prerequisite:

RUS 405 (IL) **Seminar in Russian Literature** (3-6 per semester/maximum of 6) Readings in classical Russian literature; Topics vary.

Effective: Summer 2012

Prerequisite:

RUS 406 (IL) **Russian Film** (3) Conversation and Composition based on classical Russian films.

Effective: Summer 2012

Prerequisite:

RUS 410 (IL) **Heritage Russian 1** (3) Introductory course for heritage speakers of limited linguistic proficiency aiming at teaching basic reading, writing, and grammar skills in Russian.

Effective: Summer 2014

Prerequisite:

RUS 412 (IL) **Russian Translation** (3 per semester/maximum of 6) Translation from Russian into English of complex texts from the humanities, social sciences, and technical fields.

Effective: Spring 2006

Prerequisite:

RUS 426 (IL) **Dostoevsky** (3) Study of representative works by Dostoevsky in the original Russian.

Effective: Spring 2006

Prerequisite:

RUS 427 (IL) **Tolstoy** (3) Study of representative works by Tolstoy in the original Russian.

Effective: Spring 2006

Prerequisite:

RUS 460 (IL) **Linguistic Analysis of Contemporary Russian** (3) Detailed study of the phonology, morphology, and syntax of Modern Standard Russian and the major dialects.

Effective: Spring 2006

Prerequisite:

RUS 494 **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 1994

RUS 494H **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Fall 2007

RUS 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

RUS 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

RUS 499 (IL) **Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2005

RUS 501 **Readings in Russian Literature** (3-6) No description.  
Effective: Spring 1987  
Prerequisite:

RUS 525 **Pushkin** (3) Pushkin's significance in Russian literature; his relation to other European literatures; Eugene Onegin and selected shorter works.  
Effective: Winter 1978

RUS 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Fall 2001

RUS 600 **Thesis Research** (1-15) No description.  
Effective: Fall 1983

RUS 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Teaching RUS 001, 002, or 003 under the supervision of a full-time faculty member.  
Effective: Fall 1983

RUS 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Fall 1983

Last Import from UCM: July 23, 2016 3:00 AM

## School Psychology (S PSY)

S PSY 472H (IL) (PSYCH 472H) **Human Development, Health, & Education From a Global Perspective** (3) Intended to address the University's global community objectives and provide scholarly background on India for Schreyer Honors students.

Effective: Spring 2016

Prerequisite:

S PSY 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2011

S PSY 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2011

S PSY 498 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Effective: Summer 2011

S PSY 500 **Professional Issues in School Psychology** (1-3) Orientation to the field through study of unique problems, current issues, ethical and legal matters, unique cases, and research projects.

Effective: Summer 2011

S PSY 503 **Development Across the Life Span** (3) This is a graduate level survey course on the scientific discipline of human development across the life span.

Effective: Summer 2011

Prerequisite:

S PSY 510 **Supervision of Pupil Service Personnel** (1-10) Program supervision and professional leadership in university clinics and school systems.

Effective: Summer 2011

Prerequisite:

S PSY 517 **Social Aspects of Behavior in Education** (3) A critical and detailed examination of social behavior in canons of classic and contemporary theoretical and empirical work.

Effective: Fall 2013

S PSY 530 **Psychoeducational Interventions** (3) Development of empirically validated psychoeducational interventions for academic and behavioral problems experienced in school by children and adolescents.

Effective: Summer 2011

S PSY 535 **School-Based Psychological Interventions for Children and Youth** (3) Development of empirically supported psychological and psychoeducational interventions for behavioral and emotional concerns among school-aged children.

Effective: Summer 2011

Prerequisite:

S PSY 540 **Academic Instruction and Intervention** (3) This course complements the school-based intervention sequence for students enrolled in the School Psychology doctoral program.

Effective: Summer 2016

Prerequisite:

S PSY 551 **Professional Development of School Psychologists in Working with English Language Learners (ELL)** (3) This course is designed to educate school psychology graduate students on accommodations and adaptations for diverse learners, per Pennsylvania's guidelines.

Effective: Fall 2014

S PSY 554 **Psychological and Educational Evaluation of Exceptional Children** (3) Administration and interpretation of individual tests other than the Stanford- Binet, WISC, WAIS.

Effective: Summer 2011

Prerequisite:

S PSY 555 **Special Education, School Governance, and School Law** (3) Special Education, law, and school governance will provide a framework of how schools operate to help school psychologists effect change.

Effective: Summer 2016

S PSY 556 **Psychological Assessment of Preschool and School-Aged Children** (2) Study of cognitive/affective tests; use of systems--analytic, multivariate statistical, actuarial methods of data combination in decision-making processes.

Effective: Summer 2011

Prerequisite:

S PSY 559 **The Individual Psychological Examination** (3) Demonstrations and practice in widely used ability and aptitude tests; psychological report writing.

Effective: Spring 2012

Prerequisite:

S PSY 561 **Consultation in Educational Settings** (3) Prepares students to consult with teachers, administrators, parents, and other professionals about academic, behavioral, social-emotional, and programmatic issues.

Effective: Summer 2011

Prerequisite:

S PSY 575 **Child and Adolescent Psychopathology** (3) This course will familiarize students with specific psychiatric disorders of childhood and adolescence encountered by mental health professionals in schools.

Effective: Fall 2013

S PSY 594 **Research Topics** (1-3 per semester/maximum of 6) Graduate seminar examining current research in the field of School Psychology.

Effective: Spring 2014

Prerequisite:

S PSY 595A **Practicum in School Psychology** (1-6) Clinical experience with children under supervision in a variety of settings requiring service, including practice in synthesizing data and observations.

Effective: Summer 2011

Prerequisite:

S PSY 595B **Internship in School Psychology** (1-10) Long-term placement in settings providing work for school psychologists with children, parents, teachers, administrators, and service agencies, under supervision.

Effective: Summer 2011

Prerequisite:

S PSY 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2011

S PSY 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject that may be offered infrequently; several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes, A, B, etc.

Effective: Summer 2011

S PSY 600 **Thesis Research** (1-15) No description.

Effective: Summer 2011

S PSY 601 **Ph.D. Dissertation Full-Time** (0) No description.

Effective: Summer 2011

S PSY 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Supervised Experience in College Teaching.

Effective: Summer 2015

S PSY 610 **Thesis Research Off Campus** (1-15) No description.

Effective: Summer 2011

S PSY 611 **Ph.D. Dissertation Part-Time** (0) No description.

Effective: Summer 2011

S PSY 843 (CN ED 843) **Prevention Strategies and Programming** (3) Addresses prevention program development, implementation, and evaluation, along with theoretical and empirical underpinnings, ethical, and multicultural issues related to prevention.

Effective: Summer 2011

Last Import from UCM: July 23, 2016 3:00 AM

## Science (SC)

SC 400 **Consequences of Science** (1) A series of lecture/discussions in which science faculty members show the social implications of their research specialty.  
Effective: Winter 1978

SC 401 **Basic Science and Disease** (1) Clinical aspects of various disease and how basic scientific information contributes towards understanding and treating disease.  
Effective: Summer 2008  
Prerequisite:

SC 402 **Science-Related Employment: Corporate Organization, Opportunities, and Expectations** (1-3 per semester/maximum of 3) Present undergraduate and graduate students with information and skills necessary for success in science-related job positions available in industry.  
Effective: Spring 2011  
Prerequisite:

SC 476 **Human Dimensions of Health Care** (3) Field experience in five or more medical settings; complementary exposure to the scientific literature; weekly discussions.  
Effective: Spring 2011  
Prerequisite:

SC 494 **Research Project Courses** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Spring 1994

SC 494H **Research Project Courses** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Fall 2007

SC 495 **Science Co-op Work Experience III** (1-3) A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.  
Effective: Spring 2007  
Prerequisite:

SC 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.  
Effective: Spring 1996

SC 595 **Internship** (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.  
Effective: Spring 1997

SC 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Summer 1996

Last Import from UCM: July 23, 2016 3:00 AM

## Science Education (SCIED)

**SCIED 410 Using Technology to Enhance Science Teaching** (3) This course explores contemporary practice and research associated with applications of technology to enhance science learning and teaching.

Effective: Summer 2000

Prerequisite:

**SCIED 411W Teaching Secondary Science I** (3) Introduction to teaching secondary school science, including curriculum, learning theory, media, evaluation as they relate to student progress.

Effective: Spring 2016

Prerequisite:

**SCIED 412 Teaching Secondary Science II** (3) Implementation of science instruction using a variety of modern approaches.

Effective: Spring 2016

Prerequisite: Concurrent: C I 412W

**SCIED 455 Field Natural History for Teachers** (3) Ecologically oriented field study course to provide teachers with basic knowledge of natural science resources in school environments.

Effective: Winter 1978

Prerequisite:

**SCIED 457 Environmental Science Education** (3) Philosophy, techniques, and skills for teaching environmental science, including curriculum development, fieldwork, and the use of appropriate technologies.

Effective: Fall 2003

Prerequisite:

**SCIED 458 Teaching Science in the Elementary School** (3) Interpreting children's science experiences and guiding development of their scientific concepts; a briefing of science content material and its use.

Effective: Spring 2014

Prerequisite: Concurrent: C I 495A OR C I 495B ; MTHED 420 SS ED 430W

**SCIED 460 (MTHED 460) Trends and Issues in Science, Technology, Engineering, and Mathematics (STEM) Education** (3) Develops understanding of Science, Technology, Engineering, and Mathematics (STEM) education research and practices for PreK-12 teaching and learning

Effective: Spring 2016

Prerequisite:

**SCIED 470 Selected Studies in Science Education** (1-6) Intensive work on particular issues, trends, or developments in science education for elementary and secondary school teachers.

Effective: Winter 1978

Prerequisite:

**SCIED 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

**SCIED 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

**SCIED 498 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1992

**SCIED 550 Science Education Curriculum** (3) History, analysis, and evaluation of precollege science curricula.

Effective: Spring 2014

**SCIED 551 History, Philosophy, & Sociology of Science and Science Teaching** (3) Examination of the implications of history, philosophy, and sociology of science for science teaching.

Effective: Summer 2006

Prerequisite:

**SCIED 552 Science Teaching and Learning** (3) Exploration of the theoretical and empirical foundations of the teaching and learning of science.

Effective: Summer 2009

**SCIED 558 Research Problems in Science Teaching** (3) Problems and research dealing with curriculum, materials, evaluation, and supervision of science teaching and learning.

Effective: Fall 1983

Prerequisite:

**SCIED 559 Analysis of Instruction in Elementary Science Education** (3) Analysis of the history, issues, trends, and

research in elementary science education.

Effective: Winter 1978

Prerequisite:

SCIED 583 (LDT 583) **Survey of Research in Learning Sciences and Technology** (3) Analysis and evaluation of research in domains of learning sciences and technology.

Effective: Fall 2016 Future: Fall 2016

SCIED 590 **Colloquium** (1-3) continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Summer 1992

SCIED 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1987

SCIED 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Spring 1987

Last Import from UCM: July 23, 2016 3:00 AM

## Science Health Syste (SHS)

SHS 711 **Science of Health Systems** (6) Students will learn the foundations of health systems through in class instruction and patient navigation clinical site experiences.  
Effective: Summer 2015

SHS 721 **Science of Health Systems** (4) Students will learn the foundations of health systems through in class instruction and patient navigation clinical site experiences.  
Effective: Summer 2015  
Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Science, Technology, and Society (S T S)

S T S 407 (PHIL 407) **Technology and Human Values** (3) Interrelationships of twentieth-century technological change and human values. Emphasis on the social and ethical aspects of technological progress.

Effective: Spring 1999

Prerequisite:

S T S 408 (COMM 408) **Cultural Foundations of Communications** (3) Examination of oral, scribal, print, industrial and electronic cultures; analysis of impact of technology on communications and social structure.

Effective: Spring 2009

Prerequisite:

S T S 416 (US;IL) (AF AM 416) **Race, Gender and Science** (3) The class will focus on race and gender as products of science, and how societal values shape scientific activity.

Effective: Fall 2015

Prerequisite:

S T S 420 (SOC 420, EM SC 420) **Energy and Modern Society** (3) Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.

Effective: Spring 1991

S T S 427W **Society and Natural Resources** (3) Analysis of the relationship between societal development and enhancement and natural resources.

Effective: Fall 2015

Prerequisite:

S T S 428 (IL) (HIST 428) **The Darwinian Revolution** (3) The origins and implications of evolutionary theory.

Effective: Spring 2006

Prerequisite:

S T S 430 (IL) (NUTR 430) **Global Food Strategies: Problems and Prospects for Reducing World Hunger** (3)

Technological, social, and political solutions to providing basic food needs; food resources, population, and the environment; current issues.

Effective: Summer 2005

S T S 432 (PHIL 432) **Medical and Health Care Ethics** (3) Examines ethical, political, and social issues in the research, implementation, and practice of medicine, medical technologies, and healthcare.

Effective: Fall 1998

Prerequisite:

S T S 433 (PHIL 433) **Ethics in Science and Engineering** (3) Ethical issues arising in the practice of science and engineering and their philosophical analysis.

Effective: Fall 1995

S T S 435 (PHIL 435) **The Interrelation of Science, Philosophy, and Religion** (3) The historical and transformative interactions between science and Western philosophical and religious views of nature, humanity, and God.

Effective: Spring 1996

S T S 460 (PL SC 460) **Science, Technology, and Public Policy** (3) The all-pervasive importance of science and technology policy in modern societies and mechanisms and processes by which it is made.

Effective: Spring 1995

Prerequisite:

S T S 470 **Technology Assessment and Transfer** (3) Nature of technology assessment and technology transfer in product design and development process from federal and university labs, and internationally.

Effective: Summer 1996

S T S 589 **Ethics and Values in Science and Technology** (3) Study interrelationships of 20th century technological change and human values with emphasis on social and ethical aspects of technological progress.

Effective: Summer 1994

Last Import from UCM: July 23, 2016 3:00 AM

## **Scient Princ Medicin (SPM)**

SPM 711 **Scientific Principles of Medicine** (15) This course provides an introduction to the basic science principles that form a foundation for the study of clinical medicine.

Effective: Summer 2013

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Seminar - Dickinson (SEM)

**SEM 900 Advanced Corporate Tax Seminar (2-3)** This seminar will cover two main topics: Taxation of Executive Compensation and Corporate Mergers & Acquisitions.  
Effective: Spring 2007

**SEM 901 Advanced Evidence Seminar (2)** An advanced investigation of topics in the law of evidence.  
Effective: Spring 2007  
Prerequisite:

**SEM 903 History of International Law: Seminar (2)** The general historical introduction and seminar presentations and projects are designed to accentuate problems and issues which enable students to better understand the foundations of the law of nations and encourage independent research skills.  
Effective: Summer 2007

**SEM 905 EU and International Trade Law Seminar (3)** This seminar seeks to examine selected aspects of the Commercial Law of the European Union. It provides an introduction to the distinct methodology of EU law and the European Court of Justice, examines the principles of the internal market, and focuses on aspects which are particularly important for US lawyers from a practical or theoretical perspective. It covers, among others, the following topics: Introduction to the fundamentals of the EU Legal Order; the internal market; free movement of goods, customs duties, discriminatory companies; financial services; aspects of competition law; anti-competitive agreements and monopolies; enforcement of competition law; selected comparisons with WTO and NAFTA.  
Effective: Summer 2011

**SEM 907 The Supreme Court in Comparative Perspective (3)** This course examines the contribution of the judiciary to political governance in comparative perspective. It focuses on the Supreme Court and the European Court of Justice, which is the highest court of the European Union. It also takes into account selectively judgements of other constitutional courts. It seeks to explore the function of judicial review in modern democracy through a study of judicial decisions in selected areas. It examines the relationship between the judiciary and the other organs of government and the role of courts in protecting the citizen. It focuses on the following areas: federalism, the protection of human rights, the principles of democracy, non-discrimination, equality, proportionality, legitimate expectations, and fair hearing; Locus standi, remedies for the protection of constitutional rights, and the liability of public bodies and state agencies.  
Effective: Fall 2011

**SEM 908 Comparative Law in Globalized World Seminar (3)** This seminar gives students experience in researching, drafting and orally presenting an in-depth comparative scholarly work product. Early in the seminar, in consultation with the professor, students identify and select a timely and important topic which will serve as the subject of their Seminar research paper. Each student's research and written drafts are subject to ongoing review and critique by the professor and student colleagues throughout the Semester. When completed, each research paper is presented orally to the Seminar at the end of the course. The comparative research and drafting exercises sensitize students to the civil law tradition and contemporary national and supranational legal system in Europe and around the world that have grown out of or have been substantially influenced by the civil law tradition. Students also develop client counseling skills.  
Effective: Spring 2013

**SEM 909 Dispute System Design Seminar (2)** This seminar is for students who: have closely examined at least one dispute resolution system (e.g., civil or criminal litigation, administrative adjudication, investment treaty arbitration, contractual tiered systems for the provision of negotiation, mediation and arbitration); seek to gain an empirically-grounded understanding of the lifecycle and dynamics of conflict, conflict resolution and the pursuit of justice; and will use such understanding to propose the creation or reform of a public, private or hybrid dispute resolution system. Students will conduct original legal and (if possible) empirical research, using the principles, theories, research and dispute system law and procedure studied in the seminar.  
Effective: Spring 2014  
Prerequisite:

**SEM 910 Cross-Border Legal Practice Seminar (2)** This seminar will focus on two different themes. It will explore what it means to be a lawyer in the United States in comparison with what it means to be a lawyer in other countries. Among other things, participants will discuss the lawyer's role in society and the type of conduct that is regulated. This course will also examine the cross-border practice regulation that has emerged in response to the increasingly common circumstance of lawyers who handle a matter in a country other than their own.  
Effective: Fall 2007  
Prerequisite:

**SEM 911 Education Law Seminar (2)** This course covers the basic premises of compulsory education; issues concerning exclusion of students; school control of student behavior and curriculum; teacher employment problems; and issues of funding, minority rights, and school liability.  
Effective: Spring 2007

**SEM 912 Elder Law Seminar (2)** This course presents students with opportunities for advanced research and writing in elder law, allowing them to draw on their experiences in other classes, including the Elder Law Clinic and the Elder Law Workshop. Students are required to write a paper and to make a presentation in class.

Effective: Spring 2007

**SEM 913 European Union Law Seminar (3)** This seminar examines the main elements of European Union (EU) law. It covers the institutional structure of the EU and its law-making process and compares it with US government and federalism. It explores the judicial architecture of the EU and the role of the European Court of Justice. It looks at the legal framework covering EU inter-state trade, corporate mobility, and free movement of persons within the EU. It also examines trade between the EU and third states, in particular of persons the US, and foreign relations law of the EU.  
Effective: Spring 2014

**SEM 914 Federal Regulatory and Legislative Practice Seminar (2)** A seminar devoted to exploring the details of federal regulatory and legislative practice in Washington, D.C.  
Effective: Spring 2007

**SEM 916 Class Actions Seminar (2)** This seminar explores the class action device, tracing its historical origins from the earliest forms of aggregate litigation through various amendments to Rule 23 and passage of the Class Action Fairness Act. Although other non-class aggregation techniques are discussed, they are addressed only for comparative purposes. The unique nature of representative litigation and the special issues that arise during the course of a class action are the subject of discussion and student presentations during seminar sessions. Considerable discussion is devoted to the roles of the various "players" in a class action: the qualifications of the class representative, the qualifications and interest of class counsel, and the fiduciary role of the district judge.  
Effective: Fall 2013  
Prerequisite:

**SEM 917 Gender and the Law Seminar (2)** The role of gender in the development of modern law is considered in a variety of contexts. Among the topics are discrimination in pay and conditions of employment, psychological and sociological criminal defenses, pornography, spousal abuse, reproductive rights, and issues of child custody, support, and property division.  
Effective: Spring 2007

**SEM 922 International Protection of Human Rights Seminar (3)** This seminar provides an introduction to international human rights law and procedures. It examines what are "human rights" and explores the law of treaty interpretation, how human rights law is incorporated into domestic legal systems, and the role of international governmental organizations, international and regional courts, and non-governmental organizations in protecting human rights. Students also learn how to research international law and how to write legal analysis based on international law.  
Effective: Spring 2007

**SEM 923 International Refugee Law Seminar (2)** This course is intended to provide an introduction to the basic framework of international refugee law. It begins by laying out the historical political and philosophical background to the development of the concept of "refugee" in the twentieth century. It examines this legal framework within the context of the broader human rights system. The cardinal provisions of the principal international instruments establishing this framework--in particular the 1951 UN Convention Relating to the Status of Refugees and the 1967 Protocol thereto - are examined against the domestic legal regime establishing the substantive, procedural and evidentiary requirements for making a claim for asylum under U.S. law.  
Effective: Fall 2008

**SEM 925 Jurisprudence Seminar (2)** This seminar will investigate basic themes in constitutional jurisprudence from the perspectives of legal and political theory.  
Effective: Summer 2016

**SEM 926 Law and Individuals with Disabilities Seminar (2)** Major issues and concepts in law and social policy regarding individuals with handicaps are introduced. Topics include: income maintenance programs, special education, federal and state anti-discrimination laws, accessibility, special health issues, institutionalization and deinstitutionalization.  
Effective: Spring 2007

**SEM 927 Law of Artistic Persons and Properties Seminar (2)** The objectives of this course include an examination of the interface between law and the arts with an eye to both theoretical and practical implications and a striving to identify creative and serviceable solutions to the problems that have frustrated the growth and harvest of the creative effort. The investigation will be directed toward subject areas that reflect functional divisions within the arts; i.e., the visual arts, dance, music, the literary arts, and areas such as television and film. The course includes a mandatory field trip to New York City at the student's expense.  
Effective: Spring 2007

**SEM 928 Law and Semiotics Seminar (3)** Legal semiotics is the study of law focusing signs and symbols as well as the construction of meaning in law in legal discourse. Law's communicative structures are essential in this context. Moreover, recent large-scale economic, political and social developments in the Western hemisphere have increased the need to expand our knowledge about law, and semiotic studies sustain that need.  
Effective: Summer 2011

**SEM 929 Law and Aging Policy Seminar (3)** Examination of laws and public policies affecting older adults and families,

including health and long-term care. This seminar will analyze demographic trends of aging world populations, including alternative public benefit and private retirement strategies affected by laws. Medicare, Medicaid, Social Security, protection of older adults, long-term care planning, and consumer protection laws will be introduced, with opportunities for students to select individual topics for in-depth research, writing and presentation in class. The seminar will also examine roles for specialists in elder law, whether in private practice or as public advocates.  
Effective: Summer 2011

**SEM 930 Law, Science, and Policy Seminar (2)** This course will identify diverse areas in which advances in technology have posed challenges to society and law and will study select topics within those areas in order to ground the participants in the relevant legal, scientific, and ethical principles and jurisprudential and social theories. Subjects addressed include issues in biotechnology, such as cloning, transgenics, xenotransplantation, and pharmaceutical development; the ownership of biotechnological products; experimentation with humans and animals; human and animal rights concerns; environmental bioremediation; and non-lethal defense technologies.  
Effective: Spring 2007

**SEM 931 Lawyering and Ethics for the Business Attorney Seminar (2)** This seminar provides students with an opportunity to analyze and discuss ethical and legal issues relating to representation of business entities. Issues covered include (1) who is the client for the lawyer who represents a business entity; (2) what special rules govern confidentiality and information sharing in the representation of a business entity; (3) how should a lawyer respond to evidence of client fraud or other illegal activities; (4) what are the potential liabilities for furnishing legal advice or providing legal opinions for business transactions that are later found to have been fraudulent or illegal; (5) when is a business entity required or permitted to reimburse employees for legal expenses relating to their employment activities; and (6) what special obligations and responsibilities are imposed on "in-house" attorneys who are full-time employees of a business entity.  
Effective: Summer 2011  
Prerequisite:

**SEM 933 Protection of Individual Rights Under State Constitutions Seminar (2)** With the perception that the federal judiciary is increasingly hostile to constitutional claims, individuals have turned to state constitutions as an independent source of rights in civil and criminal litigation. This course will explore the unique procedures and methods of state constitutional rights interpretation. In lieu of an examination, persons enrolled in the course will brief questions of state constitutional law in an arena where the United States Constitution fails to afford protection.  
Effective: Summer 2011

**SEM 934 Race, Racism, and American Law Seminar (2)** The purpose of this seminar is to facilitate discussion and understanding of the role law has played in both the subordination and promotion of the rights of people of color in America. Subjects for discussion will include race and the American criminal justice system, hate speech and the First Amendment, affirmative action policies, and the quest for effective schools.  
Effective: Summer 2011

**SEM 937 Forensic Genetics Seminar (2)** An examination of the history of and current issues in using genetic identification in the criminal law.  
Effective: Fall 2013  
Prerequisite:

**SEM 938 The Supreme Court Seminar (2)** The Supreme Court, including procedure and practice, principles of adjudication, and history, as well as the topics of the current term are studied. Students are required to present analyses of current cases as well as an analytical paper on approved topics of constitutional law.  
Effective: Fall 2008

**SEM 939 Tax Policy Seminar (2)** This course examines the fundamental issues in tax policy, focusing on trends and on current legislative proposals. Specific subjects include the underpinnings of the various tax systems, the tax legislative process, the use of tax structure and incentives to implement social and economic objectives, the legal methodology of controlling tax abuse, and similar subjects.  
Effective: Fall 2015  
Prerequisite:

**SEM 941 The United Nations and International Law Seminar (2)** The inexorable paces of globalization and interdependence have made the need for international cooperation more acute. The role of the United Nations in these processes has become both more relevant and controversial. Notwithstanding the critical voices that have questioned the relevance or usefulness of the world body from certain national perspectives and points of view, the United Nations, through its activities and programmes, continues to have a considerable impact on countries and societies around the world, in such areas as conflict prevention and resolution, control of population displacements, humanitarian action, and social and economic development. These considerations, among others, make a study of the United Nations and International law more important today than it has ever been.  
Effective: Summer 2011

**SEM 943 International Justice Seminar (2)** The seminar will address international trial investigative techniques, tribunal jurisdiction and procedure, and areas of international civil and criminal law that are most relevant to legal practice before international tribunals.  
Effective: Fall 2010

**SEM 945 Congressional Investigations Seminar (2)** This seminar will examine the laws and procedures governing

congressional investigations through a series of historically based case studies and student analytical presentations on approved areas of congressional investigations law and procedure.  
Effective: Spring 2014

**SEM 946 Policy Issues in Corporate Crime Seminar (2)** This seminar focuses on the theoretical and policy justifications underlying the prosecution of white collar crime.  
Effective: Spring 2011

**SEM 947 International Financial Law Seminar (3)** This seminar examines selected aspects of international financial, securities, and banking law. It will cover elements of financial law, including legal aspects of banking, securities, and money; the objectives of regulations and supervision; an overview of US regulation; and the public and private law of international monetary obligations. It examines aspects of international financial and securities regulation, including an examination of the financial crisis of 2008 and the regulatory reforms resulting from it; selected comparative aspects of regulation in the US and the EU through a detailed discussion of legislation and case law. The course also includes discussion on the economic and monetary union in the EU and the eurozone crisis and it will provide an overview of the law of the IMF and the international financial architecture.  
Effective: Fall 2012

**SEM 948 International Financial Law (3)** This seminar examines selected aspects of international financial, securities, and banking law. It covers broadly four areas: First, it provides elements of financial law. Secondly, it examines aspects of international financial and securities regulation. Thirdly, it discusses economic and monetary union in the EU and the eurozone crisis. Finally, it provides an overview of the law of the IMF and the international financial architecture.  
Effective: Summer 2013

**SEM 949 Comparative Constitutional Law Seminar (3)** This seminar explores constitutional law differences in the US, Canada, Australia, and South Africa.  
Effective: Fall 2014

**SEM 950 Evidence-Seminar: Testimonial Privileges (2)** This Seminar will examine the testimonial privileges that permit or require professionals, family members, individuals, companies, and governmental actors to withhold testimony in furtherance of a competing public interest.  
Effective: Spring 2015  
Prerequisite:

**SEM 967 Labor Law Seminar (2)** This is an advanced seminar that assumes students will already have studied the National Labor Relations Act. It provides an opportunity for students to deepen their knowledge of labor law while also developing research, writing, analytical, and trial strategy skills.  
Effective: Fall 2009  
Prerequisite:

**SEM 968 International Uniform Enforcement of Human Rights Seminar (3)** A study of the structure, value, and progress of the international Human Rights Law Project.  
Effective: Spring 2011

**SEM 969 Electronic Evidence Seminar (3)** This seminar cover the case law, procedural rules, evidence rules, and rules of professional conduct implicated by the unique attributes of information created and/or stored electronically, as well as the filing and courtroom presentation of documents in electronic format. There are three components to the course. The first part concerns the discovery of ESI, and covers the nature, sources, and terminology of ESI; the different formats of ESI and the implications for preservation and production of ESI attributable to the different formats; the evolution of the rules and case law regarding discovery of ESI; and the obligations of counsel with respect of the preservation of ESI.  
Effective: Summer 2011

**SEM 970 Russian Law Seminar (2)** This 2-credit seminar is concerned with the development of the law, legal system, and legal institutions of what is popularly known as Russia but also correctly and officially known as the Russian Federation within the boundaries presently occupied and, historically, within the boundaries of the Russian Empire. By "law" we mean formal legislation, customary rules, relevant international legal rules, legal doctrine, and anything else regarded by the Russian State or by Russian jurists as comprising part of the "law." For our purposes "legal institutions" encompasses all law enforcement agencies or any other agencies of the State or empowered by the state which are concerned with the law in any manner whatsoever, including educational institutions.  
Effective: Spring 2012

**SEM 997 Special Topics (1-9)** Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.  
Effective: Spring 2010

Last Import from UCM: July 23, 2016 3:00 AM

## Social Data Analytics (SODA)

SODA 496 **Independent Studies** (1-6) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Spring 2016

SODA 501 **Big Social Data: Approaches and Issues** (3) Interdisciplinary integration of computational, informational, statistical, visual analytic, and social scientific approaches to the creation of big social data.  
Effective: Spring 2016

SODA 502 **Social Data Analytics: Approaches and Issues** (3) Interdisciplinary integration of computational, informational, statistical, visual analytic, and social scientific approaches to learning from big social data.  
Effective: Spring 2016

Last Import from UCM: July 23, 2016 3:00 AM

## **Social Influenc Hlth (SIH)**

SIH 711 **Social Influences on Health** (3) This course introduces population based medicine and its influence on individuals and provides a framework for learning subsequent biomedical sciences.

Effective: Fall 2008

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Social Studies Education (SS ED)

**SS ED 411 Teaching Secondary Social Studies I** (3) Methods for teaching social studies in secondary grades; nature of social studies, content and learning outcomes, instructional strategies and planning.

Effective: Fall 2011

Prerequisite:

**SS ED 412W Teaching Secondary Social Studies II** (3) Writing-intensive course focusing on study of the social studies teacher's role in planning instruction; strategies for teaching.

Effective: Summer 2010

Prerequisite: Concurrent: C I 412W

**SS ED 430W Teaching Social Studies in the Elementary Grades** (3) Principles underlying use of social studies in the elementary school; practical demonstration of desirable methods.

Effective: Spring 2014

Prerequisite: Concurrent: C I 495A OR C I 495B ; MTHED 420 SCIED 458

**SS ED 470 Issues in Social Studies Education** (1-6) Concentration on particular issues, trends, and developments in the social studies.

Effective: Winter 1978

Prerequisite:

**SS ED 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

**SS ED 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

**SS ED 498 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1992

**SS ED 530 Instructional Practices in the Social Studies** (3) Social studies innovations in the classroom, new programs, new materials, new methods, and evaluation.

Effective: Winter 1978

Prerequisite:

**SS ED 532 Curriculum Models in Social Studies Education** (3) Study of past and proposed curricula in elementary and secondary social studies. Various means of judging curricula will be offered.

Effective: Spring 1985

Prerequisite:

**SS ED 533 Research in the Teaching of Social Studies** (3) Procedures and methods of research for the teaching of social studies, strategies of investigation, and review of research literature.

Effective: Fall 1983

Prerequisite:

**SS ED 535 Teaching and Learning Historical Literacy with Media** (3) Study of how historically oriented media influence learning about past and connect to present with challenges and potential for education.

Effective: Fall 2015

**SS ED 590 Colloquium** (1-3) Graduate seminar for new doctoral students in social studies education.

Effective: Summer 1998

Prerequisite:

**SS ED 596 Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1987

**SS ED 597 Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Spring 1987

Last Import from UCM: July 23, 2016 3:00 AM

## **Social Thought (SOCTH)**

SOCTH 501 **Seminar in Social Thought** (3) Selected topics in the historical development of the tradition in social thought, and a discussion of contemporary issues and debates.  
Effective: Spring 1996

Last Import from UCM: July 23, 2016 3:00 AM

## **Socio-Ecolog Medicin (SOEM)**

SOEM 711 **Socio-Ecological Medicine** (3) An introductory course encompassing topics such as public health, socio-ecological medicine, global health, health systems, medical anthropology, and culturally-sensitive medicine.

Effective: Summer 2013

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Sociology (SOC)

SOC 400W **Senior Research Seminar** (3) Major concepts and principles of sociology through reading, data analysis, and writing. Capstone course for senior Sociology majors.

Effective: Fall 2001

Prerequisite:

SOC 403 **Advanced Social Psychology** (3) Analysis of the major theoretical approaches and research findings of contemporary social psychology.

Effective: Fall 1983

Prerequisite:

SOC 404 **Social Influence and Small Groups** (3) The study of social influence, leadership and status, and social cohesion and commitment processes in small groups.

Effective: Spring 2007

Prerequisite:

SOC 405 **Sociological Theory** (3) Overview of the development of sociological theory; current issues and controversies.

Effective: Spring 2001

Prerequisite:

SOC 406 (CRIMJ 406, CRIM 406) **Sociology of Deviance** (3) Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group's normative expectations.

Effective: Spring 2008

Prerequisite:

SOC 408 **Urban Ecology** (3) Spatial and temporal aspects of urban structure; urban growth, neighborhoods, racial and ethnic groups, mental illness; cross-cultural perspectives.

Effective: Fall 1983

Prerequisite:

SOC 409 (US) (AF AM 409) **Racial and Ethnic Inequality in America** (3) The impact of inequality and discrimination on individual and group identity among various racial and ethnic groups.

Effective: Fall 2012

Prerequisite:

SOC 411 (US) (HD FS 416) **Racial and Ethnic Diversity and the American Family** (3) This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States.

Effective: Spring 2005

Prerequisite:

SOC 412 (CRIMJ 412, CRIM 412) **Crime, Social Control, and the Legal System** (3) Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Effective: Spring 2008

Prerequisite:

SOC 413 (CRIM 413, CRIMJ 413) **Advanced Criminological Theory** (3) This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories.

Effective: Spring 2008

Prerequisite:

SOC 414 (CRIMJ 414, CRIM 414) **Criminal Careers and the Organization of Crime** (3) Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and life-styles; policy implications.

Effective: Spring 2008

Prerequisite:

SOC 416 (US) (EDTHP 416) **Sociology of Education** (3) The theoretical, conceptual, and descriptive contributions of sociology to education.

Effective: Spring 2006

Prerequisite:

SOC 419 (US) **Race and Public Policy** (3) Seminar format course in which sociological theory and research are applied to current race policy issues.

Effective: Spring 2006

Prerequisite:

SOC 420 (EM SC 420, S T S 420) **Energy and Modern Society** (3) Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.

Effective: Spring 2001

Prerequisite:

SOC 422 **World Population Diversity** (3) Survey of world diversity in national population growth/composition; the impacts of demographic change on the economic/social life of nations/people.

Effective: Spring 2001

Prerequisite:

SOC 423 **Social Demography** (3) Social demographic perspectives on fertility, mortality, morbidity, migration, population

density, demographic transitions, social mobility, family, the aged, and minorities.

Effective: Spring 2001

Prerequisite:

**SOC 424 Social Change** (3) Critical review of classical and recent theories of social change, emphasizing the transformations occurring in the modern world.

Effective: Fall 1983

Prerequisite:

**SOC 425 Social Conflict** (3) An analysis of the variables affecting intergroup and international conflict and cooperation.

Effective: Fall 2007

Prerequisite:

**SOC 428 Homelessness in America** (3) Survey of social science research on homelessness in the contemporary United States.

Effective: Spring 2001

Prerequisite:

**SOC 429 Social Stratification** (3) Structure and dynamics of class, caste, and status systems; class differentials and social mobility; current theoretical and methodological issues.

Effective: Winter 1978

Prerequisite:

**SOC 430 Family in Cross-Cultural Perspective** (3) Sociological analysis of family systems in various cultures and subcultures.

Effective: Spring 2001

Prerequisite:

**SOC 431 (HD FS 431) Family Disorganization: Stress Points in the Contemporary Family** (3) Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.

Effective: Spring 1994

Prerequisite:

**SOC 432 Social Movements** (3) Why and how people mobilize to promote or retard social change. Factors predicting success or failure of social movements.

Effective: Fall 1983

Prerequisite:

**SOC 435 (HD FS 434) Perspectives on Aging** (3) An analysis of the demographic, social, and cultural factors affecting the aged population in American society.

Effective: Fall 2007

Prerequisite:

**SOC 440 (HD FS 440) Family Policy** (3) An in-depth examination of family policy.

Effective: Spring 2007

Prerequisite:

**SOC 445 U.S. Immigration** (3) This class examines theories of U.S. immigration and immigrant adaptation, effects of immigration, and policy.

Effective: Spring 2012

Prerequisite:

**SOC 446 Political Sociology** (3) Sociological analysis of types of political organization and their relations with other elements of social life.

Effective: Winter 1978

Prerequisite:

**SOC 447 (US) (EDTHP 411) Ethnic Minorities and Schools in the United States** (3) Analysis of the social and cultural factors which affect educational outcomes among minority pupils, especially Blacks, Hispanics, and Indians.

Effective: Fall 2015

**SOC 448 Environmental Sociology** (3) Examination of the relationship between the physical environment and society.

Effective: Fall 2007

Prerequisite:

**SOC 449 Environmental Movements** (3) Comparative exploration of environmental movements within the context of classical and new social movement theory.

Effective: Fall 2007

Prerequisite:

**SOC 450 Justice and the Environment** (3) Considers notions of justice in relation to environmental philosophy, environmental movements, and general environmental concerns.

Effective: Fall 2007

Prerequisite:

**SOC 451 (GS) Health, Disease & Society** (3) This course provides an introduction to the concepts, measurement and study of inequality across spatial scales and in diverse contexts.

Effective: Summer 2015

Prerequisite:

**SOC 452 Spatial Inequality (3)** This course provides an introduction to concepts, measurement and study of spatial inequality in the US and across the globe.

Effective: Summer 2015

Prerequisite:

**SOC 454 (US) The City in Postindustrial Society (3)** Postindustrial social organization in the United States and Europe; consequences for metropolitan social stratification, community power, and environmental quality.

Effective: Spring 2006

Prerequisite:

**SOC 455 Work and Occupations (3)** Work and occupational life in modern society; work in the past, present, and future.

Effective: Fall 1983

Prerequisite:

**SOC 456 (WMNST 456) Gender, Occupations, and Professions (3)** The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.

Effective: Spring 2013

Prerequisite:

**SOC 457 (US;IL) (ANTH 457, J ST 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3)** Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.

Effective: Summer 2006

Prerequisite:

**SOC 461 (US;IL) (RL ST 461) Sociology of Religion (3)** Contemporary religion in the global perspective: beliefs, structure, and function of major religious traditions, denominations, and cults.

Effective: Fall 2013

Prerequisite:

**SOC 467 (CRIM 467, CRIMJ 467) Law and Society (3)** Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials.

Effective: Spring 2008

Prerequisite:

**SOC 468 Mood-Altering Substances in Society (3)** Perspectives of cultures throughout the world toward mood-altering substances are reviewed in light of public policy, benefits, and problems.

Effective: Fall 2007

**SOC 469 Techniques in Small Group Facilitation (1-4 per semester/maximum of 12)** This course is the training course for students working as facilitators with the World in Conversation Project.

Effective: Fall 2013

Prerequisite:

**SOC 470 Intermediate Social Statistics (4)** Descriptive and inferential statistics in social research: central tendency and variation, normal distribution, measures of association, confidence intervals, hypothesis testing.

Effective: Fall 2001

Prerequisite:

**SOC 471 Qualitative Research Methods in Sociology (3)** Theory, methods, and practice of qualitative data collection, including observation, participant observation, interviewing; supervised projects in natural settings.

Effective: Spring 2001

Prerequisite:

**SOC 477 (WMNST 477) Sociology of Sexuality (3)** An analysis of the demographic, social, and cultural factors affecting the developments and experience of sexuality in contemporary society.

Effective: Spring 2016

Prerequisite:

**SOC 481H Senior Honors Seminar in Sociology (1)** Supervised experience in planning and writing the honors thesis.

Effective: Spring 1999

Prerequisite:

**SOC 494 Research Project (1-12)** Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 1994

**SOC 494H Research Project (1-12)** Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Fall 2007

**SOC 495 Internship (1-18)** Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Effective: Spring 2000

Prerequisite:

**SOC 496 Independent Studies (1-18)** Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

**SOC 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

**SOC 499 (IL) Foreign Study--Sociology** (2-6) Study, in selected foreign countries, of groups, institutions, and social problems.

Effective: Summer 2005

Prerequisite:

**SOC 500 Introduction to Graduate Study in Sociology** (1) Required of all incoming graduate students in sociology.

Effective: Fall 1983

**SOC 501 Proseminar in Sociology** (3 per semester/maximum of 6) An in-depth introduction to the major specialty areas of Sociology.

Effective: Summer 1998

Prerequisite:

**SOC 502 Theories of Society I** (3) Review and analysis of trends and controversies in sociological theory from late eighteenth-century beginnings through the nineteenth century.

Effective: Fall 1983

**SOC 503 Theories of Society II** (3) Review and analysis of trends and controversies in sociological theory in the twentieth century.

Effective: Fall 1983

**SOC 512 (CRIM 512) Criminological Theories** (3) Survey of theoretical and substantive issues in deviance and criminology, with emphasis on critical review of theories.

Effective: Fall 2015

**SOC 513 Sociological Research Methods** (3) Critical review of methodological issues; research designs; analysis and interpretation of findings.

Effective: Fall 1983

**SOC 515 (CRIM 515) Research Methods in Criminology and Deviance** (3) Review of methodological issues; design and conduct of research; analysis and interpretation of findings; ethical and policy issues.

Effective: Fall 2015

**SOC 518 (PL SC 518) Survey Methods I: Survey Design** (3) Research design for social, behavioral and health surveys.

Effective: Fall 2007

**SOC 519 (PL SC 519) Survey Methods II: Analysis of Survey Data** (3) Intermediate course on the statistical analysis of survey data: topics include weighting, complex surveys, missing data, and contextual analysis.

Effective: Spring 2008

Prerequisite:

**SOC 521 Family Demography** (3) Current family demographic research on nuptiality, divorce, household composition, female employment, migration, and fertility.

Effective: Spring 1985

**SOC 522 Demography of the Life Course** (3) The theoretical bases, critical concepts, and methods of life course analysis in the study of demographic transitions.

Effective: Spring 1994

Prerequisite:

**SOC 523 Internal and International Migration** (3) Examination of theories, frameworks, and policies related to internal and international migration causes and consequences in developed and developing nations.

Effective: Spring 1997

Prerequisite:

**SOC 524 The Demography of Human Fertility** (3) Overview of major issues and methodological approaches in the demographic study of human fertility in developing and developed countries.

Effective: Fall 2000

**SOC 525 Immigration, Assimilation, and Inequality** (3) Examine theories, research, and policies on the incorporation of immigrants and their descendents.

Effective: Summer 2011

SOC 526 (H P A 526) **Health Disparities** (3) This course provides an overview of social factors that lead to demographic disparities in health.  
Effective: Summer 2012

SOC 527 (AFR 527) **Migration, Urbanization, and Policy in the Developing World** (3) This course examines the dynamics of migration and urbanization processes, as well as their policy implications, in non-industrialized regions of the world.  
Effective: Summer 2012

SOC 528 **Homelessness in America** (3) Survey of social science research on homelessness in the contemporary United States.  
Effective: Fall 2000

SOC 529 **Seminar in Race and Ethnicity** (3) Reviews the status of U.S. racial and ethnic minority groups; analyzes factors influencing inequality and inter-group relations.  
Effective: Summer 2012

SOC 530 **Sociology of Family** (3) An in-depth introduction to the sociological study of the family.  
Effective: Spring 2002

SOC 531 (HD FS 531) **Family Disorganization: Stress Points in the Contemporary Family** (3) Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.  
Effective: Summer 1994

SOC 532 **Global Health and Mortality** (3) Major issues in international health from a demographic perspective; special attention to the Global South and to data quality.  
Effective: Summer 2013  
Prerequisite:

SOC 533 **Sociology of Religion Seminar** (3) A survey of the sociology of religion designed to help students conduct and critique social science research.  
Effective: Summer 2013

SOC 534 (EDTHP 534, SOC 534) **Childhood and Education in Sociological and International Comparative Perspective** (3) The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in the process.  
Effective: Spring 2013

SOC 535 **Sociology of Aging** (3) Current research and methodological issues in the sociological study of aging.  
Effective: Fall 1983

SOC 537 (HD FS 537) **Biosocial Perspectives on the Family** (3) The implications of knowledge from behavioral endocrinology, behavior genetics, and evolutionary psychology for understanding family relationships and child development.  
Effective: Summer 2002

SOC 538 (EDTHP 538) **Sociology of Education** (3) Provides students with an overview of dominant sociological theoretical perspectives on schools, schooling, and education in modern society.  
Effective: Summer 2007

SOC 544 **Current Issues in Complex Organizations** (3) Critical survey of recent developments in sociological study of organizations and the theory of bureaucracy, including reciprocal effects on environments.  
Effective: Spring 2011

SOC 546 **Seminar in Political Sociology** (3) Analysis of issues and problems in political sociology. Topical emphasis varies.  
Effective: Fall 1983  
Prerequisite:

SOC 551 **Social Stratification and Social Change** (3) Origin and development of stratification systems and inequality among and within societies; social mobility; change in stratification systems.  
Effective: Fall 1983

SOC 553 (CI ED 553, EDTHP 553, HI ED 553) **Education Mobility in Comparative Perspective** (3) Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, South America.  
Effective: Summer 2002

SOC 557 (EDTHP 557, HI ED 557) **Sociology of Higher Education** (3) Reviews theory and current sociology research on student access, achievement, and governance in postsecondary education, with applications to policy analysis.

Effective: Fall 2000

Prerequisite:

SOC 560 **Urban Sociology** (3) Examination of the structure and dynamics of North American cities and of residents' experiences in such settings.

Effective: Fall 2000

SOC 572 **Foundations in Causal Analysis in the Social Sciences** (3) Methods for estimating causal effects in observational data, including matching, counterfactual, and related approaches.

Effective: Fall 2014

Prerequisite:

SOC 573 **Demographic Techniques** (3) Models and measures of vital processes (fertility, mortality, migration) and their effects on growth and age structure of human populations.

Effective: Fall 2001

Prerequisite:

SOC 574 **Statistical Methods for Social Research** (3) Basic concepts of statistics; linear regression; computer software; analysis of social surveys; causal inferences from nonexperimental data.

Effective: Fall 1983

Prerequisite:

SOC 575 **Statistical Models for Nonexperimental Research** (3) Causal models for quantitative and qualitative data; path analysis and structural equations; logistic regression; duration models.

Effective: Spring 1989

Prerequisite:

SOC 576 **Applied Mathematical Demography** (3) Survey of mathematical models used in the study of population: models of growth, survivorship, fertility, migration, stability, kinship, projection.

Effective: Fall 1986

Prerequisite:

SOC 577 **Techniques of Event History Modeling** (3) Survival analysis theory and methods for discrete dependent variables.

Effective: Summer 1998

Prerequisite:

SOC 578 **Multilevel Regression Models** (3) Covers multilevel regression models for the analysis of nested or hierarchical data, including both contextual and longitudinal applications.

Effective: Summer 2006

Prerequisite:

SOC 579 (ANTH 579) **Spatial Demography** (3) This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research.

Effective: Spring 2008

Prerequisite:

SOC 584 (PSY 584) **Attitude Formation and Change** (3) Theory and method in research on attitude formation and change with emphasis on critical analysis.

Effective: Spring 2007

Prerequisite:

SOC 590 **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Spring 1987

SOC 591 (CRIM 591) **Teaching Sociology/Criminology** (1) Preparation for teaching sociology and/or criminology at the college level.

Effective: Fall 2015

SOC 592 **Writing for Publication in the Social Sciences** (3) Systematic, collective review of unpublished student manuscripts with an eye toward revision for publication.

Effective: Spring 2007

Prerequisite:

SOC 595A (PL SC 595A) **Survey Research Practicum** (1-6 per semester/maximum of 6) Practicum in Survey Research data collection or management.

Effective: Summer 2011

Prerequisite:

SOC 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1987

SOC 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered

infrequently; several different topics may be taught in one year or term.  
Effective: Spring 1987

SOC 600 **Thesis Research** (1-15) No description.  
Effective: Fall 1983

SOC 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Fall 1983

SOC 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Students will teach introductory level courses as required by staffing and students' needs.  
Effective: Fall 1983

SOC 603 **Foreign Academic Experience** (1-12) Foreign study and/or research constituting progress toward the degree at a foreign university.  
Effective: Summer 2005

SOC 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Fall 1983

SOC 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Fall 1983

Last Import from UCM: July 23, 2016 3:00 AM

## Software Engineering (SWENG)

**SWENG 400 Introduction to Software Engineering Studio** (3) Provides an introduction to the principles of software engineering and includes complementary instruction in one programming language.

Effective: Summer 1999

Prerequisite:

**SWENG 411 Software Engineering** (3) Software engineering principles including life cycle, dependability, process modeling, project management, requires specification, design analysis, implementation, testing, and maintenance.

Effective: Spring 2008

Prerequisite: Concurrent: SWENG 311

**SWENG 421 Software Architecture** (3) The analysis and design of software systems using canonical design patterns.

Effective: Summer 2008

Prerequisite:

**SWENG 431 Software Verification, Validation, and Testing** (3) Introduction to methods of software verification, validation, and testing; mathematical foundations of testing, reliability models; statistical testing.

Effective: Spring 2008

Prerequisite:

**SWENG 452W Embedded Real Time Systems** (3) The design and implementation of real time systems.

Effective: Summer 2008

Prerequisite:

**SWENG 465 Web Services** (3) This course introduces the students to a contemporary computing paradigm called "service-oriented computing."

Effective: Spring 2011

Prerequisite:

**SWENG 480 Software Engineering Design** (3) Concepts of engineering ethics, economy, and project management, senior capstone project selection, and technical communication skills.

Effective: Spring 2009

Prerequisite:

**SWENG 481 Software Engineering Project** (3) Capstone group design projects in software engineering.

Effective: Spring 2008

Prerequisite:

**SWENG 494 Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 2010

**SWENG 495 Internship** (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Effective: Spring 2008

Prerequisite:

**SWENG 496 Independent Studies** (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Effective: Summer 2010

**SWENG 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Effective: Summer 1999

**SWENG 499 (IL) Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2010

**SWENG 500 Software Engineering Studio** (3) The 500-level studio provides an opportunity for students to undertake a substantial software project.

Effective: Summer 1999

**SWENG 505 Software Project Management** (3) Analysis and construction of project plans for the development of complex software products; how to manage change and cost control.

Effective: Fall 2003

**SWENG 510 Secure Software Engineering** (3) This course provides a foundation in software engineering techniques for developing secure software systems.

Effective: Spring 2013

**SWENG 537 Software System Design** (3) Best practices in the requirements, analysis, and design of large software systems including the Unified Modeling language and the Unified Process.

Effective: Spring 2008

Prerequisite:

**SWENG 541 Advanced Database Design Concepts** (3) Practical benefits of a Database Management System; three-stage process to create and implement a relational database to meet defined requirements.

Effective: Summer 2002

Prerequisite:

**SWENG 545 Data Mining** (3) Practical benefits of data mining will be presented; data warehousing, data cubes, and underlying algorithms used by data mining software.

Effective: Summer 2002

Prerequisite:

**SWENG 552 Bioinformatics** (3) Introduction to information processing problems in computational biology and a unified treatment of machine learning methods for solving these problems.

Effective: Summer 2002

Prerequisite:

**SWENG 568 Enterprise Integration** (3) Advances in design, development, and deployment of control and management software for enterprise and production information systems.

Effective: Fall 2003

**SWENG 569 Service Oriented Architecture** (3) The principles of service oriented architecture; modeling, design and implementation of services; mapping business processes to services.

Effective: Spring 2009

**SWENG 580 Advanced Software Engineering** (3) Description of tools and techniques in the software development lifecycle; Mitigation and managing time-to-market and quality of large software systems.

Effective: Spring 2001

Prerequisite:

**SWENG 581 Software Testing** (3) This course provides a rigorous formal framework and practical information on this the testing of software throughout its life cycle.

Effective: Summer 2005

Prerequisite:

**SWENG 582 Real-Time Software Design and Analysis** (3) A holistic, systems-based approach to design and analysis of real-time systems; design and implementation of a small real-time system.

Effective: Summer 2002

Prerequisite:

**SWENG 584 Genetic Algorithms** (3) Application of genetic algorithms to problems in engineering and science including combinatorial optimization, multi-criteria optimization, biology, chemistry, and neural networks.

Effective: Summer 2002

Prerequisite:

**SWENG 585 Pattern Oriented Design** (3) This class examines well-known heuristics, principles and patterns in the design and construction of reusable frameworks, packages and components.

Effective: Spring 2006

Prerequisite:

**SWENG 586 Requirements Engineering** (3) Theory and applications of requirements elicitation, analysis, modeling, validation, testing, and writing for hardware and software systems.

Effective: Summer 2008

**SWENG 587 Software Systems Architecture** (3) Software systems architecture; architectural design principles/patterns; documentation/evaluation of software architectures; reuse of architectural assets through frameworks/software product lines.

Effective: Summer 2008

**SWENG 588 Program Understanding** (3) Techniques for the analysis and visualization of large software systems to assess the quality of the design and architecture.

Effective: Spring 2009

**SWENG 590 Colloquium** (1-3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Summer 1999

**SWENG 594 Research Topics** (1-15) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 1999

SWENG 594A **Masters Research Paper** (3) SWENG 594 Master's Research Paper. Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Summer 2016 Ending: Summer 2016

SWENG 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 1999

SWENG 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Summer 1999

SWENG 826 **Applied Human-Computer Interaction** (3) Evaluate and design interactive products that support how people work and communicate from both a theoretical and practical perspective.  
Effective: Fall 2010

SWENG 861 **Software Construction** (3) Students will learn and practice the elements of constructing a large-scale distributed software system using current technologies.  
Effective: Fall 2014

SWENG 888 (IST 888) **Mobile Computing and Applications** (3) Design and development of mobile computing-based applications and services utilizing current and emerging mobile computing technologies.  
Effective: Spring 2016

SWENG 897 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Summer 2016

Last Import from UCM: July 23, 2016 3:00 AM

## Soil Science (SOILS)

**SOILS 401 Soil Composition and Physical Properties** (3) Advanced study of mineralogical and physical properties of soils which affect soil-plant-water relationships.

Effective: Summer 2013

Prerequisite:

**SOILS 402 Soil Nutrient Behavior and Management** (3) Chemical and biological behavior of soil nutrients; management for plant availability and fate in the environment. Laboratory emphasizes soil testing and soil-plant relationships.

Effective: Summer 2013

Prerequisite:

**SOILS 403 Soil Morphology Practicum** (2 per semester/maximum of 4) Students develop field skills to describe soil morphology, classify soils, and make land use interpretations.

Effective: Summer 2013

Prerequisite:

**SOILS 404 Urban Soils** (3) This course introduces the student to natural and human-influenced soils.

Effective: Summer 2013

Prerequisite:

**SOILS 405 (GEOSC 405) Hydropedology** (3) Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport.

Effective: Summer 2013

Prerequisite:

**SOILS 412W Soil Ecology** (3) Introduction to soil organisms; includes interactions between organisms, their processes, and metabolism with a major focus on microorganisms.

Effective: Summer 2013

Prerequisite:

**SOILS 416 Soil Genesis, Classification, and Mapping** (4) Lecture and laboratory course on the genesis of soils, their classification, mapping, and interpretation for land use.

Effective: Summer 2013

Prerequisite:

**SOILS 418 (AGECO 418, AN SC 418) Nutrient Management in Agricultural Systems** (3) Comprehensive review of nutrient flow in animal agricultural systems, environmental regulations, and environmental stewardship practices.

Effective: Summer 2013

**SOILS 419 (GEOSC 418) Soil Environmental Chemistry** (3) Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes.

Effective: Summer 2013

Prerequisite:

**SOILS 420 Remediation of Contaminated Soils** (3) Basic principles and technical aspects of remediation of contaminated soils.

Effective: Summer 2013

Prerequisite:

**SOILS 422 Natural Resources Conservation and Community Sustainability** (3) Conservation, land-use, and community (soil, water, air, plants, animals, and humans) impacting quality of life and sense of place.

Effective: Summer 2013 Ending: Summer 2016

Prerequisite:

**SOILS 422 Natural Resources Conservation and Community Sustainability** (4) Conservation, land-use, and community (soil, water, air, plants, animals, and humans) impacting quality of life and sense of place.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SOILS 450 Environmental Geographic Information Systems** (3) Use of geographic information systems (GIS) and digital spatial databases to characterize landscapes for environmental assessment and management.

Effective: Summer 2013

Prerequisite:

**SOILS 489 Supervised Experience in College Teaching** (1-3) Participate with instructors in teaching an undergraduate soil science course; assist with teaching and evaluation and with development of instructional materials.

Effective: Summer 2013

Prerequisite:

**SOILS 490 (AGRO 490) Colloquium** (1) Continuing written and oral presentations developed by students in consultation with the course instructor.

Effective: Summer 2013

Prerequisite:

**SOILS 494 Senior Thesis** (1-6) Supervised data collection and analysis on a topic of interest to the student culminating in a formal thesis.

Effective: Summer 2013 Ending: Fall 2016

Prerequisite:

**SOILS 494 Undergraduate Research** (1-12) Supervised student activities on research projects identified on an individual or small group basis.

Effective: Spring 2017 Future: Spring 2017

Prerequisite:

**SOILS 494H Senior Thesis** (1-6) Supervised data collection and analysis on a topic of interest to the student culminating in a formal thesis.

Effective: Summer 2013 Ending: Fall 2016

Prerequisite:

**SOILS 494H Honors Thesis Research** (1-6) Independent study directed by a faculty supervisor that culminates in the production of a SOILS honors thesis

Effective: Spring 2017 Future: Spring 2017

Prerequisite:

**SOILS 495 Internship** (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Effective: Summer 2013

Prerequisite:

**SOILS 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2013

**SOILS 497 Special Topics** (1-9) Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2013

**SOILS 499 (IL) Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2013

**SOILS 499B (IL) Co-evolution of Land and People - Travel Component** (3) Students admitted to this summer abroad program will work with Dr. Drohan and collaborators of his in the Teagasc agriculture and food development authority at Johnstown Castle, Wexford Ireland. We begin our trip by examining the history of Ireland with visits to the Irish National Heritage Park living history museum and then the Viking towns of Waterford and Wexford. These towns were also invaded by the Normans and important in the history of the Irish Rebellion. We will examine past agricultural and land tenure issues and their role in the Irish famine at New Ross when we visit the Dunbrody famine ship. We will investigate modern agricultural production practices with Irish sheep and dairy farmers and examine current agricultural challenges set forth under the Irish Agricultural directives Food Harvest 2020 and Foodwise 2025.

Effective: Summer 2016 Ending: Summer 2016

Prerequisite:

**SOILS 502 Soils Properties and Functions** (3) Introduction to soil science for graduate students including fundamentals of and applications to plant production and environmental sustainability.

Effective: Summer 2013

**SOILS 507 Soil Physics** (3-4) Soil physical properties emphasizing water, heat, gas, and ion movement in unsaturated soils. Laboratory included with 4 credits.

Effective: Summer 2013

Prerequisite:

**SOILS 510 Geographic Information System Applications** (3) Soil data bases, image processing, and geographic information systems will be used to model and understand land and water resources.

Effective: Summer 2013

Prerequisite:

**SOILS 512 Environmental Soil Microbiology** (3) Biology and ecology of microorganisms in terrestrial environments; microbiological and molecular analysis methods; microbial processes in carbon and nitrogen cycling.

Effective: Summer 2013

Prerequisite:

**SOILS 513 Soil Environmental Chemistry** (3) Chemical constituents and processes occurring in soils. Discussion of soil components, reactions at the solid-solution interface, and soil chemical processes.

Effective: Summer 2013

Prerequisite:

**SOILS 516 Soil Genesis** (1 per semester, maximum of 4) Field trip to study the genesis, classification, and geomorphology of the major soils of the northeastern United States.

Effective: Summer 2013

Prerequisite:

**SOILS 519 Nature of Soil Minerals** (3) Constituent minerals of soils: modern methods for identification; relations to soil formation and agricultural practices.

Effective: Summer 2013

SOILS 536 (C E 536, GEOSC 536) **Topics in Biogeochemistry** (2) This seminar addresses chemical interactions between the biosphere and the physical environment over Earth's history and as impacted by humans.  
Effective: Summer 2016

SOILS 571 **Ecosystem Nutrient Cycles** (3) Ecological theory and applications related to water, carbon, nitrogen, phosphorus, and cation cycling in managed and unmanaged terrestrial ecosystems.  
Effective: Summer 2013

SOILS 590 (FOR 590, W F S 590) **Colloquium** (1-3 per semester/maximum of 3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.  
Effective: Fall 2015

SOILS 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 2013

SOILS 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Summer 2013

SOILS 600 **THESIS RESEARCH** (1-15) NO DESCRIPTION.  
Effective: Summer 2013

SOILS 601 **PH.D. DISSERTATION FULL-TIME** (0) NO DESCRIPTION.  
Effective: Summer 2013

SOILS 602 **SUPERVISED EXPERIENCE IN COLLEGE TEACHING** (1-3 PER SEMESTER, MAXIMUM OF 6) GRADUATE STUDENT INVOLVEMENT IN PREPARATION, PRESENTATION, AND EVALUATION OF COURSE MATERIALS FOR UNDERGRADUATE FORMAL COURSES.  
Effective: Summer 2013

SOILS 610 **Thesis Research Off-Campus** (1-15) No description.  
Effective: Summer 2013

SOILS 611 **PH.D. DISSERTATION PART-TIME** (0) NO DESCRIPTION.  
Effective: Summer 2013

Last Import from UCM: July 23, 2016 3:00 AM

## Spanish (SPAN)

**SPAN 410 Advanced Oral Expression and Communication** (3) Emphasis on achieving practical command of spoken Spanish and the comprehension of native speech. Use of journalistic materials.

Effective: Fall 1995

Prerequisite:

**SPAN 412 Translation** (3) Techniques of oral and written translation from Spanish to English and vice versa, particularly for business, literature, and social work.

Effective: Spring 2008

Prerequisite:

**SPAN 413 Interpretation** (3) Introduction to the art of interpretation, with particular attention to the professions for which it is most commonly required.

Effective: Summer 2012

Prerequisite:

**SPAN 418 The Evolution of Spanish** (3) The emergence and development of the sounds and forms of Spanish.

Effective: Spring 2013

Prerequisite:

**SPAN 420 Spanish for Business and International Trade** (3) Introduction to the Spanish of international business and to the social and cultural norms of negotiation in Spanish-speaking countries.

Effective: Spring 2008

Prerequisite:

**SPAN 439 Don Quijote** (3) Thorough study of the masterpiece, including its sources, genesis, language, style, success, and influence.

Effective: Spring 2013

Prerequisite:

**SPAN 440 Teaching of Romance Languages** (3) Theories of second language acquisition. Current classroom practices in the teaching of Romance languages.

Effective: Spring 2001

Prerequisite:

**SPAN 472 The Contemporary Spanish American Novel** (3) The regionalist and social novel since 1910, together with the social background.

Effective: Spring 2013

Prerequisite:

**SPAN 474 Many Mexicos** (3) Overview of Mexican literature, culture and history from pre-colonial period to present.

Effective: Summer 2013

Prerequisite:

**SPAN 476 Masterpieces of Spanish American Literature** (3) Reading, analysis, and discussion of selected major works representative of Spanish American prose and poetry.

Effective: Spring 2013

Prerequisite:

**SPAN 479 (GH;US) (LTNST 479) U.S. Latina/o Culture en Espanol** (3) The history, culture, art, and social issues of Latinos in the United States.

Effective: Summer 2014

Prerequisite:

**SPAN 488 War, Revolution, and the Struggles for Modernity: Spain 1898-1939** (3) This course, conducted in Spanish, examines Spanish literature from 1898 to 1939.

Effective: Summer 2014

Prerequisite:

**SPAN 490 Masterpieces of Spanish Prose** (3) Reading, analysis, and discussion of selected masterpieces of Spanish novels, short stories, etc.

Effective: Spring 2013

Prerequisite:

**SPAN 494 Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 1994

**SPAN 494H Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Fall 2007

**SPAN 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

SPAN 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.  
Effective: Fall 1983

SPAN 499 (IL) **Foreign Study--Spanish** (1-12) Contemporary Spanish life and civilization. Emphasis on post-Civil War period: literature, arts, and sociopolitical problems.  
Effective: Summer 2005  
Prerequisite:

SPAN 502 **Theory and Techniques of Teaching Spanish** (1-3) Audio-lingual orientation.  
Effective: Winter 1978

SPAN 507 **Hispano-Romance Linguistics** (3 per semester/maximum of 9) History, development, and linguistic description of Old Spanish and related Romance languages of the Iberian Peninsula.  
Effective: Fall 1983

SPAN 508 **Generative Syntax** (3) This course offers foundations of generative syntax. It addresses the advantage of a scientific model to explain human knowledge of language that also makes predictions about its representation in the mind.  
Effective: Summer 2013

SPAN 509 **Functional Syntax** (3) This course covers foundations of functional syntax. It addresses the advantages of a scientific approach to explain human knowledge of language that makes predictions about its representation in the mind.  
Effective: Summer 2013

SPAN 510 **Spanish Descriptive Linguistics: Phonology** (3) No description.  
Effective: Winter 1978

SPAN 511 **Spanish Transformational-Generative Linguistics** (3) No description.  
Effective: Winter 1978

SPAN 513 **Acquisition of Spanish as a Second Language** (3) Analysis of research on the acquisition of syntax, phonology, lexicon, discourse.  
Effective: Spring 2002  
Prerequisite:

SPAN 514 **Hispanic Dialectology** (3 per semester/maximum of 6) Early fragmentation among the peninsular dialects; their status today, Judeo-Spanish; descriptive analysis of modern Spanish American dialects.  
Effective: Fall 1983

SPAN 516 **Medieval Spanish Literature** (3 per semester/maximum of 9) Topics vary: juglaria and clerecia, emergence of lyric and brief narrative; history and didacticism; origins of novel; balladry; fifteenth-century innovations.  
Effective: Fall 1983

SPAN 528 **Seventeenth-Century Spanish Literature** (3 per semester/maximum of 9) Prose and poetry of major authors: works and trends of the late Golden Age and Baroque period.  
Effective: Fall 1983

SPAN 537 **Golden Age Theatre** (3 per semester/maximum of 6) Major works of Lope de Vega, Tirso de Molina, Calderon, and others.  
Effective: Fall 1983

SPAN 553 **Writings of the "Generation of 1898"** (3 per semester/maximum of 6) Novels, plays, short stories, essays, poetry of Valle-Inclan, Azorin, Benavente, Unamuno, Machado, Maeztu, and Baroja in the context of generation concept.  
Effective: Fall 1983

SPAN 560 **The Contemporary Novel in Spain** (3 per semester, maximum of 9) The novel since 1941: Cela, Laforet, Zunzunegui, Suarez Carreno, Matute, and others.  
Effective: Spring 2001

SPAN 566 **Contemporary Spanish Poetry** (3) Various currents in Spanish poetry from the generation of 1927: Lorca, Aleixandre, Salinas, Guillen, Alonso, Alberti, Hernandez, Otero, and others.  
Effective: Fall 1983

SPAN 568 **Early Spanish American Literature** (3 per semester/maximum of 9) Content varies; selected topics from

colonial period, romanticism, and the nineteenth century before modernism.  
Effective: Fall 1983

SPAN 574 **The Spanish American Novel** (3 per semester/maximum of 9) Content varies; selected works from the late nineteenth century through the contemporary period.  
Effective: Fall 1983

SPAN 587 **Stylistic and Literary Criticism** (3) Major theories of literary criticism applied to Hispanic literature.  
Effective: Winter 1978

SPAN 588 **Seminar in Hispanic Literature** (3-12) Common and individual research in special problems in Spanish or Spanish American literature.  
Effective: Summer 1988

SPAN 589 (CMLIT 589, FR 589, GER 589) **Technology in Foreign Language Education: An Overview** (3) Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with APLNG 589)  
Effective: Spring 2004

SPAN 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Spring 1987

SPAN 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Summer 1988

SPAN 600 **Thesis Research** (1-15) No description.  
Effective: Fall 1983

SPAN 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Fall 1983

SPAN 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.  
Effective: Summer 1999

SPAN 603 **Foreign Academic Experience** (1-12) Foreign study and/or research constituting progress toward the degree at a foreign university.  
Effective: Spring 2001

SPAN 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Fall 1983

SPAN 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Fall 1983

Last Import from UCM: July 23, 2016 3:00 AM

## Special Education (SPLED)

**SPLED 400 Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management (4)** Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings.

Effective: Summer 2011

Prerequisite:

**SPLED 400H Inclusive Special Education Foundations: Honors Section (4)** Legal issues, learner characteristics, communication and collaboration, assessing learners with special needs, behavior management.

Effective: Spring 2016

Prerequisite:

**SPLED 401 Motivating Exceptional Learners (4)** Group and individual techniques to promote student task engagement and prosocial behavior.

Effective: Summer 2011

Prerequisite:

**SPLED 402 Human Rights: Historical and Current Issues in Special Education (3)** Litigation, legislation, regulation, and advocacy issues impacting on educational and related services for individuals with academic and/or physical disabilities.

Effective: Summer 2011

Prerequisite:

**SPLED 403A Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing (3)** Evidence-based methods for design, delivery, and adaption of instruction for elementary students with disabilities in reading, mathematics, and writing.

Effective: Summer 2011

Prerequisite:

**SPLED 403B Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings (3)** Evidence-based methods for designing, delivering, and adapting instruction for students with disabilities in inclusive secondary education settings.

Effective: Summer 2011

Prerequisite:

**SPLED 404 Working with Families and Professionals in Special Education (3)** Strategies for productive interactions between special educators and others such as colleagues, employers, parents, service providers, professionals, and students.

Effective: Summer 2011

Prerequisite:

**SPLED 408 (EDPSY 408) Meeting Instructional Needs of English Language Learners with Special Needs (3)** The course content and activities focus on instruction and assessment for English Language Learners with special needs.

Effective: Summer 2011

Prerequisite:

**SPLED 409A Fundamental Literacy Skills for Students with Special Needs (3)** Effective reading curriculum and teaching methods to teach students with special needs.

Effective: Summer 2011

Prerequisite: Concurrent: SPLED 495G

**SPLED 409B Writing and Content Literacy for Students with Special Needs (3)** Effective curriculum and materials for teaching writing and content literacy to students with special needs.

Effective: Summer 2011

Prerequisite: Concurrent: SPLED 495G

**SPLED 409C Mathematics Instruction for Students with Special Needs (3)** Research-based practices for teaching mathematics skills to students with special needs.

Effective: Summer 2011

Prerequisite: Concurrent: SPLED 495G

**SPLED 411 Intervention for Students with Severe Disabilities (3)** Assessment, teaching strategies, curricula, materials, and assistive techniques for use with individuals having severe disabilities (mental and physical).

Effective: Summer 2011

Prerequisite: Concurrent: a grade of C or better in SPLED 495E

**SPLED 412 Instruction for Students with Mild Disabilities (4)** Appropriate teaching strategies, curriculum sequences, and materials selection and evaluation for children with mild special needs.

Effective: Summer 2011

Prerequisite: Concurrent: a grade of C or better required in SPLED 454

**SPLED 415 Early Special Education (3-4)** Includes early identification methods, assessment, curricula, parent involvement, and program evaluation for exceptional preschoolers in mainstreamed or segregated settings.

Effective: Summer 2011

Prerequisite:

**SPLED 418 Technologies for Persons with Disabilities (3)** Sensory aids, communication systems, computer systems,

expert systems, simulations, and other technologies for students with disabilities.

Effective: Fall 2015

Prerequisite:

**SPLED 419 Assistive Technology for General Education Teachers (2-3)** Strategies to support use of assistive technologies by students with disabilities in general education classrooms.

Effective: Summer 2012

Prerequisite:

**SPLED 420 (RHS 420) Culture & Disability: Study Abroad in Ireland (6)** Students will travel independently to Dublin and overnight accommodations will be organized by the instructors (university dormitories). Travel throughout Ireland will be organized by instructors including visits to disability service agencies, volunteering and other required group travel for this course. Travel may include public busing and private tour companies (when needed), and train(s). Students will be responsible for organizing their flights to and from Ireland.

Effective: Summer 2016

**SPLED 425 Foundations of Special Education, Etiologies, Law, and Implications for Practice (4)** An introduction to exceptional individuals being served in special education programs across the life span.

Effective: Fall 2011

Prerequisite:

**SPLED 430 Foundational Skills for Working with Students with Special Education Needs in General Education Classrooms (1)** Introduction to working with students with special education needs in the general education classroom, including history and legal foundation.

Effective: Summer 2011

Prerequisite:

**SPLED 431 Evidenced-Based Methods for Monitoring Student Progress and Making Instructional Decisions (2)**

Evidence-based methods for assessing student progress and making data-based instructional decisions.

Effective: Summer 2011

Prerequisite:

**SPLED 432 Evidence-Based Practices for Inclusive Behavior Management (2)** Managing and motivating learners with special needs in general education settings based upon principles of Applied Behavior Analysis.

Effective: Summer 2011

Prerequisite:

**SPLED 433 Effective and Explicit Instruction for Students with Learning Difficulties (2)** Evidence-based methods for designing, delivering, and adapting academic instruction for students with mild, moderate, and severe learning difficulties.

Effective: Summer 2011

Prerequisite:

**SPLED 434A Evidence-Based Practices for Inclusive Elementary Classrooms (2)** Evidence-based methods to effectively serve special needs students in elementary general education settings, including reading, writing, and mathematics instruction.

Effective: Summer 2011

Prerequisite:

**SPLED 444 Inclusive Education and Assessment (6)** Knowledge and skills needed to educate students with special needs in urban schools.

Effective: Summer 2011

Prerequisite: Concurrent: URBED 395W

**SPLED 454 Assessment for Instruction (4)** Orientation to evaluation of special students with emphasis on the creation, use, and interpretation of teacher-made assessment procedures.

Effective: Summer 2011

Prerequisite: Concurrent: a grade of C or better in SPLED 412

**SPLED 460A Fundamentals of Reading Instruction in Special Education (3)** Topics include the interactive nature of reading, recent findings of the National Reading Panel, explicit instruction principles and reading assessments.

Effective: Summer 2011

**SPLED 460B Teaching and Assessing Reading Skills of Students with Special Needs (3)** Topics include methods for assessing and teaching reading skills including fluency, word level decoding and comprehension.

Effective: Summer 2011

Prerequisite:

**SPLED 460C Specialized Reading Applications in Special Education (3)** Topics include methods for assessing and teaching reading skills in vocational competence, functional reading, reading for students with sensory impairment.

Effective: Summer 2011

Prerequisite:

**SPLED 461 Introduction to Autism Spectrum Disorders: Issues and Concerns (3)** Overview of issues, characteristics, and evidenced-based assessment strategies, and approaches for individuals with autism/PDD.

Effective: Spring 2013

Prerequisite:

**SPLED 462 Autism and Applied Behavior Analysis (3)** This course addresses principles of applied behavior analysis and

empiricism related to instruction and special issues affecting individuals with autism.

Effective: Spring 2013

Prerequisite:

**SPLED 463 Communication and Social Competence** (3) Overview of deficits and strategies in speech, language, and communication across the Autism Spectrum Disorder.

Effective: Summer 2011

Prerequisite:

**SPLED 464 Assessment and Curriculum** (3) Overview of screening, diagnosis, and identification of skills in developmental domains and curricula for individuals with autism.

Effective: Summer 2011

Prerequisite:

**SPLED 465 Asperger Syndrome** (1) Characteristics, assessment, intervention, and curricula for individuals with Asperger syndrome. Emphasis will be given to social skill development.

Effective: Summer 2011

**SPLED 495E Experience with Exceptional Children** (3) Supervised activities with exceptional children in a variety of possible settings, e.g., schools, institutions, day care centers, vocational settings.

Effective: Summer 2011

Prerequisite: Concurrent: a grade of C or better in SPLED 411 SPLED 412

**SPLED 495F Practicum in Special Education** (15) Teaching experience with mildly/moderately disabled children in age appropriate settings, e.g., infant/preschools, schools, vocational/job sites.

Effective: Summer 2011

Prerequisite:

**SPLED 495G Experience with an Integrated Inclusion Classroom** (4) Supervised teaching in integrated general classrooms with activities in assessment, diagnosis, and direct intervention with students in need or with disabilities.

Effective: Summer 2011

Prerequisite: Concurrent: a grade of C or better required in SPLED 409

**SPLED 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2011

**SPLED 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2011

**SPLED 498 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2011

**SPLED 500 Seminar in Special Education** (1-9) Continuing series of professional seminars designed to provide a forum for discussion of current and classical research concerning exceptional children.

Effective: Summer 2011

Prerequisite:

**SPLED 501 Administration and Supervision of Educational Programs for Exceptional Children** (2-3) Problems connected with the instituting and organizing of classes for atypical children; the legal phases, finances, teaching personnel, pupil personnel, housing, equipment, courses of study, curriculum, etc.

Effective: Summer 2011

Prerequisite:

**SPLED 502 Educating Individuals with Autism Spectrum Disorders** (3) This seminar addresses evidence-based strategies related to individuals with ASD including characteristics, assessment, treatment approaches, and life-span programming.

Effective: Summer 2011

**SPLED 503A Applied Behavior Analysis for Special Education: Basic Principles I** (4) Topics include a history of applied behavior analysis; underlying assumptions; dimensions and characteristics of ABA; ethics; basic terminology and principles.

Effective: Summer 2011

**SPLED 503B Applied Behavior Analysis for Special Education: Basic Principles II** (4) Topics include functional assessment of behavior, ethics, methods to increase and decrease behavior, and generalization.

Effective: Summer 2011

Prerequisite:

**SPLED 503C Applied Behavior Analysis for Special Education: Extended Applications I** (4) Topics include assessment and intervention for challenging behavior, systems support, classroom applications of ABA, and review of ABA Certification Exam.

Effective: Summer 2011

Prerequisite:

**SPLED 503D Applied Behavior Analysis for Special Education: Extended Applications II (3)** In this course students learn additional techniques to promote meaningful behavior change using principles of behavior.

Effective: Fall 2012

Prerequisite:

**SPLED 504 Classroom and School-Wide Management Practices in Special Education (3)** Developing function-based individual interventions as well as class-wide behavior supports for students with disabilities.

Effective: Summer 2015

Prerequisite:

**SPLED 505 Single-Case Research (3)** Overview of research methods associated with collecting and evaluating repeated measures on single cases.

Effective: Summer 2011

**SPLED 509A Seminar in Literacy Skills Instruction for Students with Disabilities (3)** Review of research in reading instruction for students with disabilities and analysis of implications for classroom practice.

Effective: Summer 2015

Prerequisite:

**SPLED 509B Seminar in Writing and Content Literacy Instruction for Students with Disabilities (3)** Evidence-based methods for designing and implementing writing and content literacy instruction for learners with special needs across content areas.

Effective: Summer 2015

Prerequisite:

**SPLED 509C Seminar in Mathematics and Science Instruction for Students with Disabilities (3)** Explore advanced methods of effective mathematics and science instruction for students with disabilities.

Effective: Summer 2015

Prerequisite:

**SPLED 510 Problems in the Education of the Mentally Retarded (2-4)** Study of existing curriculums, instructional practices, educational programs; experimentation in curriculum building and materials construction.

Effective: Summer 2011

Prerequisite:

**SPLED 511 Ethical Considerations for Special Education Populations (3)** Discussion of ethical and legal standards in special education.

Effective: Summer 2012

**SPLED 512 Advanced Instructional Design and Delivery for Students with High-Incidence Disabilities (3)** Explore research underlying effective instruction for students with high- incidence disabilities and use information to design and deliver class lessons.

Effective: Summer 2015

Prerequisite:

**SPLED 515 Infants and Toddlers with Special Needs (3)** Comparison of typical and atypical development of infants and toddlers; applicable instructional strategies in education.

Effective: Summer 2011

Prerequisite:

**SPLED 516 Assessment in Early Educational Intervention (2-3)** Describes and illustrates models, methods, and materials for assessing infants and preschoolers with developmental delays and disabilities.

Effective: Summer 2011

Prerequisite:

**SPLED 520 (EDPSY 520) Current Issues in Special Education (3)** Explore current issues and research in the field of special education.

Effective: Fall 2015

Prerequisite:

**SPLED 521 Capstone Seminar in Special Education (3)** Seminar dealing with advanced research analysis, interpretation, synthesis, and presentation in special education.

Effective: Summer 2015

Prerequisite:

**SPLED 525 Teaching Learners with Disabilities in Inclusive Settings (3)** Strategies for educating learners with disabilities in inclusive settings with an emphasis on instruction, accommodations, collaboration, and consultation.

Effective: Summer 2014

Prerequisite:

**SPLED 530 Problems in the Education of the Learning Disabled (2-4)** Review of the research and theoretical implications in the educational and behavioral management of learning disabled children.

Effective: Summer 2011

Prerequisite:

**SPLED 540 Orientation to PhD Study in Special Education (3)** Information and skills needed for successful completion of Ph.D. study in Special Education for those targeting academic careers.

Effective: Summer 2011

Prerequisite:

**SPLED 550 Professional Seminar in Special Education (2)** Professional competencies and ethical issues related to obtaining and retaining positions in higher education.

Effective: Summer 2011

Prerequisite:

**SPLED 554 Developing and Interpreting Assessments in Special Education (3)** Advanced assessment of special needs learners including research and legal basis for norm-referenced and informal assessments.

Effective: Fall 2015

Prerequisite:

**SPLED 570 Problems in the Education of the Emotionally Disturbed (2-4)** Current issues, methods, and problems associated with the education of the emotionally/behaviorally disturbed.

Effective: Summer 2011

Concurrent: SPLED 305 SPLED 401

**SPLED 573 Introduction to Research in Special Education (3)** A seminar to review and design research in special education.

Effective: Summer 2011

Prerequisite:

**SPLED 575 Grant-Proposal Development in Special Education (3)** Designed to facilitate development of grants and proposal writing techniques for submission and funding by student researchers.

Effective: Summer 2011

Prerequisite:

**SPLED 594 Reserach Topics (1-15)** Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 2011

**SPLED 595 Internship (1-12)** Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes A, B, etc.

Effective: Summer 2011

**SPLED 595A Practicum (1-6)** Supervised clinical experience on campus in University-managed diagnostic and remedial settings.

Effective: Summer 2011

Prerequisite:

**SPLED 595B Field Experiences in Off-Campus Laboratories (1-10)** Supervised off-campus field experiences in selected laboratory settings with exceptional children.

Effective: Summer 2011

Prerequisite:

**SPLED 595C Internship in Special Education Supervision (1-6)** Internship in day/residential school setting under supervision of field supervisor and University faculty.

Effective: Summer 2011

Prerequisite:

**SPLED 595D Internship in Special Education (2-10)** Internship to take place in schools or educational situations where student is not regularly employed, under supervision of graduate faculty.

Effective: Summer 2011

Prerequisite:

**SPLED 596 Individual Studies (1-9)** Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2011

**SPLED 597 Special Topics (1-9)** Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Summer 2011

**SPLED 600 Thesis Research (1-15)** No description.

Effective: Summer 2011

**SPLED 601 Ph.D. Dissertation Full-Time (0)** No description.

Effective: Summer 2011

**SPLED 602 Supervised Experience in College Teaching (1-3 per semester/maximum of 6)** Experience in structuring and teaching a college course supervised by a graduate faculty member.

Effective: Summer 2011

SPLED 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Summer 2011

SPLED 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Summer 2011

SPLED 801 **Evidence-Based Student, Classroom, and School-Wide Behavior Supports** (3) Overview of motivation, encouraging positive behaviors, effective classroom management, performance feedback, functional behavior assessment, collaboration, generalization, and maintenance of behavior.  
Effective: Fall 2015

SPLED 802 **Design and Delivery of Evidence-Based Instruction for Learners with Special Needs** (3) Evidence-based methods for designing, delivering, and adapting instruction for students with special needs in general education settings.  
Effective: Fall 2015

SPLED 803 **Evidence-Based Assessment for Teaching Learners with Special Needs** (3) Overview of special education assessment law, the assessment process, monitoring academic progress, classroom behavior, and assessing learners with severe disabilities.  
Effective: Summer 2015

SPLED 867 **Practicum in Applied Behavior Analysis** (2-4 per semester/maximum of 10) Supervised experience in applied settings implementing behavior management techniques.  
Effective: Fall 2012  
Concurrent: SPLED 503A SPLED 503B SPLED 503C SPLED 503D

Last Import from UCM: July 23, 2016 3:00 AM

## Special Grad Pgmr (SPEC)

SPEC 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Fall 1993

SPEC 600 **Thesis Research** (1-15) No description.  
Effective: Fall 1983

SPEC 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Fall 1983

SPEC 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Fall 1983

SPEC 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Fall 1983

Last Import from UCM: July 23, 2016 3:00 AM

## Statistics (STAT)

**STAT 401 Experimental Methods** (3) Random variables; probability density functions; estimation; statistical tests, t-tests; correlation; simple linear regression; one-way analysis of variance; randomized blocks.

Effective: Spring 1988

Prerequisite:

**STAT 414 (MATH 414) Introduction to Probability Theory** (3) Probability spaces, discrete and continuous random variables, transformations, expectations, generating functions, conditional distributions, law of large numbers, central limit theorems. Students may take only one course from STAT(MATH) 414 and 418.

Effective: Fall 2001

Prerequisite:

**STAT 415 (MATH 415) Introduction to Mathematical Statistics** (3) A theoretical treatment of statistical inference, including sufficiency, estimation, testing, regression, analysis of variance, and chi-square tests.

Effective: Fall 1989

Prerequisite:

**STAT 416 (MATH 416) Stochastic Modeling** (3) Review of distribution models, probability generating functions, transforms, convolutions, Markov chains, equilibrium distributions, Poisson process, birth and death processes, estimation.

Effective: Spring 1984

Prerequisite:

**STAT 418 (MATH 418) Introduction to Probability and Stochastic Processes for Engineering** (3) Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH(STAT) 414 and 418 for credit.

Effective: Fall 2011

Prerequisite:

**STAT 440 Computational Statistics** (3) Topics related to computing in statistics, including numerical linear algebra, optimization, simulation, numerical integration, and bootstrapping.

Effective: Spring 2006

Prerequisite:

**STAT 460 Intermediate Applied Statistics** (3) Review of hypothesis testing, goodness-of-fit tests, regression, correlation analysis, completely randomized designs, randomized complete block designs, latin squares.

Effective: Summer 2015

Prerequisite:

**STAT 461 Analysis of Variance** (3) Analysis of variance for single and multifactor designs; response surface methodology.

Effective: Summer 2015

Prerequisite:

**STAT 462 Applied Regression Analysis** (3) Introduction to linear and multiple regression; correlation; choice of models, stepwise regression, nonlinear regression.

Effective: Summer 2015

Prerequisite:

**STAT 463 Applied Time Series Analysis** (3) Identification of models for empirical data collected over time; use of models in forecasting.

Effective: Spring 2006

Prerequisite:

**STAT 464 Applied Nonparametric Statistics** (3) Tests based on nominal and ordinal data for both related and independent samples. Chi-square tests, correlation.

Effective: Summer 2015

Prerequisite:

**STAT 466 Survey Sampling** (3) Introduction to design and analysis of sample surveys, including questionnaire design, data collection, sampling methods, and ratio and regression estimation.

Effective: Summer 2015

Prerequisite:

**STAT 470W Problem Solving and Communication in Applied Statistics** (3) Provide problem solving and communication skills through development of writing ability, interaction with peers and the SCC, and oral presentations.

Effective: Spring 2015

Prerequisite:

**STAT 480 Introduction to SAS** (1) Introduction to SAS with emphasis on reading, manipulating and summarizing data.

Effective: Spring 2008

Prerequisite:

**STAT 481 Intermediate SAS for Data Management** (1) Intermediate SAS for data management.

Effective: Summer 2007

Prerequisite:

**STAT 482 Advanced Topics in SAS** (1) Advanced statistical procedures in SAS, including ANOVA, GLM, CORR, REG,

MANOVA, FACTOR, DISCRIM, LOGISTIC, MIXED, GRAPH, EXPORT, and SQL.

Effective: Summer 2009

Prerequisite:

**STAT 483 Statistical Analysis System Programming (3)** Introduction, intermediate, and advanced topics in SAS. Credit can not be received for both STAT 483 and STAT 480/481/482.

Effective: Summer 2009

Prerequisite:

**STAT 484 The R Statistical Programming Language (1)** Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics.

Effective: Summer 2016

Prerequisite:

**STAT 485 Intermediate R Statistical Programming Language (1)** Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics.

Effective: Summer 2016

Prerequisite:

**STAT 494 Research Project (1-12)** Supervised student activities on research projects identified on an individual or small group basis.

Effective: Fall 2007

Prerequisite:

**STAT 494H Research Project (1-12)** Supervised student activities on research projects identified on an individual or small group basis.

Effective: Fall 2007

Prerequisite:

**STAT 495 Internship (1-18)** Supervised off-campus, nongroup instruction including field experiences, practica, or internships.

Effective: Fall 2007

Prerequisite:

**STAT 496 Independent Studies (1-18)** Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

**STAT 497 Special Topics (1-9)** Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

**STAT 497D Intermediate R Statistical Programming Language (1)** Intermediate R Statistical Programming Language (1) Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics.

Effective: Summer 2016 Ending: Summer 2016

**STAT 499 (IL) Foreign Studies (1-12)** Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2005

**STAT 500 Applied Statistics (3)** Descriptive statistics, hypothesis testing, power, estimation, confidence intervals, regression, one- and 2-way ANOVA, Chi-square tests, diagnostics.

Effective: Spring 1999

Prerequisite:

**STAT 501 Regression Methods (3)** Analysis of research data through simple and multiple regression and correlation; polynomial models; indicator variables; step-wise, piece-wise, and logistic regression.

Effective: Fall 2006

Prerequisite:

**STAT 502 Analysis of Variance and Design of Experiments (3)** Analysis of variance and design concepts; factorial, nested, and unbalanced data; ANCOVA; blocked, Latin square, split-plot, repeated measures designs.

Effective: Fall 1995

Prerequisite:

**STAT 503 Design of Experiments (3)** Design principles; optimality; confounding in split-plot, repeated measures, fractional factorial, response surface, and balanced/partially balanced incomplete block designs.

Effective: Fall 1983

Prerequisite:

**STAT 504 Analysis of Discrete Data (3)** Models for frequency arrays; goodness-of-fit tests; two-, three-, and higher-way tables; latent and logistic models.

Effective: Fall 1983

Prerequisite:

**STAT 505 Applied Multivariate Statistical Analysis (3)** Analysis of multivariate data; T2-tests; partial correlation; discrimination; MANOVA; cluster analysis; regression; growth curves; factor analysis; principal components; canonical correlations.

Effective: Spring 2003

Prerequisite:

**STAT 506 Sampling Theory and Methods** (3) Theory and application of sampling from finite populations.

Effective: Fall 1983

Prerequisite:

**STAT 507 Epidemiologic Research Methods** (3) Research and quantitative methods for analysis of epidemiologic observational studies. Non-randomized, intervention studies for human health, and disease treatment.

Effective: Spring 2005

Prerequisite:

**STAT 509 Design and Analysis of Clinical Trials** (3) An introduction to the design and statistical analysis of randomized and observational studies in biomedical research.

Effective: Fall 2004

Prerequisite:

**STAT 510 Applied Time Series Analysis** (3) Identification of models for empirical data collected over time. Use of models in forecasting.

Effective: Fall 1983

Prerequisite:

**STAT 511 Regression Analysis and Modeling** (3) Multiple regression methodology using matrix notation; linear, polynomial, and nonlinear models; indicator variables; AOV models; piece-wise regression, autocorrelation; residual analyses.

Effective: Fall 2006

Prerequisite:

**STAT 512 Design and Analysis of Experiments** (3) AOV, unbalanced, nested factors; CRD, RCBD, Latin squares, split-plot, and repeated measures; incomplete block, fractional factorial, response surface designs; confounding.

Effective: Spring 1984

Prerequisite:

**STAT 513 Theory of Statistics I** (3) Probability models, random variables, expectation, generating functions, distribution theory, limit theorems, parametric families, exponential families, sampling distributions.

Effective: Summer 1986

Prerequisite:

**STAT 514 Theory of Statistics II** (3) Sufficiency, completeness, likelihood, estimation, testing, decision theory, Bayesian inference, sequential procedures, multivariate distributions and inference, nonparametric inference.

Effective: Summer 1986

Prerequisite:

**STAT 515 Stochastic Processes and Monte Carlo Methods** (3) Conditional probability and expectation, Markov chains, Poisson processes, Continuous-time Markov chains, Monte Carlo methods, Markov chain Monte Carlo.

Effective: Spring 2013

Prerequisite:

**STAT 517 (MATH 517) Probability Theory** (3) Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

Effective: Summer 2000

Prerequisite:

**STAT 518 (MATH 518) Probability Theory** (3) Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

Effective: Fall 1983

Prerequisite:

**STAT 519 (MATH 519) Topics in Stochastic Processes** (3) Selected topics in stochastic processes, including Markov and Wiener processes; stochastic integrals, optimization, and control; optimal filtering.

Effective: Fall 1984

Prerequisite:

**STAT 525 Survival Analysis I** (3) Location estimation, 2- and K- sample problems, matched pairs, tests for association and covariance analysis when the data are censored.

Effective: Summer 1992

Prerequisite:

**STAT 540 Statistical Computing** (3) Computational foundations of statistics; algorithms for linear and nonlinear models, discrete algorithms in statistics, graphics, missing data, Monte Carlo techniques.

Effective: Fall 1983

Prerequisite:

**STAT 544 Categorical Data Analysis I** (3) Two-way tables; generalized linear models; logistic and conditional logistic models; loglinear models; fitting strategies; model selection; residual analysis.

Effective: Summer 1992

Prerequisite:

**STAT 551 Linear Models I** (3) A coordinate-free treatment of the theory of univariate linear models, including multiple regression and analysis of variance models.

Effective: Spring 1987

Prerequisite:

STAT 552 **Linear Models II** (3) Treatment of other normal models, including generalized linear, repeated measures, random effects, mixed, correlation, and some multivariate models.

Effective: Spring 1987

Prerequisite:

STAT 553 **Asymptotic Tools** (3) A rigorous but non-measure-theoretic introduction to statistical large-sample theory for Ph.D. students.

Effective: Summer 2004

Prerequisite:

STAT 555 (BIOL 555, IBIOS 555) **Statistical Analysis of Genomics Data** (3) Statistical Analysis of High Throughput Biology Experiments.

Effective: Spring 2014 Ending: Summer 2016

STAT 555 (BIOL 555, MCIBS 555) **Statistical Analysis of Genomics Data** (3) Statistical Analysis of High Throughput Biology Experiments.

Effective: Fall 2016 Future: Fall 2016

STAT 557 **Data Mining I** (3) This course introduces data mining and statistical/machine learning, and their applications in information retrieval, database management, and image analysis.

Effective: Fall 2015

Prerequisite:

STAT 558 (IST 558) **Data Mining II** (3) Advanced data mining techniques: temporal pattern mining, network mining, boosting, discriminative models, generative models, data warehouse, and choosing mining algorithms.

Effective: Summer 2010

Prerequisite:

STAT 561 **Statistical Inference I** (3) Classical optimal hypothesis test and confidence regions, Bayesian inference, Bayesian computation, large sample relationship between Bayesian and classical procedures.

Effective: Spring 2003

Prerequisite: Concurrent: STAT 517

STAT 562 **Statistical Inference II** (3) Basic limit theorems; asymptotically efficient estimators and tests; local asymptotic analysis; estimating equations and generalized linear models.

Effective: Spring 2003

Prerequisite:

STAT 565 **Multivariate Analysis** (3) Theoretical treatment of methods for analyzing multivariate data, including Hotelling's T<sup>2</sup>, MANOVA, discrimination, principal components, and canonical analysis.

Effective: Spring 1987

Prerequisite:

STAT 580 **Statistical Consulting Practicum I** (2) General principles of statistical consulting and statistical consulting experience. Preparation of reports, presentations, and communication aspects of consulting are discussed.

Effective: Spring 2005

Prerequisite:

STAT 581 **Statistical Consulting Practicum II** (1 per semester/maximum of 2) Statistical consulting experience including client meetings, development of recommendation reports, and discussion of consulting solutions.

Effective: Summer 2004

Prerequisite:

STAT 584 (CSE 584) **Machine Learning: Tools and Algorithms** (3) Computational methods for modern machine learning models, including applications to big data and non-differentiable objective functions.

Effective: Fall 2015

STAT 590 **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Spring 1987

STAT 592 **Teaching Statistics** (1) This course is designed to help students become better teachers and communicators of statistics.

Effective: Summer 2015

STAT 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1987

STAT 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Effective: Spring 1987

STAT 600 **Thesis Research** (1-15) No description.  
Effective: Fall 1983

STAT 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Fall 1983

STAT 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Fall 1983

STAT 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Fall 1983

STAT 800 **Applied Research Methods** (3) Investigates methods for assessing data collected from experimental and/or observational studies in various research setting.  
Effective: Spring 2014

STAT 897 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.  
Effective: Spring 2008

STAT 897D **Applied Data Mining and Statistical Learning** (3) Data Mining tools for exploring data with regression, PCA, discriminate analysis, cluster analysis, classification and regression trees (CART) term.  
Effective: Summer 2016 Ending: Summer 2016  
Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## **Strctrl Basis-Med Pr (SBMP)**

SBMP 715 **Structural Basis of Medical Practice** (13) This integrated course will provide gross structure, organization, and function of human body with labs devoted to dissection of human body; clinical and radiological correlation.  
Effective: Summer 1997

Last Import from UCM: July 23, 2016 3:00 AM

## **Study Abroad (ABLAW)**

ABLAW 900 **Study Abroad** (1-17) Law student attending international study abroad program.  
Effective: Summer 2008

Last Import from UCM: July 23, 2016 3:00 AM

## **Study Abroad (STABO)**

STABO 999 (IL) **Study Abroad** (1-12) See summer program brochure for description.  
Effective: Summer 2005

Last Import from UCM: July 23, 2016 3:00 AM

## Study Abroad (STABR)

STABR 997 **Special Topics** (1-12) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Summer 2010

STABR 999 (IL) **Study Abroad** (1-12) See summer program brochure for description.  
Effective: Summer 2005

Last Import from UCM: July 23, 2016 3:00 AM

## Summer Practicum (SP)

SP 714 **Summer Practicum** (1) The Penn State College of Medicine's summer practicum gives students the opportunity to gain direct experience in the care of patients in conducting biomedical research. The course is offered during the summer session between the first and second year of medical school.

Effective: Summer 2011

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Supply Chain Mgmt (SCM)

**SCM 400 Transport Planning** (3) Advanced study of transport systems in supply chain networks.

Effective: Spring 2007

Prerequisite:

**SCM 404 Demand Fulfillment** (3) Analysis of demand fulfillment and the role of distribution operations management in the supply chain.

Effective: Spring 2011

Prerequisite:

**SCM 405 Manufacturing and Services Strategies** (3) Investigates manufacturing and services strategies in supply chain networks.

Effective: Spring 2011

Prerequisite:

**SCM 406 Strategic Procurement** (3) Analysis of strategic procurement in the supply chain.

Effective: Summer 2011

Prerequisite:

**SCM 416 Warehousing and Terminal Management** (3) Administration of warehouse and terminal functions in logistics systems, with analysis of customer service, forecasting, inventory, investment, design, and operation. Not available to baccalaureate business students in Smeal.

Effective: Spring 2007

Prerequisite:

**SCM 421 Supply Chain Analytics** (3) Models and Methodologies for supply chain analysis.

Effective: Spring 2011

Prerequisite:

**SCM 445 Operations Planning and Control** (3) Aggregate production planning procedures, disaggregation methods in hierarchical production planning, master production scheduling, material requirements planning, lot-sizing, and capacity planning. Not available to baccalaureate business students in Smeal.

Effective: Fall 2012

Prerequisite:

**SCM 450W Strategic Design and Management of Supply Chains** (3) Strategic design and management of supply chains.

Effective: Fall 2011

Prerequisite:

**SCM 455 Logistics Systems Analysis and Design** (3) Customer service, inventory management, transportation, warehousing, purchasing, international logistics, site location planning and analysis, and total cost analysis.

Effective: Spring 2007

Prerequisite:

**SCM 460 Purchasing and Materials Management** (3) Purchasing policies, procedures, order specifications and agreements, supplier selection, and the role of purchasing in production planning and inventory management. Not available to baccalaureate business students in Smeal.

Effective: Spring 2007

Prerequisite:

**SCM 465 Electronic Business Management** (3) A problem-based exploration of the various electronic business tools and technologies required to efficiently manage a supply chain. Not available to baccalaureate business students in Smeal.

Effective: Spring 2007

Prerequisite:

**SCM 494 Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Spring 2007

**SCM 494H Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Spring 2008

**SCM 496 Independent Studies** (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Effective: Spring 2007

**SCM 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Effective: Spring 2007

**SCM 498 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Effective: Spring 2007

**SCM 499 (IL) Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2007

**SCM 530 Supply Chain Analysis** (3) Methods and tools to support supply chain decision making with emphasis on forecasting, inventory analysis, and demand planning.

Effective: Summer 2007

Prerequisite:

**SCM 540 Transportation in Supply Chains** (2) Strategies and processes for design and implementation of transportation service links in supply chain networks.

Effective: Summer 2002

Prerequisite:

**SCM 546 Strategic Procurement** (2) Development of procurement and supply management strategies to support synchronized supply chains.

Effective: Summer 2002

Prerequisite:

**SCM 556 Manufacturing Strategy** (2) Development of service-sensitive manufacturing strategies to support synchronized supply chains.

Effective: Summer 2002

Prerequisite:

**SCM 566 Demand Fulfillment** (2) Demand fulfillment strategies, operations, and methods in supply chain networks.

Effective: Summer 2002

Prerequisite:

**SCM 570 Supply Chain Modeling** (2) Explore current modeling methods and software for design, analysis, execution and integration of supply chains.

Effective: Summer 2002

Prerequisite:

**SCM 576 Logistics and Supply Chain Leadership** (2) Current issues and best practices for selected supply chain leadership topics.

Effective: Summer 2002

Prerequisite:

**SCM 594 Research Topics** (1-15) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 2007

**SCM 595 Internship** (1-9) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships.

Effective: Fall 2013

**SCM 596 Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2013

**SCM 597 Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Effective: Spring 2002

**SCM 597F Demand Planning** (2) Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Effective: Summer 2016 Ending: Summer 2016

**SCM 800 Supply Chain Management** (4) Introduction to the strategic framework, issues, and methods for integrating supply and demand management within and across companies.

Effective: Summer 2007

**SCM 801 Supply Chain Performance Metrics and Financial Analysis** (1) Performance metrics used in supply chain management, both within the enterprise and across the extended enterprise.

Effective: Fall 2016 Future: Fall 2016

Concurrent: SCM 800

**SCM 810 Transportation and Distribution** (4) Role of transportation and distribution operations in matching supply with demand; principles of transport industry analysis and competitive positioning.

Effective: Summer 2007

Prerequisite:

**SCM 812 Demand Fulfillment (2)** This course covers the forecasting and inventory management activities involved in the fulfillment of demand for finished goods.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SCM 814 Logistics and Transportation Management (4)** The role of logistics and transportation in matching supply with demand.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SCM 815 Product Realization: Development, Manufacturing, and the Supply Chain (4)** Integration of product development, production, and supply chain processes required to launch products from design concept to steady state manufacturing.

Effective: Fall 2012

**SCM 820 Strategic Procurement (4)** Strategic planning for the source/buy process, including developing and managing supplier relationships, global issues, and e-procurement.

Effective: Summer 2007

Prerequisite:

**SCM 822 Supply Management (2)** An overview of the strategic role that supply management has in effective supply, demand, and value chain operations.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SCM 824 Strategic Procurement (4)** Alignment of suppliers with the strategic needs and direction of the organization.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SCM 830 Supply Chain Analysis (2)** Methods and tools to support supply chain decision making with emphasis on forecasting, inventory analysis, and demand planning.

Effective: Summer 2007

Prerequisite:

**SCM 840 Supply Chain Project Management (4)** The fundamentals and tools of managing supply chain projects, with special emphasis given to related information technology projects.

Effective: Summer 2007

Prerequisite:

**SCM 842 Manufacturing and Service Operations Planning (2)** Planning strategies for managing manufacturing and service operations within supply chains.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SCM 844 Global Manufacturing and Service Operations (4)** A detailed review of concepts, tools, and strategies for managing global manufacturing and service operations.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**SCM 846 Topics in Supply Chain Management (4)** Emerging issues in supply chain management, from procurement through manufacturing, logistics, and sales.

Effective: Summer 2014

Prerequisite:

**SCM 850 Supply Chain Design and Strategy (4)** Design and management of supply chain networks, emphasizing the alignment of supply chain networks with corporate competitive strategy.

Effective: Summer 2007

Prerequisite:

**SCM 860 Supply Chain Transformation and Innovation (4)** Strategic supply chain transformation and innovation with emphasis on (re)configuration of key capabilities to achieve competitive advantages.

Effective: Summer 2007

Prerequisite:

**SCM 894 Research Topics (1-15)** Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 2007

**SCM 896 Individual Studies (1-9)** Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2007

**SCM 897 Special Topics (1-9)** Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Effective: Summer 2007

**SCM 898 Special Topics (1-9)** Formal courses given on a topical or special interest subject which may be offered

infrequently; several different topics may be taught in one year or term.  
Effective: Summer 2007

Last Import from UCM: July 23, 2016 3:00 AM

## Supply Chain and Information Systems (SC&IS)

SC&IS 505 **Management Information Systems Research** (1-3) Research problems and issues in supply chain and information systems.  
Effective: Spring 2006

SC&IS 510 **Introduction to Supply Chain and Information Systems** (3) Introduction to the strategic framework, issues, and methods for integrating supply and demand management within and across companies.  
Effective: Spring 2006

SC&IS 516 (I E 516) **Applied Stochastic Processes** (3) Study of stochastic processes and their applications to engineering and supply chain and information systems.  
Effective: Spring 2006  
Prerequisite:

SC&IS 519 (I E 519) **Dynamic Programming** (3) Theory and application of dynamic programming; Markov decision processes with emphasis on applications in engineering systems, supply chain and information systems.  
Effective: Spring 2006  
Prerequisite:

SC&IS 520 **Principles of SC&IS I** (3) Initial course on principles of supply chain and information systems with special emphasis on potential research topics.  
Effective: Spring 2006  
Prerequisite:

SC&IS 525 **Supply Chain Optimization** (3) Introduction to theory and practice of optimization methods and models for analyzing and improving the performance of supply chain environments.  
Effective: Spring 2006  
Prerequisite:

SC&IS 530 **Principles of SC&IS II** (3) Sequel on principles of supply chain and information systems with special emphasis on potential research topics.  
Effective: Spring 2006  
Prerequisite:

SC&IS 535 **Statistical Research Methods for Supply Chain and Information Systems** (3) Current statistical research methods for modeling and analysis of supply chain and information systems.  
Effective: Spring 2006  
Prerequisite:

SC&IS 540 **Transportation and Distribution Management** (3) Transportation and distribution systems in supply chains. Emphasis on role of system cost, price, service elements in total order management.  
Effective: Spring 2006

SC&IS 545 **Supply Chain Systems Simulation** (3) Application of computer simulation to analysis and design of supply chain and information systems design; simulation experiments in SC&IS research.  
Effective: Spring 2006  
Prerequisite:

SC&IS 546 **Procurement and Supply Management** (3) Analysis, planning, and management of domestic and international procurement and supply activities.  
Effective: Spring 2006

SC&IS 560 **Seminar in Transport Economics and Policy** (3 per semester/maximum of 6) Comparative analysis of theoretical and empirical studies in transport cost, demand, pricing, and policy problems.  
Effective: Spring 2006

SC&IS 565 **Supply Chain Strategy** (3) Strategies, issues and best practices in technology adoption, change management, financial/capability assessments, critical aspects of relationship management in supply-chain networks.  
Effective: Spring 2006  
Prerequisite:

SC&IS 570 (I E 570) **Supply Chain Engineering** (3) Use of operations research models and methods for solving problems in supply chain systems.  
Effective: Spring 2014  
Prerequisite:

SC&IS 590 **Colloquium** (1-3) Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.  
Effective: Summer 2004

SC&IS 594 **Research Topics** (1-15) Supervised student activities on research projects identified on an individual or

small-group basis.  
Effective: Spring 2005

SC&IS 595 **Internship** (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.  
Effective: Spring 2005

SC&IS 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student's transcript.  
Effective: Summer 2004

SC&IS 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Summer 2004

SC&IS 598 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Spring 2005

SC&IS 599 (IL) **Foreign Studies** (1-2 per semester/maximum of 4) Courses offered in foreign countries by individual or group instruction.  
Effective: Summer 2005

SC&IS 600 **Thesis Research** (1-15) No description.  
Effective: Spring 2004

SC&IS 601 **Thesis Preparation** No description.  
Effective: Spring 2004

SC&IS 610 **Thesis Research** (1-15) No description.  
Effective: Spring 2004

SC&IS 611 **Thesis Preparation** No description.  
Effective: Spring 2004

Last Import from UCM: July 23, 2016 3:00 AM

## Surgery-Hy (SURG)

**SURG 700 Surgical Core Clerkship** (15) Fundamental surgical course for medical students designed to provide basic surgical information and clinical exposure.

Effective: Winter 1978

Prerequisite:

**SURG 710 General Surgery Acting Internship** (5) Four week General Surgery Acting Internship.

Effective: Spring 2009

Prerequisite:

**SURG 711 Cardiothoracic Surgery Acting Internship** (5) Acting Internship in Adult Cardiothoracic Surgery.

Effective: Spring 2009

Prerequisite:

**SURG 712 Surgical Endocrinology Elective** (5) An in-depth experience involving the medical and surgical management of endocrinological disorders.

Effective: Summer 2012

Prerequisite:

**SURG 713 Vascular Surgery Acting Internship** (5) An opportunity for in-depth experience in vascular surgery.

Effective: Spring 2009

Prerequisite:

**SURG 714 Transplant Surgery Acting Internship** (5) An in-depth experience in the preoperative evaluation, intra-operative procedures, and postoperative management of kidney, liver, and pancreas transplant patients.

Effective: Spring 2009

Prerequisite:

**SURG 720 Plastic Surgery Acting Internship** (5) Preceptorship with an active plastic surgical service at The Milton S. Hershey Medical Center or an affiliated hospital.

Effective: Spring 2009

Prerequisite:

**SURG 722 Hand Surgery Acting Internship** (5) Surgical Acting Internship experience in Hand Surgery.

Effective: Spring 2009

Prerequisite:

**SURG 740 Urology Acting Internship** (5) In-depth experience in evaluation and management of urologic problems.

Effective: Spring 2009

Prerequisite:

**SURG 741 Intensive Respiratory Care -- Anesthesia** (5) Students are taught to assess and manage acute respiratory insufficiency.

Effective: Spring 2009

Prerequisite:

**SURG 745 (PED 745) Pediatric Cardiothoracic Surgery Elective** (5) This fourth-year elective provides an introduction to the operative repair and peri-operative management of simple and complex congenital heart disease.

Effective: Summer 2009

Prerequisite:

**SURG 770 Otolaryngology Acting Internship** (5) A clinical experience devoted to disorders of the ears, nose, throat, and head and neck.

Effective: Fall 2008

Prerequisite:

**SURG 771 Otolaryngology - Head and Neck Surgery Elective for Third Year Medical Students** (2.5) This course provides exposure to basic concepts for diagnosis and management of ear, nose and throat problems in children and adults.

Effective: Summer 2009

Prerequisite:

**SURG 780 Pediatric Surgery Acting Internship** (5) Exposure to the surgical crises of the pediatric patient and their treatment.

Effective: Fall 2008

Prerequisite:

**SURG 796 Surgery Individual Studies** (5) Creative projects including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 2009

Prerequisite:

**SURG 796A Surgery Individual Studies for 3rd Year Medical Students** (2.5) Surgery Individual Studies for 3rd Year Medical Students.

Effective: Spring 2010

Prerequisite:

**SURG 797 Surgery Special Topics** (5) Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Spring 2009

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Systems Engineering (SYSEN)

**SYSEN 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.  
Effective: Spring 1999

**SYSEN 505 Technical Project Management** (3) Analysis and construction of project plans for the development of complex engineering products taken from a variety of problem domains.  
Effective: Fall 2003

**SYSEN 507 (EDSGN 507) Systems Thinking** (3) The theory and practice of systems thinking. General systems theory; system dynamics, emergent properties, structure, feedback and leverage.  
Effective: Spring 2015

**SYSEN 510 Engineering Analysis I** (3) The course includes applications of advanced engineering mathematics; the study of systems are described by ordinary/partial differential equations and methods of solutions.  
Effective: Spring 2001  
Prerequisite:

**SYSEN 520 Systems Engineering** (3) Fundamentals of Systems Engineering with focus on System methodology, design, and management; includes life cycle analysis, human factors, maintainability, serviceability/reliability.  
Effective: Spring 2012  
Prerequisite:

**SYSEN 522 Systems Verification Validation & Testing** (3) The theory and practice of verification, validation and testing of engineering systems.  
Effective: Summer 2013

**SYSEN 530 Systems Optimization** (3) Theory/practice of linear programming will be developed including determination of optimum mix of products, levels of staffing, blending, network analysis, multi-period planning.  
Effective: Spring 2001  
Prerequisite:

**SYSEN 531 Probability Models and Simulation** (3) Provides background in modeling problems containing random components that must be accounted for in a reasonable solution.  
Effective: Summer 2007

**SYSEN 533 Deterministic Models and Simulation** (3) Provides a background in simulation and the modeling of problems that contain differential equations as part of the system.  
Effective: Summer 2007

**SYSEN 536 Decision and Risk Analysis in Engineering** (3) Analysis of engineering decisions under uncertainty; problem identification, formulation, judgment, resolution; mitigation, risk analysis, quantification and management.  
Effective: Summer 2008

**SYSEN 540 Intelligent System Applications** (3) Mathematical foundations of intelligent control and systems; linear quadratic self-tuning regulation and model reference adaptive control.  
Effective: Summer 2002  
Prerequisite:

**SYSEN 550 Creativity and Problem Solving I** (3) Foundations of individual problem solving, including creativity, cognitive style and level, problem solving processes and techniques, the paradox of structure.  
Effective: Spring 2006

**SYSEN 552 Creativity and Problem Solving II** (3) Theory and practical applications of group problem solving, including cognitive gap, coping behavior, agents of change, and managing cognitive diversity.  
Effective: Summer 2005  
Prerequisite:

**SYSEN 554 Problem Solving Leadership** (3) Models, processes, and techniques for solving complex problems, managing problem solving diversity, and facilitating change through problem solving in socio-technical systems.  
Effective: Summer 2007  
Prerequisite:

**SYSEN 555 Invention and Creative Design** (3) This course focuses on the creative design process which leads to the development of new products, processes, and systems (i.e. invention).  
Effective: Spring 2001

**SYSEN 590 Colloquium** (1-3) Continuing seminars that consist of a series of individual lectures by faculty, students, or

outside speakers.  
Effective: Spring 1999

**SYSEN 594 Research Topics** (1-15) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Spring 1999

**SYSEN 596 Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Spring 1999

**SYSEN 597 Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Spring 1999

**SYSEN 895 Internship** (1-9 per semester/maximum of 9) Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships.  
Effective: Spring 2015

**SYSEN 897 Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Summer 2016

Last Import from UCM: July 23, 2016 3:00 AM

## Taxation (TAX)

**TAX 949 Basic Federal Income Taxation (3)** This course examines the basic substantive provisions of the federal income tax law. Included are the following general topics: gross income, exclusions, deductions, depreciation, basis, tax accounting, and other provisions affecting situations encountered by attorneys in general practice.  
Effective: Fall 2009

**TAX 950 Advanced Federal Income Taxation (3)** This course is designed to continue the examination of the basic substantive provisions for the federal income tax law begun in Basic Federal Income Taxation, including the following general topics: income splitting and assignment, realization and recognition of gain and loss, capital transactions, the investment credit, and other taxable entities.  
Effective: Summer 2011  
Prerequisite:

**TAX 951 Comparative International Tax Law (3)** This course treats the unique problems of Home country taxation of the foreign income and operations of resident persons and enterprises and Host country taxation of foreign persons and enterprises. Topics include the treatment of cross-border business and investment; sales, financing and e-commerce; the source of income; worldwide and territorial taxation; methods for the elimination of double taxation including foreign tax credits, exemption, and treaties; controlled foreign corporations; tax avoidance; and value added taxes. While stressing the law of the United States and the European Union, this course broadly examines the tax law of both developed and emerging economies to gain a better understanding of the impact of taxation internationally.  
Effective: Fall 2015  
Prerequisite:

**TAX 952 Taxation of Executive Compensation and Benefits (2)** This class will focus on the tax and ERISA aspects associated with executive compensation and nonqualified deferred compensation, including a variety of executive perquisites, equity programs and fringe benefits.  
Effective: Spring 2014

**TAX 960 Employee Benefits Law (2-3)** This course introduces students to the law governing employer-provided benefit programs. It will begin with a look at the early development of welfare and pension plans offered through the workplace. The course will examine closely the landmark Employee Retirement Income Security Act of 1974 ("ERISA") and its subsequent amendments. Among topics to be covered will be defined benefit and defined contribution pension programs. This will include a survey of rules relating to pension taxation, vesting, funding, alienability, guaranty, and fiduciary duties. With respect to health insurance, the course will look at issues affecting both employee and retiree health programs, including collectively bargained ones. The course will also discuss the subjects of age discrimination in employee benefit programs as well as ERISA preemption.  
Effective: Summer 2011

**TAX 980 Partnership Taxation (2)** This course examines the income tax consequences of the formation, operation, and liquidation of a partnership, the classification of an entity as a partnership, distributions by a partnership, and sales of partnership interests.  
Effective: Fall 2007  
Prerequisite:

**TAX 988 State and Local Taxation (2)** Beginning with historical and constitutional aspects, students will analyze in detail recent developments in state and local taxation and their impact on client representation. Attention will be concentrated on corporate, sales and use and other business taxes, death duties, and property taxes and exemptions.  
Effective: Fall 1998

**TAX 991 Corporate Tax (3)** This course focuses primarily on income tax problems unique to corporations and the income tax problems arising from the shareholder-corporate relationship.  
Effective: Fall 2009  
Prerequisite:

**TAX 992 International Tax (2)** This course addresses U.S. taxation of the foreign income and operations of U.S. persons and enterprises.  
Effective: Fall 2010  
Prerequisite:

**TAX 994 Tax Aspects of Mergers and Acquisitions (2)** This course approaches corporate tax issues through the prism of the Federal income tax treatment of taxable and tax free mergers and acquisitions (M&A).  
Effective: Summer 2008  
Prerequisite:

**TAX 997 Special Topics (1-9)** Special topics in Tax Law field.  
Effective: Spring 2008

**TAX 997A Corporate Tax Through the Lens of M&A (2)** Corporate Tax Through the Lens of M&A approaches the subject principally through the prism of the Federal income tax treatment of taxable and tax-free mergers and acquisitions (M&A). Although the course will explore virtually every section of subchapter C of the Internal Revenue

Code (i.e., 301 et seq.), which governs the tax treatment of "C" or regular corporations, the emphasis is placed on those provisions of subchapter C that have the most impact on M&A transactions.

Effective: Summer 2016 Ending: Summer 2016

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Theatre (THEA)

**THEA 400 Advanced Theatre Projects** (1-6 per semester) Individual and group-directed study of in-depth projects involving reading, discussion, performance, and critical analysis by faculty.

Effective: Spring 1991

Prerequisite:

**THEA 401 (IL) Theatre History I: Ancient to 1700** (3) Survey of drama and theatre from primitive rites through the Renaissance.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**THEA 401Y (IL) Theatre History I: Ancient to 1700** (3) Survey of drama and theatre from primitive rites through the Renaissance.

Effective: Spring 2008 Ending: Summer 2016

Prerequisite:

**THEA 402 Theatre History II: From 1700 to Present** (3) Survey of European drama and theatre from the eighteenth century through the modern period.

Effective: Spring 2012

Prerequisite:

**THEA 405 (US) Theatre History: American Theatre** (3) Survey of American drama and theatre from the colonial period to the present.

Effective: Spring 2006 Ending: Summer 2016

Prerequisite:

**THEA 405W (US) Theatre History: American Theatre** (3) Survey of American drama and theatre from the colonial period to the present.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**THEA 407 (US) (WMNST 407) Women and Theatre** (3) A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background.

Effective: Spring 2008 Ending: Fall 2016

Prerequisite:

**THEA 407W (US) (WMNST 407) Women and Theatre** (3) A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background.

Effective: Spring 2017 Future: Spring 2017

Prerequisite:

**THEA 408 (US) History of American Musical Theatre** (3) A survey of the history of American musical theatre presented in a social, cultural, and aesthetic perspective.

Effective: Spring 2008 Ending: Summer 2016

Prerequisite:

**THEA 408W (US) History of American Musical Theatre** (3) A survey of the history of American musical theatre presented in a social, cultural, and aesthetic perspective.

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**THEA 410 Play Analysis** (3) Advanced skills in textual analysis of plays and screenplays.

Effective: Spring 2008

Prerequisite:

**THEA 412 (US;IL) (AF AM 412) African American Theatre** (3) Exploration of the development of African American theatre from its roots in Africa through the diaspora, to the present time.

Effective: Spring 2013

Prerequisite:

**THEA 420 Scene Study I** (3 per semester/maximum of 9) Advanced monologue and scene study techniques. Principal focus on realism.

Effective: Spring 2013

Prerequisite:

**THEA 423 Musical Theatre Performance III** (2) Studio training in the unique performance skills, repertoire and business of professional musical theatre.

Effective: Spring 2006

Prerequisite:

**THEA 424 Musical Theatre Performance IV** (2) Studio training in the unique performance skills, repertoire and business of professional musical theatre.

Effective: Spring 2006

Prerequisite:

**THEA 425A B.F.A. Acting Studio II** (2) Scene Study

Effective: Summer 2005

Prerequisite: Concurrent: THEA 425C

**THEA 425C B.F.A. Voice/Speech Studio II** (2) Advanced voice and speech training for BFA Musical Theatre students.

Effective: Summer 2005

Prerequisite: Concurrent: THEA 425A

**THEA 426 Children's Theatre** (3) Theories and practice of theatre for children.

Effective: Spring 2001

Prerequisite:

**THEA 427A B.F.A. Acting Studio III** (2) Continuation of THEA 425A

Effective: Summer 2005

Prerequisite: Concurrent: THEA 427C

**THEA 427C B.F.A. Voice/Speech Studio III** (2) Stage Dialect Studies

Effective: Summer 2005

Prerequisite: Concurrent: THEA 427A

**THEA 428 Musical Theatre Performance Studio V** (2) Students will prepare and present workshop reading of a new musical theatre piece.

Effective: Spring 2016

Prerequisite:

**THEA 429 Theatre Performance Practicum** (1-3 per semester) Supervised experience in rehearsal and performance of significant roles.

Effective: Fall 1983

Prerequisite:

**THEA 434 Introduction to Directing** (3) Introduction to principles and procedures of play direction.

Effective: Summer 2012

Prerequisite:

**THEA 436 Directorial Processes** (3) Preparing a play for production including the scoring of the script, developing ground plan, casting, and staging projects in American realism.

Effective: Spring 1991

Prerequisite:

**THEA 437 Artistic Staff for Production** (1-6) To provide students with experience in choreography, dramaturgy, combat, staging, voice/speech, musical direction, assisting in direction, for major productions.

Effective: Summer 1989

Prerequisite:

**THEA 440 Principles of Playwriting** (3 per semester/maximum of 6) Structure, dramatic effect, characterization, and dialogue; the writing, reading, and criticism of original one-act plays.

Effective: Spring 2013

Prerequisite:

**THEA 447 Make-Up Design for Production** (1-6) Materials, research, preparation, design, execution of make-up for major University Theatre productions.

Effective: Summer 1989

Prerequisite:

**THEA 450 Advanced Topics in Scene Design** (3 per semester/maximum of 6) Design emphasis on a variety of production techniques, genre, and styles.

Effective: Spring 2006

Prerequisite:

**THEA 451 Drafting, Drawing, and Painting for the Theatre** (1) Drafting, freehand drawing including perspective methods and property development, rendering techniques, and painters' elevations.

Effective: Summer 1993

Prerequisite:

**THEA 453 Advanced Scene Painting** (1 per semester, maximum of 12) Practicum study in painting techniques currently in professional use. Exploration of tools, available paints, and texturing materials.

Effective: Spring 1991

Prerequisite:

**THEA 454 Period Research for the Theatre** (3) History of decor, styles, and movements in art and architecture.

Effective: Summer 1993

Prerequisite:

**THEA 456 Scenic Projects for Production** (1 per semester, maximum of 6) Special projects for production; painting, properties, design assistance.

Effective: Summer 1993

Prerequisite:

**THEA 457 Scene Design for Production** (1 per semester/maximum of 6) Design and execution of production projects.

Effective: Fall 1983

Prerequisite:

**THEA 458 Digital Imaging for the Theatre** (1) Introduction to imaging software and its application in theatrical design and production.

Effective: Summer 2005

Prerequisite:

**THEA 459 Theatre Portfolio & Business Practices** (2) Life as a professional theatre designer. Contracts, taxes, record-keeping, resumes, portfolios, interviewing, job hunting, and legal considerations.

Effective: Spring 2006

Prerequisite:

**THEA 460 Advanced Topics in Costume Design** (3 per semester/maximum of 6) Developing and executing a design concept in a variety of the performing arts.

Effective: Spring 2006

Prerequisite:

**THEA 461 Advanced Topics in Costume Construction and Technology** (3 per semester/maximum of 6) A specialized course in advanced costume construction techniques and theatrical costume technologies.

Effective: Spring 2006

Prerequisite:

**THEA 464 History of Fashion** (3) Survey of dress from Egyptian period to contemporary fashion.

Effective: Spring 2008

Prerequisite:

**THEA 465 History of Fashion II** (3) Survey of dress from 1800 to contemporary fashion.

Effective: Summer 2004

Prerequisite:

**THEA 466 Costume Construction for Production** (1 per semester/maximum of 6) Execution of production projects in construction and shop management.

Effective: Fall 1983

Prerequisite:

**THEA 467 Costume Design for Production** (1 per semester/maximum of 6) Design and execution of production design projects.

Effective: Fall 1983

Prerequisite:

**THEA 470 Advanced Topics in Lighting Design** (3 per semester/maximum of 6) Advanced Topics in Lighting Design will rotate through opera, dance, non-traditional spaces, architecture, advanced technology, and color theory.

Effective: Spring 2006 Ending: Fall 2016

Prerequisite:

**THEA 470 Advanced Topics in Lighting Design** (3 per semester/maximum of 9) Advanced Topics in Lighting Design will rotate through opera, dance, non-traditional spaces, architecture, advanced technology, and color theory.

Effective: Spring 2017 Future: Spring 2017

Prerequisite:

**THEA 472 Lighting Technology** (3) An introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices.

Effective: Summer 2005

Prerequisite:

**THEA 477 Lighting Design for Production** (1 per semester/maximum of 6) Design and execution of design projects.

Effective: Fall 1983

Prerequisite:

**THEA 480 Advanced Topics in Technical Direction for the Theatre** (3 per semester/maximum of 6) Advanced study of the methods, materials, equipment, facilities, concepts and processes associated with Technical Direction for the Theatre.

Effective: Summer 2005

Prerequisite:

**THEA 480B Technical Production IV** (3) Discussion of problems of the technical director: personnel management, time management, scheduling, budgeting, purchasing, and the technical drawing of production.

Effective: Spring 1995

Prerequisite:

**THEA 481 Stage and Production Management** (3) Production planning, scheduling, assignment of personnel, rehearsal procedures, and budgeting.

Effective: Fall 1983

Prerequisite:

**THEA 482 Technical Production - Rigging** (3) In-depth exploration of current rigging techniques used in entertainment.

Effective: Fall 2013

**THEA 484 Sound Recording Techniques** (3) Multi-track audio recording and post production techniques.

Effective: Spring 2011

Prerequisite:

**THEA 485 Sound for Theatre Production** (3 per semester/maximum of 6) Aesthetics of live and recorded sound; recording and editing techniques for the stage.

Effective: Fall 2012

Prerequisite:

THEA 486 **Stage Management for Production** (1-9) Stage manager for University Theatre production.

Effective: Summer 1996

Prerequisite:

THEA 487 **Technical Projects for Production** (1 per semester/maximum of 6) Execution of practical production projects.

Effective: Fall 1983

Prerequisite:

THEA 489 **Theatre Production Practicum** (1 per semester) Supervised experience in production techniques. For theatre majors only.

Effective: Summer 2012

Prerequisite:

THEA 490H **London Study Tour** (3) An intensive academic and cultural experience in the theatre capital of the English-speaking world.

Effective: Summer 2015

Prerequisite:

THEA 494H **Research Projects - Honors** (1-12 per semester/maximum of 12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Spring 2012

THEA 495 **Internship Practicum** (1-6 per semester/maximum of 12) Professional field experience in theatre performance, production, and management assignments.

Effective: Fall 1983

Prerequisite:

THEA 496 **Independent Studies** (1-18) Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 1983

THEA 496H **Independent Studies - Honors** (1-18) Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 2012

THEA 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Fall 1983

THEA 498 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Effective: Summer 1994

THEA 499 (IL) **Foreign Studies--Theatre Arts** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2005

Prerequisite:

THEA 500 **Theatre Research: Sources and Procedure** (3) Source materials and techniques as applied to theatre research; the form and content of theses and monographs.

Effective: Winter 1978

THEA 502 **Creative Collaboration** (3) Theory and process of creative collaboration between the theatre artistic and production staffs.

Effective: Summer 1993

Prerequisite:

THEA 505 **Masterpieces in Production I** (3) Dramatic structure, theatrical validity, production viability of great plays from Greek to eighteenth-century. Drama as blueprint for production.

Effective: Summer 1990

THEA 506 **Masterpieces in Production II** (3) Dramatic structure, theatrical validity, production viability of masterworks of theatre. Drama as the blueprint for production. Offered in London, England.

Effective: Fall 2004

Prerequisite:

THEA 507 **Masterpieces in Production III** (3) Dramatic structure, theatrical validity, production viability of major American plays from Tyler to the present. Drama as blueprint for production.

Effective: Spring 1990

THEA 508 **Experiential Analysis of Italian Design Styles** (3) Applications of Historical and Cultural Perspectives in

Dramatic Production. Offered in Italy.  
Effective: Fall 2009

THEA 509 **Experiential Analysis of Eastern European Styles** (3) Applications of Historical and Cultural Perspectives in Dramatic Production. Offered in Prague and Budapest.  
Effective: Fall 2009

THEA 510 **Experiential Analysis of Period Style** (3) Applications of Visual/Spatial History in Dramatic Production. Offered in London, England.  
Effective: Spring 2004

THEA 524 **Acting V** (2) Advanced scene study and class projects; development of individual student repertoires.  
Effective: Spring 1996  
Prerequisite:

THEA 529 **Performance Monograph** (1-2 per semester, maximum of 4) The development and presentation of M.F.A. monographs in acting, design/ production, or directing.  
Effective: Spring 1996  
Prerequisite:

THEA 530 **Rehearsal Methods for the Director** (3) Theory and practice in approaches, procedures, and techniques in mounting a play.  
Effective: Spring 2014  
Prerequisite:

THEA 531 **Directorial Styles and Approaches** (2) Seminar in advanced theory and directorial practice. Designed for the advanced student of directing.  
Effective: Fall 1999  
Prerequisite:

THEA 532 **Directing Seminar** (2) Career orientation: resume preparation, interviewing, unions, survey of directorial opportunities, and review of major contemporary directors and practices.  
Effective: Fall 1999  
Prerequisite:

THEA 539 **Projects in Directing** (1-2) Approved directing projects for the M.F.A. directing student.  
Effective: Spring 1990  
Prerequisite:

THEA 543 **Projects in Playwriting** (1-9) Preparation of the script for revision during and following production of the student's original play.  
Effective: Fall 1983  
Prerequisite:

THEA 551 **Scenic Design IV** (1-6) Advanced projects in scenic design.  
Effective: Spring 2015  
Prerequisite:

THEA 552 **Scene Design III** (3) Design and project execution of plays and industrial installations.  
Effective: Summer 1994  
Prerequisite:

THEA 553 **Scene Design IV** (3) Design of plays for proper theatre and mass media.  
Effective: Summer 1994  
Prerequisite:

THEA 559 **Portfolio Presentation** (1 per semester, maximum of 2) Current practice in portfolio development and presentation to client and employer.  
Effective: Spring 1994  
Prerequisite:

THEA 560 **Costume Design III** (3 per semester/maximum of 9) Advanced costume design with emphasis on total production concept.  
Effective: Fall 1983  
Prerequisite:

THEA 562 **Costume Design: Rendering Techniques** (3) Exploration and development of various rendering techniques with application to costume design.  
Effective: Spring 1994  
Prerequisite:

THEA 568A **Costume Design for Related Performance Arts** (3) Exploration and development of costume design with application to the other arts (opera/dance/film).  
Effective: Spring 1994  
Prerequisite:

THEA 568B **Costume Design: Production Concepts** (3) Exploration and development of costume design for specific production concepts.

Effective: Spring 1994

Prerequisite:

**THEA 569 Costume Construction: Crafts** (3) Exploration and development of various crafts techniques with application to costume construction (i.e. masks, jewelry, armor, millinery, footwear, wigs).

Effective: Spring 2010

**THEA 570 Stage Lighting Design III** (3) Advanced techniques in the art of theatrical lighting design.

Effective: Fall 1983

Prerequisite:

**THEA 571 Stage Lighting Design IV** (3) Course addresses individual problems in the stage lighting design process concentrating on the development of skills necessary for processional examination.

Effective: Spring 1994

Prerequisite:

**THEA 580B Technical production VIII** (3) Planning of the theater shop; emphasis on space design, renovation, upgrade, planning, outfitting, and safety; selection of tools and tool support systems.

Effective: Spring 1994

Prerequisite:

**THEA 585 Theatre Planning** (3) Processes and problems in planning and designing theatres: performance, audience, and technical requirements.

Effective: Winter 1978

**THEA 589 Design/Production Monograph** (1-4) The development and presentation of M.F.A. monographs in design/production.

Effective: Summer 1995

**THEA 590 Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Spring 1987

**THEA 595 Internship** (1-3) Professional field experience in theatre performance, production, and management assignments.

Effective: Spring 1987

Prerequisite:

**THEA 596 Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1987

**THEA 597 Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.

Effective: Spring 1987

**THEA 600 Thesis Research** (1-15) No description.

Effective: Fall 1983

**THEA 602 Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Teaching of theatre and film classes under senior faculty supervision.

Effective: Fall 1983

**THEA 610 Thesis Research Off Campus** (1-15) No description.

Effective: Fall 1983

**THEA 811 International Studio Intensive** (1-9) The course enhances the ability of the actor to meet the voice and speech demands for the performance of Shakespeare.

Effective: Fall 2007

**THEA 811A International Production Studio Intensive** (1 per semester/maximum of 9) Intensive studio application of processes and procedures within specific theatre disciplines as influenced by the work of international professionals.

Effective: Summer 2009

Prerequisite:

**THEA 820A Acting I** (4) Exercises, monologue, and scene study. Principal focus on realism.

Effective: Spring 2009

Prerequisite:

**THEA 820B Movement for Actors I** (2) Techniques and skills in physical expression, awareness, control, and stage movement.

Effective: Fall 2007

Prerequisite:

**THEA 820C Voice and Speech I (2)** Vocal techniques for the actor: articulation, voice control, support, and projection.

Effective: Fall 2007

Prerequisite:

**THEA 821A Acting II (3)** A continuation of THEA 520A.

Effective: Fall 2007

Prerequisite:

**THEA 821B Movement for Actors II (2)** A continuation of THEA 520B.

Effective: Fall 2007

Prerequisite:

**THEA 821C Voice and Speech II (2)** A continuation of THEA 520C.

Effective: Fall 2007

Prerequisite:

**THEA 822A Acting III (3)** This course will focus on the research and development of skills necessary to perform the plays of Shakespeare and his contemporaries.

Effective: Fall 2007

Prerequisite:

**THEA 822B Movement for Actors III (2)** Advanced techniques and skills in physical expression.

Effective: Fall 2007

Prerequisite:

**THEA 822C Voice and Speech III (2)** Advanced voice and speech training for the actor: articulation, resonance, and vocal technique related to verse and heightened language drama.

Effective: Fall 2007

Prerequisite:

**THEA 823A Acting IV (3)** Students prepare audition material for their New York Showcase for theatrical agents.

Effective: Fall 2007

Prerequisite:

**THEA 823B Movement for Actors IV (2)** Fundamentals of unarmed and armed stage combat with emphasis on enactment of safe and effective stage fights.

Effective: Fall 2007

Prerequisite:

**THEA 823C Voice and Speech IV (2)** A study of stage dialects.

Effective: Fall 2007

Prerequisite:

**THEA 824 Acting for the Camera (6)** This course introduces the actor to the skills necessary for successful performance in television, film, video and commercial venues.

Effective: Summer 2009

Prerequisite:

**THEA 825A Acting Professionally/NYC Showcase (3)** Development of audition repertoire; study of business topics; development, rehearsal and performance of NYC showcase.

Effective: Spring 2009

Prerequisite:

**THEA 825C Professional Repertory Performance (3)** Rehearsal and performance of theatre productions at Penn State featuring third year MFA actors and professional guest artists.

Effective: Summer 2007

Prerequisite:

**THEA 830 Interdisciplinary Theatrical Design Studio (3-6 per semester/maximum of 36)** Advanced analysis, graphic, and presentation techniques for evolving and communicating design for the stage.

Effective: Fall 2009

**THEA 831 Theatrical Costume Technology Studio (3-6/maximum of 30)** Advanced mastery of both traditional and modern techniques in costume creation for live performance.

Effective: Summer 2016

**THEA 857 Scenic Design for Production (1 per semester/maximum of 6)** Design and execution of production design projects.

Effective: Summer 2010

**THEA 861 Costume Design and Construction (1-6 per semester/maximum of 18)** Advanced special projects for the graduate designer and costumer.

Effective: Spring 2010

Prerequisite:

**THEA 863 Costume Construction: Draping (3)** Exploration and development of various draping techniques with

application to costume construction.  
Effective: Spring 2010

THEA 865 **Costume Construction: Period Reconstruction** (3) Exploration and development of reproduction techniques relating to period clothing, and their application to costume construction.  
Effective: Spring 2010

THEA 866 **Costume Construction for Production** (1 per semester/maximum of 6) Execution of production in construction and shop management.  
Effective: Summer 2010

THEA 867 **Costume Design for Production** (1 per semester/maximum of 6) Design and execution of production design projects.  
Effective: Summer 2010

THEA 877 **Lighting Design for Production** (1 per semester/maximum of 6) Design and execution of production design projects.  
Effective: Spring 2010

THEA 887 **Technical Projects for Production** (1 per semester/maximum of 6) Execution of assigned technical projects for theatre production.  
Effective: Summer 2010

Last Import from UCM: July 23, 2016 3:00 AM

## Training and Development (TRDEV)

**TRDEV 460 Foundations in Training and Development** (3) Roles in training and development, relationships between training and development and other organizational structures, and the principles of training design.  
Effective: Spring 1986

**TRDEV 503 Performance Consulting** (3) Performance consulting strategies and techniques for working with organizations to systematically identify performance problems, diagnose causes, and specify solutions.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 505 Project Management in Training and Development** (3) Introduces skills for managing complex training and development projects, such as developing timelines, creating budgets, and allocating resources.  
Effective: Summer 2015  
Prerequisite:

**TRDEV 507 Program Evaluation** (3) Evaluation of educational and other human services programs; preparation and presentation of the evaluation proposal.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 518 Systematic Instructional Design in Training** (3) Study of theory and practice of systematic instructional design. Application of instructional design principles to training problems in local organizations.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 520 Learning Styles and Learning Theory in Training** (3) Adult learning theory and its application to training and development.  
Effective: Summer 2015  
Prerequisite:

**TRDEV 528 Instructional Systems Design Applications** (3) Advanced instructional systems design theory, models, strategies, and consulting approaches.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 530 Multiplatform Delivery Skills** (3) Platform skills for training delivery, including voice, audio-visual aids, and personal presence, in face-to-face and virtual environments.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 531 Technology in Training** (3) Applications of various new instructional technologies to training problems.  
Effective: Spring 2014  
Prerequisite:

**TRDEV 532 Web-Based Training** (3) Introduction to the design and development of websites for computer-based instruction in the workplace.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 537 Technologies in Learning and Development** (3) Design and application of various technologies utilized for instructional and human resource development in corporate and similar settings.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 561 Facilitation Theories and Practice** (3) Exploration of facilitation theories and their implications for practice.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 563 Strategic and Critical Human Resource Development** (3) An exploration of contemporary HRD strategies for designing processes and approaches to employee learning and performance that advance organizational goals.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 565 Implementing Training and Development Programs** (3) The critical analysis of theories, strategies, and techniques for planning and implementing TRDEV programs to enhance employee learning and performance.  
Effective: Fall 2014  
Prerequisite:

**TRDEV 567 Instructional Leadership Theories and Development** (3) Explores instructional leadership theory, development strategies and practice, and style, including students' leadership styles and development action planning.  
Effective: Summer 2014  
Prerequisite:

**TRDEV 583 Issues in Training** (3) An issue seminar addressing topics such as an unprepared work force, diversity, recession, and issues generated by the class.  
Effective: Spring 2014

Prerequisite:

TRDEV 587 **Master's Paper** (1-6) The development of an original master's project (paper, production, or practicum) supervised and judged by an appropriate faculty committee.

Effective: Spring 1986

TRDEV 588 **Research Designs Applied in Training** (3) Planning experimental, observation, survey and qualitative research designs for training setting needs such as needs assessments and evaluations.

Effective: Spring 2014

Prerequisite:

TRDEV 590 **Colloquium** (3) The purpose of this colloquium is to critically explore current theory, research, and best practices in training and development.

Effective: Spring 2014

Prerequisite:

TRDEV 595 **Internship** (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Effective: Fall 2001

Prerequisite:

TRDEV 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Spring 1988

TRDEV 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Effective: Spring 1987

Last Import from UCM: July 23, 2016 3:00 AM

## **Trans Clinical Medic (TCM)**

TCM 706 **Transition to Clinical Medicine** (2) Introductory course that teaches the basic skills and knowledge a student needs to enter the clinical training years.

Effective: Summer 2007

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Traveling Schl Prog (C I C)

C I C 597 **Special Topics** (1-15) Formal courses taken on a special interest subject which will be offered on a C I C institution by C I C traveling scholars; several different topics may be taken each semester.

Effective: Spring 1993

Prerequisite:

C I C 598 **Special Topics** (1-15) Formal courses taken on a special interest subject which will be offered on a C I C institution by C I C traveling scholars; several different topics may be taken each semester.

Effective: Spring 1993

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## **Trial Team (TRTEM)**

TRTEM 995A **AAJ Trial Team** (2) See Handbook for description.  
Effective: Spring 2009

TRTEM 995B **BLSA Trial Moot Court Team** (2) See Handbook for description.  
Effective: Spring 2005

TRTEM 995C **Gourley Trial Competition Team** (2) See Handbook for description.  
Effective: Fall 1998

TRTEM 995D **National Trial Moot Court Team** (2) See Handbook for description.  
Effective: Fall 1998

TRTEM 995E **Miscellaneous Trial Moot Court Teams** (2) See Handbook for description.  
Effective: Fall 1998

TRTEM 997 **BLSA Mock Trial Team** (2) BLSA Mock Trial Team.  
Effective: Spring 2011

Last Import from UCM: July 23, 2016 3:00 AM

## Turfgrass (TURF)

**TURF 425 Turfgrass Cultural Systems** (3) A study of turfgrass maintenance practices and how their interrelationships can be utilized to develop management systems.

Effective: Summer 2013

Prerequisite:

**TURF 434 Turfgrass Edaphology** (3) Characterization of soil physical properties for the establishment and maintenance of sports turf; includes root-zone construction.

Effective: Summer 2013

Prerequisite:

**TURF 435 Turfgrass Nutrition** (4) Study of turfgrass nutrition and growth; emphasizing constructed and mineral soil fertility, nutrient uptake and function, and fertilizer use efficiency.

Effective: Summer 2013

Prerequisite:

**TURF 436W Case Studies in Turfgrass Management** (3) Case study and discussion considering integrated management of selected turfgrass sites; emphasis on problem analysis, principle application, and decision making.

Effective: Spring 2014

Prerequisite:

**TURF 489 Supervised Experience in College Teaching** (1-3) Participate with instructors in teaching and undergraduate turfgrass course. Assist with teaching an evaluation and with development of instructional materials.

Effective: Summer 2013

Prerequisite:

**TURF 490 Colloquium** (1) Oral presentations developed by students in consultation with the course instructor.

Effective: Summer 2013

Prerequisite:

**TURF 495 Internship** (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Effective: Summer 2013

Prerequisite:

**TURF 496 Independent Studies** (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Effective: Summer 2013

**TURF 497 Special Topics** (2-6 per semester/maximum of 6) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Spring 2015

**TURF 499 (IL) Foreign Studies** (1-8) Courses offered in foreign countries by individual or group instruction.

Effective: Fall 2014

**TURF 499B (IL) Foreign Studies** (0.5) Travel component of Turf 499A. Travel to United Kingdom to compare turfgrass management practices between the US & United Kingdom.

Effective: Summer 2016 Ending: Summer 2016

Prerequisite:

**TURF 850 Turfgrass Physiology** (3) Lectures, reading assignments, and problems designed to develop student competency in plant physiology as it relates to turfgrass management strategies.

Effective: Summer 2013

**TURF 852 Turfgrass Health Management** (3) Lectures and exercises designed to develop student competency in solving turfgrass pest problems, as well as disease resistance in turfgrass.

Effective: Summer 2013

**TURF 853 (PPATH 853) Interpreting Turfgrass Science Literature** (3) Introduction to turfgrass research publications, interpretation of the data, and discussion of the significance of the results.

Effective: Summer 2013

Last Import from UCM: July 23, 2016 3:00 AM

## **Underser Med&Dom Hlt (UMDH)**

UMDH 700 **Underserved Medicine and Domestic Health** (5) Students will apply critical thinking and clinical reasoning to improve patient outcomes within the framework of underserved medicine.

Effective: Summer 2013

Prerequisite:

Last Import from UCM: July 23, 2016 3:00 AM

## Urban & Reg Plan-CI (UR PL)

UR PL 595 **Planning Internship** (1-6) Internship with a planning agency, under supervision of a graduate faculty member.  
Effective: Spring 1987  
Prerequisite:

UR PL 596 **Individual Studies** (1-9) Creative projects, including nonthesis reseach, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Fall 1983

UR PL 600 **Thesis Research** (1-15) No description.  
Effective: Fall 1983

Last Import from UCM: July 23, 2016 3:00 AM

## Veterinary and Biomedical Sciences (VB SC)

VB SC 402W (ENT 402W) **Biology of Animal Parasites** (3) An introduction to animal parasitology. Emphasis placed on host/parasite interactions, parasites of zoonotic importance, control programs and taxonomy.

Effective: Spring 2010

Prerequisite:

VB SC 403 **Principles of Animal Disease Control** (3) Principles of disease control based on knowledge of the multiple causes of animal disease.

Effective: Spring 2015

Prerequisite:

VB SC 403H **Principles of Animal Disease Control** (3) Principles of disease control based on knowledge of the epidemiology of animal disease.

Effective: Summer 2015

Prerequisite:

VB SC 405 **Laboratory Animal Science** (3) Principles involved in maintaining laboratory animals. Emphasis is on management, preventive medicine, and surgical considerations used in laboratory animal colonies.

Effective: Spring 2009

Prerequisite:

VB SC 407 **Dairy Herd Health Programs** (2) A discussion of health programs for dairy herds to assist in the control of infectious and metabolic diseases of dairy animals.

Effective: Fall 2007

Prerequisite:

VB SC 409 **Wildlife Diseases** (3) An introduction to wildlife diseases emphasizing their impact on wildlife, domestic animals and humans in today's world.

Effective: Spring 2013

Prerequisite:

VB SC 418 **Bacterial Pathogenesis** (2) Study of molecular interactions between bacterial pathogens and their hosts.

Effective: Fall 2007

Prerequisite:

VB SC 420 **General Animal Pathology** (3) Nature and mechanisms of the disease process including degenerations, growth disturbances, inflammation, host-parasite relationships and neoplasia.

Effective: Fall 2007

Prerequisite:

VB SC 421 (BIOL 421) **Comparative Anatomy of Vertebrates** (4) The comparative anatomy of representative vertebrate animals, discussed from a descriptive and an evolutionary viewpoint.

Effective: Spring 2008

Prerequisite:

VB SC 423W **Pathology of Nutritional and Metabolic Diseases** (3) Overview of nutritional and metabolic diseases of animals integrating concepts from biochemical and physiologic aberrations to clinical applications.

Effective: Spring 2008

Prerequisite:

VB SC 425 (AN SC 425) **Principles of Avian Diseases** (3) Principles of pathogenesis and control of diseases in poultry and other avian populations. Case material used where appropriate.

Effective: Spring 2009 Ending: Fall 2016

Prerequisite:

VB SC 425 (AN SC 425) **Principles of Avian Diseases** (3) Principles of pathogenesis and control of diseases in poultry and other avian populations. Case material used where appropriate.

Effective: Spring 2017 Future: Spring 2017

Prerequisite: Concurrent: AN SC 211 AN SC 311

VB SC 430 **Principles of Toxicology** (3) Introduction to the biomedical aspects of toxicology with emphasis on the mechanisms and fate of chemical interaction with biological systems.

Effective: Fall 2007

Prerequisite:

VB SC 431 (E R M 431) **Environmental Toxicology** (3) Effects of pollutants on animal health at the chemical, physical, and cellular level.

Effective: Spring 2011

Prerequisite:

VB SC 432 (B M B 432, MICRB 432) **Advanced Immunology: Signaling in the Immune System** (3) The study of signaling pathways that regulate the immune response.

Effective: Fall 2007

Prerequisite:

VB SC 433 (B M B 433) **Molecular and Cellular Toxicology** (3) In-depth coverage of processes by which drugs/chemicals interact with biological systems and the experimental approaches used to study these interactions.

Effective: Fall 2007

Prerequisite:

VB SC 435 (B M B 435, MICRB 435) **Viral Pathogenesis** (2) A study of the molecular, immunological, and pathological aspects of viral diseases as well as laboratory methods of diagnosis.

Effective: Fall 2007

Prerequisite:

VB SC 444 **Epidemiology of Infectious Diseases** (3) An introduction to epidemiology of infectious diseases with emphasis on understanding epidemiologic concepts for identifying, preventing and controlling infectious diseases.

Effective: Fall 2007

Prerequisite:

VB SC 445 **Molecular Epidemiology of Infectious Diseases** (3) A discussion and practicum of the molecular laboratory techniques used to study molecular epidemiology of infectious diseases.

Effective: Fall 2007

Prerequisite:

VB SC 448W **Current Topics in Immunology** (3) Study of current approaches and questions driving research in immunology and infectious diseases.

Effective: Fall 2007

Prerequisite:

VB SC 451 **Immunotoxicology of Drugs and Chemicals** (3) An in depth discussion of the effect of xenobiotics and drugs on host immune mechanisms.

Effective: Fall 2012

Prerequisite:

VB SC 494H **Honors Thesis** (1-6 per semester/maximum of 6) Independent study directed by a faculty supervisor that culminates in the production of a Veterinary and Biomedical Sciences honors thesis.

Effective: Summer 2013

Prerequisite:

VB SC 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 2007

VB SC 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Effective: Fall 2007

VB SC 499 **Foreign Studies** (0.5 - 4 credits/maximum of 10) Courses offered in foreign countries by individual or group instruction.

Effective: Spring 2016

VB SC 503 (BIOL 503, BMMB 503, MCIBS 503) **Critical Elements of Genetics and Molecular and Cellular Biology** (4) Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation.

Effective: Fall 2014

VB SC 511 (BMMB 511, MCIBS 511) **Molecular Immunology** (2) The study of molecular and biochemical events that influence immune responses and define current questions in immunology.

Effective: Spring 2016

Prerequisite:

VB SC 514 (NUTR 514) **Prostaglandins and Leukotrienes** (3) Biochemical, physiological, and nutritional aspects of arachidonic acid and related essential fatty acid metabolism. Structure-activity relationships of prostaglandins, prostacyclins, thromboxanes, and leukotrienes.

Effective: Fall 2012

Prerequisite:

VB SC 515 (BMMB 515) **Macrophage Biology** (2) The role of macrophages at the interface between innate and adaptive immunity.

Effective: Spring 2008

Prerequisite:

VB SC 520 **Pathobiology** (3) The course deals with the mechanism of disease. Topics are: homeostasis, vascular injury, inflammation, neoplasia, genetic disorders, and biochemical toxicology.

Effective: Fall 2009

Prerequisite:

VB SC 530 (MCIBS 530) **Regulation of Gene Expression by Xenobiotics** (3) The course examines mechanisms by which foreign chemicals alter gene expression and techniques used to analyze these effects.

Effective: Fall 2015

Prerequisite:

VB SC 534 **Current Topics in Cancer Research** (3) A discussion of current cancer research literature with the focus on primary research literature.

Effective: Fall 2015

Prerequisite:

VB SC 590 **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Fall 2007

VB SC 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Fall 2007

VB SC 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Effective: Fall 2008

VB SC 600 **Thesis Research** (1-15) No description.

Effective: Fall 2007

VB SC 601 **Ph.D. Dissertation Full-Time** (0) No description.

Effective: Fall 2007

VB SC 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Experience in preparing and conducting lectures/laboratories and assembling materials for laboratories.

Effective: Fall 2007

VB SC 610 **Thesis Research Off Campus** (1-15) No description.

Effective: Fall 2014

VB SC 611 **Ph.D. Dissertation Part-Time** (0) No description.

Effective: Fall 2014

Last Import from UCM: July 23, 2016 3:00 AM

## **Virology (VIRIM)**

VIRIM 580 **Critical Reading in Immunobiology** (1) Literature review of cellular, molecular, genetic and biochemical analysis of in vitro and in vivo immunology.  
Effective: Fall 2015

Last Import from UCM: July 23, 2016 3:00 AM

## Visual Studies (VSTUD)

VSTUD 501 **Visual Culture Theory and History** (3) Visual Culture Theory and History examines foundational theoretical texts that have come to define Visual Studies as a historically delineated academic discipline.  
Effective: Summer 2016

VSTUD 502 **Visual Studies in Digitality** (3) Study of historical, theoretical, and operational aspects of the consumption and production of digital technologies and associated cultures.  
Effective: Summer 2016

VSTUD 580 (ENGL 580) **Comics and Graphic Novels** (3) A survey of comics and graphic novels, primarily in English.  
Effective: Fall 2016 Future: Fall 2016

VSTUD 597 **Special Topics** (1-9/maximum of 9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject.  
Effective: Spring 2016

VSTUD 897 **Special Topics** (1-9/maximum of 9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject.  
Effective: Spring 2016

Last Import from UCM: July 23, 2016 3:00 AM

## Wildlife and Fisheries Science (W F S)

W F S 406 **Ornithology Laboratory** (2) Laboratory and field identification of Pennsylvania birds, avian ecology and behavior, field survey techniques.

Effective: Fall 2014

Prerequisite:

W F S 407 **Ornithology** (3) Introduction to the biology, ecology, adaptations, and conservation of birds.

Effective: Summer 2013

Prerequisite:

W F S 408 **Mammalogy** (3) Identification, systematics, characteristics, adaptations, ecology, behavior, natural history and conservation, and socio-economic aspects of mammals.

Effective: Summer 2013

Prerequisite:

W F S 409 **Mammalogy Laboratory** (2) Laboratory and field identification of mammals, ecology and behavior of mammals, field survey techniques.

Effective: Fall 2014

Prerequisite:

W F S 410 **General Fishery Science** (3) Introduction to the study, management, and uses of fish populations; methods of investigation, culture, and harvest of fishes.

Effective: Summer 2013

Prerequisite:

W F S 422 **Ecology of Fishes** (3) Role of fishes in aquatic communities and general ecosystems. Environmental factors influencing fish as individuals, populations, and communities.

Effective: Summer 2013

Prerequisite:

W F S 430 (FOR 430) **Conservation Biology** (3) The application of biological principles to issues in the conservation of biodiversity.

Effective: Spring 2016

Prerequisite:

W F S 435 (E R M 435) **Limnology** (3) Biogeochemistry and natural history of freshwater ecosystems.

Effective: Summer 2013

Prerequisite:

W F S 436 (E R M 436) **Limnological Methods** (3) Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems.

Effective: Summer 2013

Prerequisite:

W F S 440 **Natural Resources Public Relations** (3) The course prepares students to integrate public relations concepts with principles of natural resources management at the community level.

Effective: Summer 2013

Prerequisite:

W F S 446 **Wildlife and Fisheries Population Dynamics** (3) Concepts and estimation of mammalian, avian, and fish populations; processes of mortality, natality, growth, and regulation.

Effective: Summer 2013

Prerequisite:

W F S 447W **Wildlife Management** (3) Management of renewable wildlife resources by applying ecological concepts, habitat evaluation, and decision-making; writing and editing reports are emphasized.

Effective: Summer 2013

Prerequisite:

W F S 450 (E R M 450) **Wetland Conservation** (3) Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations.

Effective: Summer 2013

Prerequisite:

W F S 452 **Ichthyology** (2) Study of the structure, taxonomy, systematics, and natural history of freshwater and marine fishes.

Effective: Summer 2013

Prerequisite:

W F S 453 **Ichthyology Laboratory** (2) Identification of fishes, major fish families, use of keys.

Effective: Summer 2013

Prerequisite:

W F S 454 **Field Ichthyology** (2) Introduction to collection and field identification of the fishes of Pennsylvania.

Effective: Summer 2013

Prerequisite:

W F S 460 **Wildlife Behavior** (3) Scholarly discussion and critique of history, concepts, and application of wildlife behavioral concepts to conservation issues.

Effective: Summer 2013

Prerequisite:

W F S 462 **Amphibians and Reptiles** (3) Critique of global evolution and conservation of amphibians and reptiles, focusing on Northeastern U.S. natural history and ecology.

Effective: Summer 2013

Prerequisite:

W F S 463W **Fishery Management** (3) Management of sport and commercial fisheries, including biological, political, social, and economic factors; regulations and other management techniques.

Effective: Summer 2013

Prerequisite:

W F S 494 **Undergraduate Research** (1-12 per semester/maximum 12) Supervised student activities on research projects identified on an individual or small group basis.

Effective: Spring 2016

Prerequisite:

W F S 494H **Honors Thesis Research** (1-6 per semester/maximum 6) Independent study directed by a faculty supervisor that culminates in the production of a Wildlife and Fisheries Science honors thesis.

Effective: Spring 2016

Prerequisite:

W F S 495 **Wildlife/Fisheries Internship** (1-6) Supervised field experience related to the student's major.

Effective: Summer 2013

Prerequisite:

W F S 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2013

W F S 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2013

W F S 497B **Wildlife Field Ecology: Herps and Birds of the Central Appalachians** (1) This field course is devoted to wildlife identification and ecological field methodology with a focus on the study of birds, amphibians, and reptiles. Course objectives are for students to improve field identification skills and ecological field techniques, and to meet with biologists and managers who use these skills and techniques. Students will visit wildland areas and research sites of the Mid-Atlantic region, including Shenandoah National Park (May 11 - 20). Prerequisite: W F S 497A in spring 2016.

Effective: Summer 2016 Ending: Summer 2016

W F S 499 (IL) **Foreign Studies** (1-12 per semester/maximum of 12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2013

W F S 500 **Professionalism in Natural Resources** (3) Scholarly discussion and critique of skills important to professionalism of students in natural resources, wood products, and related science-based disciplines.

Effective: Summer 2013

Prerequisite:

W F S 510 **Design of Ecological Field Studies** (2) Application of the scientific method and general principles of designing ecological field studies through discussion and critique of the primary literature.

Effective: Fall 2016 Future: Fall 2016

W F S 530 **Conservation Ecology** (3) Discussion of the application of ecological principles to conservation and management of biological diversity, landscapes, and ecosystems.

Effective: Summer 2013

Prerequisite:

W F S 536 **Freshwater Field Ecology** (3) Organisms and physical/chemical factors that affect them in the aquatic environment; basic water chemistry; identification of aquatic organisms.

Effective: Summer 2013

Prerequisite:

W F S 542 **Systematics** (3) Principles and methods of classification, phylogeny, and speciation; taxonomic techniques; analysis of species; causal interpretation of animal diversity.

Effective: Summer 2013

W F S 551 **Wildlife Biometrics and Population Analysis** (3) Application of biometrics and mathematics to concepts and problems in wildlife ecology with emphasis on population analysis.

Effective: Summer 2013

Prerequisite:

W F S 552 **Systematics and Evolution of Fishes** (3) Detailed study of the systematics, evolution, identification, and natural history of fishes.  
Effective: Summer 2013  
Prerequisite:

W F S 560 **Population Estimation and Modeling** (4) Application of statistical models to estimating population parameters to test ecological theories.  
Effective: Summer 2013  
Prerequisite:

W F S 585 **Applied Spatial Ecology** (3) Students will develop skills in understanding and processing complex datasets while learning traditional and innovative methods for spatial data analysis.  
Effective: Summer 2016

W F S 590 (FOR 590, SOILS 590) **Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.  
Effective: Fall 2015

W F S 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Spring 1989

W F S 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Summer 2013

W F S 600 **Thesis Research** (1-15) No description.  
Effective: Summer 2013

W F S 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Summer 2013

W F S 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Provides an opportunity for supervised and graded teaching experience in wildlife courses.  
Effective: Summer 2013

W F S 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Summer 2013

W F S 611 **Ph.D. Dissertation Part-Time** (0) No Description.  
Effective: Summer 2013

Last Import from UCM: July 23, 2016 3:00 AM

## Women's Studies (WMNST)

WMNST 400 (US;IL) **Debates in Contemporary Feminism** (3) Consideration of feminist theories of women's experience in transforming understanding, reconceptualizing old problems, raising new ones, and expanding traditional disciplines.  
Effective: Spring 2013  
Prerequisite:

WMNST 401 **Doing Feminism: Theory and Practice** (3) Advanced analysis of feminist theory and the nature of its integration (sometimes uneasily) within feminist movements and practices.  
Effective: Spring 2013  
Prerequisite:

WMNST 407 (US) (THEA 407) **Women and Theatre** (3) A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background.  
Effective: Summer 2005 Ending: Fall 2016  
Prerequisite:

WMNST 407W (US) (THEA 407) **Women and Theatre** (3) A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background.  
Effective: Spring 2017 Future: Spring 2017  
Prerequisite:

WMNST 412 (EDTHP 412) **Education and the Status of Women** (3) An examination of the relationship of education to the status of women in American society.  
Effective: Spring 2005

WMNST 420 (US;IL) (CED 420) **Women in Developing Countries** (3) Analysis of women's work, experiences, and development policies and practices in Africa, Asia, and Latin America.  
Effective: Fall 2014

WMNST 421 (IL) (HIST 421) **The History of European Women** (3) European women's lives from the Middle Ages to the present.  
Effective: Spring 2013  
Prerequisite:

WMNST 423 (US) (CRIMJ 423, CRIM 423) **Sexual and Domestic Violence** (3) Legal, sociological, and psychological perspectives of sexual and domestic violence.  
Effective: Spring 2008  
Prerequisite:

WMNST 424 (US) (KINES 424) **Women and Sport** (3) An interdisciplinary approach to contemporary issues related to women and sport from historical, physiological, psychological, and sociological perspectives.  
Effective: Spring 2013  
Prerequisite:

WMNST 426Y (US;IL) (GEOG 426Y) **Gender Geographies** (3) Description and explanation of the links between gender relations and spatial structures; gender and work, social services, and neighborhood activism.  
Effective: Fall 2013  
Prerequisite:

WMNST 428 (US;IL) (PL SC 428) **Gender and Politics** (3) Gender in politics in the United States and around the world; major areas of women and politics research.  
Effective: Fall 2007  
Prerequisite:

WMNST 430 (US) (AM ST 430) **Women in American Society** (3) A historical study of women's roles and experiences in the United States.  
Effective: Spring 2008  
Prerequisite:

WMNST 438 (PHIL 438) **Feminist Philosophy** (3) Examines the central currents of feminist philosophy, selected problems and concepts regarding difference, gender and sex, identity, and political culture.  
Effective: Fall 2007  
Prerequisite:

WMNST 439 (HIST 439, J ST 439) **Women and the Holocaust** (3) Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies.  
Effective: Spring 2015  
Prerequisite:

WMNST 450W (IL) (CAMS 450W) **Gender and Sexuality in Ancient Greece and Rome** (3) An examination of gender, sexuality, and sexual desire in ancient Greece and Rome.  
Effective: Spring 2016  
Prerequisite:

WMNST 452 (US) (BB H 452, NURS 452) **Women's Health Issues** (3) Exploration of major health issues concerning women

today, with an emphasis on social, cultural, and medical influences.

Effective: Fall 2013

Prerequisite:

WMNST 453 (US) (CRIMJ 453, CRIM 453) **Women and the Criminal Justice System** (3) This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system.

Effective: Spring 2013

Prerequisite:

WMNST 455 (US) (CAS 455) **Gender Roles in Communication** (3) Explores the literature on gender research in the discipline of human communication.

Effective: Summer 2005

Prerequisite:

WMNST 456 (SOC 456) **Gender, Occupations, and Professions** (3) The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.

Effective: Spring 2013

Prerequisite:

WMNST 458 (GS) (BB H 458) **Critical Issues in Reproduction** (3) Examination and analysis of the new reproductive technologies from the standpoint of medical ethics, feminism, and sociocultural influences.

Effective: Fall 2013

Prerequisite:

WMNST 462 (US) (ENGL 462) **Reading Black, Reading Feminist** (3) Female identity and its construction in textual representations of gender, class, color, and cultural difference in English-language literatures.

Effective: Summer 2005

Prerequisite:

WMNST 464 (US) (BE SC 464) **Feminine/Masculine** (3) Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society.

Effective: Spring 2008

Prerequisite:

WMNST 466 (US;IL) (HIST 466) **Lesbian and Gay History** (3) Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.

Effective: Spring 2013

Prerequisite:

WMNST 471 (US) (PSYCH 479) **The Psychology of Gender** (3) Theories and research on gender differences and gender roles. Emphasis on women's and men's current positions in society.

Effective: Spring 2007

Prerequisite:

WMNST 472 (LER 472) **Work-Life Practices and Policies** (3) Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved.

Effective: Spring 2008

Prerequisite:

WMNST 477 (SOC 477) **Sociology of Sexuality** (3) An analysis of the demographic, social, and cultural factors affecting the development and experience of sexuality in contemporary society.

Effective: Spring 2016

Prerequisite:

WMNST 480 (IT 480) **Italian Women Writers Through the Centuries** (3) Analysis of the works of women authors in their historical and literary contexts.

Effective: Fall 2015

Prerequisite:

WMNST 489 (ENGL 489) **British Women Writers** (3) A study of selected British women writers.

Effective: Spring 2008

Prerequisite:

WMNST 490 (US;IL) (ENGL 490) **Women Writers and Their Worlds** (3) American and British literature written from the perspective of women.

Effective: Summer 2005

Prerequisite:

WMNST 491 (AM ST 476, ENGL 492) **American Women Writers** (3) A study of selected American women writers.

Effective: Spring 2008

Prerequisite:

WMNST 492W **Contemporary Feminist Analysis: The Capstone Senior Seminar** (3) Applied critical analysis of any aspect of society and/or culture from a contemporary feminist perspective.

Effective: Spring 2013

Prerequisite:

WMNST 494 **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

Effective: Summer 1994

WMNST 494H **Research Project** (1-12) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Fall 2007

WMNST 495 **Internship** (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.  
Effective: Spring 1998  
Prerequisite:

WMNST 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside scope of formal courses.  
Effective: Fall 1983

WMNST 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.  
Effective: Summer 1984

WMNST 497A (AF AM 497A) **Race, gender, and religion in Cuba** (3) This course is designed to expose students to the intersection of race, gender and religion in Cuban culture. Students will spend 12 days of in Cuba conducting fieldwork and engaging, not only through reading materials--but in practical and concrete ways--with important questions about Cuban religious politics as they relate to both race and gender.  
Effective: Summer 2016 Ending: Summer 2016

WMNST 499 (IL) **Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.  
Effective: Summer 2005

WMNST 501 **Feminist Perspectives on Research and Teaching Across the Disciplines** (3) Feminist approaches to methodological issues in research and teaching in the social sciences, humanities, and natural sciences.  
Effective: Spring 2002

WMNST 502 **Global Perspectives on Feminism** (3) Exploration of feminist issues in a global perspective, including debates in history, ethics, and political feminism.  
Effective: Fall 2001

WMNST 507 **Feminist Theory** (3) Development of feminist theory and its relationship to history in terms of critique of family, sexuality, and gender stratification.  
Effective: Spring 2002

WMNST 508 (GEOG 508) **Feminist Methodology** (3) The objective of this course is to examine feminist approaches to traditional research methodologies.  
Effective: Spring 2016

WMNST 516 (HIST 516) **US Women's and Gender History** (3) A critical analysis of gender and theories of gender in selected American historical contexts.  
Effective: Fall 2012

WMNST 518 **Global Black Feminist Thought** (3) This course will explore the historical background and various expressions of contemporary Black feminist thought around the globe.  
Effective: Summer 2016

WMNST 520 **Gender and Nationalism** (3) Impact of Western nationalism and colonialism on the organization of gender roles from the 18th century to the present.  
Effective: Fall 2001

WMNST 523 (HRER 523) **Seminar in Work-Life Dilemmas, Practices, and Policies** (3) The course will provide students with an analytic framework for understanding how social inequalities in race, class, and gender shape experiences in families and the workplace.  
Effective: Spring 2015

WMNST 536 **Gender and Science** (3) Studies the foundations of feminist science studies as applied to biocultural practices of gender, biology, and reproductive technologies.  
Effective: Fall 2013

WMNST 537 (AFR 537) **Gender, Sexuality and Islam in Africa: Exploring Contemporary Feminist Scholarship** (3) A course about discourses of sexuality and gender in studies of Islam in Africa, with South Africa as a case study.  
Effective: Spring 2013

WMNST 538 (PHIL 538) **Feminist Philosophy Seminar** (3) Critically examines feminist approaches to ethics, epistemology, philosophy of science, metaphysics, social/political philosophy, and the history of philosophy.  
Effective: Summer 2005

WMNST 542 (C I 542) **Girls' Cultures and Popular Cultures** (3) This seminar explores educational implications in popular texts created for and by girls across time and cultures.  
Effective: Summer 2014

WMNST 594 **Research Topics** (1-15) Supervised student activities on research projects identified on an individual or small-group basis.  
Effective: Spring 1998

WMNST 595 **Internship** (1-18) Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.  
Effective: Spring 1998

WMNST 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 1987

WMNST 597 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently.  
Effective: Spring 1992

WMNST 602 **Supervised Experience in College Teaching** (1-3 per semester, maximum of 6) Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.  
Effective: Fall 1996

Last Import from UCM: July 23, 2016 3:00 AM

## Wood Products (W P)

**W P 412 Wood in Structures** (3) Behavior and design of solid, laminated, and plywood wood beams, trusses, columns, and foundations. Wood construction details.

Effective: Summer 2013

Prerequisite:

**W P 416 Wood Industries Management Development** (3) Managerial concepts and issues important to forest products organizations will help prepare students to assume management-level positions.

Effective: Summer 2013

Prerequisite:

**W P 417 Wood Products Manufacturing Systems and Processes** (4) Description of systems and processes used in the manufacture of wood products.

Effective: Summer 2013 Ending: Fall 2016

Prerequisite:

**W P 418 Chemical Processing of Wood** (4) Principles and practices of basic operations in converting wood and wood waste into useful chemicals and modified cellulose products.

Effective: Summer 2013

Prerequisite:

**W P 438 Business Concepts for Wood Manufacturing** (4) The course will cover manufacturing strategies and related financial measures in a wood production environment.

Effective: Summer 2013

Prerequisite:

**W P 495 Wood Products Internship** (1-6) Supervised field experience related to the student's major.

Effective: Summer 2013

Prerequisite:

**W P 496 Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2013

**W P 497 Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 2013

**W P 499 (IL) Foreign Studies** (1-12) Courses offered in foreign countries by individual or group instruction.

Effective: Summer 2013

**W P 513 Wood Chemistry** (3) Treatment of the chemical components of wood, their distribution and reactions.

Effective: Spring 2014

**W P 515 Wood Composite Processing Parameters** (3) Wood composite manufacture in theory and practice including various synthesis parameters in relation to physical and mechanical properties.

Effective: Summer 2013

Prerequisite:

**W P 530 Case Studies in Forest Products** (3) Manufacturing, marketing, and management issue analysis from a global perspective in the forest products industries.

Effective: Summer 2013

**W P 537 International Wood Products Marketing and Trade** (3) Strategic analysis, environmental scanning, international trade policy implications, determinants of competitive strategy for firms, industries, and nations.

Effective: Summer 2013

Prerequisite:

**W P 590 Colloquium** (1-3) Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Effective: Spring 1993

**W P 596 Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 2013

**W P 597 Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Effective: Summer 2013

W P 600 **Thesis Research** (1-15) No description.  
Effective: Summer 2013

W P 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) Provides an opportunity for supervised and graded teaching experience in forest products courses.  
Effective: Summer 2013

W P 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Summer 2013

Last Import from UCM: July 23, 2016 3:00 AM

## Workforce Education and Development (WF ED)

WF ED 402 **Supervision of Vocational Education** (3) For administrators, supervisors, and teachers responsible for improvement of instruction through supervision or for students preparing for supervisory work.  
Effective: Fall 2001

WF ED 405 (ENGR 405) **Project Management for Professionals** (3) Covers the essential concepts and skills needed to make effective contributions on projects, on time and within budget.  
Effective: Spring 2014  
Prerequisite:

WF ED 410 **Leadership Competencies for Professionals** (3) Designed to teach contemporary professional leadership competencies for workforce professionals who do not currently have supervisory responsibilities.  
Effective: Summer 2011  
Prerequisite:

WF ED 411 **Occupational Safety and Health for Workforce Education and Development Professionals** (3) This course assists participants in creating and supporting workplaces and educational environments free of occupational safety and health hazards.  
Effective: Spring 2014  
Prerequisite:

WF ED 413 **Vocational Education for Special-Needs Learners** (3) Introduction to program modifications, supplementary services, and resources required for special-needs learners in vocational and practical arts education programs.  
Effective: Fall 2001

WF ED 424 (CN ED 424) **Facilitating Career Development** (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work.  
Effective: Summer 2012  
Prerequisite:

WF ED 428 **Fiscal Accounting and Management for Workforce Development Professionals** (3) This course explores the subject of accounting through the sub-disciplines of financial and managerial accounting for Workforce Development Professionals.  
Effective: Spring 2016  
Prerequisite:

WF ED 441 **Conceptual and Legal Bases for Cooperative Vocational Education** (2) History, conceptual and legal bases for a cooperative vocational education program.  
Effective: Summer 1996  
Prerequisite:

WF ED 442 **Operating Cooperative Vocational Education Programs** (2) Student and training station selection, training plan and related subject development, records and reporting systems, school-industry coordination.  
Effective: Summer 1996  
Prerequisite:

WF ED 445 **Vocational Guidance** (3) Problems and possibilities of vocational guidance; the field of guidance and guidance literature; methods of field work; school guidance techniques.  
Effective: Summer 1996  
Prerequisite:

WF ED 450 (US;IL) **Cultural Diversity in the Workplace** (3) Provides opportunities for students to explore different cultures and mores that are changing the dynamics of the workplace.  
Effective: Fall 2006

WF ED 451 **Lean-Sigma for Professionals** (3) The course focuses on essential lean and six sigma concepts to improve processes in any industry.  
Effective: Summer 2013  
Prerequisite:

WF ED 471 **Training in Industry and Business** (3) Appraisal of training functions and development of competencies in work analysis, design, development, delivery, and evaluation of training.  
Effective: Spring 2001  
Prerequisite:

WF ED 495 **Internship** (1-6) Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.  
Effective: Summer 1996  
Prerequisite:

WF ED 495A **Cooperative Education Practicum** (2) Validation of competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.  
Effective: Summer 1996

## Prerequisite:

WF ED 495C **Student Teaching** (10) Supervised observation and practice teaching in approved vocational industrial schools/health occupations education settings.

Effective: Spring 1997

## Prerequisite:

WF ED 495D **Instructional Internship in Industrial Training** (5) Supervised internship in industrial training. Interns will be expected to perform instructional duties in industrial environments.

Effective: Summer 1996

## Prerequisite:

WF ED 496 **Independent Studies** (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Effective: Summer 1996

WF ED 497 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 1996

WF ED 498 **Special Topics** (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Effective: Summer 1996

WF ED 508 **Workforce Education Management** (3) Introduction to theories and concepts of managing workforce education programs in the public and private sector.

Effective: Summer 1996

WF ED 518 **Curriculum and Instructional Leadership for Workforce Education** (3) Study of topics related to curriculum and instructional leadership in workforce education in the public and private sectors.

Effective: Summer 1996

## Prerequisite:

WF ED 528 **Fiscal and Facilities Management for Vocational Administrators** (3) Sources of revenue, budget preparation, purchasing, and the management of physical facilities in vocational education.

Effective: Summer 1996

## Prerequisite:

WF ED 529 **Ethical Issues in Workforce Education and Development** (3) A study of ethical issues in workforce education environments in industry and education.

Effective: Summer 2014

WF ED 538 **Administering Personnel Services in Vocational Education** (3) Planning and implementing staff development activities, student guidance services, admissions, student organizations, and placement.

Effective: Summer 1996

## Prerequisite:

WF ED 540 **Data Analysis in Workforce Education and Development** (3) Provides opportunities to acquire and practice skills in descriptive and inferential statistics.

Effective: Spring 1996

WF ED 543 **Evaluation of Investments in Workforce Education and Development** (3) Use of labor supply models to evaluate investments in workforce education and development.

Effective: Spring 2011

WF ED 544 **Analysis of Policies for Workforce Education and Development** (3) Explores models and methods for analyzing policies for workforce education.

Effective: Summer 1996

## Prerequisite:

WF ED 546 **Work Based Education** (3) Discussion of legislation and educational requirements for education based at the worksite including cooperative education, youth apprenticeship, and apprenticeship programs.

Effective: Summer 1996

## Prerequisite:

WF ED 550 **Research in Workforce Education** (3) Research techniques in workforce education.

Effective: Summer 1996

WF ED 560 **Historical and Philosophical Foundations of Workforce Education** (3) An investigation of historical, philosophical, and professional foundations of workforce education.

Effective: Summer 1996

WF ED 572 **Foundations in Organization Development and Change** (3) Development of major concepts, skills and techniques required by workplace learning professionals to support and facilitate organization change.  
Effective: Spring 2016

WF ED 573 **Needs Assessment for Workforce Development Professionals** (3) Acquire skills to identify training and development needs, distinguish problems with management versus training solutions, develop and evaluate training solutions.  
Effective: Fall 2015

WF ED 574 **Strategic Planning For Education For Work** (3) Study of human capital as a component of education, industrial and business training strategic planning at economy, and organizational levels.  
Effective: Summer 1996  
Prerequisite:

WF ED 575 **Current Policy and Practices in Industrial Training** (3) Analysis of training and development practices and their articulation with business practices.  
Effective: Summer 1996  
Prerequisite:

WF ED 578 **Process Consultation in Organization Development** (3) This course provides a foundation in process consultation. Process refers to how groups interact and how people get along.  
Effective: Summer 2013

WF ED 582 **Assessing Data: Organizational Diagnosis** (3) This course familiarizes students with approaches to assessing and feeding back data in organization development (OD) and consulting services.  
Effective: Summer 2013

WF ED 585 **Appraising Organization Change and Development and Consulting** (3) This course familiarizes students with approaches to evaluating organization development (OD) and consulting services.  
Effective: Summer 2013

WF ED 588 **Platform Skills for Human Resource Development Professionals** (3) Platform skills focuses on theory and practice related to delivering well-crafted and effective training presentations.  
Effective: Spring 2013

WF ED 590 **Industrial Training Professional Seminars** (1) Study of special topics relating to problems, practices, methodologies and special competency needs in industrial training.  
Effective: Fall 2001

WF ED 595A **Field Based Project for Workforce Development Professionals** (2-5) Students identify a training and/or organization development problem in industry and/or business and carry out contract problem analysis and resolutions.  
Effective: Fall 2015

WF ED 595B **Workforce Education Administrative Internship** (2-15) Supervised study with an administrator or researcher at a cooperating school, state governmental agency, or research institution.  
Effective: Summer 1996

WF ED 595C **Internship in Cooperative Vocational Education** (1-10) Validation of teaching and co-op coordinator competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.  
Effective: Fall 1997  
Prerequisite:

WF ED 596 **Individual Studies** (1-9) Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  
Effective: Summer 1996

WF ED 597 **Special Topics** (1-9) Formal courses given on a topic or special interest subject which may be offered infrequently.  
Effective: Summer 1996

WF ED 597A **Appreciative Inquiry Coaching** (3) This course provides a foundation in the theories, principles, and techniques of Appreciative Inquiry Coaching (AIC).  
Effective: Summer 2016 Ending: Summer 2016

WF ED 598 **Special Topics** (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.  
Effective: Fall 2001

WF ED 600 **Thesis Research** (1-15) No description.  
Effective: Summer 1996

WF ED 601 **Ph.D. Dissertation Full-Time** (0) No description.  
Effective: Summer 1996

WF ED 602 **Supervised Experience in College Teaching** (1-3 per semester/maximum of 6) An opportunity for graduate students to teach a college level course under the supervision of an experience professor.  
Effective: Summer 1996

WF ED 610 **Thesis Research Off Campus** (1-15) No description.  
Effective: Summer 1996

WF ED 611 **Ph.D. Dissertation Part-Time** (0) No description.  
Effective: Summer 1996

WF ED 806 **Program and Facilities Management for Work Force Development Professionals** (3) This course examines advanced learning laboratory organization and management processes to facilitate learning and skill development in a safe environment.  
Effective: Spring 2016

WF ED 807 **Career and Technical Student Organizations (CTSOs)** (3) This course examines principles and practices of Career and Technical Student Organizations to promote enhanced learning and skills development.  
Effective: Spring 2015

WF ED 808 **Assessment Techniques in Workforce Education** (3) This course examines advanced assessment techniques associated with learning in an integrated competency-based Career and Technical Education (CTE) program.  
Effective: Spring 2016

WF ED 877 **Training-Group Seminar** (1) This course familiarizes students with self as an instrument of change and sensitizes individuals to their role in group dynamics.  
Effective: Summer 2014

WF ED 880 **Facilitating Groups and Teams** (3) This course provides students with necessary skills to facilitate small groups and teams.  
Effective: Summer 2013

WF ED 881 **Marketing Organization Development** (3) This course familiarizes students with the unique issues in marketing organization development (OD) and OD consulting services.  
Effective: Summer 2013

WF ED 883 **Organization Change and Development Interventions** (3) This course focuses on organization change and development interventions, where an intervention means a change effort.  
Effective: Summer 2013

WF ED 884 **Appreciative Inquiry** (3) This course provides a foundation in the theories, principles and techniques of Appreciative Inquiry (AI).  
Effective: Summer 2013

WF ED 886 **Laboratory in Organization Change and Development** (3) Students will work in teams to carry out an OD intervention in a field setting.  
Effective: Summer 2013

Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACCTG 404** Managerial Accounting: Economic Perspective (3) Accounting techniques as planning, control, and motivating devices in business and other organizations; accounting data for decision making and performance evaluation.

#### **ACCTG 404 Managerial Accounting (3)**

This course emphasizes the use of accounting information for internal purposes as opposed to the external disclosure focus of the financial accounting course. The cost covers the vocabulary and mechanics of cost accounting and the design of management accounting systems for planning and controlling operations, and for motivating personnel. The course integrates accounting with ideas from data analysis, decision analysis, finance, microeconomics, and operations management. The themes stressed throughout the course will be the notion that information is costly; the circumstances that necessitate cost allocation, the idea that different costs and different allocation schemes apply for different purposes; and fundamentals of incentive and compensation plans. Among the topics covered are cost behavior, cost-volume analysis, relevant costs, and the use of cost information for decision making. The course will rely on lectures and

discussion of case studies.

**ACCTG 405** Principles of Taxation I (3) Elements of tax policy and tax-planning concepts for personal and business decision making; with emphasis on taxation of individuals.

### **ACCTG 405 Principles of Taxation (3)**

Introduction to Taxation, is the first course that undergraduate accounting majors take that is devoted entirely to taxation. Although the course is intended for accounting majors, the content is relevant to finance majors seeking elective courses. The objective of the course is to provide students with a basic understanding of the concepts, terminology, and decision-making skills specific to the discipline of taxation that are germane to the professional development of those preparing for a career in accounting. Although the course surveys the many forms of taxation that are found in industrialized societies, and the comparisons thereof, the main focus is on the federal income taxation of individuals. However, coverage is provided regarding the manner in which the taxation of individuals relates to corporate and partnership entities. ACCTG 405 is related to other accounting courses through its coverage of income concepts, and micro-economic principles. The former compares differences in the measurement of financial accounting income with the manner in which income is determined according to the tax laws. The latter emphasizes business decision-making principles that are important in the managerial portion of the accounting program. The course covers topics that illustrate fundamental tax strategies and how such enable taxpayers to achieve business and personal economic objectives. The assessment process in ACCTG 405 incorporates examinations, homework assignments, and individual and group projects. The exams are combinations of objective questions and open-ended problems. Exams are often given in the evening. Course learning aids include a text book, on-line tax research services, spreadsheet software, and a packet of handouts prepared by instructors to keep the classes updated on the many changes in the tax laws that occur each year.

**ACCTG 417 Corporate and Managerial Communication (2-3)** Developing student's expertise in interpreting and communicating accounting and financial information to business professionals.

### **ACCTG 417 Corporate and Managerial Communication (2-3)**

This course provides an opportunity for business students to develop oral, graphic, and written communication skills essential to success in a corporate environment, with emphasis on corporate accounting, finance, and/or consulting contexts. The course provides a framework for understanding the characteristics of effective business communication. It further provides guidelines for the successful development and delivery of professional messages.

This course employs individual and team activities designed to strengthen skills in the development and delivery of corporate messages. Participants will gain experience analyzing and discussing financial and accounting data, evaluate and prepare professional responses to corporate problems/opportunities, and develop strategies for conversing with multiple business audiences. Specific selection of topics will evolve to reflect current issues in business, finance, and accounting.

**ACCTG 422 Accounting Systems (3)** Understanding flow and documentation of accounting information and internal controls in the context of accounting cycles.

### **ACCTG 422 Accounting Systems (3)**

This course primarily investigates accounting transactions cycles-processes and procedures by which an organization's financial information is recorded, processed, reported, and disposed of. The processes covered in this course range from manual to fully automated and Web-enabled systems. The documentation and analysis of the accounting cycles for the revenue, expenditure, conversion, and managerial reporting areas are explored via flowcharts and narrative descriptions. The concepts of files, transaction updates, editing, and reporting in the automated accounting systems are explored. The course also covers internal controls in the manual and automated systems. Additional topics may include fraud examination, applicable laws and regulations, and computerized auditing.

**ACCTG 426 Financial Statement Analysis (3)** The exploration of conventional and advanced methods of analyzing financial statements, including the assessment of earnings quality.

### **ACCTG 426 Financial Statement Analysis (3)**

The objective of this course is to explore conventional and advanced analytical methods of analyzing financial statements. Expanding on the material covered in the principles of accounting and principles of finance courses and using actual financial statements, students:

- review and apply the traditional methods for analyzing financial statements, such as ratio analysis, trend analysis, and common-size analysis,
- apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models, and
- evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality.

**ACCTG 432** Accounting Information Systems (3) Systems analysis tools and techniques; internal control concepts; development of computer control procedures.

**ACCTG 432 Accounting Information Systems (3)**

Accounting data are utilized as information in making decisions and as a control mechanism. The focus of this course, however, will be upon the actual production of accounting data.

The purpose of the course is to learn how accountants collect relevant data and transform them into reports appropriate for managers and external readers. Procedural details will focus first on the traditional accounting cycle and the journal entries for business transactions and events. Then we shall examine in detail the principle accounting cycles: sales cycle, cash receipts cycle, purchases cycle, cash disbursements cycle, payroll cycle, facilities cycle, general ledger cycle, production cycle.

For each cycle, you should be able to explain the relation of the accounting process to the business enterprise, the basic journal entries, the basic internal control features, and the document flow.

**ACCTG 440** Advanced Management Accounting (3) Management accounting topics such as decision models, quantitative techniques, variance analysis, and their use in accounting.

**ACCTG 440 Advanced Management Accounting (3)**

An in-depth examination of accounting techniques used within modern organizations. The course is designed for students interested in pursuing careers in corporate accounting or financial management.

The portfolio of managerial accounting procedures, including cost measurement and allocation, budgeting practices, transfer pricing, and variance analyses appropriate to an organization's unique circumstances are derived. The student will learn to apply psychological and sociological theories of behavior to practical problems of control and to apply quantitative methods and models to managerial decision-making. Other topics covered by the course may include, financial management of working capital, long-term assets and liabilities; techniques for managing inventory; and strategic cost management including inter-organizational cost management.

**ACCTG 471 Intermediate Accounting I (3)**

This course provides students with an understanding of generally accepted accounting principles and procedures so that they properly account for and present information in financial statements prepared for external users. The student should acquire a complete understanding of the accounting issues relating to cash, receivables, inventory, plant assets, natural resources, and intangibles. The student should be able to evaluate alternative accounting methods and choose the methods which will best convey the financial information related to the above areas. The student should be able to apply appropriate generally accepted accounting principles and procedures to account for transactions related to the above asset areas. The student should be able to demonstrate an understanding of the transaction analysis, recording, classification, summarization, and reporting procedures in the accounting cycle, and an understanding of the information contained in the financial statements. Finally, student should be able to demonstrate written communication skills required of accountants.

**ACCTG 481** Financial Statement Analysis: Accounting Based Evaluation and Decision Making (3) An accounting based evaluation and decision making approach to analyzing financial statements by studying business and firm valuation.

### **ACCTG 481 Financial Statement Analysis (3)**

The proposed course in financial statement analysis is structured to improve the student's ability to extract and interpret information from actual financial statements and to expose the student to how financial statement information is integrated into equity valuation and credit analysis. The course would not only rely upon textbook-based and lecture-based learning, but also emphasize case-based learning.

The course will consist of two main sections. The first will deal with accounting and business analysis. This part will explore the types of financial information data typically available for publicly traded companies and introduce a model of the economic drivers of company performance. It would incorporate some technical accounting as well as some standards business economics/strategy concepts. Students will be forced to recast financial statements that they believe do not reflect the underlying economic state of the company. Financial reporting issues relating to revenue and expense recognition, leases and consolidations will be discussed.

The other section of the course will deal with firm valuation. Students would be exposed to some standard approaches to equity valuation and the analysis activities underlying these approaches. Aspects of valuation that would be covered in this section of the course are financial ratio analysis, forecasting, pro-forma statements, cost of capital and valuation methods.

The course will rely on lectures and extensive use of case studies.

**ACCTG 483** Forensic Accounting (3) Study of investigative accounting, consulting and litigation support activities undertaken in forensic accounting engagements.

### **ACCTG 483 Forensic Accounting (3)**

ACCTG 483 is the exploration of the broad discipline known as "forensic accounting," which includes a variety of investigative accounting, valuation, damage assessment and litigation support services. Forensic accounting is an evolving discipline which is distinguished from assurance services in that it does not involve reporting on the fairness of financial statements. It generally involves the investigation and analysis of financial data for some specific purpose – obtaining an in-depth understanding of information that enables the forensic accountant to prove, disprove or at least confidently speculate about allegations related to the information and to report those findings objectively.

Forensic accountants are involved in presenting analyses that might be valuable for such things as settling legal disputes, calculating economic damages, valuing intellectual property, determining the extent of damage or loss due to fraud, or tracing elusive assets or revenue sources. A forensic accountant might also participate in pro-active engagements such as the development of systems and procedures to prevent fraud.

The first part of the course deals with the technical and ethical framework of forensic accounting and focuses on the understanding of forensic and investigative accounting including investigation methodology, the nature of fraud, fraud risk factors, financial statement fraud, litigation support and dispute resolution services and development of the skills needed in those professional activities. These skills include the ability to integrate knowledge of accounting, finance, economics, business law and other business disciplines in gathering, analyzing and evaluating evidence and drawing conclusions. The second part of the course focuses on forensic accounting investigation and analysis of financial information in connection with litigation, dispute resolution, estimation of economic damages, or other specific objectives, and the preparation of comprehensive, objective reports of findings and conclusions.

## Accounting-CI (ACCT)

**ACCT 501** Financial Statement Analysis (3) Study of financial reporting, financial statement analysis, capital markets, asset pricing and impact of ethical, legal, regulatory and environmental concerns.

### Financial Statement Analysis (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2002  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACCT 504** Auditing Theory and Practice (3) Auditing theory pertaining to the regulatory environment, risk assessment, internal controls, materiality, computerization, analytical procedures, sampling, fraud, ethics, and professional responsibilities.

### ACCT 504 Auditing Theory and Practice (3)

This course provides in-depth coverage of the theory and practice of auditing. Topics may include the regulatory environment, risk assessment and planning, internal controls, materiality, computerized auditing, analytical procedures and sampling, accounting fraud, ethics and professional responsibilities. Students are expected to apply professional judgment in practical applications of course concepts, building on technical knowledge acquired in undergraduate accounting coursework.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2012  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ACCT 510** Business Tax Planning Theory and Practice (3) Tax theory pertaining to corporations, partnerships and conduit entities, estates, trusts, ethics, and professional tax responsibilities.

### ACCT 510 Business Tax Planning Theory and Practice (3)

This course provides in-depth coverage of the theory and practice of tax planning for corporations, partnerships and other related pass-through entities. Topics will include tax research, corporate formation and capital structure, corporate non-liquidating distributions, corporate acquisitions and reorganizations, consolidated tax returns, partnership formation and operation, special partnership issues, S corporations, taxation of gifts, estates and trusts, and professional responsibilities and ethics.

**ACCT 532** Accounting Information and Decision Systems (3) The study of business processes, transactions cycles, and internal control structure with an emphasis on computerized accounting information systems.

### ACCT 532 Accounting Information and Decision Systems (3)

The course includes the study of business processes, transactions cycles, and internal control structure with an emphasis on computerized accounting information systems. The course explores the need for communication of information across functional areas to meet an organization's contemporary auditing, professional and legal considerations. The role of information systems is demonstrated by a focus on reporting objectives, management needs, transaction trails, documentation, security, internal controls, and the integration of accounting systems in the evaluation and selection of software.

**ACCT 540** Accounting for Managerial Decisions (3) Application of accounting to monitoring and improving the internal operation of an organization.

ACCT 540

**ACCT 540 Managerial Accounting (3)**

Accounting is the language of economic activity. Managers in all organizations - business, government, and not-for-profit - use accounting information to make decisions. As such, managerial accounting is an important competency area for MBA graduates.

Managerial Accounting addresses resource-related questions from a cost perspective. Relevant issues include resources consumed and the related cost of producing goods and providing services, and the effectiveness and efficiency of resource usage.

**Faculty Member Proposing Course:** Thomas Buttross

**ACCT 550** Professional Responsibilities and Ethics in Accounting (3) The study of ethical systems and ethical decision making and their application in Accounting.

### **ACCT 550 Professional Responsibilities and Ethics in Accounting (3)**

This course provides students with a foundation in professional codes of conduct and ethics adopted by professional associations and licensing boards for accountants, auditors, and fraud examiners. Topics include research into and discussions of selected historical and contemporary ethical cases and issues as they relate to accounting and business. The course includes an introduction to the concepts of ethical reasoning, integrity, objectivity, independence, core values, and professional issues in accounting. The course provides a working knowledge of ethical and justice theories on which students will be able to build as their careers progress. Some of the ethical issues that they may have to address include corporate social responsibility, distributive justice, accounting and economic development, accounting and the environment, professionalism, whistleblowing, and tax avoidance and evasion. Students will gain an understanding of the ethical foundations from which they can address the ethical issues that they will face as a professional.

**ACCT 561** Financial Statement Analysis II (3) The exploration of conventional and advanced methods of analyzing financial statements, including earnings quality and financial distress assessment.

### **ACCT 561 Financial Statement Analysis II (3)**

The objective of this course is to explore conventional and advanced analytical methods of analyzing financial statements. Expanding on the material covered in a financial accounting or financial statement analysis course and using actual financial statements, students:

- review and apply the traditional methods for analyzing financial statements, such as ratio analysis, trend analysis, and common-size analysis
- apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models
- evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality

Evaluation methods include case studies of actual companies and a comprehensive project to analyze the financial statements of a publicly-traded company. This course typically will be offered once a year.

**ACCT 571** Strategic Tax Planning (3) Study of strategic aspects of tax for planning business operations, growth, expansion, capital transactions, and transfer of wealth.

### **ACCT 571 Strategic Tax Planning (3)**

The objective of this course is to provide a framework for understanding the strategic impacts of tax-related decisions for new and existing businesses. Emphasis is placed on the managerial implications of tax planning and decisions with respect to operations, growth and expansion, capital transactions and the transfer of wealth. Six topics will be covered. These areas are as follows:

- (1) Strategic Tax Planning - Review of net present value and impact of taxation on maximization of wealth.
- (2) Tax Strategies for New Businesses - Exploration of choice of organizational form and compensation arrangements.
- (3) Business Operating Strategies - Study of the impact on the routine conduct of business of tax and accounting issues such as obtaining tax incentives, use of conduit entities and distributing cash and property.
- (4) Strategies for Business Growth and Expansion - Consideration of the tax consequences of operating with multiple entities in multiple jurisdictions.
- (5) Business Capital Transactions - Examination of the tax consequences of corporate reorganizations, mergers, acquisitions, divisions and liquidations.
- (6) Personal Wealth Planning - Explanation of the consequences of gift and estate taxes on the accumulation of family wealth.

**ACCT 572 Financial Reporting I (3)** Accounting theory and practice for reporting consolidations, foreign currency transactions, and preparing financial statements for governmental and NGOs.

**ACCT 572 Financial Reporting I (3)**

This course covers accounting theories and procedures as they pertain (a) to the preparation of financial statements for consolidated entities, (b) to the use of foreign currency and (c) to the financial reporting of activities of governmental and of not-for-profit entities. Contemporary reporting issues are reviewed and explored.

This course may utilize textbooks, lectures and/or cases. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. This course is recommended for students who did not take Advanced Accounting and/or Governmental Accounting at the undergraduate level.

General Education: None  
Diversity: None  
Bachelor of Arts: None

**ACCT 573 Financial Reporting II (3)** Topics involving consolidated financial statements, special purpose entities, derivative financial instruments, and use of the Financial Accounting Research System (FARS).

**ACCT 573 Financial Reporting II (3)**

This course covers (a) advanced topics related to the preparation of consolidated financial statements, (b) accounting for derivative financial instruments, (c) accounting for off-balance sheet financing and special purpose entities, and (d) the use of the Financial Accounting Research System (FARS) to explore advanced financial reporting issues.

This course relies upon textbooks-based, lecture-based, and case-based learning. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. It is assumed that students taking this course have either completed ACCT 572 or have completed courses providing significant coverage of consolidations, foreign currency transactions, governmental accounting and not-for-profit accounting at either the undergraduate or graduate level.

**ACCT 574 Accounting and Management Control Systems (3)** Study of theories, practices and issues associated with accounting and management control as reflected in relevant literature.

**ACCT 574 Accounting and Management Control Systems (3)**

Objective setting, strategy formulation, and control are three key management processes. This course focuses exclusively on control. The attributes of good control systems and poor control systems are identified. Basic types of controls are studied and by studying cases the applications of controls are considered relative to various settings.

**ACS 501** Elements of Acoustics and Vibration (3) Vibrational acoustics including mechanical oscillation, forced and damped response, vibration of strings, membranes, rods, bars, and plates.

**ACS 501 Elements of Acoustics and Vibration (3)**

Acoustics is a broad subject that crosses and interacts with many engineering, science, mathematics, medical, and artistic disciplines. This course provides a thorough foundation necessary for studying structural acoustics and vibration problems and the exploration of acoustic waves in solids. A detailed analysis of the single-degree-of-freedom mechanical mass-spring system provides the building block for exploring lumped-element models of more complicated acoustic systems and the phenomena of resonance for forced and damped systems. Multiple-degree-of-freedom mechanical systems are used to investigate the coupled oscillation between oscillating systems, the design of vibration absorbers, and methods for modeling the low frequency behavior of guitars, violins, and vented-boxed loudspeakers. Extending the mass-spring model to an infinite number of degrees-of-freedom leads to a development of the wave equation and its solutions for longitudinal acoustic waves in elastic solids. Boundary conditions and the concept of mechanical impedance are used to explore standing waves in a bounded elastic medium and the transmission of waves between media with different elastic properties. Transverse waves on an elastic string, while fundamentally different from longitudinal waves, obey the same differential equation of motion and the same application of boundary conditions and mechanical impedance. For both longitudinal and transverse wave systems, the mechanical impedance approach and the method of separation of variables are used to study systems with specified boundary conditions. Longitudinal and transverse waves in structures with varying cross-section, density, or elastic properties are also explored. Torsional waves in elastic solids are explored with application to systems with various cross-sectional shapes. Membranes serve as a two-dimensional extension of transverse waves on an elastic string, and provide mode shapes which may be described using rectangular and cylindrical coordinates (with Bessel function solutions). The fourth-order differential equation of motion for flexural bending vibrations of thin beams is derived and solutions are explored using the separation of variables approach for boundary value problems. Finally, the flexural vibration of two-dimensional rectangular and circular plates are investigated. Homework problem sets will illustrate theory and applications to real world problems.

**ACS 502 Elements of Waves in Fluids (3)** Thermodynamic and hydrodynamic foundations of linear acoustics in fluids with applications to lumped-elements, reflection, refraction, radiation, attenuation, enclosures, and waveguides.

### **ACS 502 Elements of Waves in Fluids (3)**

The purpose of this course is to provide the foundation for understanding the behavior of waves in fluids in the "linear acoustic" limit for first-year graduate students entering the Graduate Program in Acoustics. The course provides a common ground for students coming from a broad range of varying undergraduate programs in sciences, engineering, mathematics, and the arts. This self-consistent foundation will be built upon an understanding of thermodynamics and the consequences for the behavior of gases and gas mixtures (i.e., ideal gas equations-of-state, heat capacity), and hydrodynamics (both dissipative and non-dissipative) as expressed from the Eulerian perspective. This perspective will be used to develop techniques for understanding oscillations in lumped-element acoustical networks that are smaller than the wavelength of sound and will be applied to extended media in which waves propagate, are reflected and transmitted through interfaces between media with different acoustical properties, and are refracted through media with continuously-varying acoustical properties. The same equations will be applied to the excitation of sound waves that propagate in 3-dimensions by vibrating bodies that are smaller than the wavelength of sound. Those results will be extended by superposition of such "compact sources" to produce both discrete and continuous one- and two-dimensional arrays. The directional properties and strength of such extended sources will be examined. The behavior of sound within 3-dimensional rectangular enclosures is studied via the method of "separation of variables" to identify the sound modes in such enclosures, their characteristic frequencies, and the selective excitation and detection of such modes. The frequency dependence of the density of modes is introduced to motivate the relationship between the modal and ray-tracing (i.e., ballistic) perspectives. The techniques of "statistical energy analysis" will be applied such enclosures to quantify architectural phenomena such as reverberation time and critical distance. Those results will be extended to non-rectangular enclosures and to rectangular and cylindrical waveguides, focusing on the concept of group and phase speed and the coupling of sources to planewave and higher-order waveguide modes. Attenuation of sound waves is also treated from the hydrodynamic perspective and results are derived for boundary-layer dissipation, classical thermo-viscous sound absorption within bulk fluids, and the relaxation-time approximation is applied for sound absorption by chemical association-dissociation in seawater and the effects of humidity on collision-times in air. Problem sets that illustrate the theory and applications are a central component of this course.

**ACS 530** Flow-Induced Noise (3) Introduction to the basic and applied aspects of flow-induced noise created by subsonic flows of various complexities.

### **ACS 530 Flow-Induced Noise (3)**

The objective of this course is to introduce the basic and applied aspects of flow noise created by subsonic flows of various complexities. Basic concepts of noise and pressure fluctuations induced by unsteady fluid flows are discussed, including theoretical as well as experimental approaches. For a given class of flow, mechanisms for the creation of unsteady wall pressures and forces, radiated sound, and fluid-structure interactions are detailed. Various prediction schemes are presented which range from purely theoretical to empirical. The intent is to keep the material practical while at the same time introducing the student to a wide variety of specific topics. Some of the topics to be presented include: basic fluid mechanics, fundamental flow noise theory, flow noise measurement issues including wave vector-frequency spectral estimates of unsteady pressures and forces, compact Green's functions, unsteady forces and noise created by bluff bodies in flow, vortex shedding noise, wall pressure fluctuations and acoustics associated with turbulent boundary layers, including separated layers and transition zones, unsteady forces and noise due to flow over lifting surfaces, edge acoustic scattering mechanisms, axial-flow fan noise, rotor/flow interactions, turbulence ingestion, centrifugal blower

noise, and noise generated by flow in pipes. The prerequisite for this course is a solid understanding of the fundamentals of acoustics, as demonstrated by successful completions of ACS 501 and 502. Students with a minor in Acoustics from accredited universities may also have the proper background to take this course. Although basic fluid mechanics is covered in the course, any previous courses or experience in this area will be beneficial. Homework problems will be assigned weekly and graded. Some of the homework may involve reading technical papers and providing a written synopsis. The average of all homework grades will constitute one-third of the final course grade. Another third will come from the mid-term exam and the final third from the final exam.

**ACS 542 (E MCH 542) Physical Principles in Biomedical Ultrasonics (3)** Physical principles of advanced ultrasonic imaging and quantitative data acquisition techniques in fields of biology and medicine.

**ACS (E MCH) 542 Physical Principles in Biomedical Ultrasonics (3)**

This course focuses on the phenomenon of ultrasound in the context of medical and biological applications, systematically discussing physical principles and concepts. Concepts of wave acoustics are examined and practical implications are explored - first, the generation and nature of acoustic fields and then their formal descriptions and measurement. Real tissues attenuate and scatter ultrasound in ways that have interesting relationships to their physical chemistry, and the course includes coverage of these topics. This course also includes critical accounts and discussions of the wide variety of diagnostic and investigative applications of ultrasound that are available in medicine and biology. The course encompasses the biophysics of ultrasound and its practical applications to therapeutic and surgical objectives. The course utilizes finite element methods for simulation.

**ACS 573 (M E 573) Designing Quiet Structures (3)** Course integrates structural dynamics, acoustics and optimization into unified method for designing quiet structures virtually for early product development.

### **ACS (M E) 573 Designing Quiet Structures (3)**

During the past decade, several Mechanical & Nuclear Engineering faculty have been developing a broadly applicable methodology for the acoustic design of structures. The method integrates the disciplines of structural dynamics, acoustics and optimization into a unified approach that allows designers the possibility of including sound as a parameter in the early stages of product development. This course is designed as an introduction to this unique design method.

The format of the teaching style is a series of modular lectures each supplemented with an experiment (either numerical or physical) that students perform in teams. Because of the multidisciplinary nature of the course, the composition of the teams is balanced to ensure that at least one team member has a solid background in one of the three disciplines to be covered.

All of the experiments center on the problem of controlling the sound power spectrum of a structure via material tailoring, e.g., adding trim elements such as mass, stiffness, damping or dynamic absorbers. In particular, each team is asked to modify the acoustic signature of a selected structure to minimize its sound power radiation within a given frequency band. Optimization search routines identify the optimal location and size of the trim elements to give the best fit to the prescribed objective function.

Dedicated computer programs are available to students enrolled in this course.

Students are evaluated through individual and group homework assignments, in-class participation and activities, and a group project report and presentation.

**Adult Education (ADTED)**

**ADTED 456** Introduction to Family Literacy (3) Introduces family literacy concepts, models, and components supporting families; adult, child, and parent education, interactive literacy activities, and case management.

**ADTED 456 Introduction to Family Literacy (3)**

This 3-credit course examines the concept of family literacy and different models and services that support families. Students will review the main parts of family literacy services and programs that support vulnerable families: adult education, early childhood education, parent education, interactive literacy activities, case management, and collaboration with partners who provide services to families (such as libraries, community centers, school districts, one-stop services, Head Start.) The course attends to issues such as racial/ethnic, cultural, and linguistic diversity among families, continuous program improvement, and professional development.

**ADTED 458** Early Literacy Development (3) Focuses on young children's language and literacy development, including parental and staff support, grounded in scientifically based reading research.

**ADTED 458 Early Literacy Development (3)**

This is a three-credit, post-baccalaureate course that focuses on young children's language and literacy development. This course examines research related to how children acquire language, reading, and writing skills, as well as how family partnerships between the home and school can further support language and literacy development and children's academic success. This course will cover a wide array of topics related to language and literacy development, including the influence of play and technology, the impact of read-alouds on literacy development, and the role of racial/ethnic and cultural diversity in learning. Students will examine early literacy development through a series of activities and readings.

**ADTED 459 Interactive Literacy: Parents and Children (3)**

Interactive Literacy: Parents and Children is one of five 3-credit courses in the 15-credit Certificate in Family Literacy developed by the Goodling Institute for Research in Family Literacy in the College of Education in partnership with the National Center for Family Literacy (Louisville, KY). It is offered during the summer and fall semesters to about 20 students per class. The course is 15 weeks in length, entirely online, and cohort-based. Study materials are both web- and print-based. Students work in teams for most of their assignments although they are also expected to produce a portfolio of individual application activities. An Associate's Degree or 60 baccalaureate credits at an accredited institution are required to enter the course. Technological requirements, registration, and other support are provided. The courses focuses on the component of family literacy in which the low-literate parents engage in language and literacy development activities with their young children (birth to age 8). During interactive literacy the teachers both model and supervise the literacy interactions. Students learn to use planned and intentional activities that are developmentally appropriate for the children. They also learn how to teach the parent the necessary interaction skills as well as how to debrief the parents afterwards. They also learn how to assess the literacy interactions between parents and their children.

**ADTED 480 Teaching Math and Numeracy to Adults (3)** Examines issues of learning math as an adult and explores effective strategies for teaching math and numeracy to adults.

### **ADTED 480 Teaching Math and Numeracy to Adults (3)**

Many international assessments show that the numeracy skills of U.S. adults are lower than those of adults in many other countries and that their numeracy skills are even weaker than their literacy skills. This online course is designed for teachers, administrators, and others concerned with helping adults develop the math skills and abilities they need to function successfully in workplace, educational, and community settings. This course will focus on (1) how adults develop math skills in informal and work contexts and in classes or programs for students who wish to obtain a high school credential; (2) considerations for teaching math to immigrant adults and those with learning disabilities; and (3) the identification and implementation of instructional strategies for helping adults acquire the numeracy skills they need.

Using current research from the U.S. and other countries, course participants will consider the benefits and limitations of various instructional and programmatic approaches to helping adults learn. Through this course, students will (1) identify the implications of adult learners' prior experiences with math and numeracy for their reengagement with math in a non-formal learning setting; (2) differentiate between numeracy and math and consider the relevance of the distinction to teaching adult learners; (3) identify adult processes for learning math and compare and contrast them with those of children; (4) gain current knowledge about math standards that guide instruction and policy for adults; and (5) develop and evaluate instructional strategies and initiatives to teach math to adults, including accommodating immigrant learners and those with learning disabilities. Further, students will consider the knowledge and skills needed to help adults acquire functional numeracy skills.

**ADTED 501** Foundations of Medical Education (3) This course provides an overview of medical education, and considers how it operates as a specific form of adult education.

**ADTED 501 Foundations of Medical Education (3)**

The primary focus of this course is to explore the foundations of medical education by providing an overview of medical education, and considering how medical education operates as a specific form of adult education. It is especially relevant to educators working with adult learners in medical education, nursing education, or health education. More specifically, the course will focus on how insights from adult learning theory can contribute to the theory and practice of medical education in designing curriculum and developing an appropriate pedagogy in both classroom and clinical teaching contexts. It will examine recent and future trends in US medical education in light of the context of: the guidelines of the American Association of Medical Colleges (AAMC); the current health care system; and comparative trends in medical education in other countries. The course will examine research in medical education, and help students focus on the connections of research and educational philosophy/theory with developing their own teaching practice in medical education in classroom settings (face to face and online), and in clinical teaching settings. Finally, it will briefly explore trends in medical education assessment, and issues in continuing medical education.

Objectives are:

1. To provide an overview of the foundations of Medical Education as Adult Education
2. To consider the development of medical education in light of its history and recent trends in health care in both a U.S. and international context
3. To analyze and discuss adult learning theory as related to medical education in both classroom and clinical settings
4. To examine some of the research in medical education assessment strategies used in evaluating medical education
5. To develop a philosophy of medical education that guides the development of curriculum and pedagogy in different medical education settings
6. To develop specific strategies for medical education teaching practice for both classroom and clinical contexts

In addition to ongoing participation, evaluation is predominantly based on the following:

1. A paper where students discuss their philosophy of medical education and what it suggests for curriculum development in light of course readings and class discussion
2. A collaborative book review and presentation of a recent book in medical education
3. A final paper or project exploring an issue in medical education in depth

**ADTED 502** Program and Instructional Design in Medical Education (3) This course focuses on program planning and instructional design in a medical setting with an emphasis on teaching with simulation.

**ADTED 502 Program and Instructional Design in Medical Education (3)**

Participants of this course will explore a variety of program and curriculum planning and instructional design approaches to teaching in a medical setting, with a particular emphasis on the use of simulation as an instructional design. Program planning is informed by models from the adult education literature and curriculum planning informed by the field of medical education which will provide a framework for preparing participants in the assessing, planning, developing and evaluating simulations as an instructional design. The course will provide participants with the both theoretical understanding and direct practical experience so they are able to effectively plan and develop effective simulations for teaching in a medical setting. In addition, this course is taught in six sessions (9-5pm) which is a suitable format for teaching the content and the work schedule of medical students/faculty who will be taking this course.

General Education: None

**ADTED 508** (CI ED 508) Globalization and Lifelong Learning (3) Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts.

**ADTED (CI ED) 508 Globalization and Lifelong Learning (3)**

The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning.

The main goal is to enhance the students' ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

**ADTED 509** (CI ED 509) Language, Literacy, Identity, and Culture in a Global Context (3) Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context.

**ADTED (CI ED) 509 Language, Literacy, Identity, and Culture in a Global Context (3)**

This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.

**ADTED 543** (AFR 543, CI ED 543) Comparative and International Trends in Adult Literacy Education (3) This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework.

**ADTED (AFR/CI ED) 543 Comparative and International Trends in Adult Literacy Education (3)**

This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives.

This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis?

Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge

production itself.

**ADTED 551** Qualitative Data Analysis (3) Students learn to analyze data qualitatively by engaging in, and continuously reflecting on the process.

#### **ADTED 551 Qualitative Data Analysis (3)**

The course is designed for graduate students wishing to gain competencies in qualitative data analysis. It is especially suitable for students needing guidance in completing the data analysis phase of their masters' or doctoral research. The course takes a thoroughly hands-on, inductive approach. Students learn the skills and principles of qualitative data analysis by engaging in, and reflecting on, the process. Texts will be consulted, as needed, but only as resources to assist in the students' on-going work, not as blue prints to follow. Using their own data, the instructor will guide students in selecting and using appropriate strategies and techniques for qualitatively analyzing data. Students will work in teams. Each work team will make periodic progress reports - in the form of oral class presentations. It is expected that students will actively participate in class discussions and in their work teams. Each student will also submit a diskette that contains samples of the work he or she has generated while using qualitative data analysis computer programs. Each student will also submit a final paper that articulates what he or she learned about the qualitative data analysis process.

**ADTED 552** Participatory Action Research (3) Examines origins, historical development, main characteristics, methodological assumptions and models, practice of participatory action research adult education and community development.

#### **ADTED 552 Participatory Action Research (3)**

This course is designed to provide students with a critical overview of the theory and practice of participatory action research (PAR). The course begins with an examination of the meaning and nature of participatory action research. Related issues such as the major differences between PAR and the orthodox, traditional research paradigm will be discussed. This will be followed with a discussion of the historical roots of PAR and a critical examination of its epistemological assumptions and philosophical roots. The course will explore the various models of doing PAR with particular reference to the guidelines, phases, methods, and techniques. Finally, the course will critically examine a selected number of case

studies from various regions. Students will be evaluated using a variety of assignments. The scholarly paper, a case study of PAR practice, annotated bibliography and three reaction papers will count for 90% of the course grade. Class participation will be awarded 10%.

**ADTED 561** Family Literacy (3) Examines the research related to the four components of family literacy, program effectiveness, and theoretical underpinnings.

#### **ADTED 561 Family Literacy (3)**

Open to graduate students who are interested in literacy, adult education, early childhood education, family studies, communication, and related fields, this 3-credit course provides a research-based study of family literacy. Family literacy comprises four components: Adult literacy instruction, early childhood education, parenting education, and parent - child interaction. Research about the four components and the program as implemented in the USA (primarily under the Goodling Even Start Act) and internationally will be studied in addition to the theoretical underpinnings of the concept of family literacy. Students will be required to conduct original or library research related to family literacy and present their findings both in class and in a written paper that could be publishable. Students may choose to do research related to the projects of the Goodling Institute for Research in Family Literacy in the College of Education; students' papers may have the opportunity to be disseminated through the Institute. The research project, presentation, and paper will be counted as 50% of the course grade. Class participation (including email discussion groups) will be awarded 20% of the course grade while the remaining 30% will be awarded to short reaction papers to the assigned readings.

**ADTED 562** (CI ED 562) Politics, Language and Pedagogy: Applying Paulo Freire today (3) Examines the work of Paulo Freire as it applies to community action projects.

#### **ADTED (CI ED) 562 Politics, Languages and Pedagogy: Applying Paulo Freire Today (3)**

The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

**ADTED 564** (CI ED 564) Social and Cultural Contexts of Learning and Work (3) Examines the relationship between learning and work with special attention given to how certain forms of learning are legitimized.

**ADTED (CI ED) 564 Social and Cultural Contexts of Learning and Work (3)**

This course is designed to provide students with the knowledge and skills required to critically examine the concepts and meanings of learning and work and their relationship to community. The course focuses on formal, nonformal, informal, and incidental learning, with particular emphasis given to how different types of knowledge and different forms of learning are legitimized. The course will allow students to develop and understand the social context in which learning and work operate and how those concepts shape and impact the community. Students will write critiques of readings as well as a major literature review, participate in class discussion, and do a class presentation.

**ADTED 597A** (HLHED 597A) Meditation, Embodied Learning, and Health (3) This graduate-level course will initially focus on the examination of the conceptual and research based literature on different types of meditation and embodied learning and their effects on health. But it will also focus on the applied practice of a form of meditation (of the learner's choosing) and its relationship to embodied learning, and perceived effects on stress reduction and increased well-being. As such the course is both theoretical and experiential. Participants will be expected to represent their learning in two primary ways: (1) by writing a paper that connects their experience of meditation to the research and conceptual literature on the effects of meditation and embodied learning on health, and its implications for education; and (2) by presenting their knowing by creating either a digital story (of pictures, music, and story), or other applied project documenting their learning.

## **Aerospace Engineering (AERSP)**

**AERSP 401A** Spacecraft Design--Preliminary (3) Conceptual and preliminary design of a spacecraft, its constituent subsystems, and related systems, to satisfy a given set of specifications.

**AERSP 401A Spacecraft Design - Preliminary (3)**

AERSP 401A is the first of a two-semester sequence of senior capstone design courses. In this course, students will begin to learn the design process, complete a conceptual design, and to begin a preliminary design of a spacecraft, working in teams. This process is inherently multidisciplinary, requiring the use of engineering practices in such subjects as structures, dynamics, electrical and thermal systems, propulsion, controls, and information systems. In addition to the technical design content, this course seeks to enhance students' skills in verbal and written communications, ethical thinking, and the team approach to design, which is widely used in industry and government. Classes (115 minutes each, twice weekly) include lecture and time for team meetings. Students are evaluated on the technical merit of the designs (presented in written and oral reports), as well as their ability to function on a team.

General Education: None

Bachelor of Arts: None  
Effective: Spring 2007  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 401B** Spacecraft Design--Detailed (2) Detailed design of the constituent subsystems and related support systems for a spacecraft.

**AERSP 401B Spacecraft Design -- Detailed (2)**

AERSP 401B is the second of a two-semester sequence of senior capstone design courses. In this course, students work in teams, continuing the design process begun in AERSP 401A. This process is inherently multidisciplinary, requiring the use of engineering practices in such subjects as structures, dynamics, electrical and thermal systems, propulsion, controls, and information systems. In addition to the technical design content, this course seeks to enhance students' skills in verbal and written communications, and the team approach to design, which is widely used in industry and government. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

**AERSP 402A Aircraft Design--Preliminary (3)** Conceptual and preliminary design of an aircraft, its constituent subsystems, and related systems, to satisfy a given set of specifications.

**AERSP 402A Aircraft Design -- Preliminary (3)**

AERSP 402A is the first of a two-semester sequence of senior capstone design courses. In this course, students will complete the preliminary design for an aircraft such that it satisfies the assigned specifications. Students completing this course will have the ability to design a system, component, or process to meet desired needs in aircraft systems; they will have the ability to function on multi-disciplinary teams; and they will have the ability to identify, formulate, and solve engineering problems. In addition, students will have the background to help determine what the ethical responsibilities are to themselves, to employers, and to society. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 402B Aircraft Design--Detailed (2)** Detailed design of the constituent subsystems and related support systems for an aircraft.

**AERSP 402B Aircraft Design - Detailed (2)**

AERSP 402B is the second of a two-semester sequence of senior capstone design courses. In this course, students will complete the detailed design for an aircraft, and all of its constituent and related support systems, such that it satisfies the assigned specifications. Students completing this course will have the ability to design a system, component, or process to meet desired needs in aircraft systems; they will have the ability to function on multi-disciplinary teams; and they will have the ability to identify, formulate, and solve the associated engineering problems. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

**AERSP 405 Experimental Methods and Projects (3)** Experimental methods involving a variety of aerospace engineering topics; teams of students focus on advanced measurement techniques and project engineering.

**AERSP 405 Experimental Methods and Projects (3)**

This is a senior-level elective laboratory course that builds on AERSP 305W "Aerospace Technology Laboratory." The first part of AERSP 405 addresses the engineering of typical data acquisition systems through a series of lectures and laboratory experiments. Data acquisition and processing are covered as they relate to a broad range of engineering experiments. Several sessions in the laboratory provide students with hands-on experience with data acquisition, followed by computer program exercises to complete the assignments. Initially the lectures are twice a week (75 minutes each). This activity comprises approximately 20 % of the total course.

The major portion of the course introduces students to "real-world" projects in engineering and laboratory research. Students work in teams to identify, formulate, plan and solve engineering problems associated with a design or system, the completion of an experiment, or an extensive computational simulation requiring a team of students. Teams of 2 to 4 students are assigned, following student input on preferences from a list of proposed projects. Students learn, through practice, the methodology of team project engineering. The teams each develop goals for the semester's project, performed following a careful work breakdown analysis with realistic time estimations and scheduling. Many of the projects involve the design and completion of an experiment. As part of the project, students will assemble, analyze and interpret relevant data, and prepare progress and final reports (written and oral). The reports should contain graphs that go with the text to provide the necessary data interpretation. The topics in the projects have application to a variety of research programs currently underway at Penn State. At the initiation of the project activity, lectures on principles of project planning including Gantt chart preparation, work breakdown structures and critical path considerations are presented. Common best practices for the preparation of project proposals, reports, presentations and general record keeping are discussed.

Overall meetings with the course instructor become bi-weekly once the projects are underway. Many of the projects also have knowledgeable graduate student or faculty consultants to assist with project planning and implementation. Project consultants conduct occasional individual review meetings with each team. Much of the project coordination work is undertaken within the regularly scheduled hours for the course. The class meetings include a combination of informal presentations by the students and, occasionally, the instructor on important technical issues. Considerable class time is spent discussing the goals and progress of individual tasks, and each student gives several brief oral presentations.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2012  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 407** Aerodynamics of V/STOL Aircraft (3) Rotary wing aircraft; VTOL and STOL performance; propeller-wing combinations; jet flap; high lift devices.

#### **Aerodynamics of V/STOL Aircraft (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1984  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 410** Aerospace Propulsion (3) Analysis and performance characteristics of reciprocating engine, turbo-jet, turbo-prop, turbo-fan, ram-jets, and chemical rockets. Aerothermodynamics of inlets, combustors, and turbomachinery.

#### **Aerospace Propulsion (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 412** Turbulent Flow (3) Homogeneous turbulence; spectral transfer of energy, viscous dissipation; turbulent shear flow: mixing-length theory, eddy viscosity, scaling laws, energy budget.

#### **Turbulent Flow (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 413** Stability and Control of Aircraft (3) Static and dynamic stability and control of aircraft; open and closed loop systems.

#### **Stability and Control of Aircraft (3)**

General Education: None

Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1989  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 420 Principles of Flight Testing (3)** In-flight and analytical studies of airplane performance, stability, and control; reduction of data; instrumentation; flight test techniques.

### **Principles of Flight Testing (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 423 Introduction to Numerical Methods in Fluid Dynamics (3)** Finite difference methods applied to solving viscous/inviscid fluid dynamics problems, error control, numerical stability.

### **Introduction to Numerical Methods in Fluid Dynamics (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 424 Advanced Computer Programming (3)** Engineering and scientific programming topics: object oriented programming, parallel programming, and various modern languages (e.g. C++, Java, and Ada).

### **AERSP 424 Advanced Computer Programming (3)**

This course presents an advanced view of computer programming, mainly using Java, C++, and Ada95. The use of current operating systems (e.g. Linux and Unix) and compilers (e.g. gcc) will also be presented. Object Oriented Programming will also be discussed in detail. Object Oriented Programming is quite different than functional or procedural programming, and it is difficult to learn on your own. The differences and similarities between Java and C++ and Ada95 will also be discussed. Hands-on programming will be a key part of the course. This course is one of the Core Courses for the Graduate Minor in High Performance Computing, and will also be a technical elective in Aerospace Engineering.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 425 Theory of Flight (3)** Advanced wing and airfoil theory, conformal mapping, slender body theory.

### **Theory of Flight (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2001  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 430 Space Propulsion and Power Systems (3)** Analysis and performance of chemical and nuclear rockets, electric propulsion systems. Introduction to solar, chemical, thermoelectric, and nuclear power sources.

### **Space Propulsion and Power Systems (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 440** Introduction to Software Engineering for Aerospace Engineers (3) Software engineering for safety- and mission-critical systems, including requirements, management, processes, designs, programming, validation/ verification, and other aspects of software development.

### **AERSP 440 Introduction to Software Engineering for Aerospace Engineers (3)**

This course is an introduction to software engineering. Software engineering includes all aspects of professional software production, and is especially important for safety-critical and mission-critical software. It includes documentation, management, processes, requirements, design models, computer programs, validation, verification, and other aspects of the development process.

Aerospace systems, including aircraft, spacecraft, onboard avionics, ground-based systems, flight simulators, and air transportation systems, rely heavily on software. Software is a major cost of all aerospace systems. For example, the Boeing 777 has more than 1000 onboard processors and more than 4 million lines of software which is primarily written in Ada. The F/A-22 fighter has more than 2 million lines of software onboard, and much of this is Ada also.

Aerospace systems also demand a level of reliability far beyond that of most other systems, which means the software must be designed using rigorous mission-critical and safety-critical procedures, which makes the software quite unique compared to most other software. The FAA and DOD are both involved in certifying aircraft software, for example, through the DO-178B and DOD-2168 standards.

This course is required option in Aerospace Engineering (take one of AERSP 440, E E 305, or E E 210). If not taken to satisfy that requirement, it can be used as a technical elective.

This course is a required option in Aerospace Engineering (take one of AERSP 440, E E 305, or E E 210). If not taken to satisfy that requirement, it can be used as a technical elective.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 450** Orbit and Attitude Control of Spacecraft (3) Principles of mechanics and vector analysis applied to basic concepts of satellite motion and control, rocket ballistics, and gyroscopic instruments.

### **Orbit and Attitude Control of Spacecraft (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1987  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 460** Aerospace Control Systems (3) Design and analysis of feedback control systems for aerospace applications; stability, root locus, time- and frequency-domain, state-space methods.

### **AERSP 460 Aerospace Control Systems (3)**

This course is an introduction to the design and analysis of feedback control systems as applied to aerospace systems. The course covers control theory that is commonly used in the aerospace industry and presents practical applications of this theory to aerospace systems. The course does not emphasize rigorous mathematical derivation, but instead emphasizes the application of control theory. It provides a comprehensive overview of classical control theory and single-input/single-output (SISO) design methods. The course also presents an introduction to modern control theory and multi-input/multi-output (MIMO) design methods. Aerospace examples and applications are emphasized throughout the course.

The course builds upon a required junior-level course in system dynamics and controls (AERSP 304), which provides students with basic dynamic system theory and a brief introduction to feedback control. The course also supplements required senior-level courses in either aircraft or spacecraft dynamics (AERSP 413 and 450) which provides background on vehicle dynamics. AERSP 460 provides an additional level of depth in dynamics and control theory, and prepares students for entry-level work or graduate studies involving the design of automatic control systems for aircraft and spacecraft.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AERSP 470** Advanced Aerospace Structures (3) Design and analysis of aerospace structures. Plates and sandwich panels; composite materials; structural dynamics; aeroelasticity; damage tolerance.

### **AERSP 470 Advanced Aerospace Structures (3)**

AERSP 470 covers important topics in aerospace structures beyond basic stress and deflection analysis of thin-walled beams. The objectives of the course are to help students: 1) appreciate the roles that structures and structural materials play in aerospace vehicles; 2) understand general design concepts for aerospace structures: vehicles, components, and materials; 3) develop the analysis tools and skills needed to analyze the static and dynamic performance of aerospace structures; and 4) gain experience identifying, formulating, and solving aerospace structural engineering problems.

AERSP 470 builds on structural, dynamics, and aerodynamics topics covered in PHYS 211, E MCH 011 & 013 (or 210), E MCH 215 & 216, AERSP 301, AERSP 306, and AERSP 304. It prepares students for entry-level work or graduate study in the analysis and design of aerospace structures. It also provides students with the strong background needed to contribute effectively to multidisciplinary trade studies in vehicle design activities.

AERSP 417 begins with a review of the general features of flight vehicle structures and aerospace structural design concepts. Then, the deflection and stress responses of flat plates and sandwich panels under lateral and in-plane loading are addressed. About a third of the course is devoted to the behavior of advanced composite panels, and another third to structural dynamics and aeroelasticity. The course finishes with treatments of joining and damage tolerance, both key topics with respect to the design of aerospace structures.

**AF AM (HIST) 465 The Post-World War II Civil Rights Movement (3)  
(US)**

This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

**AF AM 492 (C I 492, EDTHP 492) Identities, Power and Perceptual Pedagogies in Teaching and Learning (3)** Students will perform inquires into the intersections of identities, power, and pedagogical formations in relation to urban teaching/learning contexts.

**AF AM (C I/EDTHP) 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3)**

In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict actual lived experiences among racially and economically diverse students and teachers in urban contexts.

**AFR 532** Environment and Livelihoods in Africa (3) An enquiry into the relationships between the environment, resource control, resource conservation, rural livelihood systems and poverty in Africa.

**AFR 532 Environment and Livelihoods in Africa (3)**

The seminar examines the relationships among the environment, resource control, conservation and rural livelihoods in sub-Saharan Africa. Readings will allow students to develop a critical understanding of the ideology and epistemology of environmental management, resource control, rural development and poverty in sub-Saharan Africa. Students will be encouraged to interrogate modernist doctrines such as population-environment narratives, poverty-stewardship narratives and related environmental ideologies/narratives that embody sustainability and rural (under)development in sub-Saharan Africa. Through case study examples, students will use these conceptual foundations to trace the relationships between sustainability and poverty in a number of livelihood systems and resource control regimes. Some examples are resource (land/water) management between the state and nomadic pastoral systems; land reform and rural peasant livelihood systems; mining and rural livelihood systems; and national parks, trans-frontier parks and rural livelihood systems.

**AFR 543** (ADTED 543, CI ED 543) Comparative and International Trends in Adult Literacy Education (3) This course

critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework.

### **AFR (ADTED/CI ED) 543 Comparative and International Trends in Adult Literacy Education (3)**

This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives.

This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis?

Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

AGBIO 802

**AGBIO 802 Plant Protection: Responding to Introductions of Threatening Pests and Pathogens (3)**

This course covers agricultural biosecurity issues relevant to plant-based agriculture. Topics include the size and scope of plant-based agriculture domestically and globally, the concept of plant disease, the nature of threats to plant health,

modes of transmission of pests and pathogens and the role of government and other public institutions in protecting the nation's agricultural and forest systems. Information on the regulatory component of plant protection and how they function will be included.

Case studies of introductions of major pests and pathogens will be reviewed in depth and comprise the majority of the course. These cases are selected to represent different means of introduction and different types of pests or pathogens. Various strategies and technologies developed for prevention, detection, response, and recovery will be considered and compared. The intended and unintended influences that governmental regulations, industry practices and international agreements can have on the spread of plant pathogens and pests will also be discussed. Finally, an assessment of readiness for future pathogen/pest introductions will be synthesized and presented.

## **Agricultural and Biological Engineering (A B E)**

**A B E 500 (BRS 500) Research Methods (3)** Foundation in research philosophies, methodologies, issues and policies; measures of research quality; critical thinking and discourse; research report writing; professional development; research ethics.

### **A B E (BRS) 500 Research Methods (3)**

A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

**A B E 559** Biological and Agricultural Systems Simulation (3) Continuous simulation modeling of biological and physical systems, numerical simulation techniques, validation and verification, difference measures, sensitivity analysis.

**A B E 559 Biological and Agricultural Systems Simulation (3)**

This course enables the student to better understand system behavior and prediction, with a focus on biological and physical systems. Using a diagramming-based model development package and standard spreadsheet programs, the student will be able to: identify a system, labeling components, boundaries, and environment; represent a system in mathematical terms; develop a working simulation model; evaluate a model through statistical means. The applications used within this course are oriented towards graduate students in the Colleges of Agricultural Sciences and Engineering. The course is offered every Fall semester, with an expected enrollment of 10 students. Grading is based on homework and in-class assignments, and a final project.

## **Agricultural and Extension Education (AEE)**

**AEE 400** Global Agriculture Education (3) Development and implementation of educational programs in agriculture in developing countries.

### **AEE 400 Educational Programs in Agriculture for Developing Countries (3)**

The purpose of the this course is to develop the global competency of future change agents in agricultural education so that they, in turn, can guide future learners to gain knowledge, develop skills, and acquire dispositions for living in a globally interdependent and culturally diverse world. The course is designed for all learners who wish further their ability to engage in formal and non-formal systems of agricultural education in all settings.

As the enduring understandings of this course, students will develop 1) a knowledge of global agricultural education programs, 2) critical and comparative thinking skills, including the ability to think creatively and integrate knowledge, rather than unquestioning acceptance of knowledge, and 3) an ongoing willingness to seek out international or intercultural opportunities.

The course is organized around five essential themes: 1) education as innovation, 2) access to education and employment, 3) program planning and evaluation, 4) types of agricultural education and 5) spaces of innovation.

Learners in the course will be encouraged to develop their 21st century learning skills of communication collaboration, critical thinking, and creativity through authentic, experiential assessments curated around dynamic world issues in education related to agriculture, food, fiber and natural resources.

**AEE 412** Methods of Teaching Agriculture and Environmental Science (4) Instructional strategies and media; directing

individual and group learning activities; assessing student performance and quality of instruction in vocational agriculture.

#### **AEE 412 Methods of Teaching Agriculture and Environmental Science (4)**

This course is designed to utilize various instructional strategies and media, which inform students in the directing of individual and group learning activities. Students also learn methods in which to assess student performance and quality of instruction in school-based agricultural education. The course allows students to analyze, and implement, how they best can design instruction to maximize student learning. A range of teaching methods are utilized throughout the course including, but not limited to; lectures, discussions, demonstrations, supervised study, and cooperative learning. The course prepares students to successfully develop engaging lessons and units of instruction in agricultural education. Additionally, students will learn how to modify instruction to allow each learner the opportunity to achieve total student success. A laboratory enables student to refine their skills in a peer setting, prior to the student teaching internship experience. The combination of lecture and laboratory allow students to become reflective practitioners that are capable of planning, organizing, and implementing effective teaching practices and learning experiences for their students. Also, this course will provide students the opportunity to develop the capacity to evaluate student learning utilizing both formative and summative evaluation techniques.

Effective: Spring 2016

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AEE 413 Program Planning and Instructional Development (3-4)** A course in planning, developing, and organizing school-based curriculum, summer programs, advisory councils, and facilities for environmental/ agricultural education.

#### **AEE 413 Program Planning and Instructional Development (3-4)**

Organization and administration of secondary programs of education in and about agricultural/environmental sciences, including Ag In The Classroom (Elementary School Agriculture), marketing, summer programs, and state vocational finances. Topics will include discussion of instructional techniques for secondary educators in agriculture, with emphasis on classroom management, discipline and motivation, and teacher evaluation.

The course is arranged in 10 units (for students who have completed AEE 100 as an undergraduate certification requirement) or 15 units (for returning adult students seeking certification who have already completed an Agricultural/Environmental Science undergraduate degree). Thus, this is a variable credit offering designed to meet the needs of these two groups of students.

In each unit there are objectives that need to be met by the students. The students "click" on the objective to open the lessons. Within the lessons are research materials, articles, textbook references (all copyright permission), additional WWW links, and other supporting resources. At the end of the article is an opportunity for students to enter the Penn State Coursetalk electronic "chat" room to engage in discussions.

#### **AEE (AN SC) 437 Equine Facilitated Therapy (3)**

The primary goal of this course is to acquaint the participant to equine facilitated therapy (therapeutic riding) and to introduce them to individuals who benefit/participate in such programs through lecture, audio-visual media, discussions, program visitation, independent research and via a practicum at a therapeutic riding program. Additionally, this course is

designed to introduce the participant to various exceptional characteristics and conditions which may benefit from exposure/participation in equine facilitated therapy and other animal related therapy programs.

**AEE 460 Foundations in Leadership Development (3)** This course explores historical and contemporary leadership theories, models and perspectives within social, cross-cultural, and political contexts.

### **AEE 460 Foundations of Leadership Development (3)**

This course is designed to provide students with a philosophical and theoretical framework of leadership by examining historical and contemporary theories, models and leadership styles within a social, political and global context. Students will explore leadership effectiveness and its relationship to issues of power, influence, persuasion, motivation and ethical decision-making. The overall objective of this course is to help students learn specific leadership competencies that will make them a more effective leader when addressing problems and seeking solutions in public and private domains.

Evaluation will be based upon quizzes, written projects, leader interview and a final paper in which students will be expected to demonstrate an integrated application of causes, barriers and key ingredients of successful leadership practices. This course will be part of a series on leadership development offered through the Department of Agricultural and Extension Education.

### **AEE 465 Leadership Practices: Power, Influences, and Impact (3)**

In this course, students will explore leadership roles as they relate to issues of purpose, social responsibility, political influences and legal constraints. It is designed to help students develop greater sensitivity to the variety of factors and

forces impacting leadership processes and to acquire an increased understanding of key elements of successful leadership practices. The overall objective of this course is to help students learn specific leadership competencies that will make them a more effective leader when addressing problems and seeking solutions in public and/or private domains.

Evaluation will be based upon unannounced quizzes, several short written projects, and a final paper in which students will be expected to demonstrate an integrated application of causes, barriers and key ingredients of a leader they consider to be successful. This course will be part of a series on leadership development offered through the Department of Agricultural and Extension Education.

**AEE 511** Youth Leadership Development in the Agricultural and Life Sciences (3) This course will address youth leadership development theories and emphasize formal and nonformal youth programs in agricultural and life sciences.

**AEE 511 Youth Leadership Development in the Agricultural and Life Sciences (3)**

The course will provide learners with an understanding of how adolescents develop and emerge as leaders in their families, schools, organizations, and communities. The overall objective for this course is to provide future and current leaders of youth organizations in the agricultural, natural resource, and/or life sciences the knowledge, skills, and experiences to develop and enhance the leadership skills and behaviors of the youth in their organizations. This will be accomplished through a variety of educational methods and techniques. Exposure to theories of youth leadership development will be shared within the context of adolescent development, group dynamics, and opportunities for growth and self-development. A variety of youth organizations and their respective leadership based programs, curricula, and philosophies will be shared and analyzed. Assignments and evaluative-based activities will focus on investigating and comparing youth organizations, analyzing leadership-based resources, analyzing youth/adolescent development theory, and developing a proposal to secure extramural funding to support youth leadership development.

**AEE 515** Engagement Through Outreach Scholarship in Higher Education (3) To develop an understanding of outreach scholarship as a nonformal educational system and its relationship to relevant social systems.

**AEE 515. Engagement through Outreach Scholarship in Higher Education (3)**

Through this course, students will develop an understanding of outreach scholarship as a non-formal educational system and its relationship to relevant domestic and international social systems. Students will explore the historical and legislative history of how higher education evolved. Drawing from both contemporary as well as historical resources, students will understand the "land-grant" philosophy and outreach scholarship in higher education in order to define an engaged university. Using their definitions, students then critique outreach scholarship as it is carried out through specific institutions of higher education, both in the United States and around the world. Alternative institutional missions, organizational policies and procedures as well as organizational structures and financial arrangements will be explored to demonstrate how distinct approaches to outreach

scholarship evolve and their perceived value within an institution. Within this framework, students explore today's definition for scholarship and appropriate standards for scholarly performance through outreach. Case studies, interviews, and guest lectures supplement the current and historical literature. Students carry out individual capstone projects in order to allow each of them to synthesize course content in terms of their own professional interests within an engaged university.

Given the visibility of outreach scholarship in higher education today and the fluidity of its definition, implementation, and perceived value within institutions, this course reflects contemporary thought in addition to its historical underpinnings.

## **Agronomy (AGRO)**

**AGRO 410W** Physiology of Agricultural Crops (4) Study of the relation of plants to their environment and the physiology of crop plant growth.

#### **AGRO 410W Physiology of Agricultural Crops (4)**

AGRO 410W is a course in plant physiology that presents fundamental aspects of plant metabolism and demonstrates how they are affected by environmental conditions such as light, water availability, temperature, and mineral nutrition. It describes how plants use photosynthesis to accumulate and partition biomass and how this contributes to crop productivity. The roles of abiotic stress such as drought and temperature extremes on crop productivity also are discussed. The course objectives are to 1] learn how plants 'work' at the molecular, cellular, whole plant and population levels; 2] develop critical thinking skills by planning and conducting experiments related to the course topics and reviewing journal articles; and 3] develop and enhance communication skills through a variety of writing assignments. This course is appropriate for upper level undergraduates or beginning graduate students with interest in plant and agricultural science disciplines including, horticulture, agroecology, plant pathology, ecology, meteorology and entomology; and meshes with courses in these areas. Students will be evaluated by examinations/quizzes, writing

assignments and class participation. The course is offered annually and the optimal enrollment is 20 students.

General Education: None  
Diversity: None

Effective: Summer 2013  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**AGRO 438 (AGECO 438) Principles of Weed Management (4)** Weedy plant taxonomy, biology and ecology of weedy plant populations, and integration of biological, chemical, cultural and biological controls.

### **AGRO (AGECO) 438 Principles of Weed Management (4)**

The study of weeds and their management is a challenging and demanding task that requires diverse abilities. The term weed is an anthropocentric construct meaning it is a human colored definition. We will study the biology and ecology of weedy plants drawing on examples from a wide range of plant systems; those systems include agricultural fields (agronomic and horticultural crops) and forests. Of course our knowledge of the biology and ecology of weedy plant populations will then be used to underpin and assess control tactics and their integration. The discipline has a history of equating management with herbicidal control and in fact some 80% of the pesticides used in U.S. agriculture are herbicides. However through novel farmer designed management systems, through a research community focused on alternative methods of management and through increased focus on invasive species, exciting breakthroughs are occurring in alternative methods of management and prevention. This course seeks to introduce you to the breadth of management approaches in use and under study. The specific objectives are for students to be familiar with: 1) the local weed flora, 2) fundamental aspects of weed biology and ecology relevant to managed landscapes, 3) the control methods used in managing weed populations, 4) how control measures can be integrated to accomplish acceptable levels of pest suppression, 5) operationalizing a weed management plan, 6) how herbicides enter and move to their site of action in plants, 7) classifying herbicides by their site of action, and 8) the distinction between herbicide concentration in soils and plant available herbicide concentration.

General Education: None  
Diversity: None  
Bachelor of Arts: None

**AGRO 460 (BIOTC 460) Advances and Applications of Plant Biotechnology (3)** This course provides a comprehensive overview and current status of plant biotech research. The course provides knowledge of plant systems that fall in the category of GMOs.

### **AGRO (BIOTC) 460 Advances and Applications of Plant Biotechnology (3)**

This course will provide a comprehensive overview and status of current plant biotech research. The focus is on providing knowledge of the biology of plant systems. Consequences of development of a transgenic plant either for food (crops) or

as a tool to understand molecular, genetic, and inheritance mechanisms of a trait will be discussed in detail. The course will deliver the current literature and understanding of mechanisms involved in herbicide resistance in transgenic plants. Specific topics that will be of interest to students from various disciplines include disease and insect resistance, quality traits, and secondary metabolites. Molecular biology of different pollination systems will be examined so that students will understand the concept of gene flow from transgenic to non-transgenic crops. Examples from recent developments on the beneficial use of transgenic plants as producers of modified compounds, starches, antibodies and their use in phytoremediation of toxic and organic pollutants will be discussed from the perspective of genetic and molecular plant systems. Gene expression of transgenic plant traits and the stability of an engineered crop will be discussed. Specific emphasis will be on different modes of inheritance that a transgenic plant can follow after its development and release into the environment. The course also prepares students for understanding the regulatory processes that are required for testing, moving, and environment release of transgenic crops. The laboratory component of the course will introduce students to the common technique of molecular biology that are used to detect expression in transgenic plants. Transgenic maize plants will be grown in a greenhouse and analyzed for expression of introduced genes.

**AGRO 510** Ecology of Agricultural Systems (3) Examination of ecological concepts and research on agroecosystem processes and dynamics via discussion and analysis of review and research papers.

**AGRO 510 Ecology of Agricultural Systems (3)**

This course covers agroecological components, processes, and dynamics. Emphasis is placed on learning via reading and discussing the recent agroecological research literature. Students also gain experience interpreting and critically analyzing scientific papers and theories. Students lead some of the class discussions on the assigned readings. They identify one or two articles that are relevant to their graduate research subject to read and discuss with the class. Students write review papers on the course themes and on agroecology research that is relevant to their graduate research topic. The course is offered in alternative years during spring semesters.

**AGRO 555** Effective Scientific Communications (2) Instruction and practice in verbal communication of scientific information to technical and non-technical audiences through realistic exercises with invited audiences.

**AGRO 555 Effective Scientific Communications (2)**

The overall course objective is discovery of methods to effectively communicate scientific information to both fellow scientists and the lay community. A majority of the course will be devoted to preparing students to deliver oral and poster presentations technically appropriate for their target audience. Specifically, students will learn to present information in oral and poster formats used for scientific meetings, seminars, and proposal hearings. Additional emphasis will be placed on techniques for handling questions from the audience. Students will also determine appropriate scientific paper

formats, and realize how outlines facilitate organized technical writing. Students will improve their critical listening, thinking, and interpersonal skills by participating in weekly topical discussions as well as peer reviews. This course is unlike others in the Crop and Soil Sciences curriculum in that it teaches students how to communicate what they have learned during their research and academic endeavors. Enrollees will make two formal presentations based on their research, present their research as a scientific poster and conduct an exercise in writing a scientific journal article. Students will be evaluated on five criteria: participation, scientific poster presentation, technical oral presentation, non-technical oral presentation, and a scientific journal writing exercise.

**AGRO 851 Applied Plant Population Biology (3)**

Even though the emphasis of this course will be on the applied aspects of plant population biology, students nevertheless require a fundamental understanding of the underlying science and theory on which to guide their land management decisions, with particular emphasis on plant materials. This course is designed to give potential superintendents and managers of large land holdings (such as golf courses, highway roadsides, game lands, and military installations) the skills necessary for making sound ecological decisions regarding the choice and management of plant materials utilized in land restoration and revegetation. Emphasis will be made on the applied aspects of plant population biology.

## American Studies (AM ST)

**AM ST 400** Early America to 1765 (3) American society and culture in the colonial period.

### **AM ST 400 Early America to 1765 (3)**

A study of early American history and culture from the Columbian encounter to the end of the colonial period in America. The course covers the results of contact between Native American civilizations and Europeans, forms of government and community that emerged in America, the formation of an American identity, and the creation of a distinctive, expanding American cultural landscape. The course satisfies the "area" requirement in history for undergraduate majors in American Studies, and is open to all majors.

### **AM ST 401 Revolution and Early Republic 1765-1815 (3)**

American society and culture during the period of the Revolution and Early Republic. The course satisfies the "area" requirement in history for undergraduate majors in American Studies, and is open to all majors. An objective of the course is for students to understand the significance of this formative period on the emergence of the United States as a nation. Students will examine the mythology of the Revolution as well as its historical record. They will consider the development of social and political institutions in the early years of the new nation, including the creation of pivotal texts of the Declaration of Independence and Constitution.

### **AM ST 405 Cold War America (3)**

Examination of social and cultural currents in American life after World War II to 1990. The course satisfies the "area" requirement in history for undergraduate majors in American Studies, and is open to all majors. Students will analyze the way that the confrontation between communist superpowers and the United States shaped politics, culture, and society. Among the events discussed are the nuclear bomb, space and arms race, Kennedy assassination, Watergate scandal, and Korean and Vietnam wars. The cultural expression of the period in film, television, literature, music, and art will be

analyzed.

**AM ST (KINES) 441 History of Sport in American Society (3)**

Study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture.

**AM ST 447 (US) (HIST 447) Recent American History (3)** Contemporary economic, social, and political aspects of the United States and its role as a world power since 1945.

**AM ST 447 (HIST) Recent American History (3)**

This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women's Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period –art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.

**ANAT 584** Human Anatomy and Development A: Gross Human Anatomy (1) Explore gross human anatomy providing orientation to organs and the overall relationship of organs and structures within the human body.

### **ANAT (PHARM) 584 Human Anatomy and Development A: Gross Human Anatomy (1)**

This course will provide a concise but thorough description of the gross human anatomy. With the use of pre-dissected prosection or model representations of the human body, anatomic position, orientation (e.g., retroperitoneal, superficial, deep, ipsilateral), and identification of structures within major body cavities (thorax, abdomen) of the human body will be conducted. Evaluation of the musculoskeletal system will include structure of bones, classification of bones in the axial and appendicular skeleton, discussion of joints, skeletal muscles, and accessory structures related to muscle action including fascia. Evaluation of digestion system will include components involved with alimentary canal as well as accessory organs. Evaluation of the cardiovascular system will focus on the communication network, heart anatomy and blood flow through its chambers, pulmonary and systemic circulation, as well as relationship of arteries, veins, capillaries to the heart. Evaluation of the nervous system will identify and discuss major structures of the central nervous system including the brain and spinal cord, peripheral nervous system, and enteric nervous system. For each system, the focus will be knowledge necessary for understanding, utilizing, and appreciating the role of the human body in biomedical and translational research.

**ANAT 585 Human Anatomy and Development B: Human Development (1)** Explores human embryology and organogenesis beginning at the third week of gestation through parturition.

**ANAT (PHARM) 585 Human Anatomy and Development B: Human Development (1)**

This course will provide a concise but thorough description of embryology of the major systems in the human. It will provide an awareness of how genetics, environment, and maternal-fetal relationships impact on normal human development, and the importance of understanding embryology for biomedical and translational research. An emphasis will be placed on the role of molecular biology in normal embryology and human development. Primary literature will be consulted for a description of major signaling pathways and key signaling molecules associated with each system. Some discussion of abnormal development will be included.

Bachelor of Arts: None  
Effective: Spring 2015

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ANAT 586 Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine (1)** Exploration of stem cell biology and the role of stem cells in regenerative medicine.

**ANAT (PHARM) 586 Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine (1)**

This course will provide an evaluation of stem cell biology and regenerative medicine. In particular, discussions will focus on the five sources of embryonic stem cells (adult stem cells, amniotic fluid-derived stem cells, embryonic stem cells derived using *in vitro* fertilization technologies, somatic cell nuclear transfer cloning-derived stem cells, and stem cells derived by parthenogenetically-activating oocytes). In addition to providing detailed information on the biology underlying stem cells, group discussions will focus on ethical advantages and disadvantages for each of the five distinct types of stem cells. Work will then turn to current understanding of changes in transcriptome and proteome control of differentiation. As well, discussions will focus on attempts to use stem cells in regenerative medicine. This course will be designed as a mixture of didactic lectures with a particular focus on the current literature. This latter aspect of the course is essential in that much of our current understanding of stem cells has not yet made it into any common text books.

**Animal Science (AN SC)**

**AN SC 405** Advanced Canine Nutrition and Management (3) Application of biological principles to the care and nutrition of dogs; interactive discussions of contemporary nutrition and management issues.

**AN SC 405 Advanced Canine Nutrition and Management (3)**

Animal Science 405, Advanced Canine Nutrition and Management, is a 3 credit senior-level course emphasizing the application of biological principles to the proper care and nutrition of dogs. Students scheduling this course must first complete a junior level course in companion animal care and nutrition. Course objectives are to a) develop an appreciation for the role and importance of the dog in contemporary society; b) develop skills in formulating sound management plans for the selection, breeding, feeding, training, and health care of the dog; and c) encourage independent student thought,

written communication, and oral communication of topics related to the care and management of canines. AN SC 405 is one of several "capstone" advanced management courses offered by the Department of Dairy and Animal Science for students with intensive interest in various animal species.

**AN SC 413 Transgenic Biology (3)** The principles and concepts used to generate genetically engineered animals by pronuclear, knockout, and cloning methods; and applied biotechnology applications.

### **AN SC 413 Transgenic Biology (3)**

The Transgenic Biology course is offered each spring semester for those students interested in learning the concepts, principles, and applications of genetic engineering in animals. The mouse is used as a model system, but the discussion encompasses large animals and commercial applications. Techniques covered are pronuclear, embryonic stem, and somatic-nuclear transfer generated animals. Content also includes the use of morpholinos and RNAi use to "knockdown" gene expression. Other systems discussed are Zebrafish and Xenopus as well as gene analysis by mutagenesis and gene trapping. The course objectives are (1) to provide the student with a working knowledge of the processes involved in functional analysis of gene expression using model animal systems and (2) to give the student understanding for the practical aspects of generating transgenic animals including microinjection, screening, breeding, and phenotypic analysis. Students are typically evaluated using several parameters including exams, presentations of current journal articles, abstracts of current journal articles, and a paper dealing with an aspect of transgenesis in the student's field of interest.

**AN SC 417** Horse Judging (2) Evaluation and selection of halter and performance horses, and presentation of oral reasons.

**AN SC 417 Horse Judging (2)**

Animal Science 417 encompasses all of the information necessary for students to pursue competencies in horse evaluation. From external parts and evaluation of conformation of halter horses, rail and pattern classes, to special classes (trail, pleasure driving, etc.) students will expand the depth and breadth of knowledge for evaluating classes of stock-type horses. Following successful completion of AN SC 417, students will be eligible to compete for a position on the Penn State Intercollegiate Horse Judging Team (AN SC 426 Advanced Judging and Selection). Students who elect to take AN SC 417 and AN SC 426 will fulfill the writing and speaking skills requirement for the Animal Science major. Furthermore, this course serves as an elective for students outside of the major, Animal Science, who are enrolled in the Equine Sciences minor.

**AN SC 418** (AGECO 418, SOILS 418) Nutrient Management in Agricultural Systems (3) Comprehensive review of nutrient flow in animal agricultural systems, environmental regulations, and environmental stewardship practices.

**AN SC (AGECO/SOILS) 418 Nutrient Management in Agricultural Systems (3)**

Nutrient Management in Agricultural Systems is a senior level course that applies the fundamentals of animal and plant, sciences to the concept of a nation-wide food animal system. The regional concentration and consolidation of animal production enterprises has resulted in important economic savings for consumers. But these changes have also had some detrimental impacts on the environment. For example, some nutrients such as calcium and phosphorus and certain trace elements are mined, while others such as nitrogen and potassium are derived from crop production systems. In all cases, the nutrients are transported to areas of livestock concentration. A small portion of the nutrients leave the farm in the form of animal products, while 60 to 70% of the nutrients are excreted and applied to nearby crop land. The environmental implications of the net influx of these nutrients to livestock producing communities have only recently been recognized. These concepts will provide the background around which regulations are written and sound nutrient management strategies are developed and implemented.

**AN SC 429** Advanced Beef Cattle Production (3) Application of scientific and business principles to practical production and management issues using case studies or selected live settings.

**AN SC 429 Advanced Beef Cattle Production (3)**

This course was developed to train students to critically evaluate management, facility, and husbandry practices of working beef cattle operations. Students visit owner facilities where they gather necessary information by interacting with the owners and inquiring about the owner's practices. The students use knowledge gained through previous courses and material covered in class to make recommendations. The students work in teams to present to the owners possible solutions to their problems. Each team will present a 30 minute critical evaluation of each case study with the owners being present. Students interact and answer questions concerning their presentation from the owners, students, and faculty. Students are introduced to the NCBA and Cattle FAX which they can use to stay abreast of beef industry concerns after completion of the class. If available, a field trip to either national or Pennsylvania state agriculture offices will occur.

**AN SC 432 Techniques in Cattle Reproduction (1)** Demonstration and practice in cattle artificial insemination technique and semen handling. Instruction in reproductive systems anatomy, estrous cycle and estrus synchronization programs.

**AN SC 432 Techniques in Cattle Reproduction (1)**

This course provides instruction in the technique of artificial insemination and the associated applications of this technology. A minimum level of expertise in this technique will be achieved through an understanding of cattle reproductive system anatomy, the estrus cycle and estrus synchronization programs. There will be a significant amount of time spent practicing artificial insemination technique in cows. This will be accompanied by instruction in semen handling and the proper use of the equipment used to store semen and to inseminate a cow. Evaluation will be based on proficiency in artificial insemination technique and semen handling in addition to a written exam. This course is offered during the fall semester by appointment.

**AN SC 447 Applied Equine Behavior (3)** Theory and application of behavior principles as they apply to horses in free-running and domestic situations.

**AN SC 447 Applied Equine Behavior (3)**

Applied Equine Behavior is an advanced course in equine science that examines the behavior of horses in free-running and domesticated situations. Outcome-based course objectives are as follows: 1) develop a working repertoire of behavior terminology and principles particularly as they apply to the horse; 2) apply critical thinking skills toward understanding and predicting behavior in horses under intensive management as it is modified from instinctive behavior seen in free running horses; 3) critically analyze and compare various training theories; 4) develop a new expertise in careful observation and analysis of behavior; 5) practice communication skills and increase information literacy, particularly in the study of behavior.

This course presupposes previous coursework in equine science or biology and complements other courses such as horse production and management, animal behavior/sociobiology, physiology, and genetics. Applied Equine Behavior is [will be] a supporting course for the Animal Science Major. Students will be able to make full use of the University horse herd and available data recording and analysis instruments and software.

**AN SC 457 Equine Reproduction and Breeding Farm Management (3)** Advanced aspects of equine reproduction will be covered, including collection of semen, processing it for shipment, and insemination of mares.

**AN SC 457 Equine Reproduction and Breeding Farm Management (3)**

Equine Reproduction and Breeding Farm Management is intended to expand on the knowledge of equine reproduction and breeding farm management acquired in other classes. The students will get hands on experience in artificial insemination of mares and semen collection of stallions.

Having completed the course, students will be able to:

- A. Collect semen from a stallion.
- B. Assess seminal characteristics and process the chilled semen to be sent to another farm.
- C. Artificially inseminate a mare.
- D. Apply scientific principles to make the decisions necessary to manage an equine breeding facility. The information covered will include but not be limited to reproductive management of the mare and stallion, foaling, and neonatology.

Evaluation will typically be based on written tests, research and presentation of a selected topic, and laboratory attendance and participation.

**AN SC 467W Equine Nutrition and Feeding (3)** Equine gastrointestinal anatomy and physiology; energy and nutrient requirements for body functions; applied interrelationships between nutrition, health, and performance.

**AN SC 467W Equine Nutrition and Feeding (3)**

AN SC 467W, Equine Nutrition and Feeding, is a 3 credit junior or senior-level course emphasizing the application of biological principles to the proper nutrition of horses. Students scheduling this course must first complete AN SC 301. Course objectives are that upon completion of the course, students should be able to a) Apply an understanding of form and function of the equine gastrointestinal tract to actual feeding management problems associated with athletic performance or health concerns; b) Describe the nutrient and energy requirements of horses in different physiologic states and apply these in diet evaluation and formulation; c) Communicate to clients, customers and peers important information about equine nutrition, enabling them to improve the health and performance of their horse without having to take a course on equine nutrition. Each student will complete a 3000 to 3500 word paper on how some aspect of nutrition might be applied to improve equine health or performance. The writing project will involve an oral presentation, multiple drafts and require students to review and provide feedback on each others' work. Students will be evaluated via a series of assigned homework, exams, class participation, and the overall writing project.

**AN SC 477** Riding Instructor Training (1) Management of equestrian riding lessons, teaching techniques, lesson plans, program planning, time management, and handling of mounted groups.

**AN SC 477 Riding Instructor Training (1)**

The Equine Riding Instructor Training course relates to teaching, equestrian skills, developing lesson plans, program planning, events coordination, staff management, time management, and handling of mounted groups from beginners to more advanced level riders. There are many opportunities for riding instructors in the equine industry throughout the United States. Career areas include breed associations, cooperative extension, and equine facilities/stables. This course will help give students the tools to be safer and better-prepared equine riding instructors. Successful completion of the course implies students will be able to: Conduct horse riding lessons at all horsemanship skill levels, understand safe horsemanship; manage large mounted equestrian groups; and develop appropriate lesson plans.

**AN SC 543** Animal Genomics (3) Foundations in genomics, proteomics, epigenomics, and basic bioinformatics, and their applications in animal breeding, health, production, reproduction, nutrition, and medicine.

**AN SC 543 Animal Genomics (3)**

Genomics is a branch of genetics concerned with the study of genome sequence, assembly, and analysis of the structure and function of genomes. It is an interdisciplinary field involving the marriage of molecular biology, robotics, and computing. The course is designed to foster an appreciation for the importance of genomics as applied to animal agriculture and medicine and to provide a knowledge base that enables students to successfully move on and master advanced topics in genomics. Additionally, the course will introduce students to approaches and techniques used to sequence and analyze animal genomes and provide a hands-on learning environment to familiarize students with genome databases and basic bioinformatics tools. The course will combine lecture discussion of current literature with hands-on genomic analysis with focus on genome structure & organization, genome sequencing & annotation, animal genome projects & comparative mapping, single nucleotide polymorphism (SNP) discovery & genome-wide association study (GWAS), genomic selection, non-coding RNA, microarray analysis, proteomics, epigenomics, phylogenomics, and systems biology. Each topic will have one or more computer-based lab sections that are designed to provide students with further information related to the topic, with a particular focus on how to navigate genome databases and how to carry out basic bioinformatics analysis for their research projects. This course is suitable for graduate students, professional research scientists, and any student who has a BS in life science and wants to learn more about animal genomics and its sub-disciplines.

**ANTH 408** Anthropological Demography (3) Analysis of demographic studies in traditional and very small populations.

**ANTH 408 Anthropological Demography (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines population-related problems from an anthropological perspective. Special emphasis is placed on ecological and economic approaches to the study of population dynamics in small-scale, preindustrial societies. This is an advanced undergraduate course that builds upon introductory anthropology and leads the student into more difficult demographic problems that are linked with economics, politics, religion and other cultural factors that shape population and population change. While the course is designed to introduce any of the basic analytical methods of demography, attention is focused primarily on fundamental theoretical issues concerning population growth, resources, fertility, mortality, age structure, and household demography in traditional societies. Data is drawn from ethnographic studies of living populations, from historical demography, and from paleodemography (the reconstruction of population patterns from skeletal samples). There will be three take-home problem sets. These will be a mixture of short essay questions and simple numerical exercises that can be solved on a pocket calculator or a spreadsheet. This course fulfills a 3 credit 400-level requirement for the Anthropology major and minor.

Bachelor of Arts: Social and Behavioral Science

Effective: Fall 2003

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ANTH 410** Osteology (4) Introduction to the systematic study of the human skeleton from an evolutionary developmental biological perspective.

**ANTH 410 Osteology (4)**

This course introduces students to the aspects of the human skeleton and dentition that are of anatomical, archaeological, forensic, and developmental significance. Topics include the identification of skeletal and dental structures; the distinction between normal and pathological bone; the estimation of age, sex, and stature from skeletons; bone metabolism; growth and development; and the functional aspects of musculoskeletal and dental systems. Up to one-half of the course is spent on bone identification and skeletal anatomy. Lectures are supplemented by labs that provide practical experience in the identification of individual bones and anatomical structures, age and sex estimation, and the differentiation of abnormal from normal bony structures. It is absolutely essential for students to attend labs to familiarize themselves with bone specimens and casts. At the close of this course, students are expected to be able to recognize human bones and be familiar with anatomical terms, the bony landmarks that define their shape, and the relation of those bones with various soft-tissue structures. Students will have a basic grasp of bone growth and development, as well as how to identify an individual's general characteristics from the skeleton, such as age, sex, and prior life-history events including disease and trauma. The course fulfills a 400-level elective for the Anthropology (BA) major and minor, as well as the Archaeological Science and Biological Anthropology (BS) degree programs.

**ANTH 411** Skeletal Forensic Anthropology (3) An introduction to anthropological forensic science with an emphasis on what can be learned from human skeletons and archaeological recovery methods.

**ANTH 411 Skeletal Forensic Anthropology (3)**

This course is a survey of forensic anthropology focusing on human skeletal remains and archaeological recovery methods. Emphasis is placed on field methods used to collect human remains from surface and buried contexts; taphonomic processes; estimating age, sex, stature, and ancestry from human skeletons; recognizing signs of trauma and scavenger damage; and identifying individuals from skeletons. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be two exams, a midterm and a final, and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 410, Human Osteology, and proposed course ANTH 413, Molecular Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university's Forensic Science major.

General Education: None

**ANTH 412 Settlement Demography (3)** Examination of the demography and ecology of human settlement systems in the preindustrial past.

**ANTH 412 Settlement Demography (3)**

This seminar will examine the population dynamics of human settlement systems in preindustrial societies, living, historic, and prehistoric. The focus will be on subsistence-level agrarian settlements, but some attention will also be paid to settlement patterns in hunter-gatherers, in market economics, and in complex societies. After reviewing basic assumptions and problems of working with spatial data, the course will examine processes determining settlement size, composition, and location on the micro-level (i.e. that of individual households, farmsteads, hamlets, and villages) and then pass on to regional patterns of transport, migration, and defense. The processes of site colonization, settlement expansion and contraction, site abandonment, and re-colonization will all be considered in detail. Since human settlements are always non-randomly distributed across spatially-heterogeneous landscapes, some basic landscape ecology will be presented in the course. Some fundamentals of geostatistical analysis will also be taught, although the course is not intended to be a survey of quantitative geography or spatial analysis. Rather, it is designed to be a more specialized follow-up to ANTH 408 (Anthropological Demography); the new course builds upon the basic explored in ANTH 408 by extending them into the spatial domain. During the last quarter of the semester, students will split into 2-3 teams, each of which will re-analyze settlement data from a region and time period of its choice for presentation to the rest of the class. The proposed course will provide 3 elective credits toward the undergraduate major and minor, and will be open to graduate students as well. The overall aim is to produce scholars who can think in creative ways about the dynamics of settlement systems in their own reading and research. The course should be of interest to archaeologists, anthropological demographers, ethnologists, and other students interested in human population science, especially as it relates to preindustrial society.

**ANTH 421 Intro to Geospatial Science in Anthropology and Archaeology (3)** This course is a practical, data driven, introduction to applications of Geospatial tools in anthropological and archaeological research.

### **ANTH 421 Intro to Geospatial Science in Anthropology and Archaeology (3)**

As anthropologists, we are interested in humans, how humans interact with each other, and how that interaction is modulated by space and place. The purpose of this course is to introduce students to the basic concepts of spatial theory in anthropology, and the use of GIS (Geographic Information Systems) as a tool in anthropological and archaeological research designs. Students will gain familiarity with geospatial technologies, their use as a tool for data creation, storage and manipulation, and a broad array of data analyses. The course is relevant to anyone documenting or investigating spatial dimensions of human social behavior. Students will gain familiarity with GIS software, its use as a tool for data creation, and a broad array of data analyses.

This class will be offered each Fall semester. It will introduce students to sources and uses of data in addressing anthropological or archaeological research questions. It will prepare the student for more advanced spatial analysis courses such as Advanced Geospatial Science for Anthropologists and Archaeologists. Students will be expected to develop a research project which uses GIS as a tool to address broader anthropological research questions. The class will culminate in the development of a research contract for a future fieldwork project. A list of sample topics is provided. Students will be expected to develop an original and functioning GIS which addresses their research question. The purpose of this exercise is to introduce the student to all stages in the development and operationalization of an anthropological research GIS in the development of an archaeological or anthropological project. There are two components to this class: classroom and labs. The classroom component will consist of lectures and discussions. The student will receive hands-on experience with GIS applications during the laboratory component of the class. The laboratory component will enable students to gain experience applying the concepts discussed in class to archaeological data through use of GIS programs in a technology classroom setting. Data used in the laboratory exercises derive from actual anthropological and archaeological fieldwork. Students are expected to complete labs in one of the several computer labs across campus that have GIS software installed. Grades are based upon the completion of 12 lab exercises, a draft of a proposed contract, the final contract and a short presentation of the proposed contract to the class. This course will fulfill three credits of the requirement in both the Minor and Major in Anthropology. This is the first part of a two part course. The second part of this course is called Advanced Geospatial Science for Anthropologists and Archaeologists.

**ANTH 424** Andean Ethnology and Archaeology (3) Cultures of the Andes from earliest settlements to Inka Empire; includes discussion of life in modern Andean communities.

**ANTH 424 Andean Ethnology and Archaeology (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

When the Spanish conquistadors arrived in the Andes in 1532, they were astonished by the complexity and grandeur of the Inca Empire, which stretched along western South America incorporating a multitude of different societies that occupied a seemingly inhospitable landscape with coastal deserts, rugged mountain chains, and dense jungles. This course traces out the history and development of Andean cultures from the earliest peopling of the continent to the rise and fall of the Inca Empire. Using archaeological, historical, and ethnographic sources, students will learn about the relationship between Andean societies and their environments and landscapes, as well as the economic, social, and political changes that transformed small egalitarian communities through time into large, stratified states. Through the course, students will not only gain a strong background in pre-Columbian Andean history but will also hone their skills in the use of different lines of evidence to reconstruct the past while learning to critically evaluate existing interpretations. All students are expected to participate actively in discussions. Lectures will be supplemented by illustrations (slides, handouts, videos), and students will learn how societal dynamics are expressed in material culture and in the organization of architecture and settlements. Grades will be based on the results of three exams, a short paper, and participation in discussions. The course complements existing courses at the same (400) level on the archaeology of Mesoamerica (ANTH 422) and North America (ANTH 423). It continues the discussion (at a higher level) of some of the themes covered in ANTH 008 (Incas, Aztecs, Mayas). It fulfills the archaeology credits requirement for the major and is one of the 400-level courses that can be used for the minor. For students outside the major, it may be used to meet the Other Cultures or the Social Sciences requirement in Bachelor of Arts programs.

**ANTH 426W** Archaeological Laboratory Analysis (3) Scientific laboratory methods used in the analysis of ceramic and lithic artifacts.

**ANTH 426W Archaeological Laboratory Analysis (3)**

This course, Archaeological Laboratory Analysis, employs experiential learning to teach students how to ask and answer archaeological questions using real data. While students learn the fundamentals of interpretation in other courses using already processed computer (and internet) assembled data sets, this is not how archaeological data are analyzed. Archaeological data emerge from the ground covered with dirt and the analyst must learn how to identify and measure their important attributes, and interpret what they mean. This class will provide a hands-on learning experience where students learn how to examine and use physical remains to reconstruct and interpret human behavior.

Students in the Anthropology program currently learn this critical step on an *ad hoc* basis by working with faculty on individual research projects. This approach, while effective, is neither systematic nor comprehensive. This is a course on analytical systematics. It provides students with an introduction to problem formulation, artifact processing, artifact

cataloging, attribute identification, artifact classification, analysis, data illustration and photography. At the same time, students will be introduced to two separate and distinct approaches to interpretation: 1) morphological/diacritical analysis, and 2) direct experimentation and replication.

Students will be graded on the completion of nine laboratory exercises. These exercises will require that students identify the research question being addresses, the theoretical assumptions used in the analysis, the data sample, the analytical method(s) employed, and the conclusions reached. The exercises will also request that students identify personal insights and difficulties encountered during the analysis.

This course fills a vital position in training undergraduate majors by providing them with practical training in research design and data analysis. It also provides the logical link between our general courses in prehistory, our courses on archaeological theory, and our method courses on field methods of data recovery. All of these courses intersect in the archaeological laboratory where data interpretations are made and new information about the past takes shape. In addition to contributing to both the BA and BS undergraduate majors and minors, this course will also provide a framework for training graduate students who enter the program with minimal field and laboratory training in archaeology.

**ANTH 429 Paleoethnobotany (3)** Introductory course in paleoethnobotany, the study of the interrelationships between people of the past, natural environment, and plant resources.

### **ANTH 429 Paleoethnobotany (3)**

This course is a survey of the fast-developing field of paleoethnobotany-- also known as "archaeobotany" or "phytoarchaeology"-- that involves the extension of ethnobotany into the past, emphasizing archaeological plant remains and study of the historical dimensions, complex dynamics, and myriad interrelations between people and plant resources. The primary goals of the course are 1) to promote understanding of the vital interplay between the natural environment and human societies, with their diverse systems of belief and resource use, especially those of the past but with relevance to the present; and 2) to foster an appreciation for what modern paleoethnobotany involves as a subdiscipline or specialization in archaeology, related to both anthropology and the plant sciences.

The course begins by considering the history and nature of the field, including parallel developments in plant biology. The first half of the semester entails weekly sessions that focus attention on the plant organism, sources of archaeobotanical data, taphonomic issues, and the major classes of archaeobotanical materials. Fundamental issues involved in fieldwork, and the variety of laboratory concerns and methodologies specific to paleoethnobotany as whole and with regard to individual subareas are addressed. Individual laboratory sessions highlight the different preservation states that affect ancient plant materials, as well as methods of identification and analysis. In the second half of the semester, attention is focused on theory and application, issues central to and/or addressed by paleoethnobotany as a subdiscipline of archaeological anthropology.

The course follows a seminar style, with substantial participation by students, including individual presentations, laboratory study, and analysis. Learning is augmented and enhanced by use of various visual aids, along with modern comparative specimens and actual archaeological plant remains.

ANTH 429 will fulfill 3 credits of the additional courses in the Anthropology minor and majors. Anth 002 is a prerequisite.

**ANTH 431 Advanced Geospatial Science for Anthropologists and Archaeologists (3)** This course is an intensive, data driven, treatment of the use of geographic information systems in anthropological and archaeological research.

### **ANTH 431 Advanced Geospatial Science for Anthropologists and Archaeologists (3)**

As anthropologists, we investigate how humans evolved, behave, define groups, and interact socially. Examining how these processes are shaped by space and place is central to the anthropological enterprise. The use of geospatial science in anthropological and archaeological research is now commonplace. Geospatial technologies are now intimately involved in anthropological and archaeological research designs. The course objective is to expose students to advanced concepts and techniques of conducting geospatial science research in anthropological and archaeological contexts. The course is a continuation and development of the introductory geospatial science course and it will fulfill three credits of the requirement in both the major and minor in Anthropology. Students will develop an in depth understanding of anthropologically and archaeologically tailored geospatial project design and implementation. Students are expected to complete the work for the course in one of several computer labs across campus that has the appropriate software installed.

**ANTH 432 Environmental Archaeology (3)** Introductory course in Environmental Archaeology, with emphasis on method and theory in the subfields archaeobotany, pediaarchaeology, and zooarchaeology.

### **ANTH 432 Environmental Archaeology (3)**

This class is a survey of the fast-developing field of environmental archaeology, or archaeobiology, which encompasses archaeology, the earth sciences, plant biology, and zoology. Environmental archaeologists apply techniques and insights obtained from these fields to questions concerning the relationships among humans, cultural systems, and the natural world, as reflected in the archaeological record. The general goal of the course is to promote understanding of the vital interplay between human societies, with their diverse systems of belief and cultural practices, and the natural environment, with emphasis on human interactions with biotic resources. Instruction is by lecture, supplemented by laboratory sessions emphasizing hands-on experience. Weekly topics are explored through selected readings and class discussions, augmented with laboratory assignments (practical exercises) variously focused on specific types or classes of archaeobiological materials.

ANTH 432 will fulfill 3 credits of the additional courses in the Anthropology minor and major, as well as the Archaeological Science major. Anth 002 is a prerequisite.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2010  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details

**ANTH 433 Archaeological Ethics and Law (3)** Introductory course that examines prominent ethical and legal issues in archaeology integral to modern applied research and practice.

### **ANTH 433 Archaeological Ethics and Law (3)**

This course explores the ethical, legal, and practical dimensions of modern archaeology through a consideration of the following topics: archaeology as a profession; archaeological ethics; the relationship between archaeology and others (the public, ethnic groups, avocationalists, collectors, etc.); international and national approaches to archaeological heritage management; the antiquities market; maritime law, underwater archaeology, and treasure hunting; cultural resource management in the United States; and archaeological outreach and education. Students are introduced to a variety of legal and ethical issues in archaeology that span local to international scales. Through lecture, discussion, and readings, students will consider the archaeology and ethics of ownership and stewardship, including issues centered on intellectual property rights, representation, repatriation, and reburial of cultural properties. They will be able to identify the various stakeholders in contemporary archaeology, and assess their values and interests in issues such as the treatment, ownership, and disposition of human remains, heritage sites, submerged cultural resources, and antiquities. They will consider growing problems with illicit collecting and excavation, illegal trade, and global concerns centered on the international trafficking of antiquities, and will be variously exposed to relevant national and international legislation involving cultural patrimony and management of antiquities, including international treaties such as the 1970 UNESCO Convention on Cultural Property, and related pieces of US federal legislation. The 1990 Native American Graves Protection and Repatriation Act (NAGPRA) and the Archaeological and Historic Preservation Act (ARPA) of 1974 figure prominently in the course. In general, upon completion of the course students will come to have a stronger appreciation of archaeological ethics and "archaeopolitics"; they will have a good understanding of the U.S. Secretary of the Interior's standards (36CFR61) for professional archaeologists and will be able to assess and evaluate contemporary issues of archaeological ethics and law in the context of modern practice.

ANTH 002 is a prerequisite of this course.

**ANTH 435 (IL) Ancient Economy (3)** The course examines the comparative organization and development of ancient economies in both the Old and New Worlds.

### **ANTH 435 Ancient Economy (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines the origin and development of ancient economy from its earliest beginnings to the advent of complex monetary economies that existed prior to the industrial revolution. It examines the common economic structures found in ancient foraging, pastoral, and agricultural societies and how those structures were modified and transformed as these societies were integrated into more complex monetary economies. The goal of the course is to develop a comprehensive understanding of ancient economies, the function and purpose of their economic structures, and how those structures of production and distribution were modified and retained within the modern economies that we live in today. While the economy is often approached as its own field of study, this course shows how and why the economy was embedded in social, political and religious institutions that were so prominent in the ancient past. The course will discuss the domestic and institutional economy, the origin and organization of ancient market systems, the development of urban centers and the economies that supported them, the role of merchants in ancient societies, and origins of many of our 21st century institutions including money, banking, insurance, and the organization of craft production before the industrial revolution.

The class draws upon the rich literature in archaeology, history and ethnohistory that examines the structure of ancient societies. It employs a cross-cultural perspective to model ancient economies and to investigate how social forces influenced their development. A range of different historic and prehistoric societies are discussed each semester to illustrate the cross-cultural perspective. The societies discussed vary from semester to semester and include, but will not be limited to, the ancient Sumerian, Assyrian, Greek, Roman, Mongol, Aztec and Inka societies. Examples will be selected that include societies at different scales of complexity from simple hunting and gathering groups to pre-industrial states. The course fulfills the Social and Behavioral requirements in Liberal Arts. It also fulfills specific major and minor requirements for the BA in Anthropology, the BS in Archaeological Sciences, and the BS in Bioanthropology. The course is also relevant for students in CAMS, History, and Ancient History that are interested in a comparative study of New and Old World civilizations.

**ANTH 441** (IL) From Stone Ax to Uzi: Tradition and Change in the New Guinea Highlands (3) This course explores cultural change and innovation among tribal peoples of Highland New Guinea from stone tool technology to globalization.

### **ANTH 441 From Stone Ax to Uzi: Tradition and Change in the New Guinea Highlands (3) (IL)**

The indigenous peoples of Highland Papua New Guinea were unknown to the outside world until the 1930s and began to be seriously influenced by European contact only after the First World War. At first contact with Europeans, the million or so people living in the Highlands used a stone tool technology, had no knowledge of the wheel, and lived in small, politically and economically independent local groups. They presented a major population engaged in a way of life typical of human society in a technologically simpler past, and have been crucial in anthropology's discussion of the general characteristics of human culture and institutions. The study of these cultures also provides an opportunity to explore the processes through which these peoples have assimilated thousands of years of technological, political, and economic innovation in a very brief period, while simultaneously maintaining and recreating their cultural identity, despite the impact of colonial rule and global influences. Apart from the specific history of these populations, the course will also give students insight into the processes of globalization and internationalization that necessarily effect changes in traditional cultures, and will require that they consider the advantages and disadvantages that accrue from these processes.

Among the topics this course will cover are traditional and current approaches to dispute settlement, economic changes that entail moving from subsistence agriculture as the basis of the economy to cash cropping for a global market, the ecological effects of extractive industries such as mining and how those effects are translated into social and cultural domains, the reorganization of gender roles, the incorporation of politically independent tribal units into a centralized, powerful state, and the demise of traditional religion with the conversion to Christianity.

Students will be evaluated on contributions to class discussion, essay exams, a term paper and a brief oral presentation based on that paper.

The course will provide support and depth for more general courses dealing with warfare, gender, religion, politics and economics and specific understandings for programs devoted to exploring cultural variation and modernization.

**ANTH 444** Primitive Warfare (3) Critical overview of the ethnography and theory of primitive warfare.

### **ANTH 444 Primitive Warfare (3)**

Anthropology 444 is concerned with the phenomenon of lethal group violence in tribal societies so called "primitive war". Through lectures, readings, and research projects, this course reviews anthropological approaches to the study of primitive war, focusing both on ethnographic examples and on theoretical approaches. The course covers topics such as explanations, traditional and modern, for the existence of warfare; the primate background to human warfare; and the social causes and individual motives leading to warfare in tribal societies; as well as its consequences for those societies. Students become familiar with both general and particular manifestations of primitive warfare, and are exposed to individual ethnographic cases of primitive warfare as they motivate a variety of theoretical paradigms.

All students are expected to attend all lectures and to complete all weekly readings. At the last class meeting of each week, a rotation of students are assigned to organize and direct the class discussion of the week's readings in the light of the lectures earlier in the week. Performance in this activity constitutes 40% of the student's grade. Another 40% is earned in the research term paper each student must prepare. The final 20% of the grade is based on overall student contribution to class discussion, particularly during those weeks when the student is not a discussion leader. There is no final examination. This course can be used to fulfill major and minor requirements in Anthropology. Because warfare was and often still is a major activity in most tribal societies, this course provides an important complement to area-focused ethnography and archaeology courses such as ANTH 241 (Peoples and Cultures of Highland New Guinea), ANTH 422 (Mesoamerica), ANTH 423 (North America), ANTH 425 (American Southwest), ANTH 440 (Lowland South America), and ANTH 447 (Africa). This course is also relevant to topically focused course such as ANTH 450 (Comparative Social

Organization), ANTH 451 (Economic Anthropology), ANTH 454 (Political Anthropology), and ANTH 456 (Cultural Ecology). On the graduate level, this course addresses central topics covered in ANTH 522-523 (Ecological Theory in Anthropology), ANTH 556 (Social Organization of Traditional Societies), and ANTH 559 (Behavioral Anthropology).

**ANTH 446 Mating and Marriage (3)** An examination of human mating mainly from the viewpoint of behavioral ecology, centering on the species-typical institution of marriage.

### **ANTH 446 Mating and Marriage (3)**

This course is an examination of human mating and marriage mainly (although not exclusively) from the viewpoint of evolutionary behavioral ecology. Its central concern is the species-typical and uniquely human institution of marriage. Why do all human societies recognize this peculiar institution, whose social and biological functions, apparently obvious, become mysterious on close examination? What, exactly, is marriage? What are its consistent characteristics and attributes--or does it have none? How are spouses chosen, and by whom? What does being married imply for the behavior of the spouses, and that of their children and other relatives? What are the evolutionary scenarios that might have led us to marriage? Although sexual behavior is clearly a key element in answering some of these questions, and receives considerable attention, this is not a course on human sexuality. Nor is it a course on kinship, even though kinship is also crucial to understanding marriage and also receives a good deal of attention. Rather, this course attempts to bring to bear on this central social institution bodies of knowledge from the biological and social sciences that may contribute to understanding how and why marriage arose as a universal feature of human societies, and how and why it is perpetuated in contemporary societies. We begin the semester with the posing of the central problem--what is marriage and why do we have it? For about half the course, we approach this question from an evolutionary, sociobiological point of view: We look into the biological background of human mating--its evolutionary history, its physiology, its behavioral ecology, etc. as we go through a semi-popular book on the subject by a biological anthropologist. Next we turn to more academic readings, old and new, that further elucidate the ecological constraints and fitness consequences of various behaviors relating to mating and mate choice, child rearing, etc., in terms of reproductive success, survivorship, etc. In the second half of the course, we take a more social anthropological point of view. We look at what anthropologists have written about marriage and marriage customs over the years. We try to relate the traditional social anthropology to more modern human behavioral ecology. Finally, in a research project report, each student examines some specifics of marriage as it is manifested in ethnographically known societies. In these reports we are particularly interested in how and by whom mates and spouses are chosen, and who contributes what to the raising of children.

**ANTH 448 (AM ST 448) Ethnography of the United States (3)** Ethnographic descriptions of various dimensions of life in the United States.

### **ANTH (AM ST) 448 Ethnography of the United States (3)**

Ethnographic descriptions of various dimensions of life in the United States. The course covers uses of ethnography in American Studies toward an understanding of social and cultural communication and performance. The application of ethnography and concepts of cultural anthropology to complex societies such as the United States is discussed. The course teaches students to use ethnographic methods for research of American society and culture. Attention is given to the ethics and issues of ethnographic fieldwork. The course satisfies the "area" requirement in "society" for American Studies majors.

**ANTH 453 Anthropology of Religion (3)** Traditional and modern religions and historical and contemporary religious movements from an anthropological perspective.

**ANTH 453 Anthropology of Religion (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine the origin, evolution and social function of religion from a cultural materialist perspective. It will begin with a general discussion of an anthropological approach to the study of religion, using numerous examples from different cultures for purposes of illustration. Following a discussion of several topics relevant to the anthropological study of religion --including magic, rituals, witchcraft and mythology-- the course will focus on the relationship between politics and religion: first discussing the role of religion as a mechanism of social and political control, and then examining the role of religion as a vehicle of sociopolitical change in the form of what anthropologists call revitalization movements. This course links to courses on the sociology, history, and philosophy of religion, to courses on intellectual history, and history of social sciences. Course evaluation will be based on 3 take-home essay examinations. Students will give the instructor 3 questions at indicated times; the instructor will return one question; the student will write an essay on the indicated question. Attendance is mandatory. This course will fulfill a 3 credit 400 level requirement for the Anthropology major and minor.

**ANTH 454 (IL) Peoples of South Asia (3)** This course will cover nation states of Afghanistan, Bangladesh, Bhutan, India, Nepal, Pakistan, Sri Lanka and Maldives.

**ANTH 454 Peoples of South Asia (3)  
(IL)**

This course looks at the diverse peoples of South Asia and their dynamic cultures. In Nepal alone, over hundred languages are spoken and over fifty indigenous groups are officially recognized. Hindi and Bengali are the most common languages spoken in the region followed by Telugu and Panjabi. Major world religions such as Hinduism, Buddhism, Islam and Christianity are practiced in South Asia. Muslim population of Afghanistan, Bangladesh, India, Maldives and Pakistan make the largest population of Muslims in the world.

This course will explore contemporary cultural, political and economic issues that affect peoples of South Asia. This course begins by looking at the origins of religious pluralities in South Asia and discussions of how it influences South Asia today. Emergence of modern forms of social classification, facilitated by the use of technology in challenging traditional societal structures, is then explored to understand ethnicity and nationalism in 'modern' South Asia. The course will also assess growing socio-economic disparity, high rates of rural poverty and the process of 'modernization' through development. Scholarly essays and articles will be used along with audio-visual clips, films, newspapers, institutional reports and ethnographic materials.

**ANTH 455 Global Processes and Local Systems (3)** Ethnographic, comparative, historic, evolutionary treatment of global economic, political, and cultural processes and their consequences for local systems.

**ANTH 455 Global Processes and Local Systems (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Students will learn about global economic, political, and cultural processes and their consequences for local systems, how anthropologists do ethnography in the modern world of villages and factories; varieties of anthropological approaches and theories and how to assess them and how to critically assess ethnographic work.

Students will write a series of book reviews in which they critically analyze the works they read in the course. Each review will present the main argument of the work; the theoretical assumptions the argument entails; the evidence the author

used, the methods the author used to develop the evidence; the relationships among theoretical assumptions, arguments, evidence, and methods; and conclusions. Each review will assess the validity and reliability of the findings and the relationships of findings, arguments, and assumptions to the conclusions. These reviews will direct the student's attention to the salient points of scientific ethnography and anthropological theory with specific examples. Grades for the reviews will be assigned on the basis of how well each component of the review is completed, short in-class writing assignments to test reading comprehension and orient discussion, and a synthetic essay.

**ANTH 457 (US;IL) (J ST 457, SOC 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3)** Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.

### **ANTH (J ST/SOC) 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL)**

This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year.

**ANTH 460 (BIOL 460) Human Genetics (3)** The human genome, its variation, origins, and relation to disease and other traits.

### **ANTH (BIOL) 460 Human Genetics (3)**

The course considers many examples derived from the study of the genetics of human disease, and includes most general areas of interest, including simple Mendelian disorders, and complex chronic diseases such as cancer and cardiovascular disease, and variable special topics including immunogenetics and the genetics of imprinting or other processes. The course usually also touches briefly on the nature of forensic genetics and the problem of making inferences from individual genotypes. Finally, the course considers the bioethical and societal issues involving contemporary human genetics. The study of disease genetics is important for students preparing for graduate work in medicine and other health professions as well as for graduate studies in molecular and evolutionary genetics and related areas, including biological anthropology and bioethics. This course is relevant to requirements or appropriate electives for life science majors and graduate students (check with your academic advisor). Over the years, it has proven to be excellent preparation for subsequent graduate and professional work in these areas. The course is offered most years, in the fall semester. Depending on enrollment and other factors, the course may include graded homework or other components, but evaluation is predominantly based on exams during the semester and a comprehensive final. This course is cross listed as ANTH 460 and BIOL 460, but there is only one course, at the same time and place, for all students no matter how they register. In some years, a 4-credit Honors version is offered (ANTH 460H/BIOL 460H), that is identical to 460 but with an additional class period each week involving additional written and presentational assignments and term projects, along with the regular 460 exams, that combine to determine the final grade. Total enrollment is capped at about 100 students.

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ANTH 460H (BIOL 460H) Human Genetics (4)** Gene mapping in humans; molecular basis of genetic disease; genomic structure; immunogenetics; and genetic evidence for human evolutionary history.

### **ANTH (BIOL) 460H Human Genetics (4)**

Students will explore interesting normal or pathological variation to understand first its biological nature, then its epidemiological distribution, genes and genetic mechanisms associated with the trait, phylogenetic origins or comparison, and the nature of relevant genotype-phenotype relationships. Alternatively, students may explore methods for identifying and characterizing gene action or structure, or historical subjects related to human variation and evolution. Ethical and societal aspects of these issues will be considered as well. Time will be taken for faculty or students to read and present current important papers appearing in the literature, relevant to the current course topics. As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course format of Human Genetics 460 which, while presenting material at a sophisticated level, will not have time to explore the more subtle, problematic, or challenging aspects. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when the instructor learns they have registered. The nature of the course will be described including semester-specific themes or focus that will apply (if any). Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. Students will be evaluated on the quality of their project work, including writing ability, presentation ability, and depth of thought. Several written assignments will be given and graded for content and expression quality. Although students will take regular Human Genetics 460 lectures, they may be given separate exams (corresponding to those given in the regular course) that will allow more freedom of expression than multiple-choice exams or homework assignments. Depending on the workload in any semester, there may be a separate written take home synthetic essay final exam. The Honors session each week will be highly interactive rather than passive, and students will be graded on attendance, participation and whether they have done assigned work in advance of the class. Students will be expected to have the stipulated background knowledge of biological anthropology, evolutionary biology, statistics and genetics. This course should count as 4 credits toward additional courses in biological anthropology required for the Anthropology major.

**ANTH 461** Molecular Anthropology (3) Provides framework to understand current issues in biology, genetics, and anthropology as they relate to the evolution of our species.

### **ANTH 461 Molecular Anthropology (3)**

The aim of this course is to provide students with the framework to understand current issues in biology, genetics, and anthropology as they relate to the evolution of our species. Basic methods in molecular biology, structure of the genome, molecular evolution, and human population genetics will be covered in the first part of the course. Once these tools are in place we will examine both classical and contemporary research reports on a number of topics, including the place of humans among the apes; mitochondrial Eve, DNA in forensics; Neandertal DNA and other applications of ancient DNA; reconstructing recent human evolution; the biological meaning of race; disease gene mapping; recent technological advances in genomics; skin, hair, and eye color genes; and the genetic future of our species. There will be three exams that will each count for 25% of the grade. Attendance and participation are mandatory and will count for 25% of the final grade. A portion of this participation grade is earned by presenting 10 min. summaries of particular readings. Each student will be expected to summarize a scientific paper four times during the semester. These summaries are not expected to be exhaustive reports on the material, but should reflect an effort on the part of the student to understand and discuss the material and may require some background work.

**ANTH 465H** Fifteen Great Biology Papers (3) Reading and discussion of the most influential papers in the history of biology that illustrate exceptional insight and elegant reasoning.

### **ANTH 465H Fifteen Great Biology Papers (3)**

Thousands of papers are published annually in the life sciences, but only a few have lasting impact on their field. These are usually characterized by elegant and thoughtful insight, and creative scientific thinking. For each of the fourteen weeks of the semester we will read and discuss a landmark paper of this type. The 15th paper? That will be the student's term project. The student will read one classic paper in the history of biological thought each week and discuss the paper in class. During the last half of each class in last third of the semester, the students will present the classics they have chosen for their term paper. The major topics covered in this course are: Weeks 1-4: Basic history of thought about origin and nature of variation in living organisms Weeks 5-8: Landmarks in the philosophy of science Weeks 9-12: History and development of ideas in evolutionary biology. Weeks 13-14: Foundations of 20th Century biology The objective of this course is to give students an experience with and appreciation for (1) the history and origins of science, biology in particular, (2) the nature of cogent critical thinking and expression, (3) the basis for fundamental ideas in biology today, (4) a sense of the nature of papers that had great influence on the future of the field, and (5) experience scouting, choosing, evaluating, and writing about papers of this nature. Evaluation will be based on class attendance and participation, critical thinking ability and effort as manifest in class, and a term paper (graded also to include quality of writing and research.) This course is generally related to all life science courses, and relevant to social and other sciences, philosophy, and history. This course can fulfill elective credits for Anthropology majors and minors.

**ANTH 466** The Skull (3) Survey of the mammalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull.

### **ANTH 466 The Skull (3)**

This course will provide a survey of what is known about the Mammalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull. The course will consist of lectures and a laboratory component. Students will learn about the basic skull architecture and be introduced to various specializations of extinct and extant species. The section on evolution will cover the evolution of the skull from the earliest jawless vertebrates through human evolution. During the section on development, we will discuss the nature of the formation of bone embryologically. Other topics include the ways in which bone changes shape and size during prenatal and postnatal

growth, how changes in growth can result in evolutionary change in morphology. The section on the function of bone will focus on biomechanical interpretations of the morphology of the skull. The lectures will focus on human anatomy but provide contrasts with other mammals (e.g., horse, dog, mouse). The last section on variability will survey the major groups of mammals highlighting similarities and differences in bony architecture and skull morphology. This portion of the course will be more laboratory-based with students examining specimens, taking measurements and leading discussions on hypotheses regarding why skull architecture is so different among mammals. The objective of this course is to provide the student with a broad survey of information relating to the mammalian skull. Through assigned readings and lectures the student will become familiar with salient anatomical and osteological features, obvious differences in skull architecture and the various biological processes responsible for these differences. During the final laboratory part of the course the students will bring their knowledge to an assigned problem and specimen in order to apply what they have learned to a scientific question. Students will be required to attend all lectures and laboratories. Periodic quizzes will be administered as well as an exam at midterm. A paper that focuses on the student's laboratory experience will be required at the completion of the course.

**ANTH 468** Evolution and Development of Human Origins (3) In depth analysis of the genetic and developmental basis for phenotypic variation and evolution of humans and primates.

### **ANTH 468 Evolution and Development of Human Origins (3)**

Recently biology has undergone a revolution regarding our understanding of the mechanisms underlying the evolution and development of animal form. This knowledge has a profound impact on the way we conduct and interpret morphological analyses pertaining to human evolution. In this course we will explore basic principles underlying Darwinian natural selection and our understanding of the evolution of complex characters. Then we will delve into developmental genetics to explore how the gene regulation can alter spatial and temporal expression patterns during development. We will next conduct a survey the basic embryology of key morphological systems of interest to biological anthropologists including: the axial skeleton and somite formation, limb buds, musculoskeletal system, skull formation, and dental and skin appendage formation. We will also explore issues concerning skeletal plasticity, fossil analysis, and comparative genomics. Discussion particular case studies related to human and primate evolution and morphological variation will illustrate the principles discussed in this course.

**ANTH 470H** Our Place in Nature (3) An evolutionary and genetic consideration of our understanding of human beings as a part of the natural world.

### **ANTH 470H Our Place in Nature (3)**

The title "Our Place in Nature" takes off from T.H. Huxley's famous book in 1863 that put humans in rather than outside of nature, and the idea of the course is to place humans in the context of organic evolution both specifically and as a kind of general "model" organism (for example, genomic, phylogenetic, and comparative perspectives will be included). We will take a theme (one or more related topics, depending on enrollment, timeliness, etc.), which students will be assigned to work on singly or in groups. We'll first read from the historical, comparative, and evolutionary literature to see how "Our Place in Nature", relative to that theme, was first argued. Then we will follow the literature in evolutionary, developmental and genetic biology to the present to see how our current understanding of the trait evolved. Current research, especially on developmental and genetic aspects of the trait, will be examined in depth. We'll pay special attention to research strategies, comparative and genomic approaches, and latent working assumptions that help or hinder our explanations. The sociocultural context will be considered throughout, including the implications for society of our changing scientific assessment of the trait.

As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course formats. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when I learn they have registered. Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. The course will assume the level of knowledge such as can be obtained in one of several recent "Evolution" texts, an understanding of modern genetics and genetic methodology, basic statistics, and a general work on the history and philosophy of science and evolutionary thinking (initially, probably J.A. Moore's *Science as a Way of Knowing*). This substantial background requirement is based on this being an upper-level class; for good students to get what good students deserve at a good university, we need to be able to start at a high level.

Evaluation will stress original synthetic thought and investigation rather than memorized factual recapitulation. Work groups will tackle particular problems, present them, and turn in written products. There will be a written take-home synthetic essay exam. There will be other written assignments summarizing assigned reading or topics to keep students on track. The class will generally be based on oral discussion and/or be run in Socratic Q&A format. Evaluation will include a major component related to attendance and to level and quality of in- class participation, acquired knowledge and quality of thought and communication. This course will build on, and incorporate, knowledge acquired in physical anthropology, evolutionary biology, statistics, and genetics courses and will count as 3 credits toward the additional courses in biological anthropology required for the Anthropology major.

**ANTH 471H** Biology, Evolution, and Society (3) Exploration of the genetic theory of evolution and development, its history and application within Biology and beyond.

### **ANTH 471H Biology, Evolution, and Society (3)**

This will be a reading, discussion, and exploration course that looks at the way theory about the nature of life and its origins and diversity have developed over time into today's evolutionary theory. The course will examine the Darwinian theory, and then new elements that recent biological research have revealed about the nature of biological traits themselves and how genes produce them. These points were not part of evolutionary theory itself, but are an important supplement that could not have been made before results from the last 20 years have been available. A theory can be called a cosmology when its assumptions go beyond hypotheses to be tested, to become assumptions that are no longer under test but are used to devise future research and that then set the directions of science. This includes, but isn't restricted to the kind of cosmology that deals with life space. We have to use theory to order our work and to anticipate what we have not yet found (for example, that newly discovered species will be related to other known species). But in the case of biology, a modern 'biocosmology' has developed steadily since Darwin, increasingly centered on molecular genetics and genes as the ultimate units of biological causation. Sometimes that theory has become so unquestioned as to impair research and even to be somewhat misleading. Elements of biological theory, such as natural selection, are powerful and general, and are being borrowed by physicists and astronomers (a reverse of the borrowing that occurred in the last century), to account for aspects of the physical universe in explicit evolutionary terms (including natural selection). For somewhat similar reasons, also having to do with the role of science in society, modern biocosmology has routinely been extended to apply to sociopolitical issues, such as economic and educational policy, science funding decisions, and views about socially delicate issues such as behavior, sexuality, talents and abilities, and much else. This course will discuss how the modern theory of life has arisen historically and the evidence and research methods that have been used to develop that theory. A view of biological theory as a broader cosmology leads to the additional consideration of the nature of biological causation as a statistical rather than purely deterministic phenomenon, and the kinds of research approaches that are used to understand biological problems. The latter include the engineering of organisms, the health sciences, and the nature, evolution, and biological basis of behavior. The objective of this course is to give students a broad understanding of the evolutionary and genetic theory of life and a broader view of the way that theory extends to areas not yet understood, as well as to its origins in and relevance to human society. Everyone is familiar with Darwin's basic theory that life is historical and evolves via natural selection, and that genes are the basis of it all. But these ideas are often only superficially understood—sometimes even by biologists—and many clearly central aspects of life have been left out of the Darwinian theory. That theory explains how organisms evolve, but not what evolves or how genes make those traits possible. These are topics in gene function and developmental mechanisms. Along with some modifications to Darwin's ideas, largely involving elements of chance and population structure and ecology, the genetic theory evolution can be augmented by a few simple organizing principles to explain the nature of traits and flesh out a more comprehensive understanding of life. These principles are in daily use in research but it will be helpful for students to have them organized into a synthetic framework placed explicitly within evolutionary theory itself. This course will be generally related to all life science courses, and relevant to social and other sciences, philosophy, and history. But it is not tied to any particular other course, and as a kind of overview of the governing notions of life at the onset of the 21st century, complements the education of anyone in these related fields. This course will be of interest to students who have or will take courses in astrobiology, developmental biology, evolutionary biology and/or population genetics, or anthropological genetics and human evolution. The grade will be based on attendance and participation. Reading and/or research of some kind will be assigned most weeks, with students responsible for oral reporting or writing brief descriptions of what they have found. There will be a term paper or project, but no formal exams.

**ANTH 476W** (WMNST 476W) Anthropology of Gender (3) Cross-cultural construction of gender and sex roles; theories of gender construction; case studies and practical effects.

### **ANTH 476W Anthropology of Gender (3)**

Students will learn the current theoretical approaches in anthropology to the cultural construction of gender and sex roles. The first 2-3 weeks of the course will concentrate on exploring and understanding these theoretical approaches. The remaining weeks will focus on case studies of non-western gender systems, and on the practical effects of those systems, but students will also be encouraged to relate these systems to their own experience. Each meeting will be based on discussion of the readings assigned for that meeting and students will be expected to participate. During the period devoted to theoretical approaches, discussion will focus on the assumptions, advantages, and disadvantages of each approach. For the part of the course devoted to readings on individual societies, one reading each week will be the basis for a critical essay of approximately five pages. These essays will be expected to include: 1) an identification of the theoretical approach that informs the work, 2) a statement of the author's arguments or questions, 3) a discussion of the methods used to provide data in support of the arguments or to answer questions, 4) a critique of the adequacy of data, and 5) a statement suggesting which additional elements might make for a better study. These essays will be graded for both content and form and students will have the option of rewriting essays (and improving their grade) after they receive comments. These essays will provide 60% of the course grade, while participation in discussions will provide another 15%.

A short research paper will also be required. The paper must focus on a question or hypothesis concerning gender, and a preliminary proposal that includes the focus of the paper, its relevance to the course, and a beginning bibliography is required. A first draft of the paper will be required two weeks before the end of the semester. The research paper will provide 25% of the course grade.

The course complements other courses in Anthropology that deal with sex differences, but will provide a perspective on gender that is not available elsewhere in the curriculum. The course can be used to fulfill a Behavioral Anthropology requirement in both the major and minor in Anthropology and a writing across the curriculum requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures. The course is currently identified as one that may be taken to fulfill the requirements of the Women's Studies minor.

**ANTH 521** Current Literature in Archaeology (1) Seminar designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology.

**ANTH 521 Current Literature in Archaeology (1)**

This seminar is designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology. We accomplish this by examining the best of recent journal literature. We may also occasionally read a chapter from an edited book. We will normally read and discuss one article per week, although we might increase that number in cases where articles have been followed by published debates. Articles should be selected from a list of approved journals that will be supplied in class. Each article must be approved in advance by the course professor. The presenter should follow the standard outline for article discussion that will also be supplied in class.

**ANTH 559** Human Ecology (3) Ecological anthropology, emphasizing the adaptive aspects of subsistence, including foraging and settlement pattern.

**ANTH 559 Behavioral Anthropology (3)**

The goal of this course is twofold: 1) to bring students to a level of competence in human ecology such that they can read the current scholarly literature in the field with an informed and critical intelligence; and formulate their own research questions in the field; and 2) to launch students in the practice of what most anthropologists do--research, teaching, and the presentation of professional papers in oral and written form.

Students are evaluated on their class performance in preparing and delivering presentations to the seminar on the assigned readings for each session (40%); and on their term papers (60%). This class is the higher level continuation of ANTH 456. It is required for graduate students in Cultural Anthropology and recommended for those in Archaeology and Biological Anthropology. It is offered every third semester

**ANTH 566** Infectious Diseases in Anthropological Populations (3) Surveys infectious diseases in history and prehistory; introduces concepts from microbiology, immunology, and epidemiology, applies them to past human populations.

### **ANTH 566 Infectious Diseases in Anthropological Populations (3)**

Throughout history, more people have died of infectious diseases than of any other causes. Such diseases are therefore of great importance in human ecology and demography. Yet anthropologists have paid scant attention to the implications of infectious diseases for human populations, especially populations in the past. This course attempts to correct that oversight.

The course is designed for graduate students and advanced undergraduates in anthropology and related fields (biology, population studies, health sciences). The primary focus will be the role of infectious diseases in human population ecology, but enough background will be provided on the biology of infectious diseases to make the course as self-contained as possible. Thus, we will review basic information about the biology of pathogen-host interactions, including some elementary microbiology and immunobiology. (Note that the course is not intended to replace introductory-level courses in those fields.)

We will also discuss the evolutionary arms race between the human host and its pathogens, especially in the evolution of pathogen virulence.

Once this basic background has been provided, the remainder of the course will deal with infectious diseases in past human populations. What was the role of infectious diseases in population regulation? How did human population structure affect infectious disease dynamics? How did infectious diseases contribute to the mortality "crises" that are known to have affected many preindustrial societies?

To address these questions, we will review recent insights based on mathematical models of the epidemic process. The focus will not be on the mathematics per se--indeed, students need not have any special mathematical background. But they will be expected to learn Stella, a computer language for dynamic modeling. (Stella was chosen because it is easy to learn, and yet allows construction of sophisticated models without requiring any attention to the underlying math.) Toward the middle of the semester, students will break into 2-4 groups, each of which will select a particular disease or class of diseases, develop some models of them using Stella, and present the results to the class as a whole. The entire class will then work together to explore and extend the models developed by the separate groups.

Grading will be based on the group presentations, in which all students are required to participate. Participation in general classroom discussion will also be taken into account. Since the class will combine formal lectures with a more seminar-like format, active student participation is essential for a good grade. This course will be offered once a year with an enrollment of 15.

**ANTH 572** Advances in Biological Anthropology Research (3) A practical overview of integrative research approaches and current methods that are being used to advance the field of biological anthropology.

### **ANTH 572 Advances in Biological Anthropology Research (3)**

This course will provide exposure to current data collection methods and analyses in biological anthropology research, and offer specific examples of application. The course will focus especially on the creative application of newly available technologies to help address major outstanding issues in biological anthropology, or on how the combination of traditional approaches and modes of data collection with advances in computational or statistical analysis can advance the field. Research design issues, data limitations and computational analysis requirements, and anticipated future developments will be considered for each method and subject area combination. Students will be exposed to the challenges, limitations, and processes of ultimately successful research studies and programs, to provide a practical awareness and guidance towards the development of their own research projects and careers in biological anthropology.

**ANTH 575** Population, Food, and Traditional Farming (3) This course explores the relationship between demographic processes (fertility, mortality, migration) and traditional farming, especially farming near the subsistence level.

### **ANTH 575 Population, Food, and Traditional Farming (3)**

This course explores the complex relationship between demographic processes and traditional agriculture. It starts with the premise that traditional agriculture, at least agriculture near the subsistence level, is primarily demographic in its motivation: the main purpose of a small-scale, preindustrial family farm is to create and support a family – i.e. produce children (fertility) and keep them alive (survival). This idea will be the starting point for re-examining existing theories about population and agriculture, and for formulating new models of the traditional farming household as a demographic enterprise.

Some of the topics to be addressed include: (1) the slippery concepts of 'population pressure', 'over-population', 'population regulation', 'carrying capacity', and 'sustainability'; (2) some basic ecology and economics of subsistence production and consumption; (3) the debate over agricultural intensification; (4) the effects of under-nutrition on fertility and mortality; (5) the nature of the household labor force; (6) the household demographic life cycle and its economic implications; (7) seasonality and the allocation of household labor; (8) the demography of the 'hungry season' (9) risk management and food shortages; and (10) household wealth differentials and their demographic implications.

The first half of the course will be in lecture format, the second will be more like a seminar. At about the mid-point of the semester, students will split into groups of 2-4 (depending on class size). Each group will select an ethnographic/demographic/economic monograph on traditional agriculture from a list provided by the instructor, prepare and present a PowerPoint presentation on it, and lead an extended classroom discussion of it. Each presentation ought to take up at least two or three class periods. The course grade will be based on the presentation and on general seminar participation (approximately 80 percent presentation and 20 percent participation, including doing the required readings).

This course should appeal to graduate students and advanced undergraduates in anthropology, geography, crop and soil science, demography, rural sociology, agricultural economics, and behavioral ecology.

**ANTH 579 (SOC 579) Spatial Demography (3)** This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research.

### **ANTH (SOC) 579 Spatial Demography (3)**

The improved application of spatial data and methods to demographic research is a critical methodological challenge facing demographers today. This graduate seminar is designed to focus on substantive demographic research topics while exposing sociologists and demographers to challenges in, and opportunities for, using geographic information systems (GIS), spatial analysis, and spatial statistics in their own research. Substantive foci will include readings and discussions of spatial perspectives on topics such as racial/ethnic segregation, spatial mismatch/entrapment, poverty, crime/delinquency, migration, health inequalities, wellbeing, maternal and child health, environmental justice, and population and environment relations. Similarly, the seminar will highlight connections between spatial concepts and data availability (e.g., Modifiable Areal Unit Problem - MAUP; data privacy), other emerging methodological approaches to studying society (e.g., contextual modeling, multi-level modeling and the area of neighborhood effects) as well as the integration of different types of data (e.g. qualitative data and quantitative data). Throughout the course lectures and discussions will be complemented with lab sessions introducing spatial analysis methods and GIS and spatial analysis software. The lab sessions will include the use of among other software GeoDa, CrimeStat, R, and ArcGIS (including Geostatistical Analyst and Spatial Analyst extensions). These lab sessions will introduce many methodological and technical issues relevant to spatial analysis (e.g., error, data validation, data integration, cartography, exploratory spatial data analysis, spatial regression modeling, geographically weighted regression, point pattern analysis and geostatistics). Assignments for the courses include up to two writing assignments, up to four lab assignments, and a final project which will be presented as a short 15-minute presentation as well as submitted as a term paper. The writing assignments will include an annotated bibliography/brief literature review within a selected demographic theme area and a profile of a well-known demographer and their adoption of spatial thinking/perspectives/methods. The lab assignments will focus on building geospatial databases, basic spatial analysis, exploratory spatial data analysis, and spatial regression modeling. The courses will include other labs and assignments that will be completed for no grade; these are intended as mechanisms/opportunities for developing and enhancing familiarity with selected software, data resources, and analytic methods.

**ABA 500** Experimental Analysis of Behavior (3) This course covers the scientific, conceptual, theoretical, and philosophical roots of the experimental analysis of behavior.

**ABA 500 Experimental Analysis of Behavior (3)**

This course is designed to serve as a foundation course for the Applied Behavior Analysis Masters Program by giving students the necessary scientific, conceptual, theoretical and philosophical background in the experimental analysis of behavior. The field of Applied Behavior Analysis, or the application of the principles of the experimental analysis of behavior to humans, was the result of decades of basic laboratory research with animals and humans. This course will provide students with a basic understanding of the field of behavior analysis, its roots and scientific and philosophical underpinnings. ABA 500 Experimental Analysis of Behavior is a required course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 20 students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2003  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABA 511** Behavior Modification (3) Provides an overview of principles and procedures and use of behavior modification with individuals in diverse settings.

**ABA 511 Behavior Modification (3)**

This course provides students with the principles and procedures of behavior modification. The course teaches students how to analyze, interpret, and develop programs for a wide range of clinical and educational populations. The course provides advanced discussion on the empirical and theoretical underpinning of behavior modification. This course is divided into six parts. Part 1 introduces behavior modification and its major areas of application. Part 2 covers the basic principles and procedures of behavior modification. Part 3 discusses motivation operations and ways in which to combine and apply principles. Part 4 presents detailed procedures for assessing, recording, and graphing behavior and methods for conducting functional assessments and behavioral research. Part 5 covers how the basic principles, procedures, and assessment and recording techniques are incorporated into effective programming strategies. Part 6 presents the history of behavior modification and discuss some of the ethical issues in the field. ABA 511 is a required course for graduate students of the Applied Behavior Analysis Masters Program.

General Education: None

Bachelor of Arts: None  
Effective: Spring 2009

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABA 522** Single Subject Research (3) This course aims to teach how to critique, design, and analyze single subject research.

### **Single Subject Research (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2001

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABA 533** Applied Analysis of Behavior (3) Overview of the application of behavior analysis in education, rehabilitation, medicine, business, counseling, and therapy across the age range.

### **ABA 533 Applied Analysis of Behavior (3)**

This course will provide students with a basic understanding of the application of behavior analysis to a wide variety of human conditions. The characteristics and history of applied behavior analysis will be covered as well as the use of behavioral principles to increase and decrease behavior. The role of assessment and generalization and maintenance issues will be stressed. Some applications that are highlighted include self-control, token economies, systematic desensitization, and stimulus control and modeling. Populations covered include geriatrics, children, adults, and individuals with special needs.

ABA 533 is a required course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 20 students.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABA 555** Behavioral Intervention in Autism (3) Overview of the use of Behavior Analysis in the education, assessment, and treatment of individuals with autism.

### **ABA 555 Behavioral Intervention in Autism (3)**

Behavior analysis has had significant contributions to autism over the past 40 plus years. Its success in early intervention efforts has created a great need for individuals trained in behavior analysis with special knowledge of the unique aspects of autism. This course will provide students with the knowledge and skills needed to work with individuals with autism not only in early intervention efforts but across the entire spectrum of settings, age ranges, and developmental levels. Autism will be addressed in terms of assessment, education, and treatment. Some specific areas targeted that are characteristic of autism will include language, social skills, self-injury, sleep disorders, and self-stimulatory behavior. Some specific educational strategies emphasized will include discrete trial training, incidental teaching, prompting and fading. The students will gain a knowledge of the major issues related to the use of behavior analysis with individuals with autism including education issues such as due process and inclusion and legal and ethical issues surrounding the certification of behavior analysts. Students also will learn how to evaluate the various treatments and educational practices for autism. Competency-based methods of caregiver training will be covered.

ABA 555 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 15 students.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABA 566** Behavioral Pediatrics (3) Overview of behavioral pediatrics and discusses the role of Behavior Analysis within this field.

### **ABA 566 Behavioral Pediatrics (3)**

Behavior analysis has had significant contributions to the field of behavioral pediatrics. This course will provide an overview of behavioral pediatrics and discuss the role of the behavior analyst in pediatric healthcare. Pediatric problems commonly addressed by behavior analysts will be discussed in terms of both assessment and treatment. These pediatric

problems will include pediatric feeding problems, disorders of elimination, gastrointestinal disorders, sleep problems, and childhood obesity. This course also will cover the integration of behavior analysis in the areas of adherence to medical procedures, pain management, medical rehabilitation, and brain injury rehabilitation. Behavioral approaches to health promotion and injury prevention will be discussed. The management of common childhood behavioral issues and competency-based methods of caregiver training will be covered. The course will explain the use of behavior analysis in a range of pediatric healthcare settings.

ABA 566 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 10 students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ABA 577 Behavioral Assessment and Treatment of Behavior Disorders (3)** Overview of the use of Applied Behavior Analysis in the assessment and treatment of individuals with behavior and emotional disorders.

### **ABA 577 Behavioral Assessment and Treatment of Behavior Disorders (3)**

Behavior analysis has had significant contributions to treating children with a wide variety of behavioral and emotional disorders. This course will provide students with the knowledge and skills needed to work with people with behavioral and emotional problems across all environments, age ranges, and developmental levels. Behavior disorders throughout the age ranges will be addressed. Students will be taught to use applied behavior analysis for the assessment, intervention, and understanding of these problems. The students will gain knowledge of the major issues related to the use of behavior analysis including legal and ethical issues. Students also will learn how to evaluate the various treatments for behavior and emotional problems.

ABA 577 is a elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 15 students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite:

**ABA 588 Ethics and Legal Issues in Applied Behavior Analysis (3)** This course will cover ethical and legal issues related to applied behavior analysis research and practice.

### **ABA 588 Ethics and Legal Issues in Applied Behavior Analysis (3)**

The purpose of ABA 588 Ethics and Legal Issues in Applied Behavior Analysis is

- 1) to teach the Ethical Principles of the American Psychological Association (adopted by the Association for Behavior Analysis). Students will be presented with the ethical codes, the application of the codes, and the possible dilemmas involved in following the codes. Students will be responsible for applying the ethical codes by evaluating ethical dilemmas.
- 2) to teach the legal issues related to applied research with humans. Federal and State treatment and Educational Laws and issues related to the practice of Applied Behavior Analysis will be covered. Actual cases covering a variety of populations, locations and issues will be presented. Students will learn how to identify and avoid litigious situations.

ABA 588 Ethics and Legal Issues in Applied Behavior Analysis is a required course for graduate students of the Applied Behavioral Analysis Masters program and a prerequisite for ABA 594A and ABA 595.

This class will be offered annually with an enrollment limit of 25 students. The frequency will be adjusted if enrollment trends suggest an adjustment is necessary.

## Applied Demography (APDEM)

**APDEM 801** Principles of Demography (3) This course examines fundamental concepts and ideas in Demography, and U.S. and world population trends associated with these concepts.

**APDEM 801 Principles of Demography (3)**

This course provides an overview of demographic research and scholarship as a basis for the Applied Demography certificate and the Masters in Professional Studies degree in Applied Demography. The scope of the course content is broad, rather than in-depth, covering central disciplinary concepts and associated key theoretical ideas and empirical population trends. In particular the course investigates topics such as population growth, transitions in family patterns, fertility patterns and policy, immigration and growing population diversity, race and ethnic population inequality, internal migration and residential segregation, health and mortality patterns, population aging, and economic well-being and the environment.

Building on insights from the study of the above topics, students conduct a comparative population analysis of a developed vs. developing country or of two regionally dispersed U.S. states using census and vital statistics demographic data to document five or more key over-time population trends. Results from this analysis are then used to address applied demography questions about the relationships with outcomes for either business demography or public policy demography.

Students will learn fundamental disciplinary concepts, central theoretical scholarship ideas, major empirical U.S. and world population trends, and experience a hands-on skill-enhancing population data analysis project which integrates knowledge and application learning.

General Education: None

Bachelor of Arts: None  
Effective: Summer 2015

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**APDEM 802** Data, GIS, and Applied Demography (3) This course provides an overview of key demographic data sets, and promotes familiarity with, and appropriate use of, these data.

### **APDEM 802 Data, GIS, and Applied Demography (3)**

This course offers a comprehensive introduction to the wide variety of different government (and commercial) data sets that are among the most frequently utilized by practicing applied demographers. While US data sets are emphasized throughout the course international data products also will be discussed.

Raw population data needed for demographic research comes from a variety of sources. The course will introduce students to the fundamental principles and design considerations of the different types of data collection systems that are used: censuses, 'rolling' censuses, surveys, vital statistics and administrative records. While contemporary issues are often studied using the latest available data many demographic questions necessitate the inclusion of a historical perspective (e.g., studies of population change) and as such linking and analyzing data across time also will be discussed. The analytical sections of the course will focus on the strengths and limitations of data products (e.g., including issues of data reliability and appropriate data use). A review and discussion of future directions in data collection and data sources wraps up the course.

Enormous amounts of demographic data are now made available in aggregate form for geographical units (neighborhoods, cities, counties, states). These aggregate data are of interest in their own right but also are increasingly relevant to questions related to the role of geographic context on individual-level demographic outcomes. In this course students will learn about nested and non-nested geographical hierarchies of different data products and fundamental principles for handling and analyzing geospatial demographic data (e.g., how and when data sets can be linked together, how to visualize demographic data, spatial coverage, the influence of scale, and how to detect, and the consequences of, spatial dependence).

This is a hands-on applied course in which students will be expected to access, understand, manage, and analyze different kinds of demographic data sets. The emphasis on data interpretation and analysis will be on descriptive statistical analysis, data visualization, and exploratory spatial data analysis using open source and/or available software.

**APDEM 806** Applied Demography and Health (3) This course provides an overview of data, methods, and techniques in applied demography used to help address public health questions.

APDEM 806

### **APDEM 806 Applied Demography and Health (3)**

This course provides a wide-ranging coverage of substantive health questions that draw upon data and analytical methods closely associated with applied demography. The course opens with an overview of the substantive connections between health and applied demography. The remainder of the course is divided up into three main parts: (1) Local/Regional Health Assessments; (2) Methods and Case Studies in Morbidity and Mortality; and (3) Emergent Trends in Applied Demography and Health.

Part 1 focuses on data needs and commonly used methods (and their limitations) related to local/regional community health assessments - including diverse contexts (rural-urban, developed and developing countries). These data and methods are utilized to examine health disparities, health service planning (based on catchment area analysis and location-allocation modeling as well as methods for measuring accessibility and utilization of health services), environmental pollution, and emergency/disaster response.

Part 2 introduces the connections between demographics and the epidemiological transition. This section includes a broad focus on a specific classification of human health and disease (i.e., provisioning care and disease prevention, communicable disease, non-communicable disease, and accidents and other causes of injury and death). Across each classification of health and disease the heterogeneity of data needs, time scales, spatial scales, and population at risk is wide. Applications of methods and use of case studies will facilitate the discussion of these different kinds of contemporary health challenges.

Part 3 focuses briefly on the future, including an examination of global health questions (broad processes and forecasts associated with migration, urbanization, and environmental change) and new types of data and methods (including challenges and opportunities) that applied demographers will likely use in the next decade.

This course covers a diverse set of topics related to human health. Some of the most important health problems of the early 21st Century (in the U.S. and globally) relate to health inequalities in access to resources (e.g., access/use of health services) and in the variation in individual exposure to risks (e.g., environmental pollution, neighborhood deprivation, obesogenic environments, and crime), and how both access to resources and exposure to risk are associated with health disparities across populations (by race, socioeconomic status, gender, age, and other forms of social stratification). This course will provide students with an understanding of key health topics, and specific data and analytical tools that can be used to address them.

## **Applied Linguistics (APLNG)**

**APLNG 410 Teaching American English Pronunciation (3)** Study and application of principles of North American English phonetics and theories of teaching pronunciation.

**APLNG 410 Teaching American English Pronunciation (3)**

**(BA) This course meets the Bachelor of Arts degree requirements**

This course, for teachers who deal with speakers of other languages, integrates research and theory on the acquisition and development of pronunciation, as well as current pedagogy, to enable them to construct their own principled theory of teaching pronunciation. Students are introduced to the characteristics of the consonant and vowels systems of English. In addition, students are introduced to variations in the production of consonants and vowels by speakers of languages other than English. Students are expected to understand and to be able to describe the stress rhythm, and intonation of English as well as the adjustments that are made in connected speech. Students will learn how grammar and orthography influence the pronunciation of phonemes. Students will learn how to diagnose an individual's difficulties in the production of North American English and will learn how to develop appropriate curriculum. By focusing on instructional strategies from fields as diverse as theater arts, psychology, and instructional technology, students will be able to individualize their instruction by providing alternative ways to better respond to second language speakers' learning styles and preferences. Moreover, this course requires students to develop and implement appropriate curriculum for both hypothetical, real tutorial, and whole class instruction.

The objectives of this course are for teachers 1) to develop a satisfactory understanding of the phonetics of North American English, including consonants, vowels, rhythm, stress, intonation and prominence, 2) to develop an understanding of the relationship between listening and pronunciation, as well as orthography and pronunciation, 3) to develop an ability to explain these phonetic concepts appropriate to students with varying learning styles using a variety of techniques such as kinesthetic and tactile reinforcement, 4) to develop an ability to diagnose speakers' particular pronunciation difficulties and to create instructional materials in response, 5) to develop a coherent philosophy of the teaching of pronunciation, and 6) to develop an ability to evaluate pronunciation textbooks and materials and supplement them when necessary.

**APLNG 412 Teaching Second Language Writing (3)** This course provides opportunities for exploring various perspectives on theory, research, and pedagogical applications in second language writing.

**APLNG 412 Teaching Second Language Writing (3)**

This course has been designed to provide opportunities to explore various perspectives on theory, research, and pedagogical applications in second language writing. Through readings, writing, class discussion, and development of practical applications, students may develop an understanding of how research and theory can inform their practice, as well as an awareness of how personal and professional factors come together to inform their own theory of second language writing. By engaging in instructional activities, such as evaluating writing, responding to writing, and developing materials, students may begin to develop an understanding of how to implement theory in practice aligned with understanding. The overriding objectives are for students to help develop self-awareness as a writer and a teacher of writing, develop their own philosophy of teaching composition in an additional language context and to develop curriculum that embodies this philosophy. Students will be evaluated on reading journals, tutoring in the Writing Center, literature review, materials development project and developing of materials. APLNG 412 is an elective course in the M.A. TESL program and/or PhD option in Applied Linguistics.

**APLNG 482Y (IL) Introduction to Applied Linguistics (3)** Application of theories of language to psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition and teaching.

**APLNG 482Y Introduction to Applied Linguistics (3)  
(IL)**

This is a survey course concerned with the application of theories of language to issues in the areas of psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition, and second language teaching. Specifically, the course focuses on: a) how language influences the way people think and bring meaning to what they do, b) how language users match their utterances to specific functional purposes within specific social contexts, c) how the language practices of a particular culture are closely tied to the beliefs and conceptual principles by which people in the culture live, d) how language is used by speakers of different races, genders, and ethnic backgrounds, and e) how language is acquired, used, and perceived within bi/multilingual societies. Through reading, writing, and discussing the major issues in each of these areas students will come to understand how theories of language have influenced the way we think and bring meaning to what we do, the ways we communicate within different cultures and societies, and the way languages are learned and used.

**APLNG 484 Discourse-Functional Grammar (3)** Develop a working knowledge of the structure of English and apply such knowledge to research and/or classroom situations.

**APLNG 484 Linguistic Structures for English as a Second Language (3)**

This course is designed to enable prospective and practicing ESL/EFL teachers to understand the linguistic structures of the English language. Through the use of transformation grammar, students will interpret and analyze the basic grammatical structures of the English language. Students will apply their developing skills of linguistic analysis to recognize, and analyze, and remediate both oral and written grammatical errors in ESL/EFL instructional contexts. Students will understand the current theoretical issues related to pedagogical grammars and develop an appreciation for the practical and theoretical relevance of linguistics analysis for second language educators.

**APLNG 491 Theory: Second Language Acquisition (3)** An investigation into current issues in the theoretical bases of second language acquisition.

**APLNG 491 Theory: Second Language Acquisition (3)**

This course considers the relationship between second language acquisition (SLA) theory and language teaching. An examination of various aspects of first language (L1) and second language (L2) learning/acquisition processes provides a framework for consideration of basic questions in SLA research and interpretation of findings to date. Of particular interest is the relationship of this research to teaching materials and methods. The questions addressed include the following: What is SLA? What are the methods and aims of SLA Research? How are theories of SLA related to major theoretical models of human language and human learning? What have been or could be important interdisciplinary perspectives in SLA?

**APLNG 493 (IL) Teaching English as a Second Language (3)** Theory, research, and pedagogy that focus on the teaching of English to speakers of other languages in varied contexts.

**APLNG 493 Teaching English as a Second Language (3)  
(IL)**

This course focuses on the teaching of English to speakers of other languages. Specifically, the course explores the multidimensional nature of the teacher as a learner of teaching, the context of schools and schooling within which teaching occurs, and the activities and content of second language teaching and learning.

Throughout the semester, students will engage in a range of theoretical, pedagogical, and reflective activities that will enable them to: 1) understand their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on their classroom practices, 2) recognize the highly situated and interpretative processes involved in language teaching and be able to reflect on, critically analyze, and evaluate their own teaching practices, 3) become sensitive to the complex social, cultural, political, and institutional factors that affect language teaching and students' language learning, 4) come to recognize students' strengths and development as learners and language learners, 5) understand subject matter content from an instructional perspective and learn to anticipate areas that may require additional instructional support, 6) use their knowledge of theory to inform their instructional practices, 7) participate in professional collaborations with other teachers as they learn about language teachers, language teaching, and language learning.

**APLNG 512** Language and Adult Lifespan Development (3) The effects of adult cognitive development and decline on the production and comprehension of language in mono- and multilinguals.

### **APLNG 512 Language and Adult Lifespan Development (3)**

This graduate seminar is designed to provide a theoretical and practical introduction to research on adult lifespan development and language processing among multilinguals. It will be offered every other year as one of the course options in language in society, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. This course is also part of a LALS sequence in Language, Health, and Aging. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in bio-behavioral health, gerontology, and human development and family studies. The expected total enrollment is 15. Topics covered in course readings and activities include: theories of adult lifespan development and cognition; language processing among monolingual young, middle-aged, and older adults; multilingualism and adult lifespan development, with particular attention to the effects of aging on bilingual processing, second language acquisition, and language attrition; and research methods proper to cross-sectional and longitudinal studies of language development over time. Over the course of the semester, students will also plan, prepare, and conduct a quantitative experiment or qualitative study on one of these topics. Through participation in a variety of activities, students will 1) become familiar with the research literature on language processing and adult lifespan development, with particular attention to multilingualism, 2) develop critical skills in interpreting and comparing cross-sectional and longitudinal research designs in adult development studies, 3) develop practical skills in conducting such research and analyzing the results. Evaluation of students includes three components: 1) weekly presentation of results from required readings, 2) participation in an empirical research project conducted by the group, 3) summary paper describing the results of that research project.

**APLNG 570** Second Language Reading (3) Theoretical and practical introduction to concepts, methods and practices of research and instruction of second language reading development.

### **APLNG 570 Second Language Reading (3)**

This graduate seminar is designed to provide a theoretical and practical introduction to the assumptions underlying and principles embodying a variety of approaches to second language reading development and instruction. In addition, it seeks to explicate the role of second language reading in the larger context of second language development. It will be offered every other year as one of the course options in language learning and teaching, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in the foreign language departments and linguistics. The expected total enrollment is 15. Topics addressed in course readings and activities include: 1) the epistemological underpinnings of the notion of second language literacies; 2) psycholinguistic, critical and sociocultural approaches towards second language reading; 3) variables affecting second language reading performance; 4) strategies and instruction to influence second language reading development; 5) assessment of second language learners' reading performance, and 6) critical evaluation of instructional materials for a variety of second language learning contexts. Through participation in a variety of activities, it is expected that students will: 1) develop an understanding of second language literacies, 2) develop critical understanding of the variables and processes involved in L2 reading, 3) develop a principled conception of L2 reading instruction, 4) integrate L2 reading into the broader disciplinary area of second language learning and L2 proficiency, and 5) develop practical skills of designing and evaluating L2 instructional materials. Evaluation of students learning includes the following components: 1) completion and discussion of required readings; 2) presentation of key instructional approaches; and 3) completion of a paper addressing a theoretical, instructional or research issue in second language reading.

**APLNG 571** 'Foreign' Language Materials Development (3) This course focuses on the development and critical analysis of 'foreign' language teaching materials in applied linguistics and language learning.

### **APLNG 571 'Foreign' Language Materials Development (3)**

The goal of this seminar is to develop a critical awareness of the processes of language teaching and learning materials development. We will consider a range of commercially developed materials designed for what is commonly called an 'FL' setting, both past and present, from the perspectives of the author, instructor, and learner in terms of their stated goals, organizational framework, and the nature of the activities or experiences they provide. Theoretical discussions of various approaches to curriculum design and materials development will provide a basis for analysis. These will include structural, notional-functional and situational frameworks along with so-called 'content-based' and 'task-based' approaches. The cultural values implicit in the materials will be given particular focus. Is there representation of a Second Language culture

or cultures? If so, how can it be characterized in terms of breadth and balance? How are learners expected to react vis-a-vis this representation?

Consideration will also be given to market forces and author incentives important for commercial materials development. What constitutes a "successful" series? What are the advantages and disadvantages of locally prepared as opposed to imported materials? What major changes have occurred in language materials development and dissemination in recent years? What interpretations can be found of various pedagogical terms currently in wide-spread use, e.g. communicative language teaching, interaction, learner-focused, process-oriented? How is computer-aided instruction (CAI) being implemented in various settings and why? What is the influence of high stakes public examinations on teaching and learning materials?

The culminating activity will be an individual or team project that either develops a set of materials for a defined setting or takes a critical look at materials currently in use.

**APLNG 572** Communication in Second Language Classrooms (3) The study of communication in second language classrooms.

### **APLNG 572 Communication in Second-Language Classrooms (3)**

This course focuses on investigating and understanding the dynamics of communication in second/foreign language instructional settings. Students will examine different variables that influence the nature of communication in second/foreign language classrooms including: teachers' control over the patterns of classroom communication, students' perceptions of the patterns of classroom communication, students' knowledge and use of language, and students' use of language for learning and second language acquisition. Each variable will be evaluated for its theoretical and pedagogical contribution to communication, learning, and second language development.

In addition, through understanding the basic theoretical tenants of and actively participating in reflective teaching, students will examine, frame, and manage the dilemmas of classroom practice, become aware of and question the assumptions and values they bring to teaching, become attentive to the institutional and cultural contexts in which they teach, and recognize their responsibilities for their own professional development. Finally, students will be exposed to sociocultural perspectives on mediated language and literacy instruction and recognize their relevance for second language teaching, learning, and classroom communication.

**APLNG 574** World Englishes: Pluralizing Policy, Pedagogy, and Proficiency (3) This course explores the global spread of English, the diversification of its norms, and their pedagogical and policy implications.

### **APLNG 574 World Englishes: Pluralizing Policy, Pedagogy, and Proficiency (3)**

This course analyzes how the English language aids globalization and how globalization changes English. English now features multiple grammatical systems and norms in diverse speech communities, adopts new modes of literacy and discourse practices, and enters into fluid relationships with other languages and cultures. These changes call for a reconceptualization of language standards, linguistic identities, literacy practices, and English language teaching. After studying the historical and geopolitical bases for the rise of English, the course explores the implications of contemporary forms of transnational relations, digital technology, and popular culture for diversifying the structure, norms, and usage of the English language.

The course aims to develop in students a sensitivity to the changing norms in English, provide pedagogical resources for teaching English according to local repertoires, examine strategies for facilitating intercultural communication, and articulate policies on the role of English in a multilingual world. While students specializing in teaching English as a second language (TESL) will find this course useful to inform their teaching of English worldwide, doctoral candidates in applied linguistics will find it important to understand how the plural norms of English invite new research on issues such as language acquisition, discourse analysis, and sociolinguistic identities. The course will be of interest to students of English who are increasingly interested in the way World Englishes affect multilingual creative writing and composition practices. In addition, the course will be of interest to students in Education who have to address the diversification of English in the changing demography of students in national and international classrooms.

**APLNG 578** Computational and Statistical Methods for Corpus Analysis (3) A hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data.

**APLNG 578 Computational and Statistical Methods for Corpus Analysis (3)**

This course will provide a hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data.

Topics to be covered include basic UNIX tools and python scripting for text processing; state-of-the-art computational tools for automatic and computer-assisted corpus compilation and annotation; computational tools for querying and analyzing raw and linguistically annotated corpora; and statistical methods used in interpreting information extracted from text corpora. Prior experience in computational and statistical analysis is not assumed. By the end of the course, students will be expected to have a good grasp of the computational and statistical techniques necessary for processing, annotating and analyzing corpus data, and to be able to implement these methods in their own corpus-based research projects.

This course will be highly applied, and there will be substantial opportunities for demonstrations, exercises, and discussions. Students will be evaluated on participation in in-class activities and discussions, completion of a series of lab assignments designed to help them practice the computational and statistical techniques introduced, and a final research project.

This course serves as the methods component of the two-course sequence in corpus linguistics offered in the Department of Applied Linguistics.

**APLNG 580** Proseminar in Applied Linguistics (1) This team-taught seminar introduces PhD students to the scholarly areas and research perspectives in Applied Linguistics represented by department faculty.

#### **APLNG 580 Proseminar in Applied Linguistics (1)**

This team-taught pro-seminar is the cornerstone of the PhD program in Applied Linguistics. Its aims are to foster an intellectual community among incoming PhD students and department faculty and to provide the students with an overview of the scholarly expertise and research perspectives in Applied Linguistics represented by department faculty. The areas to be covered include: second and foreign language and literacy development and pedagogy; technology and language learning; language testing and assessment; language policy and planning; language uses in community, workplace, professional and academic settings from local, national, and international perspectives; language and identity; language and health; sociocultural theory; discourse and conversation analysis; and corpus linguistics.

This is a required course for those entering the PhD program in Applied Linguistics and will be offered every fall. The enrollment will depend on the number of admitted students to the PhD program with a maximum number of 10.

Through participation in discussions with individual faculty members, and readings when appropriate, it is expected that students will become familiar with 1) the scholarly expertise of the participating faculty members and 2) key concepts and research perspectives associated with their areas of specialization in the field of Applied Linguistics.

Evaluation of student learning includes completion and discussion of readings. The department's Director of Graduate Studies will be responsible for scheduling the weekly meetings, for collecting feedback from individual faculty members on student contributions/performance and for assigning grades to students.

**APLNG 581 (CAS 581)** Discourse Analysis (3) Overview of theories and approaches to the analysis of spoken and/or written discourse.

#### **APLNG (CAS) 581 Discourse Analysis (3)**

This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

**APLNG 583** Methods of Language Assessment (3) Introduces methodology for selecting, developing, applying, and analyzing tests and questionnaires for research and evaluation in communication and language education.

#### **APLNG 583 Methods of Language Assessment (3)**

This course introduces standard methodology for selecting, writing, and analyzing language tests and research questionnaires. Major focus will be given to reliability and validity issues and the study of current testing research paradigms. Course activities will include reading texts and articles, completing assigned exercises, writing and analyzing a testing/questionnaire instrument, and the preparation and presentation of a research paper reporting test development findings or addressing an approved assessment issue.

The course is aimed at promoting the skills necessary to be effective judges and developers of language tests. This will involve learning to conduct item analyses, to understand principles of classical and item response measurement theory, to appreciate current and past language assessment issues, to carry out appropriate statistical analyses by computer or calculator, and to produce assessment research of publishable quality. In addition, the course will provide introduction to issues in latent trait/item response theory, item banking, computer adaptive testing, and instructional program evaluation.

**APLNG 584 Sociocultural Theory and Second Language Learning (3)** The course is an introduction to research on second language learning from a sociocultural theoretic perspective.

#### **APLNG 584 Sociocultural Theory and Second Language Learning (3)**

The course is designed to be a graduate level introduction to research on second language learning and teaching informed by sociocultural theory of mind and cognitive development. The course will initially focus on the general principles of the theory as laid out in the writing of L. S. Vygotsky, his colleagues and modern interpreters of the theory. It will then consider in detail the research that has been carried out over the past 15 years on L2 learning and teaching from a sociocultural perspective. Topics to be covered include the following: a brief history of cultural psychology; mind as a mediated cultural construct; activity theory; the genetic method; internalization and appropriation; the zone of proximal development; inner and private speech (including gesture); collaborative learning, prolepsis, and scaffolding; the role of artifacts and social relationships in development; interface between sociocultural research and language pedagogy; language testing from a sociocultural perspective; regulation in a first and other languages; metacognition in a first and other languages; identity in a first and other languages; the relationship of sociocultural theory to other theories of second language acquisition. The course has two primary objectives: to provide students with a solid foundational and critical understanding of the principles of sociocultural theory and for them to carry out a research project on second language learning using the genetic method and sociocultural theory principles to interpret data. Given that second language acquisition has become a dominant paradigm within applied linguistics, developmental psychology, and educational psychology, the course is particularly relevant for students not only in the graduate program in Linguistics and Applied Language Studies (LALS), but also to those working in psychology and education, as well as those pursuing the applied linguistics concentration in the language departments. It also serves as a complement to the other courses in applied linguistics offer by LALS in that it exposes students to a very theoretical perspective from what is often encountered in graduate courses in applied linguistics. As such, it challenges them to think in different ways about mind, learning, development, teaching, and assessment. The requirements for the course are: completion of required readings; in-class presentation of one research study selected from the L2 literature; submission of two brief (4-5 pages maximum) critical analyses of two research studies drawn from the relevant research literature; completion of a significant research project (topic to be negotiated with the professor). Course to be offered every other year beginning 2003-04. Maximum enrollment 1

**APLNG 592** Qualitative Research in Applied Linguistics (3:2) This course offers an introduction to qualitative research methods in applied linguistics.

**APLNG 592 Introduction to Qualitative Research in Applied Linguistics (3)**

This course is designed to acquaint students with the background, methods, and current status of qualitative research in

the field of applied linguistics. The main goals of the course are: 1) to familiarize students with a range of contemporary qualitative approaches to second language research; 2) to develop students' ability to select appropriate methods for particular research questions, 3) to develop critical awareness of issues related to validity and ethics in research design and writing; 4) to enhance students' skill in the collection and analysis of qualitative data. The class will review a range of approaches to qualitative research (e.g., ethnography, conversation analysis, diary study, case study) as well as issues of ethics and quality in research design, implementation and presentation. Students will be evaluated on reading and discussion (20%), assignments (30%), book and article reviews (20%), and final project (30%). APLNG 592 is a required course for the Ph.D. in Applied Linguistics, one of two courses on research methods contributing to the core curriculum. In addition, this course will be beneficial to students in Applied Linguistics options in the foreign languages (French, Spanish, and German).

**APLNG 802** Focus on English: Teaching Form, Meaning and Use (3) Develops an understanding of the various domains of the English language as relevant for adult English language learning and teaching.

**APLNG 802 Focus on English: Teaching Form, Meaning, and Use (3)**

This course explores various domains of the English language (phonological, lexical, grammatical, pragmatics) in relation to adult English language learning and teaching. Attention is paid to the various components (form, meaning, and function) of these domains and how each component works within larger stretches of discourse. Students will come to understand: language as communication, meaning-making, social practice; grammar as both structure, arrangement,

rules and choices; and language teaching concerned with both language form and language use. The major topics covered include the sound system, lexicon, grammar, tense & aspect, modality, spoken & written texts, discourse & genre, and pragmatics. Students will engage in a variety of data analysis activities that assess their knowledge of the various domains of language and engage in practical activities that require them to apply these understandings to adult English language teaching. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

**APLNG 804 Focus on Learners: Identity, Community, and Language (3)**

This course explores how individual identities shaped by cultural differences, social positioning, and institutional roles and structures influence the learning and teaching of English in an increasingly globalized world. This course will enable students to: a) recognize the multiple dimensions of one's cultural, linguistic, and educational backgrounds, b) understand the roles and values associated with varieties of English, c) become sensitive to the complex social, cultural, political, and institutional factors that affect adult English language teaching and learners' language learning in diverse instructional settings, d) create culturally responsive curricula that is appropriate for adult English language learning communities in diverse instructional settings. The major topics covered include: developing an understanding of language identities; recognizing diverse instructional settings as cultural contexts of learning; and applying these understandings to adult English language teaching. Students will engage in a variety of practical activities in which they reflect on their own language learning and cultural experiences, conduct an exploration of a bi/multilingual/cultural community and its related instructional settings, and write a final reflective paper that examines learners' identity, community and English language learning in diverse instructional settings. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

**APLNG 806 Focus on Classrooms: Planning and Supporting Language Learning (3)** Develops a critical awareness of one's teaching practice and highlights instructional planning and classroom interactions with adult English language learners.

**APLNG 806 Focus on Classrooms: Planning and Support Language (3)**

This course will guide candidates to analyze the interactional patterns and discourse of diverse instructional settings and the factors that impinge upon planning and supporting effective instruction for adult English language learners. Students will: a) examine their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on instructional practices; b) recognize the highly situated nature of teachers' instructional decisions and practices and develop an awareness of instructional language & classroom discourse that supports English language development; c) devise, select, and/or adapt a wide range of curricular resources to meet the linguistic, social, cultural and educational needs and goals of English language learners; d) develop lesson plans, evaluate curricular units and write teaching objectives; e) connect instruction to local and global activities and problem-solving using the imagination, collaboration, computer and other technological resources. Students will observe several English language instructional settings, recognize instructional models and classroom interactional patterns, review and adapt textbooks, and develop their own materials using authentic language texts. A focus will be on writing clear teaching objectives and lesson plans and the use of new technologies to support adult English language learning. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

**APLNG 808 Focus on Instruction: Teaching and Assessing Language Learning (3)** Develops an understanding of and ability

to use effective teaching and assessment practices that support adult English language learning.

### **APLNG 808 Focus on Instruction: Teaching and Assessing Language (3)**

This course facilitates the candidate's understanding of and ability to use effective teaching and assessment practices that support adult English language learning. Students will: a) recognize the highly situated and interpretative processes involved in English language learning and teaching and be able to reflect on, critically analyze, and evaluate their own instructional practices; b) understand subject matter content from an instructional perspective, learn to anticipate areas that may require additional instructional support, and carry out a range of appropriate instructional strategies and activities that support English language development; c) demonstrate an understanding of the central issues and current approaches to the teaching of English language speaking, listening, reading, writing, grammar, as well as approaches to language instruction that are content-based and focused on English for specific purposes; d) recognize the interconnectedness of teaching and assessment, assess students' knowledge using multiple forms of assessment, and address students' diverse needs, backgrounds, and English proficiency as they plan instruction. Major topics will include concepts surrounding second language assessment as well as classroom strategies to evaluate and monitor adult learners' English language learning. Also, students will explore the central issues and techniques for teaching oral communication (listening and speaking), literacy (reading and writing), and grammar. Students will complete a curricular development project, teach and videotape classroom lessons for mentor instructor feedback. A focus will be on guiding students to develop their own teaching practices appropriate to a group of adult English language learners in the specific context in which they live and work. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

## **Architectural Engineering (A E)**

**A E 401** Design of Steel and Wood Structures for Buildings (3) Application of principles of engineering mechanics to layout, analysis, design, and detailing of structural elements in steel and wood of simple buildings.

**A E 401 Design of Steel and Wood Structures for Buildings (3)**

A E 401 is a first course in structural steel and wood design taken by all undergraduate Architectural Engineering students in the 6th or 7th semester. It applies the principles of engineering mechanics to layout, analysis, design, and detailing of structural steel elements. The course covers the principles of structural design, structural safety, structural stability, steel as a material, methods of structural steel design, design of tension members, design of columns, design of beams (flexure, shear, deflection, bearing, web crippling, web yielding), combined stresses (beam columns), fasteners/connections. It also treats wood design, including material characteristics, beam design, column design, and fasteners. After completion of the course students will be able to design simple wood and steel structures.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2005  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 402** Design of Concrete Structures for Buildings (3) Application of principles of engineering mechanics to layout, analysis, design, and detailing of structural elements in concrete of simple buildings.

**A E 402 Design of Concrete Structures for Buildings (3)**

This course is designed to provide all Architectural Engineering students with an ability to analyze and design reinforced concrete and an understanding of the theoretical behavior of reinforced concrete members. The primary focus is on the analysis and design of one-way systems comprised of slabs, beams, and columns. Evaluation methods include, but are not limited to, exams and homework assignments. A prerequisite knowledge of structural analysis is necessary. It is a required course in the Architectural Engineering curriculum. Additionally, this course provides the necessary prerequisite

knowledge for several upper level concrete courses in both Civil and Architectural Engineering.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2005  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 403 Advanced Steel Design for Buildings (3)** Continuation of A.E. 401. Advanced analysis, design, and detail of the structural elements in wood and steel.

### **A E 403 Advanced Steel Design for Buildings (3)**

A E 403 is designed for 4th year Architectural Engineering students in the structural option, to build on the design and analysis base developed in the first course in steel design. This course is intended to develop competency in analysis and design of multi-story steel buildings subjected to gravity, wind and earthquake loadings, including study of connections, framing systems, composite design and plastic design of steel members.

The course prerequisites include determinate and indeterminate analysis and structural design of steel members. It will cover such topics as types of construction, the design process, loading and load cases, floor systems, floor vibration, moment rotation characteristics of connections, plastic analysis, multi-story frames, braced and unbraced frames, seismic design, leaning columns, drift, composite design and connections.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2005  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 404 Building Structural Systems in Steel and Concrete (3)** Basic analysis, design, and detailing of steel and concrete structural elements for buildings, emphasizing systems design and comparisons. A E 404 is not permitted for AE Structural Option students or for Architecture students.

### **A E 404 Building Structural Systems in Steel and Concrete (3)**

The course is designed for architectural engineering students in the Construction, Mechanical Systems and Lighting/Electrical options to gain an ability to design simple building members in steel and concrete using current professional standards, specifications and guidelines. Students will learn to combine these members into simple structural systems and compare the performance and load carrying characteristics of these systems. The course will also address general performance parameters of these materials, construction issues and key systems-integration issues for beams, columns, flooring and roofing systems, and lateral bracing systems constructed in steel and concrete. This course is considered to be the terminal course for non-structural option AE students, and is designed to provide a general understanding of design, construction and integration issues that affect these structural systems. This course may be taken by AE Structural Option students or Architecture students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 421 Architectural Structural Systems I (3)** Qualitative and quantitative analysis and design of architectural structures, force flow; structure configurations; measurement and experiments; design studio critique.

### **Architectural Structural Systems I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1990  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 422 Architectural Structural Systems II (3)** Continuation of A E 421, with emphasis on structural configuration and construction assemblies.

**Architectural Structural Systems II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1990  
Prerequisite:

**A E 424 Environmental Control Systems I (3)** Fundamental principles and applications of environmental systems in buildings. This course is intended for Architecture students.

**A E 424 Environmental Control Systems I (3)**

This course is a complement to A E 211. Environmental control systems other than the thermal environmental systems are covered in this course. A E 424 introduces architecture students to building illumination, acoustical, fire protection, electrical and plumbing design issues. Emphasis is placed on building design as a response to the technical, environmental and societal challenges.

The course utilizes lectures, practicums, examinations, projects, presentations and field trips to deliver and reinforce the technical content. The course offers students opportunity to work in team settings and to present their work orally to their peers. The broad coverage of the technical and social issues and professional skills intentionally involves students in discussion and application of social and ethical responsibilities. The course is required for students enrolled in the undergraduate architecture program. A E 211 is a prerequisite for this course. The course is not available to architectural engineering students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2005  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 430 Indeterminate Structures (3)** Classical methods of analysis for beams, frames, arches, and secondary stresses as applied to buildings; introduction to modern methods.

**Indeterminate Structures (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1984  
Prerequisite:

**A E 431 Advanced Concrete Design for Buildings (3)** Continuation of A.E. 402. Advanced analysis, design, and detail of concrete masonry, prestressed and reinforced concrete.

**A E 431 Advanced Concrete Design for Buildings (3)**

This is the last course in reinforced concrete design in the Architectural Engineering curriculum, and builds on previously learned skills in reinforced concrete design and analysis of statically determinate and statically indeterminate systems. Successful students will come away with sufficient understanding of the theoretical basis of concrete design to be able to learn any further aspect of concrete design on their own, and a set of specific critical skills needed by any structural designer involved with reinforced concrete structures. These skills include:

- Identification of the assumptions and weakness of the theory of reinforced concrete members.
- Detailed design of reinforced concrete beams and girders.
- Design of reinforced concrete slabs by the direct design method.
- Design of reinforced concrete slabs by the equivalent frame method.
- Analysis of reinforced concrete members subjected to torsion, to determine bending and torsional moments.
- Design of reinforced concrete members subjected to torsion.
- Design of reinforced concrete columns, slender and non-slender.
- Design of reinforced concrete columns in biaxial bending.

This course is taught by a combination of lectures, solution of example problems, and design projects.

General Education: None

Bachelor of Arts: None  
Effective: Fall 2005

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 432 Design of Masonry Structures (3)** Analysis and design of unreinforced and reinforced masonry: non-bearing walls, bearing walls, shear walls, masonry building systems.

### **A E 432 Design of Masonry Structures (3)**

This course is intended to prepare students in Architectural Engineering and related disciplines such as Civil Engineering and Agricultural and Biological Engineering to design load-bearing and non load-bearing masonry structures. Although the emphasis will be on reinforced masonry, the design of unreinforced masonry will also be covered. The course will begin with a discussion of the materials used in masonry construction: clay units, concrete units, mortars, grout, and reinforcement. Since masonry is designed by allowable stress methods, a discussion of allowable stress design, as compared to load and resistance factor design, is necessary from the outset. The first design applications to be discussed will be non load-bearing walls, reinforced and unreinforced. This will be followed by a brief coverage of the topic of columns. The next topic will be load-bearing walls, reinforced and unreinforced. The discussions of load-bearing walls will describe two methods for their design: the use of a straight-line interaction formula and the construction of interaction diagrams. The analysis of systems of shear walls will be described in detail, followed by shear wall design. The design of particular building systems, both low-rise and mid-rise will either be covered by lectures, or by other exercises.

**A E 457** HVAC Control Systems (3) Theory of automatic control. HVAC control applications. Control system components, control loops, development and documentation of control logic, control commissioning.

### **A E 457 HVAC Control Systems (3)**

The objective of the course is to develop the knowledge and skills necessary to understand, design, document, and diagnose problems in HVAC control systems. The course builds on knowledge of HVAC system function and design obtained in prior courses in the curriculum and prepares students for advanced design courses and the capstone project. The course begins with an introduction to concepts and terminology of automatic control, followed by detailed study of control system components: sensors, controlled devices, and controllers. Understanding of these fundamentals is then applied to the development and documentation of controls for common HVAC systems and the commissioning of control systems. Relevant standard and guideline documents are referenced as necessary.

**A E 461** Architectural Illumination Systems & Design (3) Lighting units & photometry; lighting equipment; design criteria, calculation methods; the design process; energy codes.

### **A E 461 Architectural Illumination Systems & Design (3)**

This course will prepare students to design basic lighting systems by providing them with background information and experience to do the following:

1. Develop their knowledge of lamp, luminaire, and control types and evaluate their applicability to a particular design situation.

2. Establish fundamental design criteria for a variety of lighting applications.
3. Conduct appropriate and accurate analyses of lighting systems to assess system performance and evaluate its ability to meet design criteria.
4. Implement a completed design by specifying all of the components of the system and providing an appropriate system layout.

This is the first full-semester lighting course that students receive in the Architectural Engineering Department's Lighting/Electrical Option.

**A E 464 Advanced Architectural Illumination Systems & Design (3)** Flux transfer theory; advanced lighting and control systems; emergency lighting; daylighting; visual performance issues; psychological aspects of lighting.

#### **A E 464 Advanced Architectural Illumination Systems & Design (3)**

This is the final undergraduate architectural lighting course in the Lighting/Electrical Systems Option. The course focuses on advanced topics related to lighting design such as luminous flux transfer and its application to lighting analysis procedures, advanced issues in photometry, advanced control systems, and advanced topics in lighting design. The light design topics include the psychological aspects of lighting, and design for complex spaces such as museums, stores, and video conferencing.

The course includes a weekly hands-on practicum experience, homework, exams and a design project.

General Education: None

**A E 466 Computer Aided Lighting Design (3)** Design and analysis for outdoor area; floodlighting; and interior applications, including design criteria; economic analysis; modeling algorithms; and visualization.

#### **A E 466 Computer Aided Lighting Design (3)**

The goal of this course is to cultivate an understanding of good lighting design practice through a series of design and analysis problems. Course topics include design criteria, design practice, and the application of lighting hardware and analysis procedures for outdoor area lighting, economic analysis of lighting systems, interior lighting design and lighting system visualization.

Commercially available computer software is applied to approximately seven design projects, which students present in either PowerPoint or submit in a short report format. Students, faculty and outside professionals critique the project solutions. The critiques enhance the learning experience for all students through the evaluation of different lighting solutions applied to the same design problem.

**A E 469 Photovoltaic Systems Design and Construction (3)** Criteria and analysis methods pertaining to the design and construction of photovoltaic (PV) systems and their integration with buildings.

**A E 469 Photovoltaic Systems Design and Construction (3)**

This course provides students with a working understanding of the design and construction of photovoltaic (PV) systems and their applications in buildings, and is intended for students in Engineering and Energy Engineering. The course provides an overview of PV systems and common applications in residential and commercial buildings including the determination of solar irradiance and insolation based on latitude and climate as well as site survey and assessment methods for the positioning of PV systems. Technical topics include solar module components, DC-AC power inversion, energy storage systems, and system sizing and design. The integration of PV systems with building electrical and mechanical systems, including discussions of the pertinent building codes, utility interconnection, and the economic analysis of PV systems, is also included in this course. Upon the completion of the course, students will be able to calculate and account for the factors affecting the performance of PV systems in various climates and conditions, distinguish the features and performance variables of solar modules and inverters in the design of PV systems, calculate string sizing and inverter matching variables in the design of PV systems, communicate the critical design features of safe and efficient PV system integration with buildings and utilities, evaluate and quantify the factors affecting the successful installation and performance of PV systems in variable settings, and will develop inquiry skills needed to assess new products entering the solar energy marketplace. In addition to understanding the key issues with system design, students will be able to utilize this understanding to choose components properly and to design a basic grid-tied system for a chosen building. Students will also be able to conduct an economic analysis of PV systems in the context of residential and commercial building construction.

A E 471

**A E 471 Construction Management of Residential Building Projects (3)**

The course Construction Management of Residential Building Projects is designed to introduce the students to a general understanding of the construction industry, basic principles of project planning and management, contracts, budget and project administration and execution as applied to residential building construction. The content of the course is intended to provide the student with the knowledge, tools, and understanding of processes and tasks necessary to manage residential building projects to completion successfully and within the framework of quality control, code compliance, and safety, while minimizing risks. The scope of the residential construction considered in this course is primarily focused on single-family dwellings and multi-family dwellings. Furthermore, most of the topics covered can be applicable to new construction, remodeling, as well as repair projects.

**A E 472 Building Construction Planning and Management (3)** Construction organization and contracts; preconstruction services; estimating; scheduling; cash flow; site planning and preparation; building construction sequences; construction business presentations; value engineering.

**A E 472 Building Construction Planning and Management (3)**

The objective of A E 472 is to introduce students in the construction management option of the Architectural Engineering program to the process in which building construction contractors acquire building projects, and the range of services typically provided on these projects. Upon completion of this course, students will have a working understanding of the preconstruction process and methods of acquiring negotiated work in building construction. They will be capable of assembling estimates, schedules, cash-flow curves, and site plans for building projects, and will have a working knowledge of competitive presentation strategies and develop professional presentation skills.

The content of the course centers upon the process in which companies plan for and acquire projects as construction managers and general contractors. Specific topics include schematic estimating and scheduling, design coordination of structural, architectural, and mechanical systems, value engineering processes, and site planning. The financial aspects of construction work are also presented, including project financing, cash flow, and accounting. A significant portion of the course is also devoted to the development of strategic and competitive business presentation, including risk assessment, fee structure, team dynamics, and technical presentation skills.

The class relies heavily upon the application of all content by students in the context of a team project. The project involves the distribution of a "Request for Proposal" for which students prepare a competitive proposal for an actual building construction project planned on the Penn State University Campus. Class activities include the presentation of key issues followed by in-class or independent exercises to reinforce themes and strategies to be applied in the project proposal. Students are assessed on their performance on discussion quizzes on ANGEL, independent exercises, class participation, a team presentation, and exams.

For A E students, the prerequisite for the course is the successful completion of A E 372. For non-A E majors, students are admitted at the discretion of the instructor. A E 472 is a prerequisite course for A E 473.

**A E 473 Building Construction Management and Control (3)** Building construction project planning; construction cost, schedule, quality and safety control systems; project cost accounting; change management; construction company management.

**A E 473 Building Construction Management and Control (3)**

The goals of this course are for students to learn how to perform detailed construction planning, identify potential problems during construction, and manage changes throughout a construction project. By completing this course, students will better understand the role of the general contractor/construction manager in analyzing the construction aspects of a building project and designing the construction engineering and management systems to effectively execute the project.

The main course objectives include learning how to perform and implement detailed planning for a construction project together with monitoring the project progress and performance including detailed cost control. Other course objectives emphasize gaining knowledge of the key decisions that construction executives make when managing a construction company and identifying potential projects to pursue. Students will also be introduced to the management of changes which occur throughout a project and how to negotiate changes. Finally, ethical standards for a professional engineer and their impact on decisions within the construction industry are important course learning objectives.

The course is taught via a combination of teaching methods that rely on problem based learning through both in and out of class activities; lectures by faculty and industry experts; project case studies; student presentations; and team and individual assignments. Completion of A E 472 is a prerequisite for this course.

**A E 481W Comprehensive Architectural Engineering Senior Project I (4)** Building project selection and preparation of overall plan; preliminary investigation of building design and construction issues; creation of individual Capstone Project Electronic Portfolio (CPEP) and project proposal required.

**A E 481W Comprehensive Architectural Engineering Senior Project I (4)**

The course sequence of A E 481W and A E 482 comprises the capstone engineering design program for Architectural Engineering students. A E 481W is taken by all undergraduate architectural engineering (A E) students and also serves as the writing intensive course requirement in A E. Based on an actual building project model, students will investigate the building, perform technical analysis, develop project criteria and prepare a written proposal for more detailed work to be accomplished in A E 482. Evaluation methods include but are not limited to written reports, verbal and written presentations, faculty consultations and development of a capstone project electronic portfolio (CPEP).

Engineering analysis of building systems; emphasis on analysis and design of building structural, mechanical, lighting/electrical, and construction related systems. Final written report, web-based project portfolio and verbal presentation are required.

**A E 482 Comprehensive Architectural Engineering Senior Project II (4)**

A E 482 is the second half of the capstone engineering design project for Architectural Engineering students. The course is taken by all undergraduate architectural engineering and serves as a direct follow up to A E 481W. Students perform detailed option specific work in conjunction with individual proposals written in A E 481W. Students are also required to demonstrate work in the breadth areas of architectural engineering. Evaluation methods include but are not limited to written reports, verbal and written assignments, faculty consultations, maintaining their capstone project electronic portfolio, a final comprehensive written report and a verbal presentation to a faculty jury.

**A E 530** Computer Modeling of Building Structures (3) Theory and application of structural analysis using the direct stiffness method. Modeling assumptions, validation, interpretation of computer output.

**A E 530 Computer Modeling of Building Structures (3)**

This course addresses the theory and application of structural analysis using the direct stiffness method with matrix formulation, applying computer programs to the analysis of two- and three-dimensional structures. Topics include validation and interpretation of results from computer analyses, as well as practical analysis techniques and the design of building structures to satisfy building code requirements.

The course is designed to provide students with the ability to create computer models representative of actual building response and in line with prevalent modeling techniques implemented using commercial structural analysis software. Primary objectives include developing an understanding of the process used by computers to solve structural systems, with emphasis on the use of computer models in the analysis and design process to satisfy building code requirements.

This is a mandatory course for students in the structural option within the integrated undergraduate-graduate degree program in architectural engineering (B AE/M AE), and it is a valuable course for all structural engineering graduate students.

Students must have completed an undergraduate course in structural analysis of determinate and indeterminate systems. Since some homework problems require proportioning structural members to resist combined loading conditions, the course prerequisites include introductory courses on the design of steel and concrete members. Also required is the knowledge of elementary matrix algebra and exposure to advanced programming of electronic spreadsheets.

This course involves significant instruction in the AE Department computer laboratory, which is equipped with several commercial structural analysis software programs capable of handling large structural models.

**A E 534** Analysis and Design of Steel Connections (3) Connection analysis and design for steel buildings with an emphasis on the AISC Specification.

**A E 534 Analysis and Design of Steel Connections (3)**

This course covers the theory of steel connection analysis and design including member, bolt and weld limit states as described in the AISC Specification and the *Manual of Steel Construction*. With sound knowledge in the basics of steel connection limit states, specific shear, moment and bracing connections are studied in detail. Along with the fundamental theory applied to each connection type, use of the applicable design aids contained in the *Manual of Steel Construction* is covered. This course is expected to be particularly useful for students entering the structural design profession upon graduation or those engaging in steel connection research. This course is required of students enrolled in the MAE Structural Option in the Architectural Engineering Department. Additionally, this course is commonly taken by structural engineering graduate students in both the Architectural Engineering and Civil and Environmental Engineering Departments. Student evaluations are based on their performance on a mid-semester exam, a final exam, out of class assignments, projects, and presentations. This course will generally be offered each fall, with an anticipated enrollment of 25-35 students.

**A E 538 (C E 538) Earthquake Resistant Design of Buildings (3)** Introductory engineering seismology, basic principles of structural dynamics, application of earthquake design provisions of model building codes to design of buildings.

#### **A E (C E) 538 Earthquake Resistant Design of Buildings (3)**

The main objective of this course is to familiarize students with basic principles of design of buildings to resist earthquake effects. Since building design is governed by the Building Code, currently, International Building Code that adopts American Society of Civil Engineers (ASCE) document ASCE-7 for load determination, the seismic provisions of ASCE-7 will be used as the basis for design. The course starts by introducing earthquake phenomenon and engineering seismology concepts. The basic principles of structural dynamics are then covered for single degree of freedom systems starting from free vibration to random loading so that students learn how a ground acceleration time-history subjected to the base of a building can be converted to a time varying effective seismic load on the mass. After introduction of response spectrum, introductory material on multi-degree of freedom systems is introduced so that students can determine natural frequencies and mode shapes for multi-story buildings and perform modal superposition analysis to determine displacement and force responses. Next, the principles of earthquake resisting design related to energy dissipation, ductility, over-strength, and redundancy followed by seismic provision of the building code are discussed. The main design principles related to the two main materials for building construction consisting of reinforced concrete and structural steel are next discussed. The focus will be to illustrate how lateral load resisting systems such as shear walls, moment resisting frames, or braced frames made with such materials as appropriate are designed to resist earthquake effects based on respective material code provisions, that is, American Concrete Institute (ACI) for concrete and American Institute of Steel Construction (AISC) for steel. The last part of the course will introduce seismic retrofit, base isolation systems and the concept of performance based design.

**A E 542 (C E 542) Building Enclosure Science and Design (3)** The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints.

#### **A E (C E) 542 Building Enclosure Science and Design (3)**

The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science--concerning primarily heat, moisture, and air--is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in sonic detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

**A E 543 Research Methods in Architectural Engineering (3)** Research skills, critical thinking, academic writing, presentations, use of electronic media, and experimental design applied to AE research topics.

#### **A E 543 Research Methods in Architectural Engineering (3)**

This is a course intended primarily for graduate students in Architectural Engineering. Other students interested in Architectural Engineering research may also take the course. The main objective of the course is to build research skills for students pursuing an M.S. or Ph.D. degree in Architectural Engineering. The research skills to be targeted are critical thinking, academic writing, presentation, oral communication, and use of electronic media, based on materials from architectural engineering projects and literature. These skills will be developed through a series of lectures and exercises to include architectural engineering research topics, such as novel building physical characteristics and occupant performance/environmental perceptions.

Lectures in academic writing will cover proposal, report, paper, and thesis writing requirements for Architectural Engineering students. Students will write several assigned essays and term project to gain experience in different academic writing forms as well as architectural engineering research topics. Students are encouraged to use their actual research for the semester project. Based on the project content, each student will then be required to develop an in-class

presentation. This part of the course will cover presentation preparation and the critical thinking that is embedded into oral communication skills. The electronic media portion of the course will cover topics such as electronic databases relevant to architectural engineering research topics, search engines, publishing, use of web materials, ethics, and legal considerations. All of the assignments are designed to develop critical thinking through instructor and peer feedback.

In addition to the three major targeted areas of research skills development, this course will begin and end with a focus on architectural engineering research topics. The introductory part of the course covers the topics and methods for the four focus areas within the Architectural Engineering program, while the closing portion emphasizes interdisciplinary research efforts and encourages students to thinking in that direction. For example, while experimental design is directly applicable to each individual focus area, the specific instrumentation is area (focus) dependent. Nevertheless, knowledge of different specific data collection methodologies from multiple Architectural Engineering options can enhance the understanding of integrated architectural engineering research topics. Overall, the communication established in all of the course assignments can be used to help develop new architectural engineering research ideas and polish existing ones, which will be helpful to students who are taking the course during their first or second semester in residence.

**A E 551 Combined Heat and Power System Design for Buildings (3)** Thermodynamic and thermo-economic analyses methods for determination of optimal, on-site, total energy systems for commercial buildings.

### **A E 551 Combined Heat and Power System Design for Buildings (3)**

Building systems consume about 40% of the primary energy resources utilized in the United States each year and are responsible for a proportional fraction of air contaminants (NO, SO, fine particulates, CO) and greenhouse gas, CO<sub>2</sub>. A conventional energy supply mix for building (grid electricity, site fossil fuel heating) results in approximately 50% primary fuel energy utilization. Advances in scalable, low emissions, electric power generating devices are leading to incorporating on-site power production into the building design. The "waste heat" general is of such a quality that it can be utilized at the site in heating, hot water, absorption cooling, and dehumidification applications. The simultaneous utilization of a primary fuel to generate both the electrical and thermal components in Building Combined Heat and Power (BCHP) can result in total primary fuel utilization values of 85% or greater, electric power reliability increases and significantly reduced emissions, particularly greenhouse gases.

This course examines the underlying thermodynamic principles involved in BCHP, pollutant and greenhouse emission mechanisms and levels associated with both Separate Heat and Power (SHP) and BCHP designs for a given building site. Economic and regulatory principles that govern the application feasibility of a BCHP design for a given building configuration are examined. At the end of the course, students will have the skills and tools necessary to perform an assessment of the feasibility of a BCHP application to a given building site. Specific combinations of distributed, electric power generation equipment (micro-turbines, fuel cells, diesel engines, wind-power) and thermal "waste" utilization from these generating systems will be discussed and analyzed. Case studies are utilized to illustrate the evaluation processes.

Using the SHP design methods and principles (ducted air supply systems, hydronic heating and cooling systems, etc.) covered in A E 454 (Advanced HVAC) and central system methods covered in A E 557 (Centralized Cooling Production and Distribution Systems) or A E 558 (Centralized Heating Production and Distribution Systems) for commercial buildings, students will learn how to achieve and establish the same building performance objectives using Combined Heat and Power (CHP) technologies. Since the use of CHP for various building types requires reducing transients in thermal and electric load profiles, the relationship of the structural characteristics of the building (thermal mass) and the use of combinations of artificial lighting vs. day-lighting to the utilization of CHP is investigated.

**A E 555 Building Automation and Control Systems (3)**

A E 555 complements and expands upon the material covered in the undergraduate HVAC control systems course. The objectives of this course are to provide students with an enhanced capability to design advanced building control systems and to ensure proper operation through the use of comprehensive design and analysis tools and evaluation methods. Particular emphasis will be placed on systems integration, fault detection, diagnosis and correction, optimization and performance monitoring. Reference materials will be drawn from recent technical papers and conference proceedings and cover both model-based predictive control and data-driven modeling and control. Students will develop skills to stimulate building control system performance for a wide range of system designs and to implement advanced control strategies and sequences relevant to modern integrated building systems.

**A E 559 Computational Fluid Dynamics in Building Design (3)** Theory and applications of building environmental modeling

with Computational Fluid Dynamics (CFD).

### **A E 559 Computational Fluid Dynamics in Building Design (3)**

This course will be a primary interest to Architectural Engineering graduate students in the Mechanical Systems emphasis. Other students interested in the application of Computational Fluid Dynamics (CFD) to Architectural Engineering may schedule the course if they have satisfied the prerequisites. The main objective of this course is to build the knowledge necessary for successful simulations of building indoor and outdoor environments using CFD. The skills developed in the course build on the knowledge of fluid mechanics and building mechanical systems. The course will also add to the available pool of electives for students in the integrated BAE/MAE program.

The first part of the course covers general CFD topics on the solution of Navier-Stokes partial differential equations. Different concepts necessary for the solution of the partial differential equations expressing the conservation laws will be introduced along with a CFD software package. In this phase, the course focus will be on the derivation of different equations and their solutions. Analytical solutions will be derived when possible, while most of the problems will require use of numerical solutions. Several homework assignments will require development of small computer programs. The introduced CFD software package will prepare students for the second part of the course that is more applied.

The use of CFD in building design is different from its use for other engineering applications because of the domain size and specific boundary conditions such as diffuser airflow, wind, or solar radiation. Most of the time, appropriate boundary conditions distinguish successful from unsuccessful applications of CFD. To address the issues of quality control in CFD simulations, the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) recently developed CFD guidelines that the course will follow from the beginning. The actual guidelines will be introduced to fortify everything learned during the course.

Evaluation will be based primarily on analytical homework assignments (30%), two projects (30%), a mid-semester quiz (20%), and a final examination (20%). This course will be offered each Spring, with an anticipated enrollment of 10 students

**A E 570** Production Management in Construction (3) Applications of production management tools to capital facility projects; theory of production systems in construction; development of production control manual.

**A E 570 Production Management in Construction (3)**

A E 570 explores the use of production management to efficiently manage the delivery processes of capital facility projects. Students will learn about fundamental models of managing project processes and about tools to manage projects as production systems. The procurement, design, and construction processes that are used in capital facility projects are not usually through of in production process terms. Yet, doing so can develop a deeper understanding of the complexities of capital facility projects and enable project production to be efficiently managed. Production management emphasizes managing projects as complex wholes focusing on the relationships between the parties and tasks to optimize total process performance.

A E 570 analyzes the latest production thinking and management tools to manage capital facility projects. The learning objectives of this course are for students to:

- a) recognize that capital facility projects are complex production systems and understand how principles of production relate to construction projects;
- b) understand the principles and methods of new production management methods like lean construction;
- c) be able to apply specific production management tools to specific problems identified on projects, especially those encountered on high performance sustainable building projects; and,
- d) understand how to use the latest production management planning and control tools to improve the management of capital facilities projects.

A E 570 will be offered each spring with an anticipated enrollment of 25 students. This course uses classroom demonstration, case-based materials, in-class game simulation, and computer software to demonstrate key concepts and production tool applications. Assessment is conducted through out-of-class assignments, homework exercises, and a major project requiring appropriate tool to remedy the problem. The final grade for this course will be based on:

Construction process analysis assignment - 15%  
 Experiment design assignment - 25%  
 Homework exercises and classroom participation - 25%  
 Major project, including class presentation - 35%

Students entering this course are expected to have knowledge of the construction industry, project delivery processes, and construction means and methods.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Fall 2007  
 Prerequisite:

**A E 571** International Construction Management and Planning (3) Evaluation of international project environments and participants, modeling and planning international projects.

**International Construction Management and Planning (3)**

General Education: None  
 Diversity: None  
 Bachelor of Arts: None

Effective: Spring 2005

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A E 572 Project Development and Delivery Planning (3)** Methods employed by owners and developers to initiate capital facility projects; defining project objectives, constraints, participants, financing, and delivery methods.

### **A E 572 Project Development and Delivery Planning (3)**

The course explores the methods used by capital facility owners and developers to initiate a project. Many vital decisions are made and critical activities performed early in a project that have major bearing on how the project is completed. These include defining the project objectives, identifying constraints, recognizing stakeholders, and selecting financing and delivery methods. The course explores the latest project development and delivery techniques used to support these decisions. Students will learn how early development activities shape a project, and how building industry professionals are helping to support these activities. Students will develop knowledge and perspective to help their decision-making skills. As the course title implies, special focus will be on high performance delivery planning.

The learning objectives of the course are for students to:

- 1) Understand what occurs in the early stages of project formation as capital facility owners and developers initiate a project;
- 2) Understand the methods owners and developers use to progress through the capital facility process;
- 3) Understand the different types of acquisition strategies, project delivery methods, and contractual systems to achieving capital facility owner objectives; and,
- 4) Understand the decision-making needs of high performance sustainable building projects.

Offered in the Fall semester, the course uses case-based materials, hands-on computer simulation, and other classroom demonstration. Case study projects assigned by the instructor, individual homework exercises, and a group project requiring students to apply development techniques to a current downtown State College capital facility development site from the assessment for the course.

Students entering this course are expected to know how the construction industry operates, including project delivery methods, engineering economics, preconstruction, and construction means and methods.

A E 581

### **A E 581 Facilities Management Information Systems (3)**

Facilities Management Information Systems is designed to give students a foundation in information systems that are

necessary to effectively manage a facility management organization. This course provides the students with the knowledge, tools, and understanding of the information systems necessary to effectively lead a facility management organization within the framework of facilities data, analytics, and benchmarking procedures, and knowledge management systems. The course delves into information visualization, space planning and management, procurement and management of information systems, and legal issues of these systems. Upon completion of the course, students will be able to assess current and potential information systems and technologies required to effectively lead a facility management organization. Students are strongly encouraged to have a working knowledge of the design and construction industry and a general understanding of the operation and maintenance of a building before taking this course.

**ARCH 417** The Language of Boundaries in Architecture and the Landscape (3) This course examines the development and significance of boundaries in the construction of human space and time. Students who have taken other courses from Architecture Visual Arts, Geography, or Philosophy that treat some aspect of spatial perception, conception, construction, or visualization, or who have completed equivalent study independently, may enroll with the permission of the program.

### **ARCH 417 The Language of Boundaries in Architecture and the Landscape (3)**

This course is composed of eight chronologically arranged units of study that examine the major developments in the human use of boundaries in the creation of architecture and landscapes — those actually constructed as well as those created through literature, myth, art, and film.

Human boundary behavior is complex. While we tend to describe space and time as 'transitive' (rational), our actual experience of them is intransitive. Because descriptive systems tend to disregard the role of time, they favor a constructed descriptive objectivity over subjective accuracy. Conflicts between representations and experiences reflect psychological and cultural conflicts expressed as symptoms and dysfunctions.

Both the lectures and supplemental films are directed at helping students understand, reflect upon, and critically think about the trans-cultural and ubiquitous quality of boundary behavior.

The thrust of the course is historical and critical rather than professional, and the intent of the course is to provide students with a comprehensive overview of the issues that surround the human use of boundaries. Because boundary issues are the result of humans' mental apprehension of the world, psychology, philosophy, critical studies, literature, and other humanities are intrinsically involved. But, because boundaries are a part of a way of conceiving the world mathematically, ideas from topology, number theory, and circuit logic are also key.

Each unit of study will be accompanied by exemplary films that illustrate some aspect of boundary behavior. The course includes approximately 12 important films for required study.

**ARCH 431** Architectural Design V (6) Continuation of ARCH 331 and 332, with design and research in program option areas.

### **ARCH 431 Architectural Design V (6)**

The fourth-year architecture studio emphasizes the development of skills in research, documentation, analysis and presentation of project-related physical and cultural information. The studio will investigate the implications of a rigorous predesign process in the design of architecture. The studio curriculum seeks to investigate the role of the architect in urban design, especially the design relationship between individual buildings, groups of buildings, exterior spaces, streets and streetscapes. Students will explore the synthesis of individual landmark buildings, building groups, urban landscape and service systems.

The studio explores the difference between the roles and responsibilities of public and private clients. In particular the implications of establishing levels of control within the built environments, such as design guidelines, circulation systems and utility networks.

Emphasis will be placed on the development of the following design skills:

- Cooperation and collaboration in research and design.
- Understanding the implications of existing patterns on subsequent design.
- Understanding attitudes toward contexts: cultural, physical, economic, personal, political, organizational (bureaucratic).
- Integration of scale: Development of logics (orders) for the use of the site and continuity of logic across scales of building.
- Developing culturally meaningful relationships between the ordering of land-use and space throughout related buildings.
- Design of exterior space using architectural relationships between multiple buildings
- Investigation of the implications of design controls on the single building.

Effective: Fall 2011

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ARCH 432 Architectural Design VI (6)** A continuation of ARCH 431, this course explores in greater depth urban planning and architectural design in an urban context.

### **ARCH 432 Architectural Design VI (6)**

ARCH 432 is a continuation of ARCH 431 with a focus on architecture in urban environments and urban/community planning issues of greater complexity. The class will collaborate in the research and documentation of the existing conditions of an urban site and the forces that influence it. This will include the study of precedents. The class will prepare a pre-design presentation, individual architecture projects, base models, and a book of the semester's work.

Based on the pre-design information, small student groups will develop a master plan for a large program. This exercise will include the preparation of the plan, supported by concept diagrams and models, land use diagrams, open space diagrams, landscape plans, pedestrian and vehicular circulation/parking/servicing diagrams, written and graphic site and building design guidelines, and a utilities diagram.

The architectural component of the master plan will be selected for development as the studio architectural design project. Each student will prepare an architectural project based on the general logic and concepts of the group plan.

Major topics addressed in the course include working collaboratively in teams, understanding fundamental ordering principles of cities and towns, understanding urban contexts, urban plans, land-use controls, and economic plans, the design of urban spaces, and the design of a single building or complex of buildings in an urban environment.

**ARCH 441 Architectural Design Analysis (3)** Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment. Architectural Engineering majors only.

### **ARCH 441 Architectural Design Analysis (3)**

Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment.

The objective of this course is to explore various approaches to architectural design and to reinforce the concept that there is no "right" or "wrong" answer to a design problem. "Design" is decision-making in itself -- the key to a successful project lies not only in the final product, but in the process leading up to it as well. In order to be successful, design solutions must respond to both formal ideas as well as human, environmental and technical realities. Thus, the interaction between art and technology becomes imperative.

**ARCH 451 Architectural Professional Practice (3)** A study of architectural practice in today's society: education, registration, office practice, codes, standards, construction industry, contracts, and legal documents.

**ARCH 451 Architectural Professional Practice (3)**

ARCH 451 is a required course in the BARCH curriculum. It is intended to prepare students for the professional practice of architecture. The course explores the historical influences and current trends that shape the relationship between the architect, client and builder in contemporary society. This course provides an overview of the changing roles of the architect through history as well as a detailed examination of the architectural profession in today's rapidly changing world. ARCH 451 reviews internship, architectural licensing procedures and requirements, professional development (life-long learning), architectural practice including office organizational structures, the architect's administrative role, construction cost control, professional organizations, the architect's professional, legal and ethical responsibilities (including life-safety and accessibility), leadership in the profession and the community as well as alternative architectural / design related careers.

**ARCH 480 Technical Systems Integration (3)** Presentations of buildings' analyses from a multiplicity of viewpoints: architectural, spacial, environmental, mechanical, construction assembly.

**ARCH 480 Technical Systems Integration (3)**

This course is a synthesis of topics previously introduced in the AE sequence—such as structural, mechanical, electrical, and other systems related to a building's technical performance. Students will practice the purposeful integration of all technical aspects of a buildings design, providing them with a working knowledge of matters related to energy efficiency, sustainability, lighting, and acoustics.

The focus of the course lies in questioning how technical requirements and design intentions should be integrated during the design process, so as to enhance the aesthetic and performance qualities of an architectural project. This course combines lectures, field trips, and technical assignments, along with analysis and implementation of energy, day lighting, electrical lighting, and acoustical concepts in the student's design efforts.

In addition to the synthesis of building design and technical systems, this course will further develop the student's knowledge of active/passive techniques for sustainable architecture. A focus on the collaborative workings/environment of the architectural practice helps students to translate systems integration strategies into graphic/digital representation, and reinforces the interdisciplinary nature of designing and constructing successful works of architecture.

**ARCH 491** Architectural Design Studio (6-12 per semester/maximum of 12) Problems in architectural planning and design; and/or programming, implementation methodologies and applications for various environmental design scales.

### **ARCH 491 Architectural Design VII-Thesis (6)**

It is the goal of this program that, upon completion of the fifth year, each student will have the ability to pursue an architectural idea in a rigorous, in-depth manner and be able to express the knowledge of and implication of that idea through the completion and presentation of a "thoroughly considered building design project." It is the intent of the fifth-year component of the Bachelor of Architecture program to foster the spirit of in-depth design inquiry and research, and to build upon and reiterate design awareness, skills, and methods introduced in previous years; and to introduce, discover and develop new ones. To these ends the primary educational vehicle is the use of a propositional thesis as a way of directing the study toward the linking of theory and building in a meaningful manner.

**ARCH 499A** (IL) Rome Study--Architectural Design (6) Individual or group instruction conducted in Rome, Italy.

**ARCH 499A Foreign Study - Architectural Design VI (6)**

The semester abroad design work will focus on the difficult problem of creating new construction in the presence of an historic structure. This is an inevitable problem in the city of Rome where one can hardly avoid confronting historic or monumental buildings. However, as every place is preceded by a history, either natural, political or material, these issues are important outside of this context, the course aims to help students define critical strategies that will serve them beyond their semester abroad.

Fifteen weeks is a short time to experience a place as complex and interesting as Rome, Italy. For many students, it may be a chance of a lifetime to live in and study a place as challenging and full of opportunity as this. Students are expected to approach the semester with even more seriousness than they would a semester at home. A semester in this program is not a mere travel experience but an academic exploration of a foreign and historic environment. Every activity of this studio is designed to these ends. Therefore, we have selected a very direct and limited building program, a site in the historic center, and exercises that require students to spend time in the field as well as in the studio.

**ARCH 499B** (IL) Architectural Analysis (3) Comparative study of architectural elements and building types through on-site drawing, recording, measurement, sketching and decomposition activity.

**ARCH 499B Architectural Analysis (3)  
(IL)**

Architecture is amplified and embodied in cities. Since most architecture is set in cities and the city is itself an architecture, it becomes necessary for us to evaluate the relationships that affect the making of buildings for cities and the organization of buildings into a meaningful whole. This course will explore the two meanings of the term "the architecture of cities." It will propose questions leading to an analytical de-composition of the situation of cities in general and Rome in particular.

The course is loosely divided into three sections. The first, Historical Overview, presents the evolution of early settlements focusing on the significance of built form. The second, Revolutions and Modernity, demonstrates the qualitative shift in emphasis that settlements undergo from the Enlightenment, through the Industrial Revolution, to the Information Revolution. The third section, the Current Debate, will present some contemporary issues and techniques proposed for the resolution of apparent problems of city architecture.

Since this course is given in a unique setting, it takes full advantage of Rome, its history and its problems, to highlight the universal design elements that are part of an analytical understanding, but also of a synthetic design understanding of cities.

This course is theory based and, as such, will provoke thinking, a taking apart mentally, more than a making of architecture. The studio design problem, also set in this city, is the operative dimension of thoughts generated here. In this class, students are expected to articulate thought and some clear graphic analysis concerning architecture. These thoughts, if manipulated with discipline and commitment, will become a source of illumination for design activity.

Learning Objectives:

- \* To learn the meaning of cities in Western culture
- \* To understand the significance of foundation and other rites concerning building the human environment.
- \* To understand the meaning of urban architecture
- \* To understand the reasons for the form of streets, buildings and open spaces in Western cities
- \* To achieve the analytical skills necessary to take apart the component systems and material elements of architecture

**ARCH 499C** (IL) Urban Studies Topics (3) A presentation of the history of Rome through the medium of its maps and walking tours of the city.

**ARCH 499C Urban Special Topics (3)  
(IL)**

The course is a presentation of the history of Rome through the medium of its maps. The well documented cartographic history of the city is presented along with the morphological changes that are evident in the city today. The material of Rome's physical development is presented in two distinct ways. The first involves slide presentations of Roman maps and engraving images organized by specific routes (vie consolari and others) into and out of the city. The second is by on-site walks through the same routes with the instructor.

The approximately twelve routes involve a lecture presentation usually given on Tuesdays, followed by an on-site walk usually given on Thursday. Students are then assigned their own route map of the same study area to generate over the weekend. These are graded and discussed in the following sessions.

**Framework:**

- \* Introduction: The definition of the Urbs through maps
- \* 14th-15th century: Limbourg, Taddeo di Bartolo
- \* 16th century: Bufalini, Duperac
- \* Renaissance planning and the expanding city
- \* 17th century: Maggi, Falda
- \* 18th century: Nolli
- \* 19th century: Catasto Piano
- \* 20th century: Lanciani, Sanjust

**Themes:**

- \* 14th-15th century: Derivation of the iconic map from Mappaemundi and city images in art
- \* 16th century: Images of pre-Sistine in-city and extension planning vs. Sixtus V's city outside the city
- \* 17th century: Illustrating the Baroque point developments: Urban theater
- \* 18th century: The new orientation and precision measurement of the Age of Reason. Nolli and Piranesi: the contemporary vs. the archaeological city
- \* 19th century: Stasis and expansion: Nolli retreads and the master Plans for the new Capital city
- \* 20th century: Recapitulation and expansion: Lanciani's new Forma Urbis and images of the boundless city

**Learning Objectives:**

- \* To learn the history of the development of one of the most important cities in the world.
- \* To learn the importance of mapping and way-finding in the understanding of architecture.
- \* To learn the reading of traces of the past morphological development of a city.
- \* To understand how cities are built, change, and grow over time.

**ARCH 501 Analysis of Architectural Precedents: Ancient Industrial Revolution (3) Analysis of architectural precedents from antiquity to the turn of the twentieth century through methodologies emphasizing research and critical inquiry.**

**ARCH 501 Analysis of Architectural Precedents: Ancient to Industrial Revolution (3)**

The 20th century Italian architectural historian and theorist Manfredo Tafuri argued that architecture was intrinsically forward-looking and utopian: "project" in both the sense of "a design project" and a leap into the future, like "projectile" or "projection." However, he also argued that architectural history, understood deeply and critically, is indispensable if that leap is to make the world a better place. For any new building to make a positive and meaningful contribution to the physical and human world, architects must not only know what they can build, but what has been built, and what architecture's positive and negative impact has been in the past.

This course will introduce the history of architecture from antiquity to the turn of the 20th century through (1) ten selected buildings, one covered each week, and (2) a methodology emphasizing research and critical inquiry. Borrowing from the "problem-based learning" approach that is central to studio education, this class will present "question-driven history." Students will learn how to find, use, and critique architectural history resources by attempting to answer six fundamental questions for each of the studied buildings.

**ARCH 502 Analysis of Architectural Precedents: Modernism (3) Analysis of architectural precedents of modernism from its multiple, disputed points of origin through the late twentieth century.**

**ARCH 502 Analysis of Architectural Precedents: Modernism (3)**

What is "modern" architecture? What conditions gave rise to the various movements that have come to dominate design since the industrial revolution? What sort of design did these theoretical works and movements produce, and how did it

contribute to architecture's development? An understanding of modernism and its legacy is crucial to a thorough understanding of the architectural culture of the 21st century.

By examining buildings from early modernism to today, this course will introduce the theory of modern architecture from its multiple, disputed points of origin through the late twentieth century. Our operative term will be modernisms, in the plural. "Modernism" is a convenient and important label, but its suggestion of unity can camouflage the complexity of a phenomenon that spans decades, cultures, continents, and ideas.

**ARCH 504 Materials and Building Construction II (3)** Continuing examination of fundamentals and advanced building materials, systems and construction technologies associated with their architectural use.

### **ARCH 504 Materials and Building Construction II (3)**

This first-year graduate seminar course will continue to present students with information on fundamental and advanced building materials and systems and on construction technologies associated with their architectural use. Students will also consider the advancements in architectural materials and technologies. It is the second part of a two-semester sequence preceded by ARCH 503. Recurrent course themes include 1) architecture as a product of culture (wisdom, abilities, aspirations), 2) architecture as a product of place (materials, tools, topography, climate), the relationship between architectural appearance presented and the mode of construction employed, 3) materials and making as an expression of an idea and 4) the relationship of a building whole to a detail.

This course is motivated by these concerns: a firm belief that architects must know and engage the age they are living in, so as to design and represent it with extreme appropriateness. The course explicitly addresses engagement with society/culture and its appropriate representation by asking students to form opinions about the architectural potential of contemporary and emerging technologies. Their opinions are informed by the presentation of architectural materials and associated construction methods as they evolved - contextualized by human history and by their application in the built environment. In this class students are seeing the material and technological means of making architecture continuously altered by shifting human cultural desires and artistic/scientific/industrial developments. They are simultaneously receiving instruction in their application and use. Through assignments, students also work directly with materials at full scale and learn to represent construction systems through the conventions of drawing and modeling.

**ARCH 512 Critical Theory in Architecture (6)** Inquiry into paradigms of critical theory in architecture theory, practice, and teaching. Evaluation of central texts, methods, theories, and outcomes.

### **ARCH 512 Critical Theory in Architecture (6)**

ARCH 512 is composed of six chronologically arranged units of study that examine the major developments in the evolution of discursive practices that ground architecture theory, teaching, and practice.

Modern and post-Modern critical theories in architecture have borrowed from a number of tangent disciplines, such as Phenomenology, Positivism, Existentialism, Narratology, Structuralism, Deconstruction, Grounded Theory (social sciences), Cognitive-Behaviorism, Neo-Kantianism, Psychoanalysis, Reception Theory, etc. Historical methodology, Archaeology, Anthropology Art History, and other disciplines have also had their impact. As a result, critical theory in architecture typically lacks uniform methodologies and stable definitions. In recent years, many disciplines have undergone attempts to consolidate discourse around the influence of language and culture within the historical context of evolving world ideologies and their effect on communication, material culture, and the physical environment. Architecture has responded to this general trend in a number of ways that invite cross-disciplinary comparisons and methodological adaptations.

The course will take advantage of featuring visiting scholars whose expertise in diverse areas of study will provide participants with direct contact with the widest possible range of theoretical perspectives. The strategy of the course will be a comparison and critical evaluation of what appear to be the most effective research methods within the pressing concerns of environment, population growth, material resource depletion, and international conflict. The aim will be to establish relevance as well as research competence and effective expression.

**ARCH 522 Visual Communications II (2)**

This course introduces students to a wide range of digital drawing, modeling and output techniques and concepts that are essential for architectural design in order to formulate knowledge and expertise, and investigate their potential in architectural design studio. While providing a theoretical standpoint of contemporary methodologies, knowledge gained in this course will allow students to work rigorously and precisely through conceptual exploration, design development and ultimately meaningful representation of their design intentions. Skills developed in ARCH 521 will provide the foundation for work performed in this course.

The course will be conducted in the form of weekly lectures to cover theories and methods, and accompanying weekly working sessions, software and hardware demonstrations with individual instruction in the computer lab. Brief lab assignments will be assigned to ensure proliferation and adoption of course material. The coursework maybe coordinated with design studio (ARCH 532) assignments providing the students with the opportunity to master their digital skills in a meaningful manner.

**ARCH 531** Architectural Design I (6) Studio studying the core methods of the discipline of architectural design and developing skills related to its expression and communication.

**ARCH 531 Architectural Design I (6)**

This course prepares students to understand fundamental architectural elements and concepts, to develop a sensitivity and awareness required for valid interpretations, and to develop a reflective and critical design process with emphasis on one's individual ability to articulate ideas. The major means of accomplishing this is through the design of simple buildings and environments.

The semester is divided into two halves: The first half of the semester focuses on fundamental and abstract principles of architectural design, and the theory associated with design principles. It covers architectural fundamentals such as drawing and making models through a series of abstract exercises, and introduces the principles and methods used at various stages of design analysis and synthesis processes. The second half of the semester makes a transition from abstract principles to fundamental architectural design principles such as function, scale, and structure to concepts of space and form, as they pertain to small scale design projects. The assigned projects explore and develop conceptual strategies for fundamental formal and spatial design, emphasizing the role of ordering principles and of fundamental architectonic elements in the implementation of design intentions.

**ARCH 542** Topics in Community and Urban Design (3) Community and urban design as an area of design inquiry and interdisciplinary practice.

**ARCH 542. Topics in Community and Urban Design (3)**

The intention of this course is to introduce students to the fundamental elements of community and urban design practice within the fields of architecture, landscape architecture, and planning. An investigation into the diverse traditions of design practice- -technical, esthetic, and theoretical -- will highlight the role that design plays in the urban and community context and also serve as a powerful medium for analyzing the confluence of the social, economic, political, and ecological dimensions that give form to cities and communities. An objective of the course will be to develop a critical perspective in architectural design vis-a-vis the restructuring of urban and community space.

Topics to be covered in the course include: history of the discipline, contemporary urban and community issues, methodologies and techniques in community action research and participatory design, and introduction to the case study method of analysis. It is expected that students will actively participate in class discussions, present a case study of a project related to the topics covered in the class, and submit a research paper on the selected case study.

ARCH 542 will be offered as a 3-credit course on an annual basis during the spring semester. Students with graduate standing in architecture and landscape architecture will be given priority for enrollment. However, a limited number of other students may enroll pending consent of the instructor.

**ARCH 545** Pedagogical Practices in Architectural Education (3) Review and application of pedagogical topics in studio teaching. Comparative evaluation of accepted and experimental practices.

**ARCH 545 Pedagogical Practices in Architectural Education (3)**

ARCH 545 is composed of six chronologically arranged studio projects involving intensive interaction among students and instructors about strategic options available to the architectural experiment. (The course is held in conjunction with an undergraduate summer studio; students in ARCH 545 are the instructors of the undergraduate course.)

Running in parallel with ARCH 512, ARCH 545 carries theory to the pedagogical studio where it is employed in a variety of strategic interventions involving the idea of displacement. The studio student's activities are directed towards the design and production of a performative space where the division between audience and stage is thematized in a variety of ways permuting but not violating the traditional division of viewer and viewed. Students of ARCH 545 take the role of instructors whose actions are continually reviewed in light of their pedagogical intent, theoretical presuppositions, and educational outcomes. Various models of intellectual growth will be employed: dialectic (learning from the instructor), experimental (learning through 'planned accident'), parallel stages (learning through the creation of multiple levels of production), etc.

Studio education in architecture contains many traditional elements (sketch study, material development, critique, revision, etc.) and some controversial but common elements (design-to-failure, inversion, covert coding, etc.) Students, as instructors in the pedagogical laboratory of the undergraduate studio, will document the results of each week's activities and summarize the outcomes in terms of paradigms of discovery.

ARCH 545 is a hybrid lecture-online course, with materials summaries and project descriptions and results archived on a course web site.

**ARCH 550** Ethics in Architecture: Green to Post-Green (3) GREEN to POST-GREEN - Environmental thinking in the Twenty-first Century.

**ARCH 550 Ethics in Architecture (3)**

The intention of this seminar will be to look at the legacy of sustainable design (providing the topical substance for a series of class presentations) and engage students in an interdisciplinary dialogue. The research and work assignment will require each student to write an essay and/or develop a design project, based on the cutting edge of creativity in an important field other than architecture. By pursuing this approach, students in the seminar will be expected to identify a major thinker in the arts, sciences, or humanities, research why this intellectual leader's theories are significant, and then translate what they have learned into a written paper and/or design project.

The class discussions will relate information delivered by diverse speakers to the subjects of "environmental thinking," origins of green architecture, examples of good and bad LEED qualified buildings, site-specific art, social and psychological concerns in urban planning, breakthroughs in science that impact on design and, as a fundamental mission of the entire course, the potential value of visionary ideas from other fields in shaping public policy for sustainable buildings and cities.

## Art (ART)

**ART 402** Portfolio Design and Professional Practices (3) This course emphasizes the development of presentation skills for digital artists in audience/client interactions.

**ART 402 Portfolio Design and Professional Practices (3)**

ART 402 PORTFOLIO DESIGN AND PROFESSIONAL PRACTICES (3) is the concluding experience for all students enrolled in the Digital Arts Certificate (DAC) program. The course provides opportunities for students to learn about the practical application of professional practices and portfolio development tools specific to careers that require knowledge of digital art and design principles and culminates in the development of a professional-quality creative portfolio. The course prepares the DAC student with the skills, knowledge, and ability to 1) communicate a critical understanding of his/her work through the articulation of goals, critique, and self-assessment; 2) identify, assess, and evaluate tools and information necessary to maintaining current and effective techniques for written and visual self-presentation; and 3) prepare and present online a professional-quality creative portfolio of digital art/design works and appropriate supporting documentation.

The course is taught fully online and comprises coursework supported by online presentations and guest talks, assigned readings, and other resources and reference materials relevant to the professional development of digital artists and designers. Course topics include: 1) the role of the portfolio, 2) selecting portfolio ingredients and how to adapt them for different audiences, 3) selecting/composing supporting documentation for the creative portfolio, 4) developing a professional-level online presentation of the digital portfolio, 5) locating and evaluating resources for the digital arts/design professional and 6) identifying professional practices relevant for individuals working in digital art and design. Students engage in both individual and team-based projects and interactions via activities such as asynchronous group discussions and guest talks delivered by streaming media.

Assessment is based on the quality of the student's work and participation in individual and team-based projects and activities that include online discussions, peer-reviews, collaborative research, and the development of an online presentation for the creative portfolio. Students receive regular individual and group feedback throughout the course in the form of instructor and peer reviews and critiques. Formal assessment occurs at regular intervals in a manner that evaluates both individual and group components of assigned tasks and activities. Students are expected to positively contribute to the course through active engagement in online discussions, team-based work and activities, and peer reviews. Course assignments include creative and written components and provide multiple ways for students to engage in various forms of professional development, self-evaluation, and critique.

Students are required to have access to the Internet.

**ART 409** (ART H 409) Museum Studies (3) An introduction to the professional activities that occur in art museums.

**ART (ART H) 409 Museum Studies (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

**ART 411** (US) Seminar in Contemporary Art (3 per semester/maximum of 6) Trends in contemporary art investigated within the framework of studio visitations, museum tours, and through other related avenues of encounter.

**ART 411 Seminar in Contemporary Art (3)**

This seminar on contemporary art exposes students to artistic practices and to the advanced-level critical discourses accompanying them. It is relevant to all students interested in expanding their knowledge of contemporary art and essential to BFA students who are encouraged to take the course more than once. The only prerequisite for this course is ART 122W. The seminar's intimate format allows for discussions and a convivial examination of the pluralistic expressions of contemporary art while articulating it with theory and criticism.

From an international perspective, this seminar focuses on art since the 1960s. Besides more traditional artistic expressions such as painting, sculpture, photography, installation, performance and video, the course examines networked collaborations before and after the Internet, art and social activism, and a range of new media and new genre artistic practices. The conceptual issues these works raise include among others the dematerialization of the art object, issues of site-specificity and public art, and institutional critique. The course approaches these developments through artists' writings and essays in contemporary theory and criticism. Works of art are presented through videos, power points, films, performances, gallery visits, field trips, and discussions of related essays. Critical "reading" includes an extensive introduction to the work's historical contexts, readings from primary source materials, and the exploration of critical methods of analysis. From a cross-disciplinary perspective—including historical, esthetic and philosophical approaches—this course examines principles, assumptions, and tensions inherent in artist's works as well as in our responses to them.

Student evaluation is based on short written papers such as an exhibition review or an interview, participation in class discussions, and a creative project (ranging from a web site to an installation, artist's book, or a performance), which must reflect a general understanding of the issues addressed in the course. The course is offered at least once a year with the enrollment of 15 students.

**ART 413** Performance Art (3) The development, production, and presentation of performance art works, and the study of performance art theory and history.

**ART 413 Performance Art (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will consist of lectures, readings, demonstrations, critiques, and studio practices in performance art. The course will begin with introductory exercises aimed toward the use and understanding of objects, images, materials, and actions of the body as performance elements. Performance assignments will range from autobiographical works to those

which will address political issues effecting art and the body today such as sexuality, ethnicity, health, ecology, the art market, government intervention, and others. Reading and discussion assignments will cover the theory and history of performance art in the twentieth-century.

**Performance Art Paper:** One week after the second performance project, students will be required to submit a paper that defines performance art. The paper should be typewritten, double-spaced, and three pages in length. In addition, it should contain a page for references that indicates at least five sources that have been used from the course reading list to support arguments.

**ART 415 Integrating Media: Convergence in Practice (4)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will concentrate on the integration of technologies into contemporary studio art practice. Emphasis will be placed on the convergence of digital, interactive, and time-based experiences within current studio practice. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in a final large-scale collaborative media project, group show, installation, video screening, and/or class web presentation. This course will be offered fall and spring semesters.

**ART 416 Advanced Web and Net Art: Multimedia Publishing (4 per semester/maximum of 12)** A studio course concentrating on multimedia online "net art" practice and Web publishing.

**ART 416 Advanced Web and Net Art: Multimedia Publishing (4 per semester/maximum of 12)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This is a studio art class that focuses on creating, authoring, exhibiting, and discussion online art practice. "Net Art" has become an important form of new media art creation and exhibition. The course explores experimental uses of new media in the visual arts with emphasis on integrating net art and design practice in cyberspace with current studio practices in two, three, and four (time based) dimensional art. In addition to the actual creation of new media artworks, the course will engage students in research methods to advance their skills in new media art and design and help them to develop an understanding of the critical evaluation and assessment of new media artworks created specifically for the web. The course will also explore various methods and strategies for exhibiting and publishing artworks on the web and creating online portfolios.

The course will examine and explore the potentials of net-based art through lectures, readings, demonstrations, creative practice in studio, critiques, and actual web-published exhibitions. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring.

The course will culminate in an online exhibition and personal portfolio sites published on the web.

**ART 417 Metal Art/Technology III (4 per semester/maximum of 12)** Advanced exploration of current and emerging metal art technologies and processes as medium for conceptual, aesthetic, and functional artworks.

**ART 417 Metal Art/Technology III (4 per semester/maximum of 12)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will continue exploration of metal art technologies at an advanced level. This course will also cover technologies related to professional preparation, such as mass production options, presentation approaches, and interfacing with suppliers. The convergence of metal art technologies as source material (ART 217) and its further integration with emerging technologies (ART 317) will serve as the basis for students; creative works that intersect art, function, and technology. Through this advanced exploration of a wide range of metal art technologies, the student will be able to create new artworks not otherwise possible. These artworks will use the presented technologies to address concepts, aesthetics, and functions directly relevant to the visual arts.

Assigned projects will involve a wide variety of skills, techniques and processes at an advanced level that include the application of design principles, advanced metal forming techniques, research and construction of mechanical, kinetic, and electronic systems, and independently focused explorations. This project-based learning will be reinforced through slide lectures, demonstrations, readings, reflective writings, and critiques.

This labor-intensive studio relies upon cumulative learning experience through increasingly advanced projects. Competency is expected in numerous new skills and techniques, and creative innovation in the use and application of these technologies is essential to the success of completed artworks. Projects and assignments will be based upon the advanced integration of concepts and ideas.

**ART 466W** Individual Approaches II (6) An advance studio/lecture addressing the preparation for potential employment and/or entrance into graduate studies.

**ART 466W Individual Approaches II (6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

ART 466W is the Visual Art Studies capstone experience where students are given the opportunity to experience the professional aspects of a practicing artist. In addition to completing the last 2-4 pieces toward their exit portfolio students will address vital activities surrounding applying for employment and graduate school. Students will create "packets" including resumes, cover letters, post cards, slides, and portfolio CDs that can be used directly out of school for various calls and job listings. In addition topics that will be addressed in depth are photo-documentation, and inventory of work through database maintenance. All of these issues will culminate with small group exhibitions which will be curated, installed, and promoted by the students.

**ART 467** (ART H 467) Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic Stuff (3) Considers the physical challenges and long traditions of use of artistic media from both studio and historical points of view.

**ART (ART H) 467 Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic (3)**

Art and Art History are disciplines famously preoccupied with stuff: its malleability and its endurance, its sensuous properties and formal possibilities, its economic value and its mythic or even supernatural power. As an introduction to art through its materiality, this class will focus its attention upon a different material every week. With two class meetings per week, classes will alternate between "practicum" sections (demonstrations of selected materials with visits to metal foundries, studios and laboratories) and "historical" sections (lectures and discussions of those materials as they have worked in different historical and cultural contexts). The class will also introduce students to humanistic discussions of "matter," as well as attend to the cultural work involved in western art history's preoccupation with the differences between "matter" and artistic "medium."

**ART 476** (ART H 476) History and Theory of Digital Art (3) History and theories of contemporary digital art emphasizing humanistic approaches to technology.

### **ART (ART H) 476 History and Theory of Digital Art (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware.

Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation.

This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

## Art Education (A ED)

**A ED 401** Curricula, Pedagogy, and Assessment in Art Education (3) Preparation of curricula, pedagogical, and assessment strategies for elementary/secondary school and museum art education programs.

### Curricula, Pedagogy, and Assessment in Art Education (3)

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Summer 2002

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A ED 440** Cultural Institutions (3) Role of the educator and educational programming in museums and other cultural institutions.

### A ED 440 Cultural Institutions (3)

A ED 440 is the final course before an extended internship in the Museums and Cultural Institutions option of the BS in Art Education. It provides students with the opportunity to study the roles of educators and educational programming in various types of cultural institutions and agencies, from art museums and historic houses to community arts centers and arts councils. It enables students to learn about professional and vocational opportunities and to prepare for a career in the arts and cultural education.

Through reading, discussion, and field trips, the course explores the implications of past coursework for educational programming in cultural institutions. By preparing and presenting a case study, students understand and assess the effectiveness of educational programming in one institution. By preparing their own educational materials, program, or installation, they learn how to apply what they have learned to a specific setting.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2003

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A ED 488** Cultural Institutions Practicum (1-3) Supervised field experience in a museum or other cultural institution, including planning, implementation, and evaluation of an educational project.

### A ED 488 Cultural Institutions Practicum (1-3)

This course provides 1 to 3 credit hours of field experience for students enrolled in the Museums and Cultural Institutions Option of the BS major in Art Education. The course will provide students with a structured and supervised experience working with an educator in one of a variety of possible educational settings in museums and other cultural institutions in the local community and nearby region, including the Palmer Museum of Art. The field experience will allow students to apply what they have learned in coursework in a practical setting, plan and implement an educational project or program, and prepare for their extended 15-credit internship in A ED 495.

The nature of the field experience will vary depending upon the institutional setting, upon whether the student is working alone or as part of a team, upon the needs of the institution and the nature of the educational project, and upon the number of credit hours earned. In some cases, the course may be extended over two semesters. The course may be taken as an independent study, or structured around a group of students engaged in a joint project. Each student will be supervised by an educator in the setting in which the field experience takes place, as well as by an instructor from the Art Education program at the University.

Each student will become familiar with the role of education in the particular institutional setting and participate in providing educational experiences for the people served by the institution. As his or her primary assignment, each student will carry out an educational project in the setting, either individually or as part of a team. These projects may include, but not be limited to, an educational program, a set of educational materials, a marketing campaign, or educational installation. Each project will include preparing a written plan, conducting formative evaluation to field test the plan, implementing the project, evaluating its effectiveness, and preparing and presenting a final written report.

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**A ED 490** Capstone Course in Art Education (3) Synthesis of preservice art education coursework; introduction to professional practices and standards; completion of teaching and learning portfolio.

### **A ED 490 Capstone Course in Art Education (2)**

The capstone course has four major objectives for student learning:

- Each student will synthesize the experiences and understandings developed through prior courses in the undergraduate art education program.
- Students will become aware of emerging trends in art education and reflect on implications of those trends for their future teaching and learning.
- Each student will complete, and publicly present, a teaching and learning portfolio that includes evidence of professional preparation, biographical information, samples of artwork and writings on art/visual culture, and reflective statements explaining the selection and significance of specific items.
- Students will gain understanding of the importance of professional standards and practices in art education.

Student learning will be evaluated through assessment of the preprofessional teaching portfolio, and through a combination of written assignments, individual and small group oral presentations, and active participation in class discussions. Students will collaborate on a final installation, performance or exhibition demonstrating their readiness for the final internship. Since this is the final course in the major prior to student teaching or the internship, attendance is very important and will count toward part of the final grade. Students need access to a computer lab.

The capstone course in the art education major should be taken in the final semester before student teaching or a final internship. Since one goal of the course is helping students synthesize what they have learned in their prior courses, successful completion of all of the required courses in the major is prerequisite to enrollment in the capstone course. Students will have been introduced to the teaching and learning portfolio in their introductory art education course and should have developed pieces for their pre-professional teaching portfolios in most of their earlier art education courses. Much of the work of the capstone course will, therefore, focus on reflection, refinement, and synthesis.

**A ED 495A** Art Education Student Teaching Practicum (7) The elementary student teaching practicum fulfills requirements for Pennsylvania certification to teach Art in both elementary and secondary schools.

#### **A ED 495A Art Education Student Teaching Practicum (7)**

The Pittsburgh-based elementary or middle-level field experience fulfills the student teaching requirement for Pennsylvania certification to teach art in elementary and secondary schools. It is offered each semester, and student teachers are placed through the School District University Collaborative in Pittsburgh Public Schools. An on-site Art Education faculty Supervisor supervises students. Assignments, required seminars, and professional development activities meet the teaching prerequisites outlined by NCATE (National Council for Accreditation of Teacher Education) and the Standards for Pre-Service Teachers in Urban Education. Experiences and assignments provide evidence in each of the four domains for teacher preparation: Domain A - Planning and Preparing for Student Learning, Domain B - Teaching, Domain C - Analyzing Student Learning and Inquiring into Teaching, and Domain D - Fulfilling Professional Responsibilities. The work completed in this course (a digital and/or paper-based portfolio, and documented performance-based assessment of teaching as assessed by the university supervisor and mentor teachers/clinical instructors) will demonstrate fulfillment of the teaching/domain standards. The outcome of this work is to produce multiple experiences that support professional and personal development while preparing students for upcoming positions teaching art in multiple public and private contexts at both elementary and secondary levels. At the culmination of the student teaching semester, students will have both practical and theoretical understandings in addition to materials for application within the classroom.

**A ED 495E** Internship in Museums and Cultural Institutions (15) Twelve week, full time supervised internship in education in museums or other cultural institutions.

**A ED 495E Internship in Museums and Cultural Institutions (15)**

The internship at a museum or other cultural institution completes the requirements for the Museums and Cultural Institutions option for the BS in Art Education. It is generally scheduled full-time for a period of 12 consecutive weeks during a double summer session, although it may also be taken during the fall or spring semester. The internship enables interns to meet their own educational objectives through participation in a supervised experience that moves them out of the classroom into the workplace. Prospective interns are encouraged to select internship sites that offer educational experiences relevant to their professional goals and desired careers.

The internship incorporates guidelines consistent with the *Standards and Guidelines for Museum Internships* prepared by

the New England Museum Association and published by the American Association of Museums (1993, 2000). A formal written internship agreement signed by the intern supervisor at the sponsoring museum or cultural institution, and by the prospective intern and university supervisor outlines the objectives of the internship, the intern's duties and responsibilities, the responsibilities of the museum and university supervisors, and the means by which the intern's work will be evaluated. Interns are integrated into the ongoing work and education programs of the museum and treated as staff members. They assume professional responsibilities and are expected to complete a project or some discrete portion of a major project that is being undertaken by the education department of the museum. Interns become acquainted with functions, programs and departments of the museum in addition to those to which they have been assigned in order to understand the relationship of their educational work to that of the museum, to the community, and to the museum field in general. Interns may participate in any workshops, lectures, professional courses, and staff training seminars that may occur at the museum during period of internship. They are also encouraged to seek professional employment after completion of the internship, and reasonable accommodation is made to allow them time to look for positions, prepare application materials, and attend interviews.

Interns submit a weekly journal of activities and reflections to the university supervisor, as well as a summary report at the end. The museum supervisor submits an evaluation documenting the intern's actual working/learning experiences and critically assessing these experiences. The final evaluation is based on this assessment, on the intern's weekly journal and final report, and on the university supervisors's onsite observations and interviews.

**A ED 513 Summer Institute on Contemporary Art (3)** A blended summer course with on-campus and online components and a focus on intersections among contemporary art, curriculum, and pedagogy.

### **A ED 513 Summer Institute on Contemporary Art (3)**

This course is a summer session offering with a focus on intersections between contemporary art and curriculum. A collaborative effort between the Palmer Museum of Art and the Art Education Program, the course employs an innovative instructional approach that combines an intensive one-week intensive on-campus experience followed by correspondence, discussion, and presentation of final student projects using an online course management system during the ensuing five weeks. The course is designed to appeal to practicing K-12 educators, art educators, art education graduate students, and interested students from other disciplines as a forum in which to strengthen their focus on interdisciplinary curriculum theory and design constructed from collaborative interpretations of contemporary works of art and visual culture. As a critically challenging learning experience, this course will prepare students to thrive in a global environment by providing principles of interpretation as the foundation for encounters with beliefs, issues, and practices informed by and evidenced in contemporary works of art and visual culture. Due to the interdisciplinary interpretations and curriculum projects that will result from meaningful engagement with contemporary works of art, the course will promote interdisciplinary teaching and program development. The innovative format—a one-week intensive experience followed by discussion and presentation of final projects supported by an online course management system—challenges conventional approaches to instruction and presentation of evidence of student learning, thereby responding to and requiring new ways to assess and improve student learning outcomes in and through contemporary visual art.

**A ED 522 Participatory Visual Inquiry in the Public Sphere (3)** Theory and praxis seminar to consider contemporary practices of participatory inquiry and public action with an emphasis on visual methodologies.

### **A ED 522 Participatory Visual Inquiry in the Public Sphere (3)**

Students will analyze practices of participatory inquiry in response to social and cultural issues, situations, and challenges taken up by visual artists and interdisciplinary collectives who intend their work to construct new knowledge and positive change through collective action. Students will discuss and identify societal situations and propose possible responses as sites for participatory inquiry. A key focus of the course is the exploration of theories and practices of collaborative inquiry in the public sphere with emphasis on visual methodologies. The course revolves around related and overlapping concepts such as participatory democracy, participatory culture, ideas to actions, collaborative inquiry, collaborative design, community-based research, public pedagogy, and action research.

The course is intended to function as a discursive space to broaden perceptions about contemporary art and inquiry practices; informal and public pedagogies; the interdisciplinary roles of art and artists in society, community-based projects and inquiry; and ways collaborative artmaking and cultural production can function as forms of research. Course content focuses on community artworks, interdisciplinary creative projects, and other forms of cultural production created for and existing within the public sphere in response to specific issues, challenges, and conditions. Examples of such work include public murals, public performance interventions, environmental responses, community health and change interventions, and social media activism, among others.

**A ED 524 Arts Education Policy and Advocacy (3)** Critical examination of current and emerging arts education policies in the United States in relation to federal, state, and local education and cultural policies.

**A ED 524 Arts Education Policy and Advocacy (3)**

Students who are going to become leaders in arts education should understand social and political forces that shape the landscape where they work. Although art educators were identifying policy needs and submitting resolutions with policy recommendations to national agencies during the interwar years, arts education policy gained importance during the 1960s with the founding of The National Endowments for the Humanities and Arts. Arts education—as opposed to art, dance, music, or theatre education—is a political construct forged in order to successfully advocate for inclusion of visual and performing arts in National Educational Goals during the late twentieth century. In this course, students will explore what counts as policy for arts education and how policy discourse is framed; who constitutes stakeholders and policy makers; contexts where policy is advocated and created; and how advocates develop and communicate proposals for needed policies. Working in small groups, students will examine recent issues related to arts education policy, presenting those issues in class.

**A ED 544 Visual Culture and the Construction of Childhood (3)** Maps intersections of art, design, visual, material, and popular cultures as they contribute to understandings and experiences of contemporary childhood.

**A ED 544 Visual Culture and the Construction of Childhood (3)**

This course addresses the critical importance of the image of the child that is held by teachers and researchers, its origins in cultural experience, and its impact on pedagogy, curriculum, and research practice. The interdisciplinary field of childhood studies documents dramatic historical shifts in the relationships between adults and children, with an underlying tendency to view childhood exclusively as a preparatory phase, leading to adulthood and meaningful cultural participation. Contemporary perspectives on this issue suggest that adults often fail to recognize the complexity of the interactions and interrelationships among life stages, or the extent to which childhood, and the presence of children in our lives, shapes adult experience, even as childhood and the experience of children are shaped by adults and the assumptions they hold. Helping students to understand that these experiences are shaped and reinforced by the visual culture of our time, and how this occurs, is the primary focus of this course.

This course explores the responsibilities of art educators to be experts in imagery and advocates for children. Mapping the multiple intersections and relationships among art and design; visual, material and popular cultures; and, the experience of childhood in the 21st century, the course explores the ways in which adults shape childhood, consciously and unconsciously, through choices made for children as parents, teachers, artists, designers, researchers, and advocates for childhood; the ways in which children actively create their own childhoods from the materials at hand; and the ways in

which our own experiences as children continue to influence our lives as adults.

**A ED 811** New Media and Pedagogy (3) Exploration of relationships between communication technologies and beliefs about the nature of knowledge and the nature of art.

**A ED 811 New Media and Pedagogy (3)**

Due, in part, to contemporary processes of globalization and the development of digital technologies and the Web—new issues, possibilities, and opportunities regarding media communities and art pedagogy emerge in the field of art education. This is the focus of this course. Course participants have the opportunity to explore the aesthetic communicative and pedagogical implications of intertextual Webs, hypertext and hypermedia, blogs, wikis, simulations, the body interfaced in virtual reality, threaded dialogue, WebQuests, online games, media communities, adaptive and assistive technologies, and media-rich essays.

Learning activities will be in the form of explorations and creation with the links and resources provided, and focused discussions about these explorations and how to teach this content at participants' teaching sites. Following 5 thematic

explorations, course participants write a capstone essay to construct a speculative fiction of a teaching scenario based on the content of the course imagined in a future teaching site. The main priorities in Exploration 1 are to imagine possibilities of human-technology interfaces for creating and critiquing art. In Exploration 2, participants select a social networking tool from the course's resources to conduct a collaborative mini-project concerning self-representation online and power relational networks of social, physical, technological, and discursive inscriptions or conditions. Exploration 3, involves using the Internet as a primary medium for art creation and involves developing criteria to critique interactive Net art. The focus of Exploration 4 is free, downloadable authoring programs outside of a commercial economy, which enables the creation of interactive experiences without the need for specialized programming knowledge or database support. Exploration 5 involves participants creating a socially responsive visual culture WebQuest, which is an inquiry-oriented activity in which learners construct knowledge through interacting with, evaluating, and connecting diverse, and sometimes contradictory, resources on the Internet in order to form new insights that they share in a tangible form intended to make a difference in the world.

This is one of the required courses for the M.P.S. in Art Education. There is no prescribed sequence and no prerequisites for art education courses in the M.P.S. program.

**A ED 812 Diversity, Visual Culture, and Pedagogy (3)** Diversity issues in museum and K-12 art education contexts.

### **A ED 812 Diversity, Visual Culture, and Pedagogy (3)**

This course examines diversity, visual culture, and pedagogy in various settings: the artworld, popular media, and cultural settings such as schools and museums. Diversity pertains to gender, sexual identity, social class, ethnicity, ability, age, and other attributes that shape our identities. This course pays special attention to issues of power and privilege in relation to diversity and visual culture. It examines ways that various forms of visual culture, situated in various social contexts, teach us who we are, what is "normal" in our society, and how we might change oppressive social conditions that currently exist. As defined in the course, visual culture includes paintings, sculptures, prints, and other forms of fine art as well as advertisements, news images, scientific images, television programs, and films. It includes toys, comic books, children's art—and more. Visual culture includes all manifestations of cultural life that are significant for their visual features. Pedagogy refers not only to formal methods of instruction, such as teaching and learning in classrooms. It also includes informal instruction through the arts, the media, popular forms of entertainment, and other social practices. Pedagogy includes being positioned by, or addressed in certain ways by various forms of visual culture. It includes the ways we actively interpret, use, and recreate forms of visual culture in our lives.

Objectives of the course include understanding diversity as defined in relation to various forms of visual culture; understanding the complex interactions of ethnicity, class, gender, sexual identity, and other aspects of diversity in visual culture; understanding issues of power and privilege in relation to visual culture; and understanding pedagogical issues related to visual culture, including forms of address and interpretation, as well as pedagogical practices such as teaching and learning in classrooms. By the end of the course, participants should be able to critically examine social constructions of race, class, gender, sexual identity, and other aspects of diversity in visual culture through both written and visual analyses. Participants should also be able to develop and implement units of instruction related to visual culture, and reflect on their own and others' teaching practices in schools and museums.

This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

**A ED 813 Public Pedagogy (3)** Inquiry into the public pedagogy of contemporary visual culture for relevancy to museum and K-12 art education contexts.

### **A ED 813 Public Pedagogy (3)**

This course prepares art teachers to become producers of a socially just world by becoming critical public art pedagogues who extend their teaching environment. As defined in the course, critical public pedagogy of art, as an educational and artistic practice, is a critical stance concerning socio-pervasive artifacts, processes, and interfaces that acculturate and assimilate values, beliefs, and sensitivities. Public pedagogy is the use of a public medium and/or space such as the Internet, films, television, magazines, shopping malls, and sports arenas to influence behaviors and beliefs. Public pedagogy enacts societal curricula that are easily consumed because of its ubiquitous nature. Awareness of consumption of public pedagogy is important because of its global reach. Educators need to be versed in how to facilitate

investigations of public pedagogy and how to guide students to develop critical public pedagogical practices. From spheres of influence radiating from art to a multidirectional layered matrix of sensibility, this course explores contemporary art that addresses and enacts public pedagogy through (inter)actions of cultural interfaces such as humans, technologies, localities, and politics. Such artworks are performed networks of relations. Contemporary artists' praxis involving intertextuality, palimpsest, remix, code-switching, double-coding, subversion, and hypersignification is explored through video, installation, performance, and other contemporary art forms.

Objectives of the course include understanding processes of consumption and production of public pedagogy, and understanding contemporary art practices. By the end of the course, participants should be able to develop and implement units of instruction related to contemporary art and public pedagogy, and reflect on their own and others' teaching practices in schools and museums.

This is one of the required courses for the M.P.S. in Art Education. It is offered every other fall semester with a maximum enrollment of 15 students.

**A ED 814 Informal Learning (3)** Pedagogy and contexts for learning in museums and other cultural institutions.

#### **A ED 814 Informal Learning (3)**

The course introduces participants to theories and practices of informal learning, and to the possible contexts including museums, schools and other cultural institutions in which informal, free choice learning may occur. These provide a framework for participants to use in preparing, implementing, and evaluating a learning project or other intervention in their own institutions or communities. The course includes a strategic and policy analysis of the contexts in which free choice learning projects may occur, a review of the social and economic significance of informal, free choice learning in an information age and global economy, an introduction and critical discussion of constructivist theories of informal learning, a review of specific pedagogical practices that may be effective in implementing informal learning for school-age students, adults, and senior citizens, an introduction to tools for evaluating the effectiveness of these practices, and the development, implementation and assessment of an informal learning project or intervention by each participant using other participants as consultants in the process.

This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

**A ED 815 Action Research in Art Education (3)** Develop a reflective process to improve strategies, practices, and knowledge of the environments within which art education is practiced.

#### **A ED 815 Action Research in Art Education (3)**

This course prepares M.P.S. in Art Education candidates to conduct action research in their teaching context as part of a community of practice by recognizing and sharing existing tacit knowledge about teaching and learning conceptualized in specific social and physical environments. Action research is a reflective and iterative inquiry process with the aim of improving strategies, practices, and knowledge of the environments within which one teaches. Course participants will learn how to conduct research that develops, leads to, implements, and assesses a genuinely well-informed social action in the midst of an emerging teaching and learning landscape.

The course uses a blend of Web technology, print, and other media to maximize flexibility without sacrificing professor and student interaction. Communication tools, including bulletin boards and e-mail, are used to foster a collaborative environment, providing participants with the opportunity to learn from one another about the unique schools and cultural institutions each comes from and as well as their varied professional experiences.

A ED 815 will be offered via World Campus as an online course will be offered every spring semester. Enrollment will be limited to 15 students.

**ART H 409** (ART 409) Museum Studies (3) An introduction to the professional activities that occur in art museums.

### ART H (ART) 409 Museum Studies (3)

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field.

**ART H 425 Topics in Northern Renaissance Art (3)  
(IL)**

This course explores selected issues in the arts and material culture of the "Northern Renaissance"--work produced between c. 1300 and 1600 in the greater Netherlands, Germanic lands, France, and other European areas at a distance from the Mediterranean. May be taken up to two times for a total of 6 credits if the topics are different. Themes will vary to accommodate investigation in depth. Topics may include "Playfulness in Northern Renaissance Art," "Jan van Eyck and his Legacy," "Art and Reformation 1500-1575," and others. When appropriate, optional field trips to major museum exhibitions may be offered. Through critical reading, careful looking, and focused research, the student will develop a deeper understanding of the interplay of art, politics, culture, and economics. The goal is not only to impart intensive international and historical understanding, but to impart analogous tools for analysis of the role of the arts in one's own society.

**ART H 426 (US;IL) Iconoclasm: Powerful Images and their Destruction (3)** Iconoclasm: exploring the political, religious, and social motivations behind the destruction of powerful imagery throughout history.

**ART H 426 Iconoclasm: Powerful Images and their Destruction (3)**  
**(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Images have been granted extraordinary powers in many human societies, and their purposeful destruction has been a recurrent feature of political, religious and social strife around the world. This course explores how and why humans have granted such power to images, and the subsequent reactions that have resulted in periodic outbreaks of iconoclasm. Topics include the historical specificity of image destruction, the role of art and its detractors in precipitating the Protestant Reformation, and the manipulation of iconoclasm in modern mass media. Victimized images covered may include the bronze bust of Sargon (3rd millennium BCE) and early Renaissance altarpieces through the statues of Saddam Hussein and beyond. We will read primary and secondary materials ranging from Biblical texts to letters to the editor in the New York Times. Through careful consideration of iconoclasm's historical contexts, we will explore art's ability to function as a societal lightning rod. This course has two major objectives: to introduce students to a subject matter that holds great relevance for our time, and to train them in the methods and ethics of scholarly research.

This course fulfills elective and 400-level requirements in Art History and General Education (US and IL), but it is intended also to complement concentrations in History, Visual Studies, Religion, and Communications. It would be offered every two to three years. Evaluative criteria include analytical reading and discussion, written components such as critical essays and a research projects, and analysis of relevant current events and their media coverage. Requires a classroom with digital audio-visual capability. Course may include museum visits or field trips where appropriate.

**ART H 427 (IL) Topics in Global Artistic Communication (3 per semester/maximum of 6)** Explores a specific time period in art history cross-culturally in Europe, Asia, Africa, and/or the Americas.

**ART H 427 Topics in Global Artistic Communication (3 per semester/maximum of 6)**  
**(IL)**

This course explores specific time periods and/or issues in global artistic exchange among several diverse cultures. The course may be taken up to two times, if the topics are different. One semester the topic might be "Ca. 1800: Arts and their Global Colonial Contexts." Another semester the topic might be "Global Modernisms ca. 1930," or "Ca. 1600: Global Artistic Exchange in an Era of Increased Contact." Each offering will include theoretical discussion of the goals and challenges of such intercultural study. It will then explore the artistic traditions and responses to foreign contact of diverse cultures. The course will consist of lectures, discussions, and, in many cases, visits to the Palmer Museum of Art for the study of objects in its collection. Through critical reading, listening and looking students will develop an appreciation for the range and diversity of cultural production, and the historical specificity of responses to contact with the unfamiliar. Themes touched upon may include ethnic or religious identity, gender, cultural resistance, rejection or embrace. Learning evaluation may depend upon a combination of class participation, analytical reading, essays or research papers, and examinations.

**ART H 429 (IL) Studies in Baroque Art (3)** Selected topics in the painting, sculpture, and architecture of seventeenth-century Italy, France, Flanders, Holland, and Spain.

**ART H 429 Studies in Baroque Art (3)**  
**(IL)**

This course addresses aspects of European art of the seventeenth century, a rich and complex period in which illusionism

and powerful visual effects in the arts reached maturity. Baroque painters went beyond the realism of their Renaissance predecessors to explore both the sensuous aspects of the medium of oil painting and their own increasingly subjective vision. In all the visual arts Baroque masters explored space, mass, and form with a heretofore unheard of freedom and drama. Lectures and discussion in the course may focus on painting, sculpture and/or architecture, in Italy, Flanders, France, Holland, and/or Spain. The course may include selected artists such as Bernini, Borromini, Caravaggio, A. Gentileschi, Poussin, Rembrandt, Rubens, Velazquez, and/or Vermeer. The style and meaning of Baroque art may be studied within its political and cultural setting. For example, new approaches in the visual arts in Italy, and particularly in Rome, may be explored in relation to the rise of the counter reformation. The Spanish war in the Netherlands, and the Dutch struggle for freedom, may be connected with the art of Flanders and Holland. Attendant developments in other fields such as natural philosophy (science) and literature may be related to the visual arts. For example, the use of the camera obscura may be discussed with the art of Jan Vermeer and the poetry of Giambattista Marino may be related to the art of Nicolas Poussin. Aesthetic, critical, interpretive, and theoretical ideas of major artists and writers of the seventeenth century as well as of today's art and cultural historians may be considered. The emergence of new genres such as landscape and still-life may be examined, as well as the continuing themes of mythology, portraiture, and religion. Course objectives may include students' understanding of the national and regional development of styles and schools within seventeenth-century art, the particular approaches to style and meaning by major artists of the period, the analysis of symbolism and meaning within art works of the period; the interrelationship between the art of the period and other disciplines such as natural philosophy and literature, and particular ways in which seventeenth-century art relates to the politics of particular countries, regions, and patrons. This course may serve as an elective for undergraduate students interested in the visual arts and art history, and for graduate students seeking a deeper exposure to art history. Evaluation may be accomplished through a combination of exams, quizzes, term papers, special projects, and participation in class discussion. Special facilities include a darkened room with dimmable spot lighting, computer, computer projector, and a large projection screen.

**ART H 440 (IL)** (ASIA 440) Monuments of Asia (3-9 per semester/maximum of 9) An exploration of major Asian sites and monuments through a focus on their historical and cultural significance.

**ART H (ASIA) 440 Monuments of Asia (IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, "Hindu and Buddhist Sites across Asia: Historical Significance and Contemporary Relevance," "Patronage and Religion," "Islam across Asia: Global Ideas and Local Contexts," "Political and Symbolic Centers in Asia: Between Early Modernity and the Nation State" or "Early Modern Asia: Empire and the Built Environment." Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of semester.

**ART H 445 Oceanic Art (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is a one-semester survey of the sculpture, masks, textiles, architecture and other traditional art forms of the Pacific Ocean area known as Oceania, which is usually divided into the sub-areas of Polynesia, Micronesia and Melanesia. The material examined during the semester is organized according to ethnic groups and culture areas. Objects are discussed on the basis of style, style relationships, iconography and the uses to which they were put in their traditional religious, political or social contexts. The time period covered is primarily from the period of European contact up to the present, with occasional references to archaeological findings such as the Lapita culture's (3,000 – 4,000 years ago) tracing of the movement of peoples into Polynesia. Lectures, films, reading assignments, quizzes, writing requirements (term paper) and exams will aid in providing students with an extensive introduction to the region's cultural and artistic diversity.

**ART H (AFR) 446 Topics in African Art (3 per semester/maximum of 9)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Each time this course is taught, it will focus upon a specialized topic in African Art. Using "Art and Archaeology of Ancient Africa" as an example of one semester's topic. This course is a one semester survey of some of the most important historical art traditions of sub-Saharan Africa. Topics to be covered will include prehistoric rock paintings; art from archaeological sites such as Djenné, Nok, Igbo Ukwu and Sanga; and ancient kingdoms such as Ife, Benin and Great Zimbabwe. The time period covered ranges from the first and second millennia BCE. for some of the early terracotta sculpture and rock paintings, to the 11th through 19th centuries CE. for the later ancient kingdoms. Students will learn how both artistic and archaeological evidence combine to help us reconstruct the religious, political and social contexts in which these early African art forms were used. Other possible topics for this course are "Arts of Eastern and Southern Africa," "Arts of Central Africa," and "Arts of West Africa."

**ART H (AFR) 447 Topics in the Art of the African Diaspora (3 per semester/maximum of 6)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores selected topics of the arts of the African Diaspora by examining the aesthetic, philosophical and religious patterns of the African descendants in South American countries such as Brazil, Surinam and Ecuador; the Caribbean and the United States. Some African cultural practices and art forms will be examined for background information and to establish a comparative basis. The major emphasis will be on such topics as examining the modes of transmission of African artistry to the Americas and exploring the significance of the preservation and trans-formation of artistic forms from the period of slavery to the present. Emphasis will be placed on the full range of art forms, including the sculptural and performance traditions as well as architecture, textile, basketry and pottery art forms. Two possible topics are "African Diaspora in the Americas" and "Brazil, Carnival, Samba and Candomble."

**ART H 458 (IL) Baroque Capitals of Europe (3)** This course examines the architecture and urbanism of European capital cities from 1600-1800.

**ART H 458 Roman Rococo Architecture and the Dawn of Neoclassicism (3)**

Most scholars agree that the modern European capital was created in the seventeenth and eighteenth centuries. This course will examine what transformed the cities into centers of power, culture, and learning. We will look at new building types, the creation of civic institutions, and changes in the urban plan. The course will therefore provide an overview of the architecture and urbanism of the period and also explore the political and social contexts that made them possible. Topics include capitals of great political importance such as Paris and London as well as smaller centers like Turin and Nancy that underwent major urban and architectural transformations. The social function of buildings that mark these capitals, from poor houses to opera houses, will also be explored. Units covered may include Rome of Alexander VII, London Before and After the Great Fire, Convents and Capitals, and the City Destroyed and Rebuilt. Primary and secondary reading, ranging from Pepy's Diary to Habermas' examination of the public sphere will offer period accounts as well as conceptual frameworks for understanding the capital. The objective is to challenge students to think deeply about our urban environment and its debts to this earlier era. This course fulfills elective and 400-level requirements in Art History

and General Education (IL), but it is also designed to complement concentrations in History, Music, and Architecture. It would be offered every two to three years. Students will be evaluated based on class participation, four exams, group presentations, and critical essays.

**ART H 460 (IL)** Art and Empire: Aztec, Inca and Spanish (3) This course is a comparative study of the artistic production used in Aztec, Inca and Spanish empires.

**ART H 460 Art and Empire: Aztec, Inca and Spanish (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course compares the diverse visual culture of the pre-Columbian world's two most powerful empires, the Aztec and Inca, to ascertain how art, architecture and public ritual functioned as tools of hegemony. In the aftermath of the Spanish physical and "spiritual" conquests of the sixteenth century, colonists continued to exploit the central role played by Aztec and Inca imagery as a means to assert and maintain colonial control, co-opting preexisting channels of training and also imposing foreign sign systems. This course queries, how did the visual arts effectively communicate competing imperial ideologies, how was art production appropriated as a site of indigenous resistance, and how do these artifacts continue to construct communal identities, both past and present?

**ART H 462 (IL)** Studies in Latin American Art (3 per semester/maximum of 6) Specific studies of the visual and material culture created in Latin America from the colonial through the modern era.

**ART H 462 Studies in Latin American Art (3 per semester/maximum of 6)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course analyzes the art and architecture created in Latin America from the first moments of European contact (1492) until the modern era. Each time it is taught, the class will refine its focus to study the artistic production of a specific time period (such as the early colonial period, the nineteenth century, or the modern period), a specific geographic expanse (such as the modern nation state of Mexico), or perhaps a distinct cultural group (indigenous artists). Core to this course is the study of the interaction of seemingly divergent social groups and the ways in which artistic production both reflects and reinforces the resulting cultural systems.

physical challenges and long traditions of use of artistic media from both studio and historical points of view.

### **ART H (ART) 467 Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic (3)**

Art and Art History are disciplines famously preoccupied with stuff: its malleability and its endurance, its sensuous properties and formal possibilities, its economic value and its mythic or even supernatural power. As an introduction to art through its materiality, this class will focus its attention upon a different material every week. With two class meetings per week, classes will alternate between "practicum" sections (demonstrations of selected materials with visits to metal foundries, studios and laboratories) and "historical" sections (lectures and discussions of those materials as they have worked in different historical and cultural contexts). The class will also introduce students to humanistic discussions of "matter," as well as attend to the cultural work involved in western art history's preoccupation with the differences between "matter" and artistic "medium."

**ART H 476 (ART 476) History and Theory of Digital Art (3)** History and theories of contemporary digital art emphasizing humanistic approaches to technology.

### **ART H (ART) 476 History and Theory of Digital Art (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware.

Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation.

This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

**ART H 560 Methods of Research in Art History (3)** Preparation of graduate students for professional careers in academia and museum work, involving creation of publishable articles and grant writing.

**ART H 560 Methods of Research in Art History (3)**

In the academic world, and particularly in the humanities, the publication of articles and books is understood to be a marker of success and, along with teaching skills, the basis on which appointments are made and tenure granted. Essential to this body of production is the execution and placement of one's research undertakings, skills that the "Methods Seminar" is designed to hone.

No less valued by those who make appointments and offer promotion are the grants and fellowships that a candidate has won. Indeed, since research in art history involves travel to and residence at museum, library and archive sites—whether these be in North America or abroad—financial support is a necessity for most aspiring professionals and is regarded as evidence of external validation of their investigations. Training in "grant writing" is also covered in the seminar.

Even before field work is undertaken, the investigator must be aware of the "state of research," work normally undertaken at one's own university library. In this domain there are better and worse ways of taking notes. The seminar discusses these methods and goes beyond them to consider the optimum means by which such records are organized and assembled prior to the delivery of papers and the production of articles. The nature of an oral presentation and a publishable paper are distinct activities and this difference needs to be learned. The more complex skills involved in the writing of articles, the securing of photographs and concomitant permissions, and the choice of the journal to which the "finished" piece should be submitted are dealt with at even greater length.

**ASIA (CMLIT) 404Y Topics in Studies of Asian Literatures (3)**

This course focuses on Asian literature in a comparative and international frame. Different iterations of this course will have different topics as well as different historical or geographic foci, but may include literatures from the countries of East Asia (China, Japan, Korea), Southeast Asia (Thailand, Vietnam, Laos, Indonesia, Cambodia), or South Asia (Bangladesh, India, Pakistan). The various course modules will incorporate writing to allow students to further explore their understanding of Asian literatures. Because the course is comparative, it will highlight relationships between and among literary traditions of Asia, or between Asia and the rest of the world, whether in the fields of poetry, drama, or fictional and non-fictional prose. The course will provide students with opportunities to develop writing skills necessary for academic scholarship in comparative literature and Asian Studies.

**ASIA 405 Seminar in Asian Studies (3-6 per semester/maximum of 6)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This seminar focuses on advanced topics in the field of Asian Studies and is intended to function as a senior capstone course for majors, as well as an upper-level, research-intensive course for any student seeking to gain in-depth knowledge of a specific issue relevant to Asian culture.

The course will have very different focuses in different semesters, depending on the research expertise of the instructing professor. (Potential topics might include, for instance, an examination of human rights policy in Asia, an exploration of maritime empires in the premodern period, an historical archeology of the Islamicization of western Asia, a literary investigation of vernacular literatures, or an art historical examination of urbanization and the built environment in major Asian cities.)

Regardless of focus, extensive topic-specific readings will be required, and the goal of the course will be to help students develop and polish advanced research skills in Asian Studies.

**ASIA 465Y (IL) (PL SC 465Y) Democratization in Asia (3)** A course which identifies components of democracy, such as definitions, measures, datasets, and the democratization process.

**ASIA (PL SC) 465Y Democratization in Asia (3)  
 (IL)**

This class is an upper-level seminar on democratization in Asia. How do countries move from having an authoritarian regime to a democratic government? Why are some democratic governments stable while others are not? In this class, we will focus on democratization theory and how it applies to countries in Asia. This course is organized into two parts. In the first part of the course, we will discuss democracy and democratization theory. We will cover such components as: definitions, measures, datasets, and the different stages of the democratization process. In the second part of the course, we will apply these concepts and measures to specific Asian countries. Course topics will be explored through readings from textbooks, articles, datasets, and media sources. By the end of the course, students will have a deep knowledge about a wide range of Asian countries. Students will develop the skills to compare countries, will understand the democratization process within Asia, and will be able to generalize from their knowledge to evaluate democratization events around the world. Finally, students will gain a deeper understanding of what is democracy and how easy or difficult it is to install and maintain. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. In addition, the course fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors. Finally, the course fulfills the requirements for writing across the curriculum and other cultures.

**ASIA 469 (IL) (PL SC 469) Government and Politics of South Asia (3)** This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan.

**ASIA (PL SC) 469 Government and Politics of South Asia (3)  
 (IL)**

This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

**ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3)** Japanese history from 1580-1880.

**ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3)**

Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national

identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms.

Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

**ASIA 475Y (IL) (HIST 475Y) The Making and Emergence of Modern India (3)** India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle.

**ASIA (HIST) 475Y The Making and Emergence of Modern India (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course covers India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

**ASIA 476 (IL) (HIST 476) Technology & Society in Modern Asia (3)** Role of technology in modernization, national identity, and foreign relations of an Asian country from 19th century to present day.

**ASIA (HIST) 476 Technology & Society in Modern Asia (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The countries of Asia are often seen (or imagined) in the West today in terms of their technological capabilities. This course will examine the role of technology in the modernization, national identities, and foreign relations of one or more countries of East, South, or Southeast Asia from the mid-19th century to the present day. Specific content will vary according to individual instructor, but topics may include the relationship between technological development and international relations, national power, leisure, domestic political and aesthetic movements, war, empire, and trade, as well as the impact of technology on interconnected images of self and other on the part of the peoples of Western and Asian countries.

The objectives of the course are not only to learn about the role of technology in modern East Asia, but also to encourage us to rethink the way we view other countries and the factors that go into those perceptions (as well as developing a new way of understanding of what contributes to the views other peoples hold of their own countries). Students will also consider the changing role that technology has played (and continues to play) in all modern societies.

**ASIA 480 (IL) (HIST 480)** Japan in the Age of Warriors (3) An overview of Japan from the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change.

**ASIA (HIST) 480 Japan in the Age of Warriors (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor's court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself "emperor" of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado's rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion.

This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society.

HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

**ASIA 481 (IL) (HIST 481)** Modern Japan Since 1800 (3) The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power.

**ASIA (HIST) 481 Modern Japan Since 1800 (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In the late 19th century, Japan emerged from relative seclusion and grew, within the period of a few decades, into one of the world's major powers. Japan's remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan's development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government's program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945-1952), Japan's resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

**ASIA 482 (CHNS 424, HIST 482) Confucius and the Great Books of Early China (3)** This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China.

**ASIA 482 (HIST 482, CHNS 424) Confucius and the Great Books of Early China (3)**

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period. As the first part of a two-seminar series of courses (HIST 484), it provides an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

**ASIA 484Y (IL) (HIST 484Y) History of Chinese Thought (3)** A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present.

**ASIA (HIST) 484Y History of Chinese Thought (3)  
 (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular "Orientalist" myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

**ASIA 485Y (IL) (HIST 485Y) China's Last Empire: The Qing Dynasty, 1644-1911 (3)** China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity.

**ASIA (HIST) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3)**  
**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

**ASIA 489 (IL) (HIST 489, PL SC 486) International Culture in East Asia (3)** Study of the role of culture in East Asian regional and East-West international relations.

**ASIA 489 (PL SC 486/HIST 489) International Culture in East Asia (3)**  
**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These

larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history; historical events, problems, and issues will be at the center of our weekly discussions. But it also seeks to explore aspects of international relations.

This course is intended to examine the role of cultural exchange in international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen student's appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. Evaluation will emphasize student performance on a day-to-day basis and as expressed in a final research project. A possible break down would be as follows:

This course is designed to respond to strong student interest in East Asian international history. This course will complement and extend popular survey and upper-level courses such as HIST 172/174/175/480/481/483/484/485/486.

ASIA 577

**ASIA 577 Critical Perspectives on Modern Chinese Literature (3)**

This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors' arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of key literary texts, from the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature.

## Astrobiology (ABIOL)

**ABIOL 570 Astrobiology Field Experience (2)** Geological field excursions to sites where the early evolution of life and the environment is revealed and to modern analogues.

### **ABIOL 570 Astrobiology Field Experience (2)**

Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is intended to expose students to a variety of rock units (paleosols, sedimentary rocks, glacier deposits, ore deposits, and igneous rocks) formed under a variety of environments during the period between 3 billion years and 400 million years ago in order to give them some ideas about the environments of the early Earth. Students will also be exposed to a variety of geochemical, paleontological, and geological methods to investigate these ancient rocks in order to obtain information about the biological and chemical environments of the early Earth.

The field excursion will be held for about two weeks during the Summer semester. It will be preceded by a short series of seminar-style meetings late in Spring semester to discuss the objectives of the excursion and to outline the major features of the field sites to be examined. Possible sites for the excursion will be selected from the Precambrian rocks in Ontario - Quebec, Canada, Michigan, Minnesota, Wisconsin, New York, Virginia, West Virginia, and Maryland and modern microbial ecosystems in the Bahamas and Green Lake (NY). One to three days will be spent at each of the major sites.

This is a required course for all students in Dual Title Degree Program in Astrobiology, but is open to any graduate student. This will also be a suitable course for undergraduate students, seniors preferred, with the permission of the instructor. There is no prerequisite. Grading will be based on a term paper submitted within one month after the excursion. The term paper will be based on literature review and field observations on a topic selected by each student.

**ABIOL 574 Planetary Habitability (3)** Aspects of star and planet formation, habitable zones, biospheric evolution, life in extreme environments, planet and life detection.

### **ABIOL 574 Planetary Habitability (3)**

This course introduces graduate students to the foundations of the field of Astrobiology. Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, microbiology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of habitable planets, origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space.

Students will expand their knowledge base beyond their discipline while considering such issues as the origins of stars and planets, environmental conditions of the prebiotic Earth, the origin of life on Earth, the nature of the universal "tree of life", the establishment of evolutionary patterns and rates, the causes of global glaciations and their use as analogues for life on planets or moons such as Europa, how life survives in extreme environments on Earth, what determines planetary habitability, how planets in other solar systems are detected, and how we might detect life on other planets.

This is a required course for all students in Dual-Title Degree Program in Astrobiology, but is open to any qualified undergraduate or graduate student. There is no specific prerequisite. Grading will be based on participation and performance on a midterm and final examination, problem sets, and laboratory exercises.

**ABIOL 590 Astrobiology Seminar (2)** Student-led presentations and discussions of current and classic literatures relevant

to the themes of Astrobiology.

### **ABIOL 590 Astrobiology Seminar (2)**

Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is conducted as a seminar series led by the 16 principal investigators of the Penn State Astrobiology Research Center (PSARC) and their students. Classic literature relevant to the themes of Astrobiology will be introduced, but the main focus of discussions will be on new and important research developments made by the PSARC members and other astrobiologists.

The seminars will be given once a week, typically on Friday afternoons, during the Fall semester each year. At each seminar, a faculty member will present a ~ 30 minutes summary of important questions and current knowledge on the topic. This will be followed by summaries by two or three students on selected papers (~ 40 minutes) and by discussions involving all students and faculty (~ 50 minutes). This is a required course for all students in the Dual Title Degree program in Astrobiology, but is open to any undergraduate and graduate student. There is no prerequisite. Grading will be based on the degree of participation in discussions and on a short (10 page) term paper. The term paper may be based on the paper(s) discussed in the seminars or on students' own research projects.

## **Astronomy and Astrophysics (ASTRO)**

**ASTRO 400H** Honors Seminar (1 per semester, maximum of 2) Presentations of various branches and modes of modern astrophysical research, based on lectures, visits to telescopes and facilities, and discussions.

### **Honors Seminar (1 per semester, maximum of 2)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2003  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ASTRO 401** Fundamentals of Planetary Science and Astronomy (4) Overview of the techniques used and results from studies of the Solar System, stars, and galaxies.

### **ASTRO 401 Fundamentals of Planetary Science and Astronomy (3)**

This course will focus in core content areas in planetary science and astronomy. Students will explore the fundamentals in robotic exploration of the Solar System, how astronomers map and navigate the night sky, our understanding of the nature and evolution of stars, and the nature and evolution of galaxies. Students will engage with real data from Solar System missions as well as ground-based and space-based telescopes. Through the use of many databases and data archives from missions and observatories, the students will become familiar with the census of astronomical objects in various categories.

A particular emphasis will be placed on examples of qualitative and quantitative problem solving in these content areas. In addition, students will explore how scientists communicate their results to the public, and they will get hands-on experience, such as planning and executing a planetarium show.

**ASTRO 402** Astronomical Telescopes, Techniques, and Data Analysis (3) Properties and use of optical telescopes, imaging and spectroscopy, multi-wavelength techniques, data analysis and statistics, practical research methods.

ASTRO 402

**ASTRO 402 Astronomical Telescopes, Techniques, and Data Analysis (3)**

Astro 402 is a practical astronomy class that covers telescopes, observational techniques, and astronomical data reduction. This course will provide practical experience and understanding of the telescopes and techniques by which astronomers obtain data and conduct research. The study of telescopes will include optical, infrared, radio, ultraviolet, X-ray, and gamma ray observations, and students will learn to set up and use optical telescopes. In-depth coverage of the instruments used for imaging and spectroscopic observations of a variety of astronomical objects will be provided. Applications will include topics in planets, stars, galaxies, and cosmology. Detailed examples of data analysis will be given, including the relevant statistical techniques. Finally, the process by which research in astronomy is conducted will be reviewed, from proposing observations, to obtaining them, to analyzing and interpreting them, to writing up the results.

Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**ASTRO 414** Stellar Structure and Evolution (3) Theory of Stellar structure and evolution including energy generation and transport and an examination of stellar models.

**ASTRO 414 Stellar Structure and Evolution (3)**

ASTRO 414 covers the theory of stellar structure and evolution at an introductory level. It includes the basic physical processes that influence the structure of a star, such as energy generation in stellar cores, the transport of energy to the surface via photon diffusion and convection, equilibrium conditions, etc. It examines realistic stellar models as they apply to stars of different masses, for example, polytropes and other approximations. The treatment of stellar evolution includes gravitational collapse, stable stellar configurations on the main sequence, and the fast-paced late stages of evolution, leading up to the formation of compact objects. Realistic stellar models will be employed to illustrate the structures of different types of stars and the influence of various physical processes on these models.

**ASTRO 420W Planets and Planetary System Formation (3)** Solar system properties, star formation, protoplanetary disks and planet formation, solar system model, extrasolar planets, and astrobiology.

### **ASTRO 420W Planets and Planetary System Formation (3)**

The course explores the wide variety of physical and chemical processes that govern the motions and properties of planets. Observations of the planets, moons, asteroids, comets and planetary rings in our Solar System are described. The properties of extrasolar planets are also emphasized. The process of planetary formation is discussed in the context of the solar system and in the context of extrasolar planets. The prospects of life and the effect of life on such planets will also be discussed.

It will be taken by roughly half of the juniors and seniors majoring in Astronomy and Astrophysics (about 10 people). The course will include writing papers on current issues of debate in the areas of solar system and extrasolar planets and will satisfy the "Writing Across the Curriculum" requirement.

**ASTRO 451 Astronomical Techniques (3)** Practical methods of modern observational astronomy, detectors, filters, instrumentation for both ground-based and space observations, and data analysis.

### **ASTRO 451 Astronomical Techniques (3)**

ASTRO 451 will introduce students to the techniques and technologies for modern observational astronomy, emphasizing the development of practical skills as well as understanding through computer-based investigations integrated with traditional lecture content. Beginning with a summary of probability theory, the students will be introduced to standard techniques of statistical analysis including hypothesis testing and the characterization of uncertainties. Subsequent lectures and computer exercises will discuss the physics and design of astronomical detectors, the principles of telescope and spectroscope design, and the data analysis methods used in processing astronomical datasets. Significant emphasis will be placed on estimation of signal-to-noise ratios for various observing scenarios. The effects of the Earth's atmosphere, interstellar matter, and the expanding Universe on the propagation of astronomical signals will also be discussed.

### **ASTRO (PHYS) 527 Computational Physics and Astrophysics (3)**

This course provides an introduction to applications of numerical methods and computer programming to physics and astrophysics. Numerical calculations provide a powerful tool for understanding physical phenomena, complementing laboratory experiment and analytical mathematics. The main objectives of the course are: to survey of the computational methods used for modeling concrete physical and astrophysical systems; to assess the reliability of numerical results using convergence tests and error estimates; and to use scientific visualization as a tool for computer programming development and for physical understanding of numerical results.

**ASTRO 545 (PHYS 545) Cosmology (3)** Modern cosmology of the early universe, including inflation, the cosmic microwave background, nucleosynthesis, dark matter and energy.

**ASTRO (PHYS) 545 Cosmology (3)**

Cosmology is the scientific study of the universe as a whole: its physical contents, principal physical processes, and evolution through time. Modern cosmology, which began in the early 20th century, is undergoing a renaissance as a precision science as powerful ground- and space-based telescopes allow us to observe the formation of the first stars, galaxies and galaxy clusters; the echoes of the inflationary epoch as they are impressed upon the cosmic microwave background; and evidence for and clues to the nature of the mysterious dark energy, which is driving the accelerating expansion of the universe. This course will introduce students to the key observations and the theoretical framework through which we understand the physical cosmology of the early universe.

**ASTRO 801** Planets, Stars, Galaxies, and the Universe (3) Overview of the structure, formation, and evolution of planets, stars, galaxies, and the universe.

**ASTRO 801 Planets, Stars, Galaxies, and the Universe (3)**

Observations by modern ground-based and space-based observations have fueled significant changes in our understanding of the Universe. The Solar System contains only 8 planets but has many thousands of Kuiper Belt Objects, including Pluto. Large area sky surveys have taken inventory of the stars in the Milky Way Galaxy and galaxies in the Universe and determined that only 4% of the mass of the universe is found in luminous objects. Besides the mysterious "dark matter," we know that the energy budget of the universe is dominated by "dark energy," which is causing the expansion of the Universe to accelerate. This course will provide science educators with a strong foundation in

astronomy, allowing them to critically evaluate the evidence for the most recent advances in our understanding of the Solar System, our Galaxy, and the Universe.

Astronomers use observations of the light from distant sources to discover the nature of these objects and their environment. ASTRO 801 will lead students to an understanding of light and the instruments for its detection. They will see how careful analysis of these observational data and theoretical models are used to solve the mysteries of the Universe.

ASTRO 801 will combine digital video, audio, simulation models, and the wealth of astronomical imagery from NASA's Hubble, Chandra, and Spitzer Great Observatories. Students will use highly detailed planetarium software and simulated observing experiences to directly explore the night sky to make the same observations that research astronomers perform in their work. ASTRO 801 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms.

The overarching goal of the course is to provide secondary science teachers with the necessary content background to convey the astronomy topics required by their mandated state standards. The ASTRO 801 students will be provided with materials for presenting the course content in their classrooms and will be granted license to use the courseware developed for this course in their own secondary classrooms.

Students will be required to complete weekly assignments. There are 12 lessons in ASTRO 801, plus a course introduction and orientation. Each lesson contains interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles related to the objects in the Universe and their environments. Each lesson will conclude with an open book, on-line assessment, which will rely on a variety of types of exercises. These exercises will include brief math problems and short essay questions, some of which will require additional internet research to complete. Several simulated lab exercises will also be required, which will allow the students to enrich their understanding of the concepts through inquiry-based, active learning.

Students will also complete a capstone project, where they will use the content knowledge and skills to create material for their classroom. There will be several options for this project, but one example is that students will create a set of 3-5 laboratory exercises, including instructions, data sheets, and lists of materials that teach content from the course.

## Bar Preparation (BPREP)

**BPREP 900** Fundamental Skills for the Bar Examination (2) The course provides students with a substantive review of selected material routinely tested on the bar exam, primarily through problems and exercises in a bar exam format designed to familiarize students with the exam and techniques for answering multiple choice questions. Individualized feedback is provided every week to assist each student identify areas of strength and weakness. The goal is to enhance student ability to prepare for the bar exam and is intended to supplement, not replace, commercial bar preparation courses. This course is not focused on any particular state, so all students will benefit regardless of where they are sitting for the bar exam. Students enrolled in BPREP 900 are not permitted to use laptops, phones or other devices during class. This course is not recommended for students ranked in the top third of their class. BPREP 900 is graded on a pass/fail basis but is not subject in any other respect to the Pass/Fail Option.

**Biobehavioral Health (BB H)**

**BB H 402 (IL) African Health & Development (3)** Course will address African health and development strategies in the context of health promotion programs.

**BB H 402 African Health & Development (3)  
(IL)**

This course is designed to address African health and development strategies in the context of health promotion programs. Students will analyze the cultural, educational, social, economic, political and environmental impact of health and development in Africa. Emphasis will be on development of health promotion strategies that locate program implementation and evaluation within their cultural contexts.

The objectives are to prepare students to:

1. discuss and debate the roles of culture, social contexts, gender, and political economic impact on health behaviors in Africa;
2. critique some of the theory and models used to inform public health programs in Africa;
3. examine the role of historical, spiritual, linguistic, and political impacts on health projects in different countries in Africa; and
4. analyze health priorities in Africa and their impacts on such global initiatives as the Millennium Development Goals;
5. discuss issues related to human rights, population identities in the world and examine their impact on health in Africa.

Attendance is required. Students will be expected to participate actively by critically reviewing assigned readings, engaging in class discussions, and preparing and delivering in-class presentations. Grading is based on attendance, participation, presentations, exams and a final research paper.

**BB H 407 (IL) Global Health Equity (3)** Health, social disparities, and equity in the global environment.

**BB H 407 Global Health Equity (3)  
(IL)**

This course focuses on issues related to health, social disparities, and equity in the global environment. It examines the theories of health disparities and equity from the vantage point of Western and non-Western countries. It explores epidemiologic data and the relationships between social structure, culture, demography, health promotion/disease prevention, and health policy of various countries and international health organizations.

The course objectives are to: 1. discuss and critique the history, conceptual frameworks, and policy implications of global health disparities and equity; 2. examine epidemiologic data and studies pertaining to major global health issues and cross-national and comparative research; 3. discuss the role of social structure, culture, gender roles, and government policies in preventive health behaviors and health promotion in the global context; 4. critique theories and models used to inform health and development programs in non-Western nations.

**BB H 411W Research and Applications in Biobehavioral Health (3)** Research methods, multi-level analyses, and applications in biobehavioral health.

**BB H 411W Research and Applications in Biobehavioral Health (3)**

This is an upper-division course on research and applications in Biobehavioral Health and is the designated writing intensive (W) course for the major. The primary goals of this course are to provide the student the ability to effectively: 1) find, organize, integrate, and critique existing knowledge and research in biobehavioral health; 2) generate and analyze new data related to a specific domain through the conduct of original research; 3) interpret, evaluate, and communicate—to both scientific and lay audiences--the results of the original research; and 4) integrate these findings--with due concern for strengths and limitations of the research--back into the body of knowledge on the biobehavioral health topic.

In this course the instructor will first introduce the student into a body of knowledge related to a domain involving health and health-related behaviors. Example domains may include areas such as, stress and health, drug/alcohol addictions and health, hormonal impacts on health, smoking cessation programs, obesity and health, sexual behaviors and health, etc. Students will go through the steps involved in original research (e.g., Introduction, Methods and Procedures, Results, Discussion, Summary, Abstract, Bibliography) and written assignments will be involved for each step. Depending on the instructor, the original research may involve laboratory work, collection of survey data, analyses of publically available data, or existing data sets based on faculty's research program. Students will learn how to use available tools to descriptively summarize and analyze data using computer-assisted software.

This is a required course in the Biobehavioral Health major. The course is designed to give skills to acquire, integrate, and critique health-related information and to communicate to professional and non-professional audiences. The course is appropriate for students intending to obtain positions in health promotion and disease prevention and to students seeking to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

**BB H 440 (US;IL) (H P A 440) Principles of Epidemiology (3)** Theory of epidemiology and significant case studies; potential applications to health care.

### **BB H (H P A) 440 Principles of Epidemiology (3) (US;IL)**

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations.

The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and causal factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world.

This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

### **BB H 451 Pharmacological Influences on Health (3)**

The primary theme of this course is to review and integrate information relevant to the actions, uses, and biobehavioral influences of psychoactive drugs. Concepts relevant to pharmacology, biobehavioral health, and drug use and abuse will be learned. The primary objectives of this course are:

1. To provide an understanding of the concepts relevant to pharmacology, including: principles of drug action (pharmacokinetics, pharmacodynamics), drug safety, and drug effectiveness.
2. To provide a descriptive representation of the breadth of topics relating to behavioral and biological influences of psychoactive (i.e., therapeutic, recreational) drugs on human health and disease.
3. To provide exposure to and enhance critical thinking skills in current research related to the biobehavioral effects of psychoactive (i.e., therapeutic, recreational) drugs, including: psychoactive drug use and abuse, therapeutic drug use, and drug addiction treatments.

**BB H 468** Neuroanatomical Bases for Disorders of Behavior and Health (3) An examination of the anatomical/cellular/molecular bases for human central nervous system disorders and their impacts on victims/families/caregivers.

### **BB H 468 Neuroanatomical Bases for Disorders of Behavior and Health (3)**

This course will examine in detail and in depth the neuroanatomical and cellular/molecular/genetic bases for selected disorders of the human central nervous system (e.g. Parkinson's, Alzheimer's, stroke, etc.) and their impacts on the victim, his/her daily life and his/her family and care givers. Damage to, or malfunctions of, any part of the central nervous system causes specific and characteristic disruptions of normal processes, which manifest as abnormal and/or absent behaviors. Current research on the anatomical, cellular, molecular, and genetic bases for the disorders and the current/future trends in prevention/treatment of the disorders will be studied. Upon successful completion of the course, the student should be able to: a) describe the physical signs, symptoms, causes, effects on the patient and his/her family & care givers, prognoses, treatments, and support systems available to these patients, of the neurological disorders covered in this course; b) describe the neuroanatomical, cellular, and molecular bases for these conditions; c) describe the current research on these disorders and the new prevention/treatment approaches being developed. The evaluation of students' performances in the course will be typically based on multiple choice examinations and a library research paper. This course will count toward fulfilling the BB H major requirement, "Take 15 credits in Biobehavioral Health."

**BB H 490** Introduction to Internship Experience (3) Provide an integrative learning experience to develop professional skills encountered in an internship experience and future careers in biobehavioral health.

### **BB H 490 Introduction to Internship Experience (3)**

This course is a prerequisite for BB H 495, Internship Experience in Biobehavioral Health. This course will provide students with the professional and academic skills necessary to develop an internship, be successful in an internship and equip students with the tools necessary to launch a career within the field of BBH or enable students to prepare more competitive applications for entry into post baccalaureate programs in medical fields or graduate school. The primary goal of the course is to provide integrative learning experiences preparing students to be successful in their internship endeavor, while learning practical skills necessary to flourish in future career choices. Course topics include: professional self-assessment and critical reflection, experiential learning, person/environment fit, resume creation and professional writing criteria, practical skills related to securing an internship consistent with professional goals, interviewing skills, professionalism and ethics within the BBH field, effective communication and internship agreement guidelines. Through this practical application, students will gain the necessary proficiencies and awareness of career settings, protocols and

contexts under which BBH specialists work and/or prepare for future educational opportunities.

**BB H 501** Biobehavioral Systems in Health and Development: Theory and Processes (3) Examination of theories and basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual interactions.

**BB H 501 Biobehavioral Systems in Health and Development: Theory and Processes (3)**

Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. The second course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology is relevant to behavioral development and on what aspect of this area of biology is linked to behavior. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the course. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum in Biobehavioral Health. Evaluation of the theories section will be by written exam, oral presentation, and seminar participation. Evaluation of the cell biology, genetics, and neurobiology components will be by written exam for each component. This initial required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the first of a two-course sequence (BB H 501 and BB H 503). It will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs it could be a part of a Biobehavioral Health minor for other students. This course will be offered every fall semester beginning with the first fall semester after approval and will enroll a maximum of twenty students.

**BB H 503 Biobehavioral Systems in Health and Development: Processes and Integration (3)**

Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course is the second course in a two-course sequence (BB H 501 and BB H 503) that is designed to provide first-year graduate students with a multidisciplinary understanding of the biobehavioral health perspective. This views humans as complex dynamic systems of integrated component processes that interact with the environment to influence development and health. The first course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. This course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology are relevant to behavioral development and what aspect of this area of biology is linked to behavior. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the two-course sequence. Evaluation of each of the five modules will be by written exam. This required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the second of a two-course sequence (BB H 501 and BB H 503). This course will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every spring semester beginning with the first spring semester after approval and will enroll a maximum of twenty students.

## Biochem Microb & Molbi (BMMB)

**BMMB 501** Core Concepts in Biomolecular Science (5) Introduction to broaden one's understanding of biochemical and biophysical principles and the basic aspects of eukaryotic and prokaryotic cell biology.

### **BMMB 501 Core Concepts in Biomolecular Science (5)**

This is a required course to be taken by all BMMB graduate students during their first fall semester. It will be team taught with a mixed textbook/literature approach. Material will be presented primarily in the form of lectures. The objective is to provide training in core concepts that will be essential for the students to pursue more specialized areas of study in Biomolecular Science. The course will prepare students for taking graduate electives in more specialized areas, it is not intended to be a comprehensive survey of all of the topics relevant to all of the program options in BMMB. Topics will include: acid/base theory, thermodynamics, chemical equilibrium, electron transfer, electrochemistry, and sizes and shapes of molecules, protein and nucleic acid structure, enzyme kinetics and catalysis, chromosome structure, DNA replication, cell cycle, recombination, transcription, RNA processing, and translation, intracellular compartmentalization and trafficking and cell signaling. Each student's mastery of the material will be evaluated by written examinations.

**BMMB 503** (BIOL 503, MCIBS 503, VB SC 503) Critical Elements of Genetics and Molecular and Cellular Biology (4) Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation.

### **BMMB (BIOL/MCIBS/VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4)**

Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.

**BMMB 511** (MCIBS 511, VB SC 511) Molecular Immunology (2) The study of molecular and biochemical events that influence immune responses and define current questions in immunology.

**BMMB (MCIBS/VB SC) 511 Molecular Immunology (2)**

The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned.

By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and BMB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as an elective for the Molecular Medicine and Immunobiology focus areas in the MCIBS graduate program and for the Pathobiology and BMMB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students.

**BMMB 515** (VB SC 515) Macrophage Biology (2) The role of macrophages at the interface between innate and adaptive immunity.

**BMMB (VB SC) 515 Macrophage Biology (2)**

The overall purpose of this course will be to provide second and third-year graduate students, the opportunity to study current concepts of macrophage biology. The course will be offered in the fall semester every other year. The class will meet once a week for two hours to review and discuss 3-4 papers on a chosen topic. For each class, the instructor will be responsible for choosing papers that reflect the most recent advances in the area of research to be covered and for providing background information on the topic. The students will be responsible for reading the papers prior to class and leading and/or participating in a critical discussion of the papers assigned for that week. This course will provide students with a detailed understanding of macrophage biology as well as a forum for developing skills in critical evaluation and discussion of current research. The materials covered in this course will build on information presented in MICRB 410 (Principles of Immunology), VB SC/B M B/MICRB 432 (Advances in Immunology: Signaling in the Immune System) and is designed to complement VB SC/BMMB/IBIOS 511 (Molecular Immunology).

**BMMB 531** Biomolecular Structure (2) Crystal structure determination and analysis of protein and nucleic acid three-dimensional structures.

### **BMMB 531 Biomolecular Structure (2)**

This course is taught in two parts. In the first part, students will learn the fundamentals of X-ray crystallography of bio-molecules. Topics covered include: What X-rays are and how to produce and use them safely, how protein crystals are grown, how X-rays interact with crystals to yield 3-dimensional diffraction data, how to solve a crystal structure and how to refine the structure. Basic mathematics and physics involved in this technique will be discussed. The students will also learn how to analyze a published crystal structure and how a crystallography laboratory works. The second part will focus on understanding how protein and DNA structure relate to the function of these macromolecules. The students will visualize macromolecular structures in class using videos and using interactive molecular graphics software on their own to develop an understanding of three-dimensional structures. Particular topics include: fundamentals of protein structure, enzymes, signal transduction molecules, Immune molecules, protein-DNA interactions, and other related topics.

**BMMB 533** Protein Evolution (2) Consequences of evolution of protein-coding sequences: structures and functions.

### **BMMB 533 Protein Evolution (2)**

Most biological functions are carried out by proteins, and evolutionary logic can be used to infer functions. This course will focus on evolution of protein-coding sequences, conformations and functions of proteins. Different species show varying characteristics of structure, metabolism, and regulatory control networks. Most of these differences are the product of the evolution of protein-coding sequences. DNA mutations can change amino acid sequences, protein structures and protein functions; and favorable mutations are selected, in ways that are integrated to form an organism adapted at both macroscopic and molecular levels.

The availability of large databanks of protein amino acid sequences, and protein three-dimensional structures, and the annotation of protein function in the entries in these databanks, has allowed investigation of evolutionary changes that impact proteins. One of the goals of the course will be to describe these databanks and the computational tools available to apply them in research in molecular biology. Many students will find these tools useful in their own research projects.

The evolutionary divergence of proteins has shown several types of effects.

In some cases, related proteins in different species retain similar functions, but show differences in amino acid sequence and structure. The nature of observed changes in sequence and structure will be described and the relationship between sequence changes and structural changes examined in several well-documented examples, including globins, and serine proteases.

In some cases, proteins diverge within a single species to form large families of related molecules with specialized functions. For example, the human genome encodes hundreds of odorant receptors.

The comparison of related proteins that have adopted novel functions reveals how cells can expand their functional repertoire. In most cases it is easier to adapt an existing structure to a new function than to create a new protein "from scratch". For example, the proteolytic enzymes of the chymotrypsin family are related to haptoglobin, an iron scavenger that has lost its enzymatic activity.

Beyond the description of individual proteins and individual protein families, there is the more general question of how changes in functions of individual proteins are integrated to create a smoothly-running cellular "operating system". The evolution of sequences encoding regulatory proteins to achieve this will be discussed.

Methods of bioinformatics to address these questions will be presented, with emphasis on study and comparison of structures with computer graphics.

**BMMB 541** Molecular Biology of Animal Development (3) The course emphasizes comparative molecular genetic analyses of developmental gene networks using vertebrate and *Drosophila* model systems.

#### **BMMB 541 Molecular Biology of Animal Development (3)**

This is a required course for graduate students in the IBIOS Cell and Developmental Biology Program. Approximately half of the class sessions will consist of lectures and class discussions related to lecture material. The other half will consist of primary literature presentations by the students and class discussion pursuant to these. The course will provide students with a broad overview of essential signaling pathways and gene regulatory networks that coordinate cellular activities to establish and maintain the complex communities of cells that comprise animal tissues.

**BMMB 542 Eukaryotic Cell Biology (3)** This course covers current areas of cell biology research, focusing on processes affecting the cell as a whole.

**BMMB 542 Eukaryotic Cell Biology (3)**

This course in eukaryotic cell biology will provide a foundation for those students whose thesis research focuses on cell biology or the cellular aspects of development. The primary focus will be to understand how the cell functions as a unit. Areas to be covered include compartmentalization of the cell and transport between different sub-cellular compartments; the control of cell shape and how cell shape and polarity changes drive cell movement and tissue shape; the life cycle of cells; and the regulation of these processes by extracellular signals. We will also investigate current research techniques and tools that are used to investigate these processes.

**BMMB 551 (MCIBS 551) Genomics (3)** Structure and function of genomes including use of some current web-based tools and resources for studies and research in genomics.

**BMMB (MCIBS) 551 Genomics (3)**

This course will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge. This course is designed as a basic course for any student in the life sciences who needs to exploit the developments and tools in genomics in their own research and who wants to broaden their understanding of the current knowledge and research in the life sciences that are increasingly drawing on genomics advances. The course will be taught by a team of faculty (members active in genomics research and will be video-conferenced. Students' grades will be based on take home exams or assignments that require their understanding of the concepts in genomics and the hands-on use of web-based analysis tools, as well as on class discussion participation. Students will be assigned one or more projects, tutorials, problem sets or essays to complete. Reading assignments will further help students explore the materials, do the assignments and participate in classroom discussions.

**BMMB 554** (MCIBS 554) Foundations in Data Driven Life Sciences (3) Expanded overview of current developments and technique in computational biology and genomics.

**BMMB (MCIBS) 554 Foundations in Data Driven Life Sciences (3)**

The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims at filling these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research transparency and reproducibility, as well as result dissemination practices relevant to presentations and publications.

**BMMB 566** (CSE 566) Algorithms and Data Structures in Bioinformatics (3) This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis.

BMMB 566

**BMMB 566 Algorithms and Data Structures in Bioinformatics (3)**

Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences.

Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection.

No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites.

**BMMB 572** (CHEM 572) Nucleic Acids Chemistry (3) Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids.

**BMMB (CHEM) 572 Nucleic Acids Chemistry (3)**

The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers

at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.

**BMMB 852** Applied Bioinformatics (2) This course provides a foundation for students with biology backgrounds in the computational analysis and interpretation of biological data.

**BMMB 852 Applied Bioinformatics (2)**

The purpose of this course is to provide students with a foundation in the various applications of high-throughput sequencing including: chip-Seq, RNA-Seq, SNP calling, metagenomics, de-novo assembly and others. The course material will concentrate on presenting complete data analysis scenarios for each of these domains of applications and will introduce students to a wide variety of existing tools and techniques.

By the end of the course work students will understand common bioinformatics data formats and standards, become familiar with the practice of analyzing sequencing data from various instruments and will develop the computationally oriented thinking that is necessary to take on large-scale data analysis projects.

**BIOE 507** Technical Foundations in Functional Magnetic Resonance Imaging (3) Theory and applications of functional magnetic resonance imaging.

BIOE 507

**BIOE 507 Technical Foundations in Functional Magnetic Resonance Imaging (3)**

The advent of new neuroimaging techniques such as functional magnetic resonance imaging (fMRI) has symbolized a new era of neuroscience. A large amount of neuroscience research today involves utilizing fMRI given its high spatial resolution and whole-brain coverage. In order to gain an in-depth understanding of these research findings, it is important to know the principles of fMRI. In this class we will address questions such as: What signal do different fMRI methods measure? How to interpret the results from different fMRI techniques? How to apply these methods to solving real neuroscience problems?

**BIOE 508 (MATSE 508) Biomedical Materials (3)** Properties and methods of producing metallic, ceramic, and polymeric materials used for biomedical applications.

**BIOE (MATSC) 508 Biomedical Materials (3)**

The topical content of this course will be grouped into 4 areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on the polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis), and the development of caries. The perspective placed on these topics will be that of materials science.

The selection of ceramics for hard tissue prosthesis will be described. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glass-ionomer cements will also be considered as ceramics. Hydroxyapatite, HAp-based composites and HAp-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described.

Dental and orthopaedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and stainless steel used in prosthetic applications will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular.

Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications, it is desirable that a polymeric material biodegrade while in others property retention is desirable. Because of the spectrum of applications for polymers, the topics to be covered will be limited with the intent to concentrate on hemocompatible polymers, acrylics used as bone cements, polyethylene used as bearing surfaces in prostheses, and dental resins and bonding materials. Other relevant polymers and their applications will be discussed.

**BIOE 509 Mechanobiology (3)** This course explores the molecular bases of cell mechanics and the role of mechanics in cell biology

**BIOE 509 Mechanobiology (3)**

Forces play a key role in the development and maintenance of biological tissues and organs. This course explores the detailed fundamental mechanisms by which molecular- and cellular-level mechanics guide the behavior of biological systems. It investigates the ways in which molecules and cells respond to and generate forces and the role of thermal fluctuation and diffusion in biochemical kinetics. Students will learn analytical, experimental, and computational methods used to investigate cellular- and molecular-scale force generation and explore ways in which mechanobiology underlies the diagnosis and treatment of disease and the development of improved biomedical devices.

Bachelor of Arts: None  
Effective: Summer 2013

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOE 510** Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3) Introduction to BioMEMS and Bionanotechnology. Topics include: electromechanical and chemical biosensors, microfluidics microscale separations, and surface patterning for cellular engineering.

### **BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3)**

Microelectromechanical systems (MEMS) have been developed for a wide range of applications from automotive to medical devices. Nanoscale devices within MEMS have a particular usefulness in biological applications due to their small volumes, low energy sensing, and minimal force actuators. Increased efficacy of instruments and new areas of application are also emerging from specific and successful biomedical applications of MEMS (bioMEMS). Advanced development of nanotechnology and bioMEMS for biomedical and biotechnological applications requires basic foundations from biophysics, biochemistry, solid state devices, and polymer engineering.

The objectives of this course are: to build a basic foundation for understanding of mechanisms on electrical, mechanical, chemical, and optical transducers in the context of biomedical applications; and, to teach critical thinking considering microengineering design and fabrication, material compatibility with biological systems, and cellular interaction at the interface. Finally current MEMS activities will be reviewed with emphasis on the examination of the viability of nanoscale devices and bioMEMS technology in particular biomedical applications.

Effective: Fall 2014

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOE 512** Cell and Molecular Bioengineering (3) Graduate level cell and molecular biology course for engineers emphasizing molecular mechanisms.

### **BIOE 512 Cell and Molecular Bioengineering (3)**

This course investigates the molecules and mechanisms underlying cellular function from an engineering perspective, utilizing physical, chemical and quantitative approaches. Material covered includes the structure and chemistry of biological molecules, enzyme kinetics, DNA replication and repair, gene expression, recombinant DNA technology, subcellular organization, cell motility, signaling and cell division. Applications in medicine, biotechnology, bionanotechnology and tissue engineering are addressed. This is a lecture course graded by means of exams, homework assignments, and a final paper. A general knowledge of physics, chemistry, and some physiology is required; the analytical approach of the course will also require an ability to work with mathematical equations and simple models. It is geared towards engineering students and is also suitable for physics, chemistry, and materials science graduate students. Previous molecular and cell biology knowledge is not required. Three credits, generally offered each fall semester. No formal prerequisites.

**BIOE 513** Bioengineering Laboratory Techniques (3) Laboratory techniques in cell molecular biology, protein biochemistry and cell culture with an emphasis on engineering analysis and quantification.

### **BIOE 513 Bioengineering Laboratory Techniques (3)**

BIOE 513 is a three-credit laboratory course for engineering graduate students designed to introduce laboratory techniques used in bioengineering/biomedical research. The course objectives are to build a basic foundation for understanding biological assays in the context of biomedical engineering applications and to introduce the student to the integration of biology with design and fabrication of devices. Consideration is also given to compatibility between biological systems and medical devices, and cellular interactions at the interface between biology and engineering. Emphasis is placed on cell and molecular biology, protein biochemistry, bacterial transformations, and mammalian cell culture with particular attention to engineering analysis and quantification. This course requires a substantial amount of laboratory work outside of designated meeting periods.

**BIOE 517 (MATSE 507) Biomaterials Surface Science (3)** Special properties of surfaces as an important causative and mediating agent in the biological response to materials.

**BIOE 517. (MATSC 517) Biomaterials Surface Science (3)**

This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms and the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological response to materials surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject and to draw students from different specializations.

**BIOE 518 Organic NanoBiomaterials (3)** A foundation course on the synthesis, fabrication, and characterization of nanobiomaterials and their applications in biomedical engineering.

**BIOE 518 Organic NanoBiomaterials (3)**

The objective of this course is to provide students with an in-depth foundation on the synthesis, fabrication, properties, and biomedical applications of nanobiomaterials. Topics include: introduction of biomaterials, introduction of nanobiomaterials, synthetic nanobiomaterials, biological nanobiomaterials (DNA nanomaterials, protein and peptide nanomaterials, etc), biofunctionalization of nanobiomaterials, use of nanobiomaterials in tissue engineering, drug delivery, gene delivery, cancer therapy, and bioimaging. Key advances from the recent literatures will be reviewed to supplement specific lecture topics. Project design will be offered to students to obtain design experience on nanobiomaterials processing and characterization.

**BIOE 552 (I E 552) Mechanics of the Musculoskeletal System (3)** Structure and biomechanics of bone, cartilage, and skeletal muscle; dynamics and control of musculoskeletal system models.

**BIOE (I E) 552 Mechanics of the Musculoskeletal System (3)**

The course focuses on the upper limbs and its musculoskeletal components, including mechanical properties and models; work-related musculoskeletal injuries, techniques, models, and instruments to measure and quantify the risks for developing such injuries. Specific topics covered in the first third of the course include an introduction to basic biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill's 3-element model and continuing on to Hatze's multi-element model, frequency analysis, control theory approaches. More complex models include static and dynamic aspects of tendon-pulley models and multiple muscle-tendon systems. The final third covers basic epidemiology as applied to musculoskeletal disorders and risk factors including instrumentation to measure them and various analysis tools (e.g., the PSU CTD Risk Index) to assess the not only the overall risk for injury but the reliability and validity of such assessments. Time permitting applications to hand tools and office environment with computer work stations are examined. Two exams and a modeling project are given. The course is typically offered Spring Semester.

**BIOET 504** Research Integrity in Science and Engineering (2) This course will examine the complex ways ethical issues are

a component of research in science and engineering.

**BIOET 504 Research Integrity in Science and Engineering (2)**

Research Integrity in Science and Engineering provides a foundation for understanding an expanded conception of research ethics that includes traditional responsible conduct of research (RCR) issues, but encompasses two additional domains in which ethical issues are relevant to the conduct of science, namely, the broader impacts of science and ethical issues that are embedded in scientific practice. Students in this course will develop a robust understanding of ethical responsibility and ethics spotting in their professional work as well as pedagogical training to support their becoming research integrity leaders in their home disciplines.

In this course, students will: understand and identify instances of embedded ethics, broader impacts, and research integrity as they apply to work within their profession; develop the ability to apply ethical reasoning skills to examples of each domain of research ethics through case-based analyses; and acquire pedagogical skills in research ethics through developing, delivering, and assessing curricular materials on relevant research ethics topics drawn from their home disciplines. Students will also develop a research ethics teaching portfolio and will be encouraged to work with their departments to identify ways to develop peer mentoring on these important topics.

## Biological Chem-Hy (BCHEM)

**BCHEM 510** Carcinogenesis and Chemoprevention (2) Mechanisms of cancer induction by environmental carcinogens and chemoprevention by natural and synthetic agents.

### BCHEM 510 Carcinogenesis and Chemoprevention (2)

The etiology of most human cancer remains obscure even though a vast body of literature describes risk factors for certain cancers and proposes various hypotheses for cancer etiology on the basis of epidemiological and experimental studies. Tobacco smoking is an established cause of several cancers, with lung cancer remaining the first target on the list. International studies have repeatedly confirmed that people (Chinese, Japanese) migrate from their country of origin to the U.S., adopt the pattern of certain cancers within a few generations (e.g., breast and prostate) of the latter country, which is indicative of the presence of chemical carcinogens in the environment and/or changes in lifestyles. Consequently, the search for carcinogens that exist in the human environment challenges both scientists and regulatory agencies. Chronic exposure to traces of chemical carcinogens in the diet, in polluted air, or in tobacco smoke can be important in the etiology of several human cancers in the presence of host factors that favor the multi-step process of carcinogenesis. Bioassays in laboratory animals can provide important information on the role of environmental agents in the induction of particular types of cancer. Biochemical studies can lead to insights into the nature of interactions of these environmental agents with macromolecules such as DNA that are necessary, but not always sufficient for carcinogenesis.

The search for optimal diets and for naturally occurring agents in routinely consumed foods that may inhibit cancer development, although challenging, constitutes a valuable and plausible approach to finding ways to control and prevent cancer. The prevention of cancer is the longstanding goal for most cancer researchers. There has been enormous gain in our understanding of carcinogenesis and cancer progression; such knowledge has provided new and promising opportunities to prevent cancer, e.g., to treat pre-cancer or inhibit carcinogenesis (a process often involving 20-30 years in human epithelial cancers), rather than waiting to treat cancer. In the early 1980's, the U.S. National Cancer Institute recognized the promise of chemoprevention research. In summary, this course will provide a better understanding of the potential contribution of environmental carcinogens in the development of certain human cancers and will provide important information on cancer chemoprevention intervention strategies.

The course will cover topics that include exposure, metabolic activation, detoxification, and biomonitoring of chemical carcinogens in the human environment, carcinogen-induced DNA damage, mutagenesis and DNA repair, carcinogen-induced cellular and molecular alterations, tumorigenesis and organ specificity in laboratory animals, and factors modulating individual susceptibility to the deleterious effects on chemical carcinogens. Furthermore, this course will provide knowledge on various classes of cancer chemopreventive agents, their efficacy, safety, and mechanisms of action in preclinical studies.

Course Objectives: Upon completion of this course, the students will be able to:

1. Understand the potential risk associated with human exposure to chemical carcinogens detected in the environment.
2. Describe the current assays of biomonitoring of human exposure to chemical carcinogens.
3. Learn the process of metabolic activation and detoxification of chemical carcinogens.
4. Understand the stages of the multi-step carcinogenesis process.
5. Identify factors that govern individual susceptibility to the deleterious effects of chemical carcinogens.
6. Understand the concept of cancer chemoprevention.
7. Identify molecular and cellular targets for chemoprevention intervention at any time during the process of carcinogenesis.

Grading: Grading will be determined as follows:

1. Midterm Exam 30%
  2. Research Paper\* 30%
  3. Class Participation 10%
  4. Final Exam 30%
- Total 100%

\*Guidelines for Research Paper: The topic will be selected following approval of the faculty member in charge. The paper should include the goals (aims) of the research project, literature background, the significance of the research topic, knowledge to be gained, gaps in existing knowledge, and the potential to propose future studies.

**BCHEM 521** Biochemistry: Structure/Function/Regulation of Biological Molecules (3) The fundamentals of biochemistry in evaluating the forces that govern inter- and intra-molecular interactions are studied.

**BCHEM 521 Biochemistry: Structure/Function/Regulation of Biological Molecules (3)**

An overriding theme in biochemistry is that macromolecules, which are polymers of simpler molecules, interact to form structurally large and functionally complex entities that give rise to discrete structures and functions. This course focuses on intermolecular forces between the monomers of macromolecules that govern tertiary structure, as well as interactions between macromolecules that govern higher order structures. The course begins with proteins, covering the structural basis of protein functions and then moves on to simple enzyme kinetics and mechanisms. Next, the students will discover the forces that control the three dimensional structures of nucleic acids. Subsequently, the students will explore simple and complex carbohydrates and topics in glycobiology that include energy storage, framework skeleton, and specific molecular recognition. Lipid biochemistry will be examined next, in topics that include lipid chemistry, complex lipids, membrane biology, and transport systems. Finally, the analysis of higher order structures involving the interactions between protein, nucleic acids, lipids, and carbohydrates will be discussed. The course will describe various analytical, chemical, and biochemical techniques that biochemists use to interrogate biomolecular structure and interactions.

General Education: None

Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BCHEM 522 Molecular Genetics: Genes to Genomes (3)** This course focuses on concepts of molecular genetics and genomics, and DNA- protein interactions and their functions within macromolecular complexes.

**BCHEM 522 Molecular Genetics: Genes to Genomes (3)**

This course focuses on the principles and concepts of molecular genetics and genomics and DNA-protein interactions and their functions within macromolecular complexes. Special emphasis is placed on the aspects of eukaryotic genome organization, chromatin and chromosome structural and epigenetic changes, and DNA-protein interactions that regulate expression of genetic information and change the process of inheritance in normal and disease models and affect genome stability. This course contains three major sections. Section I includes principles of recombinant DNA technologies used in the analysis of DNA sequences and genome structure. Section II covers genetic interactions and macromolecular assembly and provides links between the studies of molecular interactions and equilibrium with in vivo and genetic approaches. Section III covers genome stability, epigenetics, and medical applications involving mis-regulation of the molecular mechanisms involved in these processes. This part builds on material presented in the BMS 503 course of the core curriculum and provides students an in-depth understanding of the molecular mechanisms of genome alterations and their biomedical significance.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**BCHEM 581 Enzymology: Structure, Energetics, and Function-A. Structural Biology (1)** Structural biology: NMR spectroscopy and X-ray crystallography.

**BCHEM 581 Enzymology: Structure, Energetics, and Function-A. Structural Biology (1)**

The objectives of this course are to provide students with a solid background to critically interpret X-ray crystallographic and NMR experiments. Topics will be covered in the X-ray crystallography lectures will include crystal growth, diffraction, phasing and refinement to determine the structure. Topics in NMR spectroscopy will include basic principles, multidimensional experiments, and assignments of atoms to resonances, structure determination and dynamics of ligand binding to proteins. The students will learn the basic principles of protein structure determination by NMR and X-ray crystallography.

General Education: None

**BCHEM 583 Enzymology: Structure, Energetics, and Function-C. Mechanisms of Enzyme Reactions (1)** Molecular basis for enzyme specificity and catalysis.

**BCHEM 583 Enzymology: Structure, Energetics, and Function - C. Mechanisms of Enzyme Reactions (1)**

The objectives of this course are to provide students with the wherewithal to interpret and design experiments aimed at elucidating the mechanisms of enzyme catalyzed reactions. Selected mechanisms of enzyme catalyzed reactions will be surveyed using primary literature. The rationale for the chemical, kinetic, molecular biological, spectrophotometric, thermodynamic tools that are used to investigate these reactions will be discussed. Topics that will be discussed include (a) principles of enzyme catalysis, (b) electrostatic catalysis (c) acid/base catalysis, (d) phosphates (e) Schiff base formation. Cofactors that will be discussed include pyridyl pyrophosphate, thiamine, biotin, tetrahydrofolate, NAD, FAD, S-adenosyl methionine, and vitamin K and B12.

**BCHEM 584 Glycobiology A: Carbohydrate Chemistry (1)** Graduate course for students interested in carbohydrates.

**BCHEM 584 Glycobiology A: Carbohydrate Chemistry (1)**

The proposed course is designed to give graduate students interested in studying carbohydrates the basics about their chemistry. Because of their structure and the ability of just two sugars to form a number of different bonds with each other, carbohydrate chemistry is significantly more complex than that of any of the other building blocks found in the body. With the development of new approaches for studying these compounds, the science of glycomics is coming into its own.

**Biology (BIOL)**

**BIOL 400 Teaching in Biology (1-3)** This course will train biology teaching assistants to teach in the laboratory/ recitation setting with emphasis on critical thinking skills. Enrollment will be limited to students of at least fifth semester standing that have been accepted as teaching assistants for biology.

**BIOL 400 Teaching in Biology (1-3)**

This course provides teaching assistants with the fundamentals they will need to be effective in the laboratory and/or recitation classroom. Students will learn the fundamental skills needed to; design lesson plans; facilitate class discussions; write effective quizzes; communicate learning expectations; grade fairly; and in the case of the laboratory setting, maintain a safe learning environment. Students enrolled in this course will also be serving as teaching assistants and consequently faculty who serve as course instructors and/or lab coordinators in the relevant course will provide the instruction. Through regular meetings the course instructors will help teaching assistants adjust to their duties and solve common problems that arise in the laboratory/recitation environment. Emphasis will be placed on how teaching assistants can facilitate active learning and help their students develop sound study skills. Students enrolled in this course will be evaluated on regular attendance, organization in and preparation for their teaching, and clarity in how they communicate with their students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 402W Biological Experimental Design (3)** Discussion of experimental design, analysis and presentation, with a practicum providing for student design, analysis and presentation of biological experiments. Students may not take this course if they have taken BIOBD 350W.

**BIOL 402W Biological Experimental Design (3)**

This course emphasizes written and oral communication of scientific ideas. Students discuss papers from the literature, preparing written critiques of two. Critiques are reviewed in writing by the instructor and peers and may be revised twice. Peer reviews are graded in writing and may be revised once. Written proposals for biological research are required. Students must build arguments for methodological rationales, justify statistical approaches, and place their proposed research into a larger societal context. Proposals are reviewed by the instructor and three peer reviewers. Peer reviewers must prepare written critiques and present proposals to the class during an "NSF"-style panel review. Prior to the presentation, the instructor provides written and oral feedback to the author and the peer reviewer in a meeting at which strategies for presenting the proposal are discussed. Subsequent to the presentation, peer reviewers write summaries of the discussion and provide explicit guidance to authors. Proposals may be revised twice. Peer reviews and summaries are graded in writing and may be revised once. Thus, each student writes 2 critiques, 1 proposal, 2 peer reviews of critiques, 1 peer review of a proposal, and 1 summary of the panel discussion. Each assignment is graded in writing and is subject to revision. Students also are graded on their proposal presentations and on participation in panel discussions. These activities constitute 75% of the final grade.

Students must demonstrate competence in the use of SAS, a statistics package. Students must choose and apply appropriate statistical techniques to biological data. In addition to the program and its output, students write interpretations of the results. This activity constitutes 25% of the final grade.

Lectures are used to review statistics and "how tos" (e.g., proposal preparation). Case histories are used to address ethics, statistical decision-making, and design. Students are expected to challenge what they learn, and the notion that scientists must acknowledge and guard against bias in their work is emphasized. Intellectual honesty and the ability to give and receive constructive criticism are demanded.

This course is required in two of the six options in biology (ecology and general), and it can be taken by students in the other options. The course is required of students who have not fulfilled the WAC requirement at the 200-level (transfer students).

**BIOL 407 Plant Developmental Anatomy (3)** This course will examine the development of basic vascular plant anatomical structures including leaves, stems, roots, and flowers.

### **BIOL 407 Plant Developmental Anatomy (3)**

The course will provide students with an understanding of the developmental anatomy of plant organs and tissues. More specifically, the course will focus on the structure and function of plant organs throughout their lifecycle, including embryogenesis, organ initiation, and the structures of leaves, roots, stems, and flowers in vascular plants. When appropriate, the course will discuss genes involved in the formation and function of these organs to provide illustrations of current scientific investigations in the field of plant developmental anatomy. Upon completing the class, students will have gained an appreciation of the structure/function relationships of plant tissues and organs in regards to their development and physiological roles.

**BIOL 412** Ecology of Infectious Diseases (3) This course examines how ecological processes impact upon the epidemiology of infectious diseases.

**BIOL 412 Ecology of Infectious Diseases (3)**

The course will examine the population dynamics of disease and takes an ecological perspective on how pathogens and parasites flow through host populations to identify possible means of predicting and controlling pathogens.

The approach is one of population dynamics, examining changes in disease patterns in time and space. We construct mathematical models to capture the patterns observed, make predictions and identify the means of reducing disease spread. This is an ecological approach, applying the techniques of population biology to an understanding of Parasitology to develop a different perspective on epidemiology. At the same time, the course brings aspects of evolutionary biology into the course and will examine some of the current issues in disease biology including disease emergence, bioterrorism, agro-terrorism and the role of humans as disease reservoirs for wildlife etc.

Upon completion of this course, students will obtain insight into the dynamics of disease spread. They will understand how to construct models and how to apply generic models to specific disease systems and make predictions about controlling disease. They will grasp some major concepts in Parasitology and population dynamics including the role of the disease basic reproductive number (RO), when diseases show a density dependent patterns of transmission or a frequency dependent pattern, non-linear dynamics and the processes that generate heterogeneities in exposure and susceptibility. The course will provide an excellent course for pre-Med students, biologists and students interested in ecology.

**BIOL 419 Ecological and Environmental Problem Solving (3)** Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems.

**BIOL 419 Ecological and Environmental Problem Solving (3)**

The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems.

After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. This course will be one of several ecology courses that are available to students in the ecology and general option in the biology program along with the biology minor.

**BIOL 420 (GEOSC 420) Paleobotany (3)** Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens.

**BIOL (GEOSC) 420 Paleobotany (3)**

Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands.

This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

**BIOL 421 (VB SC 421) Comparative Anatomy of Vertebrates (4)** The comparative anatomy of representative vertebrate animals discussed from a descriptive and an evolutionary viewpoint.

**BIOL (VB SC) 421 Comparative Anatomy of Vertebrates (4)**

Upon completion of this course, students will understand the fundamentals of vertebrate anatomy and be able to employ comparisons between phylogenetically distinct vertebrate species to illustrate evolutionary adaptations and the relationship between structure and function. Unique adaptations such as those of ruminants and birds will be explored in addition to the more common fish, amphibians and mono-gastric mammals typically used to illustrate these principles. Laboratory activities utilizing specimens representative of higher and lower vertebrate species will emphasize structure identification and functional adaptations. Students will be evaluated by means of laboratory examinations which will focus on structure identification. Attendance in laboratory is mandatory and laboratory exercises to be completed at each laboratory period will be graded. Students that miss laboratory session due to an excused absence should arrange a make up assignment with the instructor. Unannounced quizzes will be presented in either lecture or laboratory sessions. Three lecture examinations and a comprehensive final examination will be given.

Bachelor of Arts: None

Effective: Spring 2008

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 422 Advanced Genetics (3)** Chromosomal mechanism of heredity; cytoplasmic and polygenic inheritance, chemical genetics, genomics, and experimental evolution.

**BIOL 422 Advanced Genetics (3)**

This course will examine the genetics of chromosomes and how changes in gene arrangements shape the structure and function of genes in genomes. This will include an examination of how chromosomes organize genetic information, how chromosomes are transmitted, how the evolutionary process shapes genetic variation in the genome of populations of organisms and between different species.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 425 (PEM 425) Biology of Fungi (4)** A survey of the biological diversity of fungi, stressing evolution, ecology, disease, morphology, life histories, and importance to human affairs.

### **BIOL (PPATH) 425 Biology of Fungi (4)**

This course is a hands-on survey of fungal diversity, covering a wide variety of topics in fungal biology: phylogenetics, morphology, ecology, evolution, population biology, fungi as food, fungi as sources of toxins, ethnomycology, fungi as agents of plant and animal disease, fungi as sources of pharmaceuticals, and industrial uses. All fungi will be discussed, from mushrooms and other fleshy fungi to molds to slime molds. The laboratory portion of the course will center mostly around handling and manipulating freshly collected and living fungi, and microscopic analysis of their major features. There will be approximately 4-5 required field trips to local forests during the laboratory period, to observe fungi in their natural habits and collect them for further analysis in the laboratory. Students will come out of the course with a broad base of knowledge about fungi and their diversity and the ability to handle them in the laboratory and observe them using the microscope.

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 426 Developmental Neurobiology (3)** Overview of basic developmental processes as they apply to the central nervous system.

### **BIOL 426 Developmental Neurobiology (3)**

This course will provide a general overview of developmental processes as they apply to the central nervous systems. From initial differentiation of neuronal tissue to the aging of human brain, this course will expose students to many hot topics in the current neuroscience research field, including synaptogenesis, axon guidance, neural stem cells, apoptosis, learning and memory, and Alzheimer's disease. Although one textbook will be assigned as the major reference book, many current research results will be integrated into the lectures so that students can grasp the most recent advancement related to each topic.

The course will be divided into four parts. Part I introduces the induction of neural tissue, the polarity and regionalization of the neural tissue, and the generation and function of neural stem cells. Cutting-edge research on neural stem cells will be discussed. Part II deals with various interactions within neuronal system, including neuron-glia interaction, cell adhesion and migration, axon growth and guidance, and target selection. Part III teaches synapse formation and maturation, neurotrophic factors and their distinct functions, and neuronal cell death. Part IV talks about learning and memory from developmental view, and also the memory disease -Alzheimer's disease. Current research on Alzheimer's disease will be discussed.

The lectures will be given in PowerPoint presentations. Classical models and front line research will be integrated to stimulate students' imaginative thinking. Students will be encouraged to read some current research paper and offer their own view on some particular subject, such as neural stem cells and learning and memory.

Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2011  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 436 Population Ecology and Global Climate Change (3)** Ecological responses of individuals, populations, and communities to environmental variation, with emphasis on climate change.

#### **BIOL 436 Population Ecology and Global Climate Change (3)**

In this course, students will be presented with a close look at the factors shaping the characteristics of populations and their dynamics in time and space, with emphasis on the responses of populations to climatic fluctuation and global climate change. The course begins with an introduction to the basic concepts necessary for understanding the responses of individuals, populations, and communities to climate change in the recent past (the past 2 centuries), present, and future. These concepts include: the science of climate change, how temperature trends are estimated, the data used in assessment reports by the Intergovernmental Panel on Climate Change, large-scale climate systems such as the North Atlantic Oscillation and the El Nio Southern Oscillation, the basic characteristics of populations, how population densities are estimated, and the types of population data used in studies of population responses to climate change. In this first section of the course, students are also introduced to natural selection and the concepts of adaptation and vulnerability, which sets the stage for distinguishing between adaptive ecological responses to climate change vs. susceptibilities to climate change.

After presenting these basic concepts, the course then moves on to examine single-species population dynamics. This section of the course teaches students about the different types of population growth, including unlimited growth, density-dependent population dynamics, and density-independent population dynamics. Here, we take a close look at case studies documenting population responses to large-scale climatic fluctuation, and case studies that demonstrate interactions between the opposing influences of density dependence and climate on population dynamics. This section of the course also introduces students to some of the analytical difficulties inherent in quantifying the contribution of climatic fluctuation to local population dynamics. This section finishes with lectures on the phenomenon of spatial synchrony in population dynamics and the implications of global climate change for widespread population decline and extinction risk.

The final section of the course focuses on multi-species dynamics. Lectures in this section introduce students to inter-specific competition through examination of case studies involving desert rodents and ants; then move on to predation, with case studies of wolf predation illustrating the different types of functional and numerical responses, predator-prey cycles, and cascading effects of predators on population dynamics at lower trophic levels including herbivores and plants; and parasite-host dynamics, including discussion of the role of parasites as specialized predators in host population dynamics. This section also includes disc

**BIOL 438 Theoretical Population Ecology (3)** Theoretical discussions of demographics, population and metapopulation growth models, life histories, and species interactions such as competition, predation, host-parasitoid relationships.

**BIOL 438 Theoretical Population Ecology (3)**

At the present time our program has no theoretical and quantitative upper level ecology course. This course is designed to be a highly-quantitative second ecology course. It emphasizes mathematical and theoretical approaches to ecological questions and reinforces the theory with practical, hands-on field and laboratory exercises in which students are required to erect and test hypothesis using appropriate experimental and statistical techniques. The course builds on concepts from introductory ecology and requires students to use tools acquired in biostatistics and calculus to solve ecological problems. It can act as an introduction to or as an extension of experimental design. Although it is not a writing intensive course, students will be required to use standard technical writing and public speaking skills throughout the course. The course covers topics that are relevant to, but not addressed in, evolution and evolutionary genetics. In addition, it offers an opportunity for mathematics students interested in applications of mathematics to biological problems to apply models covered in mathematical modeling to real situations.

Throughout the semester analytical and theoretical thinking will be emphasized, starting with simple descriptions of population phenomena and ending with development of mathematical models and the critical experiments needed to test those models. The emphasis lies on empirical tests of ecological theory and applications of ecological theory to real-world problems. Students will be evaluated by means of essay exams covering theory, mathematical models, and the design of hypothetical experiments, in-class presentations of the primary ecological literature and applications of ecological theory to current environmental problems, and laboratory reports in which data collected during laboratory exercises will be analyzed and interpreted. Field exercises will be conducted on the campus of Penn State Erie and will take advantage of the rich natural environment on campus including numerous wetlands, streams, forests, and old fields.

This course will be available to all biology majors as elective credit at the 400 level. It also will be a core course requirement for any biology major taking the Ecology Option. It may function as a course for students seeking a minor in biology, particularly for mathematics majors.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 439 Practical Bioinformatics (3)** Practical aspects of retrieving and analyzing biological information residing in common databases.

**BIOL 439 Practical Bioinformatics (3)**

This course focuses on practical aspects of biological databases and analyses of molecular data. Students will learn about vast resources available, how to access them, and retrieve only the desired information. Sequence comparison and alignment methods will be presented. We will discuss practical aspects of such algorithms as dot matrix plots, dynamic programming, BLAST, and FASTA. Different strategies of multiple alignments will be discussed as well. We will cover computational genomics and computational analysis of gene expression. Students will learn how to assemble short sequences into long contigs and how to infer biological information from raw sequence data. They will learn how to analyze protein sequences including secondary structure prediction, protein function prediction (based on motifs and functional domains), and structural modeling. The whole course will be well balanced between theoretical description of computational biology methods and practical aspects of bioinformatics (some sessions will meet in computer classrooms)

Upon completion of this course, students will have sufficient knowledge to retrieve a desired information from biological databases based on both text and sequence data. They will learn what public resources are available in term of databases and a software. They will know how to interpret results in biological context and how to adjust different parameters in the software to get exact desired results.

This course will be one of several courses that are available to students in the genetics and developmental biology and general options in the biology program along with the biology minor.

**BIOL 443 Evo-devo: Evolution of Developmental Mechanisms (3)** How evolution of animals and plants can be traced to changes in the regulation and/or interactions of genes controlling development.

**BIOL 443 Evo-devo: Evolution of Developmental Mechanisms (3)**

"Evo-devo" is a new, exciting and interdisciplinary field in biology that encompasses knowledge from developmental biology, comparative genomics, gene regulation and evolutionary theory. The key concept in "evo-devo" is that the evolution and diversification of animals and plants can be traced to changes in the regulation and/or interactions of genes controlling development. The first few weeks of the course will bring students up to date on what they need to know about evolution, development and molecular genetics to appreciate the interdisciplinary field of "evo-devo". As this is such a new field, subsequent classes will give students a taste of the excitement of current research through the use of case studies. There will be ten case studies, seven examples from animals and three examples from plants, covering a range of morphological novelties and concepts. Each case study will involve one or more lectures of background information given by the instructor and one discussion class in which students will read, present and discuss reviews and/or primary research articles. Students will be given enough background information in the fields of evolution, development and molecular biology to enable them to understand and discuss primary literature in evo-devo. For many students this will be the first time they have read reviews and articles from the literature and this course will give them the capacity to move beyond textbook knowledge to knowledge of how science really works.

This course will be one of several courses that are available to students in the genetics and development, and general options in the biology program along with the biology minor.

General Education: None

**BIOL 444 Field Ecology (3)** This field course will explore the flora and fauna of the mid-Atlantic area.

**BIOL 444 Field Ecology of the Central Appalachian Highlands (3)**

This course is designed to take advantage of the teaching opportunities presented by the West Virginia highlands. The main advantage of using this area as an outdoor classroom derives from the fact that there are large changes in elevation and soils, and a tremendous variety of community types located in a small geographic area. In this area, students can observe ecological communities ranging from river, bottom forests at 1500 to 2000 feet in elevation to dry ridge slope forests at 3000 feet to the unique acid soil heath barrens community of the Dolly Sods Wilderness at 4000 feet. Since almost all of this area was extensively logged in the past, students will have the opportunity to observe the results of succession, and how the process of succession is affected by variation in topography, soil type and local climate. There are also several types of aquatic communities available for study, including large rivers, small high elevation streams and acidic wetlands. The course will use an integrated natural history approach to study the various ecological communities. This will include discussion of the effects of human activity and the topography and geology of the area in addition to study of terrestrial and aquatic flora and fauna. At terrestrial site, we will, in part, follow the example of the US Forest Service's Forests of the Central Appalachians Projects (<http://www.spies.com/~gus/forests/>) which uses forest walk inventories to document biodiversity. Therefore, the course would have a significant plant identification and taxonomy component. Each community can be studied as a separate unit and then compared to the adjacent communities at different elevations. By the end of the course, students should understand the relationship of geology, topography and soil type to the distribution of plant communities. They should also understand the relationship of plant communities and water chemistry to the distribution of aquatic insect and vertebrate and be able to use aquatic insects as water quality indicators. This course will be one of several field courses that are available to students in the ecology and general option in the biology program along with the biology minor.

**BIOL 460** (ANTH 460) Human Genetics (3) The human genome, its variation, origins, and relation to disease and other traits.

### **BIOL (ANTH) 460 Human Genetics (3)**

The course considers many examples derived from the study of the genetics of human disease, and includes most general areas of interest, including simple Mendelian disorders, and complex chronic diseases such as cancer and cardiovascular disease, and variable special topics including immunogenetics and the genetics of imprinting or other processes. The course usually also touches briefly on the nature of forensic genetics and the problem of making inferences from individual genotypes. Finally, the course considers the bioethical and societal issues involving contemporary human genetics. The study of disease genetics is important for students preparing for graduate work in medicine and other health professions as well as for graduate studies in molecular and evolutionary genetics and related areas, including biological anthropology and bioethics. This course is relevant to requirements or appropriate electives for life science majors and graduate students (check with your academic advisor). Over the years, it has been proven to be excellent preparation for subsequent graduate and professional work in these areas. The course is offered most years, in the fall semester.

Depending on enrollment and other factors, the course may include graded homework or other components, but evaluation is predominantly based on exams during the semester and a comprehensive final. This course is cross-listed as ANTH 460 and BIOL 460, but there is only one course, at the same time and place, for all students no matter how they register. In some years, a 4-credit Honors version is offered (ANTH 460H/BIOL 460H), that is identical to 460 but with an additional class period each week involving additional written and presentational assignments and term projects, along with the regular 460 exams, that combine to determine the final grade.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 460H (ANTH 460H) Human Genetics (4)** Gene mapping in humans; molecular basis of genetic disease; genomic structure; immunogenetics; and genetic evidence for human evolutionary history.

#### **BIOL (ANTH) 460H Human Genetics (4)**

Students will explore interesting normal or pathological variation to understand first its biological nature, then its epidemiological distribution, genes and genetic mechanisms associated with the trait, phylogenetic origins or comparison, and the nature of relevant genotype-phenotype relationships. Alternatively, students may explore methods for identifying and characterizing gene action or structure, or historical subjects related to human variation and evolution. Ethical and societal aspects of these issues will be considered as well. Time will be taken for faculty or students to read and present current important papers appearing in the literature, relevant to the current course topics. As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course format of Human Genetics 460 which, while presenting material at a sophisticated level, will not have time to explore the more subtle, problematic, or challenging aspects. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when the instructor learns they have registered. The nature of the course will be described including semester-specific themes or focus that will apply (if any). Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. Students will be evaluated on the quality of their project work, including writing ability, presentation ability, and depth of thought. Several written assignments will be given and graded for content and expression quality. Although students will take regular Human Genetics 460 lectures, they may be given separate exams (corresponding to those given in the regular course) that will allow more freedom of expression than multiple-choice exams or homework assignments. Depending on the workload in any semester, there may be a separate written take home synthetic essay final exam. The Honors session each week will be highly interactive rather than passive, and students will be graded on attendance, participation and whether they have done assigned work in advance of the class. Students will be expected to have the stipulated background knowledge of biological anthropology, evolutionary biology, statistics and genetics. This course should count as 4 credits toward additional courses in biological anthropology required for the Anthropology major.

**BIOL 461 Contemporary Issues in Science and Medicine (3)** Current/classical issues relating to health, research, agriculture, environment, and biotechnology. Active exploration of the impact of science on society.

#### **BIOL 461 Contemporary Issues in Science and Medicine (3)**

The aim of this course is to provide students of the biological and biomedical sciences with a framework to recognize, examine, and resolve conflicts which may affect their professional conduct. Current and classical issues relating to human health, scientific and medical research, agriculture, the environment, and biotechnology will be explored. The history, controversies, and current issues related to each topic will be presented by the instructor through lecture, guest presentations, and multimedia presentations. Each topic will be explored by students through a variety of activities, including role playing, case studies (real and hypothetical), mock trials, small- and large-group discussions, writing exercises, and student research projects presented in oral and poster format. Some activities and discussions will involve the entire class simultaneously, while other activities will be structured for very small groups (2-3 students), small groups (5-6 students), or large groups (10-15 students). This course is especially relevant to any student majoring in Biology, as it allows and encourages them to relate information they have learned in other Biology courses to their own professional conduct. Although the course was specifically designed to cover issues that are relevant to students majoring in each of the Biology concentration areas (Genetics and Developmental Biology, Ecology, Plant Biology, and Vertebrate Physiology), it is also relevant to students in colleges other than Science, who may be enrolled in majors with some biological content or applications. This course is designed to be rigorous and very interactive.

Effective: Summer 1985  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BIOL 474 (GEOSC 474)** Astrobiology (3) In depth treatment of principles/concepts of biochemical evolution, the origin/evolution of life; evaluation of distribution of life in the universe.

**BIOL (GEOSC) 474 Astrobiology (3)**

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

**BIOL 497G** Coastal Biology Field Trip (1) BIOL 497G is a one credit field trip course intended for students who have completed BIOL 482. A field trip during Maymester will take us to the beautiful island of Curacao, part of the Netherland Antilles in the southern Caribbean. Healthy coral reefs, mangroves and seagrass beds are easily accessible from shore and we will study them by snorkeling. The colonial past and economic realities in Curacao provide an instructive background to understand the complexity of marine conservation issues today. This course requires strong participation and thus is most suited for highly motivated students. Students will conceive and carry out their own research projects during the trip. All projects are to be presented orally to the class and handed in as research papers at the end of the Maymester. Faculty will assist and interact closely with students in all aspects of the research projects.

**BIOL 503** (BMMB 503, MCIBS 503, VB SC 503) Critical Elements of Genetics and Molecular and Cellular Biology (4) Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation.

### **BIOL (/BMMB/MCIBS/VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4)**

Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.

**BIOL 519** Ecological and Environmental Problem Solving (4) Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems.

**BIOL 519 Ecological and Environmental Problem Solving (4)**

The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems.

After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology.

Graduate students will additionally be required to attend a once a week case study, where we will focus on a paper from the recent literature that uses the techniques or theory learned that week in class. Additionally, graduates will develop models of their own, based on their own research, or on some other subject of interest. They will be expected to meet with me twice in a group and individually during office hours throughout the semester, to discuss the development of their projects. They will have to complete a written report on the motivation, model development, and results and implications of their work. This work will take the form of a short manuscript (as if for publication to a representative journal in their field). They will also have to make a verbal presentation to the entire class on their project (15 minutes, as if attending a professional conference). The course will be offered once/year.

**BIOL 555** (STAT 555, MCIBS 555) Statistical Analysis of Genomics Data (3) Statistical Analysis of High Throughput Biology

## Experiments

**BIOL (IBIOS/STAT) 555 Statistical Analysis of Genomics Data (3)**

This course covers statistical analysis and experimental design for high-throughput "omics" data. Topics include a foundation in the biology of gene and protein expression, experimental design for high throughput measurement platforms, data pre-processing, differential expression analysis, peak finding, clustering and classification, and data reduction techniques. Statistical concepts such as significance, power, confidence, resampling and Bayesian methods will be discussed. Students will become familiar with statistical and bioinformatics software.

**BIOL 592** Critical Evaluation of Literature in Biology (1) Weekly readings and critiques of recent papers from primary literature are used to teach independent thinking and effective scientific communication.

**BIOL 592 Critical Evaluation of Literature in Biology (1)**

This course teaches beginning graduate students how to evaluate new findings reported in primary literature in the biological sciences. Each week, a recently published paper is evaluated according to 8 basic criteria as follows:

1. Does the author adequately establish a context for the issues addressed in the paper? Are the issues addressed in the paper important in the field? Why or why not? 2. What is the hypothesis? Is it clearly stated? Is it operational (i.e. "falsifiable")? 3. Are the methods adequate to test the hypothesis? Why or why not? What are the controls? Are they adequate? 4. Are the data clearly presented? Are the results properly analyzed? Are statistical inferences stated appropriately? Do the data meet the assumptions of the statistical tests? 5. What conclusions are drawn from the results? Do the conclusions follow from the data? Have some conclusions been overlooked? Are there reasonable alternative interpretations of the data? Did the authors consider alternative hypotheses? 6. What could be done to improve the paper? Consider written format as well as the overall experimental design. For example, is the title appropriate? Does the abstract accurately summarize the results and conclusions? Does the paper use recent and appropriate references? 7. What is your overall opinion of the size of contribution that the paper makes to the body of knowledge in its field? Is this work creative? Does it provide new insights or a framework to understand previously disparate data? Defend your position. 8. What would be the next set of tests of the hypothesis or the next hypotheses to test? How should these hypotheses be examined experimentally? To what extent do you think this paper will stimulate further studies?

The goal of the course is to provide students with opportunities to sharpen their thinking in regard to what constitutes meaningful scientific experimentation, interpretation of results, and effective presentation of information in text, figures, and tables. Near the end of the course each student prepares a written critique of a paper, and meets individually with the faculty to discuss their critique. The course follows a format very similar to the Ph.D. candidacy exam for Biology, thus providing formal preparation for that exam.

## Biomedical Engineering (BME)

**BME 401** Numerical Simulations in Biomedical Engineering (3) Integration of design theory and finite element analyses for the development of solutions to problems in biomedical engineering.

### **BME 401 Numerical Simulations in Biomedical Engineering (3)**

Biomedical engineers develop novel devices and models to facilitate patient-specific diagnosis and care. The main goal of this course, therefore, is to help students learn how to use computational modeling software as a means to apply theoretical engineering and biological principles to solve problems in medicine and biology. The course will also focus on integration of ethics and design by continually identifying where ethical decision making and health needs of global populations influence design decisions.

**BME 402** Biomedical Instrumentation and Measurements (3) Biomedical measurements, including consideration of techniques, equipment, and safety.

### **BME 402 Biomedical Instrumentation and Measurements (3)**

This course is designed to introduce students to the principles, applications, and design of instruments used in biomedical research and applications. The emphasis is on engineering design and analysis with supplemental discussion of relevant physiological principles. Topics covered include: sensors, biopotential signal origin, amplifiers, filtering, electrodes and signal processing; pressure and flow measurement in the cardiovascular and respiratory systems, chemical biosensors, therapeutic devices, and medical imaging modalities. Students will learn to analyze and design instrumentation and measurement systems through a variety of techniques including in-class examples, homework problems, and active participation.

**BME 409 Biofluid Mechanics (3)** The fundamental relations in fluid mechanics and their application to biofluids including steady/unsteady flows, diseased states, devices and biorheology.

**BME 409 Biofluid Mechanics (3)**

This course is a first course in fluid mechanics, with application to biomedical problems. This course incorporates understanding of fluid properties of biological materials and applies the fundamental laws (mass, momentum, and energy) that govern fluid mechanics to solve biofluid applications such as those in the cardiovascular system, including diseased states. The course will enable students to use approximation methods and constraints in fluid mechanics to help model and solve biofluid examples. Biorheology and cardiovascular prosthetics in the context of fluid mechanics will be discussed. The students will be able to understand and apply problem solving techniques to steady and unsteady biological flows and be exposed to wave propagation theory and oscillatory flow. Students will be exposed to biofluid devices and flow measurement techniques used to assess these devices.

**BME 410 Biomedical Applications of Microfluidics (3)** Study of fluid mechanics at small length scales including fabrication of microfluidic devices and microfluidic components, lab-on-chip concept and applications.

**BME 410 Biomedical Applications of Microfluidics (3)**

Microfluidics is the study of flow phenomena at small length scales with characteristic channel dimensions typically less than the diameter of human hair. Small length scale effects become important as surface forces such as viscous drag and surface tension govern flow behavior rather than body forces (inertia) as seen in macroscale fluid mechanics. Miniaturization of fluid handling systems also allows the development of micro Total Analysis Systems (microTAS) or so called "lab on a chip" which combines biological sample preparation, separation and analysis in a single device. Topics explored in this class include: silicon based microfabrication and non-conventional micro/nano fabrication techniques; flow phenomena at small length scales, including laminar flow and flow resistance, inertial flow, diffusion, capillary effect, electrokinetic flow like electroosmosis, electrophoresis, and dielectrophoresis (DEP); microfluidic components including valves, pumps, mixers, sensors, actuators; lab-on-chip system concept and applications; hands-on lab to make and test microfluidic device; finite element simulation lab to gain better understanding of microfluidic devices.

**BME 413 Mass Transport in Biological Systems (3)** An integrated study of the fundamentals of mass transport processes with emphasis on the analysis of physiological systems.

**BME 413 Mass Transport in Biological Systems (3)**

This course provides an introduction to mass transport phenomena in biological systems. The course builds upon thermodynamic concepts of phase and chemical equilibrium to analyze ion transport and cell membrane potentials including Nernst potentials, Gibbs-Donnan equilibrium and osmotic pressure. In particular, the course provides

fundamental understanding of the diffusion of gases, electrolytes and non-electrolytes in biological applications. Furthermore, the principles of oxygen transport in tissues are specifically described and analyzed using the Krogh Cylinder Model and hemoglobin-oxygen binding relationships. The transport of substances across biological membranes is discussed and analyzed for various biological transport mechanisms including: passive diffusion, active transport and facilitated transport. Convective transport through porous media is introduced using Darcy's Law and the Brinkman Equation. Finally, fundamental concepts of pharmacokinetic modeling are introduced and utilized for the analysis of drug transport and distribution within tissues.

**BME 419 Artificial Organs and Prosthetic Devices (3)** Analysis of function and consideration of design concerns for biomedical implants, including prosthetic joints, electrical stimulators, and cardiovascular pumps.

### **BME 419 Artificial Organs and Prosthetic Devices (3)**

This course provides an overview of artificial organs and medical devices (ranging from blood pumps, hemodialysis, BioMEMS, tissue engineered technology, orthopaedic devices, cardiovascular implants, pacemakers, etc.) and how engineers use a design methodology, need to understand the clinical need, and what FDA regulations must be considered to develop these technology. Guest speakers and experts provide lectures on the various technology and students are exposed to industry and academic device development. The basics of biomaterials and biocompatibility are discussed within the context of the technology.

**BME 423 Reaction Kinetics of Biological Systems (3)** Chemical kinetics and reaction equilibria with applications to the analysis of physiological function and the design of synthetic organs.

### **BME 423 Reaction Kinetics of Biological Systems (3)**

Chemical reactions are the underlying mechanism for numerous biological processes such as energy metabolism, biosynthesis pathways, mass transport, and detoxification. This course will introduce the basic concepts in chemical equilibrium and reaction kinetics. The course will then apply these chemical kinetics and analytical approaches to understand the underlying mechanisms of selected biological and physiological processes, which will include metabolic engineering, catalysis, bioreactors, and drug discoveries.

**BME 429 Biomedical Mechanics and Techniques Laboratory (2)** Experimental laboratory that includes hands-on measurement, computational simulations, and statistical analysis of biofluids, biosolids, and biomaterial phenomena.

### **BME 429 Biomedical Mechanics and Techniques Laboratory (2)**

This course focuses on three five-week modules whereby students will conduct experiments on biomaterial interfaces, biofluid mechanics, and biosolid mechanics. These experiments will be complimented with computational simulations to enable discussion between the experimental and computational results and appropriate advanced statistics. Students will apply theoretical knowledge from previous core bioengineering/biomedical engineering courses. Examples of some experiments include blood separation, quantifying the flow through a stenosis, and measuring the material properties of bone.

**BME 433 Drug Delivery (3)** Engineering and biological principles as applied to pharmaceutical transport and designing drug carriers.

### **BME 433 Drug Delivery (3)**

The success of drug delivery depends on not only the understanding of chemical synthesis, polymer sciences, and cell biology, but also the fundamental understanding of drug transport that is affected by both drug's properties and physiological barriers, which are very critical but often overlooked in the design of drug delivery systems. Therefore, this course covers two main issues: 1) physiological barriers and drug transport; 2) design and characterization of drug delivery systems. The first section of this course introduces transport mechanisms of drug delivery at the levels of cell, tissue and whole body from the engineering viewpoint. The second section describes the rational design of various drug delivery systems and emphasizes nanomedicines. Case studies of cancer therapy/tissue engineering are described to compare, contrast and analyze current drug delivery systems.

**BME 435 Micro/Nano-Scale Systems for Biomedical Engineering (3)** Simple and low-cost micro/nanofabrication techniques and their impact on the fields of the Biomedical Sciences and Biomedical Engineering.

### **BME 435 Micro-Nano-Scale Systems for Biomedical Engineering (3)**

Bionanotechnology is an emerging field at the interface of life sciences, physical sciences, and nanoscience. By integrating concepts and tools from all these disciplines, this field strives to advance technology in biomedical field. The purpose of this course is to provide an overview on a group of widely used nano- and micro-fabrication techniques, referred to as soft lithography techniques, with an emphasis on their impact on bionanotechnology. Specifically, applications of these fabrication methods in studies of cell biology, tissue engineering, synthetic biology, nanomedicine, bio-interfaces, and lab-on-a-chip devices will be addressed.

**BME 440 Biomedical Engineering Professional Seminar (1)** Seminar giving students exposure to professionals who apply engineering and related fields to biology and medicine.

### **BME 440 Biomedical Engineering Professional Seminar (1)**

A senior seminar introducing students to professionals in the field of biomedical engineering and disciplines that are critical to the field (e.g. ethics, regulatory affairs, entrepreneurship). This course is designed to prepare students for the subsequent capstone design course and allow them to consider areas where innovation and design in biomedical engineering are needed. Discussion with presenters will allow students to explore the promises and limitations of the clinical applications of biomedical engineering and to explore possible career paths. Guest speakers may include representatives and alumni from the medical device industry, biomedical entrepreneurs, medical clinicians, professionals from relevant regulatory agencies, and professionals in bioethics.

**BME 443 (MATSE 403) Biomedical Materials (3)** Describe properties of materials and composites and their in vivo interactions.

### **BME 443 (MATSE 403) Biomedical Materials (3)**

Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis) and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

**BME 445 Tissue Engineering: Concepts, Calculations and Applications (3)** Introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples.

### **BME 445 Tissue Engineering: Concepts, Calculations and Applications (3)**

Tissue engineering is a field of research dedicated to the design and construction of living tissues for use in repairing or regenerating tissue structures and functions compromised by disease or trauma. This course provides an introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples. Topics covered in this course will span the entire process of creating an engineered tissue, including, among other topics: biomaterials for tissue engineering, cell-material interaction, wound healing response; techniques for cell isolation, recovery, and expansion; biodegradable polymer synthesis and degradation; scaffold design, fabrication, and cell seeding; bioreactors; special topics such as tissue engineering of neural, bone, cardiovascular, cartilage, and other tissue.

### **BME 450W Biomedical Senior Design (3)**

This course is a culminating design experience where students will be presented with open-ended industry and clinically sponsored design projects related to biomedical engineering. Students will work in multi-disciplinary teams to effectively design and prototype a solution for the sponsor. Students will be required to do needs assessment, project planning, budget planning, formulation of design specifications, analysis of the design, and documentation of results. Several design review reports and assessments will be used to monitor progress throughout the semester. Students will develop teamwork and communication skills and learn how to consider the ethical implications of their design, both in construction and use. Students meet with the instructor and sponsor on a regular basis for progress assessment. Notebooks are carefully maintained and critiqued. At the end of the semester, students will demonstrate their final design in a variety of formats that may include formal presentations, posters, websites, and written reports.

**BMS 501 Regulation of Cellular & Systemic Energy Metabolism (3)** Teaches biochemical and signal transduction concepts while exploring the control of bioenergetic processes.

### **BMS 501 Regulations of Cellular & Systemic Energy Metabolism (3)**

Energy is fundamental to life. The production, storage and utilization of energy by organisms are highly regulated processes that provide excellent examples of the principals that govern the control of cellular metabolism and hormonal signaling. In addition, future biomedical scientists must be prepared to study diseases associated with aberrant energy metabolism, such as diabetes, obesity, and malnutrition. Regulation of Cellular & Systemic Energy Metabolism is one of three thematic courses that comprise the fall semester. The course explores how energy is obtained, stored and utilized by cells, tissues and organisms. The biochemistry of energy metabolism is studied with a focus on mechanisms by which these pathways are controlled in order to maintain health and energy homeostasis. Principles of hormonal signaling and cellular signal transduction pathways are studied in the context of energy metabolism. In addition, knowledge of these

subjects is applied to the study of pathologies involving abnormal energy metabolism, including diabetes, obesity and starvation. Course objectives include developing an understanding of metabolic pathways and the mechanisms by which they are regulated; understanding principals of receptor theory, signal transduction and hormonal control of cellular processes; and gaining an understanding and appreciation of diseases that involve abnormal energy metabolism. The course is taught in approximately four blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

**BMS 502 Cell and Systems Biology (3)** Explores the cellular and intracellular organization of biology, assembly of cells into tissues, and further integration into biological systems.

### **BMS 502 Cell and Systems Biology (3)**

This course will cover the cellular basis of physiological processes from a systemic perspective. The major emphasis will focus on the cellular, molecular, and biochemical basis of normal and abnormal (pathological) tissue function. A special emphasis will be placed on common themes applicable to all tissue and the integration of molecular, cellular, tissue and organ systems. Introductory lectures will be followed by discussion of the primary literature that complements the lecture material. The course is designed to give students an appreciation of the cell and molecular mechanism underlying physiological processes as well as cell and molecular biology research techniques.

**BMS 503 Flow of Cellular Information (3)** Teaches concepts underlying the inheritance, transmission and translation of genetic information.

### **BMS 503 Flow of Cellular Information (3)**

Medicine in the 21st century must incorporate an understanding of the genetic information that underlies all biological processes in every cell, tissue, and organism together with an appreciation of how genetic differences impact complex cellular pathways and individual traits or disorders. Further, with the culmination of the human genome project and high-throughput analysis this information can now be considered in the context of whole genomes and proteomes. This course provides students with a fundamental understanding of the basic processes that convert this genetic DNA information to produce RNA and proteins and the genetic principals that underlie transmission of this information at each cell division and to subsequent generations. This topic is of importance for all biomedical disciplines.

The course explores how DNA is inherited, replicated, transcribed, translated, mutated, repaired, and manipulated, and how this information is utilized by cells, tissues and organisms and in the context of genomes and populations. Central dogma (DNA to protein) is studied with a focus on mechanisms by which these processes are controlled. Other topics include non-coding RNAs and protein degradation. Course objectives include understanding the mechanisms of how these processes occur and how they are regulated; developing an appreciation for the genetic and molecular biology approaches that have allowed insight into these processes.

The flow of cellular information is one of three thematic courses that comprise the fall semester. The course is taught in approximately three blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

**BMS 504 Art of Scientific Communication I (1)** Introduction to scientific analysis, writing, and oral presentation using primary literature sources.

**BMS 504 Art of Scientific Communication I (1)**

The overall goal of BMS 504, and the sequential course BMS505 taken in the Spring semester, is to develop the students into scientific communicators who, in written and oral formats, can convey scientific concepts and the experimental support for these concepts. This includes the development of the knowledge base and communication skills required for effective scientific exchange and engagement. BMS 504 meets 90 minutes, once a week for 11 weeks from the first week of class until the Thanksgiving Recess, and focuses on reading and analyzing articles from the primary literature with brief presentations by students. The intent of this schedule is to support the students in developing the skills necessary to analyze the primary literature, begin to present components of scientific articles in a group setting, and complete these goals in a time frame that does not compete with end-of-semester examinations. The first meeting is a presentation by a course director on Effective Powerpoint Presentations. The following 10 meetings allow two weeks to cover each of five topics. Each topic focuses on a high quality article selected from a portfolio created by the instructors of the Fall first-year Core Curriculum for the Biomedical Sciences (BMS) Graduate Program (BMS 501, 502, and 503). Topics vary from year to year. The first week of each topic examines the components of the chosen article (purpose and significance) and is led by one of the course directors. The second week includes short presentations by students on experimental design and data analysis from the articles and is facilitated by a content expert from one of the Core BMS Courses.

**BMS 520 Human Integrative Physiology (3)** This course explores whole organ physiology emphasizing skeletal muscle and

exercise physiology, cardiovascular, renal and urinary, respiratory, gastrointestinal, and endocrine.

### **BMS 520 Human Integrative Physiology (3)**

Human Integrative Physiology considers the function of the mammalian organism with an emphasis on system physiology. This course builds upon the strong foundation of cellular processes, molecular interactions, and genetic regulation provided in BMS 501, 502, 503 and allows students to develop an appreciation of the integration of biological function. The course is organized into multiple sections that focus on different organ systems. Initially, the course reviews principles of excitable cells and discuss sensory transduction, the autonomic nervous system, and motor system physiology. Next, students learn the structure and function of skeletal muscle physiology including muscle contraction, force generation, and movement. The course then focuses on the structure and regulation of the cardiovascular, renal, and respiratory systems. Subsequent sections cover gastrointestinal and endocrine systems by building upon the cellular and molecular processes covered in BMS 501, 502, and 503. Each section teaches the basic design of the system, explores the physiological principles of function, and examines how each system contributes to homeostasis and pathophysiological disease. Class material is covered through lectures and primary literature.

**BMS 571** Graduate Clinical Rotation (1-3) This course allows graduate students at Hershey and University Park to gain experience in the clinical arena.

### **BMS 571 Graduate Clinical Rotation (1-3)**

The Graduate Clinical Rotation is designed to allow graduate students at Hershey and at University Park to gain intensive experience in the clinical arena in the area of their thesis research. The site of the clinical rotation and specific responsibilities of the student are determined by the clinical mentor that is matched with the student. Clinical mentors will indicate their willingness to sponsor a student and will outline the associated opportunities and responsibilities of the specific clinical rotation. The specific rotation will be selected by the student and the thesis mentor to compliment the student's graduate studies.

Opportunities during the clinical rotation: The rotation typically will last 6 – 8 weeks and the student will be in the clinic and/or engaged in clinical activities for about 4h/week. During this rotation, students will have a range of opportunities including: attending Grand Rounds, attending Resident and Department Seminars and lectures, shadowing physicians, attending clinical research meetings, attending relevant case conferences, and, if appropriate, observing surgery. Students also may engage in a practical hands-on analysis of the subject matter (e.g., via an analysis of data, histology, fMRI, etc.) and they will be involved in the discussion of relevant cases and of potential treatment strategies.

Requirements: Course-specific policies and expectations for all students (i.e., for all students from Hershey and from the University Park Campus).

(1) Student Infectious Disease Summary: In January or early February, all students must contact Janice Mesarick (x-5998) in Student Health on the Hershey campus to complete an Infectious Disease Summary. Once complete, this form is to be sent to Ms. Catherine Caruso, MEd.

(2) Insurance Waiver: An insurance Waiver needs to be signed and returned to Catherine Caruso, MEd, Academic Placements Officer. The form can be located at the following site: <http://www.hmc.psu.edu/facultyaffairs/shadowing/>

(3) Confidentiality Agreement: A Confidentiality Agreement needs to be signed and returned to Catherine Caruso, MEd. The form can be located at the following site: <http://hmc.psu.edu/facultyaffairs/shadowing>

All 3 forms must be received by Ms. Catherine Caruso, MEd, Academic Placements Officer, Department of Psychiatry, H073 before the start of the Graduate Clinical Rotation.

(4) Orientation Meeting: All students are required to attend a 2 hour mandatory Orientation Meeting where issues will be discussed related to the course requirements, what to expect in the clinical setting, HIPAA regulations, what is and is not appropriate, how and when to interact with patients, how physicians collect data from patients, terminology, hierarchy, and differences in thinking styles between clinicians and scientists. Students will not be allowed to begin their rotation if they fail to attend this mandatory meeting.

Student Requirements:

(1) The specific opportunities/requirements of the Graduate Clinical Rotation will differ for each student depending upon the nature of the selected Clinical Rotation. The specific opportunities for Clinical Rotations will be listed by the clinician at the following site <http://psu.neurosciencefaculty.info/forum/index.php>. Students will view this site, consult with his or her thesis mentor, and select a rotation that compliments the student's graduate studies. Each activity will include exposure to the related clinical setting, attendance at relevant Grand Rounds, Resident and Departmental Seminars, and lectures, a practical hands-on analysis of the subject matter (e.g., via an analysis of histology, fMRI, etc.) and consideration of important treatment issues. Students will be required to spend at least 4 hours per week in this setting for at least 6 weeks.

(2) Weekly requirements: In addition to the requirements set forth by the Clinical Mentor, each student will be required to keep a journal describing their clinical activities and experiences. The contents of the journal are considered private and are for the benefit of the student only.

(3) Oral Presentation/Student Evaluation: Students will be evaluated in one 30 min. presentation given to other graduate students in their program regarding the material learned during their Clinical Rotation and its application to translational research. Specifically, students will describe a problem that they have identified in the clinic and their proposal for addressing that problem.

(4) Written Requirement: Students will prepare one NIH-like Background and Significance section and Specific Aims outlining a problem identified in the clinic, the background related to the problem and, in the Specific Aims, the proposed translational solution to address the problem.

(5) Student Evaluation: Students will have the opportunity to evaluate their Clinical Mentor and the specific Clinical Training Activity and students will have the opportunity to evaluate the course.

#### Clinical Mentor's Responsibilities:

(1) The Clinical Mentor must meet with the student at least once every 2 weeks during the rotation.

(2) The Clinical Mentor must be supportive of the student's inclusion as a trainee on the clinical team and should see to it that the student receives good counsel as to how to seek information in a patient care training environment.

(3) The Clinical Mentor will be required to provide a reading list to the student.

(4) The Clinical Mentor is required to attend and evaluate the student's oral presentation.

(5) The Clinical Mentor must evaluate the student's written Background and Significance and Specific Aims.

(6) The Clinical Mentor should provide an "Exit Interview".

**BMS 581** Molecular and Translational Approaches to Human Disease (3) This course teaches students the scientific process used to understand the molecular bases of diseases and the development of novel therapies.

#### **BMS 581 Molecular and Translational Approaches to Human Disease (3)**

The course utilizes clinically relevant diseases as specific examples of applying an integrated approach to elucidate a mechanistic understanding of disease pathophysiology and the development of novel therapies. Over the 15-week period of the course the students study five specific diseases or complications of diseases, each over a 3-week period. The diseases used represent areas of high impact on Western society or ones in which specific principles of mechanistic understanding or therapeutic development are clearly illustrated. The diseases also represent strengths of the research at the Penn State Hershey such as cancer, diabetes, cardiovascular disease, and infection and inflammation. The instructors use primary literature to demonstrate the scientific approach used to test specific hypotheses related to disease mechanism. At the end of the 3-week period, the students use team-based learning to develop experimental approaches to study novel aspects of the disease pathology or therapeutic development.

**BMS 801** Writing Grant Proposals for Biomedical Research (1) This course will give students experience with the preparation of and submission process for grant proposals.

**BMS 801 Writing Grant Proposals for Biomedical Research (1)**

This course provides students with a hands-on learning approach to the process of submitting competitive grant proposals. It will inform students of the types of grants that exist, including training fellowships for which they may be eligible. Students will learn of the many different types of organizations, both public and private, that offer biomedical research funding. A majority of the course will focus on the proposal sections pertaining to the research plan emphasizing the purpose of each section along with strategies to create an effective, successful proposal. The proposal sections to be covered in detail are: specific aims, significance, innovation and approach. In-class discussions and team-based learning activities will be used to highlight the teaching objectives for each session. Using these in-class experiences as a guide, students will apply the key aspects of proposal writing by completing a proposal as part of a grant-writing team. The proposal review process will be discussed and a demonstration of the review process will allow students to understand who reviews proposals and how proposals are reviewed as well as to allow them to participate in the review process. In addition to these writing and review experiences, strategies for the oral presentation and defense of a proposal will be covered. By the end of the course, a student will be able to write an effective grant proposal and have the knowledge of how to present and defend that proposal orally – all skills required for a successful career in the biomedical sciences.

## **Biorenewable Systems (BRS)**

**BRS 402** (E R M 402) Foundations of Sustainable Business (3) Emphasis on understanding business strategies for

enhancing sustainable operations, including issues related to the natural environment and corporate social responsibility.

### **Foundations of Sustainable Business (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2017 Future: Spring 2017

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BRS 411 Biobased Fiber Science (4)** Theoretical and practical aspects of structure-property relationships for biobased industrial fibers, including fiber biological and chemical constitution and fiber-water relationships.

### **BRS 411 Biobased Fiber Science (4)**

This course investigates fundamental aspects of biobased industrial fibers (also known as biofibers), and ties their underlying biological and chemical structure to macroscale properties. Bioproducts are defined as products created from biologically derived, renewable industrial feedstocks (wood, cotton, grasses, and bast fibers including jute, hemp, kenaf, etc.). The course begins with a look at the worldwide production of biofibers, and considers implications relating to sustainability. Elements of underlying biological and chemical structure are then investigated, including an introduction to relevant aspects of polymer science. The interaction of biofibers with water is a practical issue that bears great significance; this is the focus of the last third of the course. Students will learn principles of psychrometrics (water-temperature-environment relationships) including measurement of relative humidity and fiber moisture content. Final course subjects include industrial techniques for drying fibers, energy implications of these processes, and troubleshooting of biofiber industry issues relating to moisture.

**BRS 422 Energy Analysis in Biorenewable Systems (3)** Energy management, energy conversions, renewable energy alternatives, engineering economic analyses, national and international perspectives on energy resources.

### **BRS 422 Energy Analysis in Biorenewable Systems (3)**

This course focuses upon first understanding the various forms of energy in common use today and then analyzing the energy equivalents of various forms of energy. Forms of energy to be studied most extensively include electricity, fossil fuels, and renewable energy sources. Principles and applications of engineering economic analyses will be emphasized because these principles are needed to evaluate the feasibility of converting from one energy form to another. Specific application areas of emphasis include buildings, motors, and lights. For each application area, there will be discussion of the alternatives available for using energy in a more efficient and economical manner.

The infrastructure systems needed for providing electricity and natural gas to a specific location will be described as well as typical rate structures for the energy provided. Alternatives to the conventional energy systems will be identified and the course will conclude with discussion of energy strategies throughout the 21st century. Local, national, and international perspectives on energy resources will be infused throughout this course.

**BRS 428** Electric Power and Instrumentation (3) Principles and application of electric circuits for power distribution, motors, automatic controls, and instrumentation used in agricultural and biorenewable industries.

**BRS 428 Electric Power and Instrumentation (3)**

Nearly every facet of our modern society relies on electricity and electronics. Whether engaged in product development, manufacturing, production, testing, or management, graduates of technical programs benefit from a fundamental understanding of electrical/electronic systems. This course prepares students to analyze electrical/electronic systems applicable to agricultural and biorenewable industries. Upon completion of this course, the student will be able to: demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate sound electrical construction techniques including cable preparation, soldering, circuit board construction, and others; demonstrate sound troubleshooting skills for electrical and electronic systems; understand common elements of power distribution systems; understand simple measurement and control circuits represented by schematics or ladder diagrams; understand and apply various sensors to measure temperature, pressure, strain, force, proximity, speed etc.; understand the application of dataloggers, programmable logic controllers, and computer software to collect data and/or control simple processes; understand the function of common circuit components such as resistors, capacitors, inductors,

diodes, op-amps, transistors, and transformers in simple circuits; understand basic maintenance and safety requirements for facility electrical systems.

**BRS 429W Biorenewable Systems Analysis and Management (3)** Theory of systems thinking; optimization and quantitative techniques for analysis of agricultural production and other biorenewable systems.

### **BRS 429W Biorenewable Systems and Analysis and Management (3)**

BRS 429W is a capstone course for the BioRenewable Systems major. The course covers systems analysis and optimization techniques including an introduction to systems theory, qualitative and quantitative analysis, linear programming, waiting line models, PERT/CPM, minimal spanning tree, calculus methods, simulation modeling for decision making, inventory, and energy audits. All topics are presented in the form of case studies that require the students to solve problems in realistic production and processing scenarios. The course also provides a writing-intensive structure. The course targets BRS students in their last semester because it integrates knowledge and experiences acquired in prior BRS, business, and agricultural science courses.

## **Business (BUS)**

**BUS 500** Negotiation, Communication, Teamwork (2) Experience-based learning approach to developing effective teams and work organizations; emphasis on developing reflective thinking and interpersonal skill sets.

**BUS 500 Negotiation, Communication, Teamwork (2)**

This course provides students with an enhanced understanding of their own behavior, the behavior of others, and the capability to deal more effectively with people and groups in organizations. Primary emphasis is placed upon application of experiential learning theory in developing the ability to perform well as a member of a team, and also in facilitating team effectiveness. As adult learners, students are empowered to become active creators of their own learning, and working with the faculty member responsible for the course, to develop skill sets and competencies in analyzing ethical issues, negotiation and communication skills, and developing leadership responses to these issues.

This course provides the skill sets and competencies underpinning the collaborative learning model used throughout the MBA program. It is intended to be taken by students who have not taken a similar course either as part of their undergraduate programs, or as graduate work. Where required, this course must be among the first 6 credits taken in the MBA program.

A combination of individual and team assignments, consistent with expectations for 500-level courses forms the basis for evaluation. There will be no formal in-class exams. However, in addition to participation in group discussions and projects (40% of the grade), and short summary papers at the completion of each chapter (20% of the grade), four short (minimum five page, typed, double spaced) papers will be required (40% of the grade). These papers will consist of an analysis and summary of the student's experiences in, and possibly, out of class, in attempts to apply theories of behavior being studied at the time. The last paper in the series will be a summary by the student of his/her interpersonal strengths

and weakness, and an action plan to improve the areas of weakness.

**BUS 502** Business Research Applications (3) Critical evaluative techniques of business research.

**BUS 502 Business Research Applications (3)**

The goals of this course are to: 1) expose students to business research and information retrieval, 2) teach students how to critically evaluate pertinent information, 3) improve student ability to work collaboratively, 4) teach students how to use technology to present research findings, and 5) improve writing skills.

Student performance will be evaluated by means of written reports and presentations, primarily team based, and written examinations. Faculty: Janet Greenlee, Stephen Schappe, Gayle Yaverbaum, and Mukund Kulkarni

**BUS 510** Business Analytics and Decision Modeling (3) Methods for solving problems that include both time evolution and uncertainty. Focus on regression analysis, simulation and advanced data analytics.

**BUS 510 Business Analytics and Decision Modeling (3)**

This course discusses concepts and tools to make informed managerial decisions through interpretation and analysis of data. The aim is to (1) familiarize students with the concepts of data interpretation; (2) provide students with language, insights, and tools used to analyze data and model operations; (3) provide students with the opportunity to use these

tools, to understand their various applications, and to interpret analyses done by others.

The course will focus on regression analysis, non-linear regression analysis, mathematical and simulation modeling, and advanced data analysis techniques.

When students successfully complete this course, they will be able to demonstrate use of analytical tools for modeling and optimizing business decisions and also analyze the results.

**BUS 515 Business Ethics, Governance and Law (3)** Legal aspects of managing for-profit corporations including (i) corporate governance, (ii) ethical decision-making, and (iii) public policy and legislation regarding business decisions.

### **BUS 515 Business Ethics and Corporate Governance (3)**

BUS 515—Business Ethics, Governance, and Law—covers a wide range of important topics regarding how firms are governed. The first part of the course grounds students in the inner workings of corporate boards of directors (BODs). Topics in this section include:

- The need for governance and BODs;
- The types of people that sit on publicly traded BODs;
- The role of committees within BODs;
- The voting process in corporations;
- The types of decisions that BODs are involved in; and
- The role of shareholders and activist investors.

The course then delves into the setting and execution of ethics policy within firms, often either initiated or approved by the BOD. Students read a number of "Codes of Conduct" from firms that they are familiar with (i.e. Dell, Apple, etc) and then perform research that allows them to see if the firms match their actions with their words. Analysis is done through measuring the negative externalities that flow from certain decisions. Specific topics in the ethics section include:

- The larger purpose of corporations in society;
- Corporate political activity;
- Decision-making and anti-trust violations; and
- Bankruptcy filing and a BOD's ethical and fiduciary duty to shareholders.

Finally, the course considers general business law that managers must be cognizant of during the decision –making process. Topics include:

- Federalism in the U.S.: The difference between state and federal law;
- Incorporation and Bylaws;
- Criminal vs. Civil Law; and
- Consumers and the Law.

**BUS 580 Business and Sustainability (3)** An inter-disciplinary and global perspective on the business case for social responsibility, environmental stewardship, and transparency in corporate governance.

### **BUS 580 Business and Sustainability (3)**

This course provides an overview of principles and practices from the natural and social sciences, arts, humanities, and professional disciplines that contribute to understanding and responding to increasing concerns over the consequences of world population growth (now in excess of eight billion people), climate change, energy, natural resource use, environmental degradation, and calls for a more fair distribution of limited and diminishing resources. Issues of corporate

sustainability and social responsibility are examined particularly as they pertain to the development and application of business strategy and practices that build social equity, and restore environmental quality while maintaining long-term profitability and enhanced competitive advantage. While the concept of sustainability has existed for some time, it is relatively recently that managers have started to explore its applications to organizations and managerial behavior beyond the basic ideas of corporate social responsibility and recycling. This course moves beyond these basic ideas to place sustainability in its historical and conceptual context by examining the history and definitions of sustainability in organizational management, the role of current drivers and stakeholders, and the advantages and disadvantages of various frameworks and methods for integrating and managing sustainability within organizations, and in their environments. Selected examples of contemporary research and organizational cases will be analyzed to gain a sense of effective and ineffective approaches to sustainability, as well as addressing issues of standards, measurement, and transparent reporting.

**BUS 589 Strategic Venture Planning and Innovation (2)** Development and presentation of a venture plan including product development; market research; competitive analysis; financing and capitalization; organizational structure.

**BUS 589 Strategic Venture Planning and Innovation (2)**

The purpose of BUS 589 is to have the business student apply strategic management theories and practices acquired in BUS 588 to a specific, practical project in order to further the understanding of the process of creating and managing a strategy based on innovation (an entrepreneur strategy). This course is a direct extension of BUS 588 and should be taken immediately following it. The process of innovation is analyzed in detail together with the influences on it. The effects of various contexts on entrepreneurial strategy will be considered. Finally, issues related to the implementation and management of a strategy based on innovation will be discussed.

Students are required to develop a comprehensive new venture plan for an actual business organization to demonstrate knowledge of organizational design from a strategic perspective. Students will have to apply management, marketing, finance, information systems, and accounting knowledge in the new venture proposal. They must also demonstrate their knowledge of the influence of external (environmental) contexts on strategy formulation and implementation through the use of appropriate analytic frameworks. Finally, they must demonstrate a grasp of what constitutes competitive advantage within the strategic context that they have chosen for their project.

## **Business Admin (B ADM)**

**B ADM 500** Business, Government, and Society (3) Overview and analysis of ethical, legal, political, technological, and societal impacts on business.

### **B ADM 500 The Business Enterprise (3)**

The Business Enterprise course is designed as an interdisciplinary introduction to business and basic business processes using problem-based and collaborative learning approaches. A key objective is to introduce students to basic concepts and models that will enable them to formulate and answer important questions applicable to any business. The course will require students working in interdisciplinary teams of 4-5 to write multi-disciplinary business/operating plan for a new product or service as a final integrative project. Students in the MFGSE graduate program will be required to write a plan for a manufacturing business. Students completing an MBA degree may write a plan for a manufacturing or service

business or a non-profit organization. To the extent possible, teams will be comprised of individuals with different academic and industry backgrounds.

Business/operating plans will address all of the functional areas of business introduced throughout the course and require students to integrate them into a coherent plan. The final plans will be presented for critical review to the class, interested faculty, and an appropriate group of business professionals.

The role of the instructor in this course is to facilitate student inquiry by helping students formulate questions that must be answered and by directing students to information resources appropriate to answering their questions. It is anticipated that the instructor will call upon other faculty and members of the business community to provide functional expertise to student teams as needed.

**B ADM 513 Quantitative Methods for Business (3)**

This course is designed to provide a systematic understanding of design, operation and control of business processes that transform inputs into outputs. The course encompasses both manufacturing and services. The focus is managerial decision-making with an emphasis on quantitative methods of analysis. Topics include operations planning and strategy, systems design, inventory management, capacity and materials planning, JIT and lean operations, quality control and management, scheduling, and project management. Quantitative methods include linear programming, decision analysis, inventory models, forecasting, simulation and queuing models.

**B ADM 514 Strategic Planning and Business Policy (3)** Formulation of objectives and the implementation of programs to promote long- range success of the organization in a changing environment.

**B ADM 514 Strategic Planning and Business Policy (3)**

Drawing from concepts in competitive strategy, organizational economics, financial economics, and industrial organization, this course will describe the skills that managers must command to create economic value through firm strategy. These skills include the ability to apply analytical tools to assess industry structure and competitors' strategies, the ability to assess the optimal scope and boundaries of the firm, and the ability to design administrative structures, systems, and processes that facilitate the development and deployment of corporate resources. Even though the course incorporates various theoretical perspectives, it ultimately is designed to focus on the essential issues and problems of competitive strategy as experienced by managers.

**B ADM 526** Leadership and Ethics (3) A multiperspective review of leadership theory and research with special emphasis given to the ethical dimensions of leadership.

**B ADM 526 Leadership and Ethics (3)**

The objectives of this course are to: a) increase moral awareness of ethical issues in organizations, b) consider the interrelationships between organizations and their stakeholders, c) analyze the ethical impacts of managerial decision-making, d) understand how to manage the ethical performance of people and organizations, e) develop an understanding of the ethical dimensions of leadership theory and research, f) explore the relationship between the concepts of leadership effectiveness and ethical leadership.

Ethical conduct is an important issue for managers in all functional areas of business organizations. Long-term "success" in business depends not only on mastery of the immediate technical environment and competitive domain, but also consideration of and attention to the broader social and ethical environments in which all organizations and institutions are embedded. Leaders have an important role to play in managing the financial and ethical performance of individuals and organizations. Even though leadership is one of the most researched topics in management, most reviews of the leadership literature rarely mention the ethical dimensions of leadership. Understanding what ethical leadership is and why it is important can provide a more comprehensive view of what it means to be an effective leader.

**B ADM 553 Consumer Behavior (3)**

The purpose of this course is to acquaint students with the field of consumer behavior and its major concepts, research techniques, and research findings. Students will be exposed to individual and psychological factors, as well as the social and cultural factors that influence consumer behavior. There will be a group project focusing on the development of a new product concept for a specific target market. Throughout the course students will be exposed to how firms utilize consumer behavior research to develop marketing strategies. Consumer behavior is presented as an actionable and strategic discipline. A deliberate attempt will be made throughout the course to tie consumer behavior concepts with "real world" illustrations. Case analysis and experiential exercises will be relied on to help accomplish this objective.

**BUSAD 511** New Ventures 1 (3) Introduction to the issues involved in the development of new ventures within existing business organizations or from start-up.

**BUSAD 511 New Ventures 1 (3)**

This course deals with the process of finding, evaluating and developing new ventures, from both the perspective of the start-up as well as the larger existing organization, which has different opportunities, resources and barriers. Students will develop an appreciation of the many legal, financial, operational, HR, and technical challenges posed by venturing.

Course activities include discussion of readings, case analyses, developing components of business plans, and teamwork. These activities encourage students to develop the critical thinking, communication and managerial skills necessary to further their understanding of corporate venturing.

This course prepares students for future coursework in the New Ventures and Entrepreneurial Studies Option within the MBA program. It is also relevant to students engaged in the general MBA program who are involved in new product development and R&D. This course is followed by New Ventures 2, which provides an in-depth view of the legal and financial issues facing managers of new ventures.

The course is a graduate elective primarily for MBA students and could also be taken by MSIS students. It is intended to be the introductory course in the New Ventures and Entrepreneurial Studies option within the MBA program.

General Education: None

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BUSAD 515** Acquiring the Existing Enterprise (3) The process of acquiring an existing company as an alternative to starting a new venture is explored.

**BUSAD 515 Acquiring the Existing Enterprise (3)**

The focus of this course is on the methods and strategies required to successfully acquire an existing enterprise as opposed to building one from scratch.

Most prospective entrepreneurs think of a start-up as the path toward becoming an entrepreneur. However, the time required to develop products and services and to build sales to a profitable level is long, and the failure rate for new organizations is high. Existing organizations have the advantage of already having products, customers, suppliers, and employees. Also, financing the purchase of an existing company is easier than financing a start-up. This may be a better path into a new venture for many people. Since it is a different process than a start-up, a separate course is required to provide adequate coverage of the topic.

Evaluation will be on case study analyses, exams, and a written and oral report on the legal and financial aspects of new venture.

Designed especially for students taking the New Ventures and Entrepreneurial Studies option within the MBA program. This course builds on the work in New Ventures 1, which is required for all New Ventures majors.

This will be an elective course for students taking the New Ventures option in the MBA program. It would also be an elective for students in the general MBA program and the MSIS (Info Science) program who have an entrepreneurial orientation.

**BUSAD 519 (LEAD 519) Developing Creative High Performance Organizations (3)** This course focuses on how to create high performing organizations based on models provided by business, science and the arts.

**BUSAD (LEAD) 519 Developing Creative High Performance Organizations (3)**

Overview:

This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development.

Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements.

The way the course will run:

This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor's. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and on-line chats. We will have invited speakers for the class representing the arts, music, science and business.

**BUSAD 522 New Ventures 2 (3)** Examines the financial and legal issues that are critical in the formation, development, and management of new ventures.

**BUSAD 522 New Ventures 2 (3)**

The focus of the course is on the methods of funding and cash flow management for the new enterprise, as well as the underlying legal issues that impact new ventures.

Evaluation will be on case study analyses, exams, and a written and oral report on the legal and financial aspects of new venture.

All students in the MBA program are required to take an introductory finance course. This course builds on that foundation and introduces the various legal issues that are critical to new venture development. Designed especially for students taking the New Ventures and Entrepreneurial Studies option within the MBA program. This course builds on the work in Entrepreneurship or New Ventures 1, which are required for all New Ventures majors.

This will be an elective course for students taking the New Ventures option in the MBA program. Students in the other options would not usually take this course. However, they could take it as an elective, since it has little overlap with the required courses in the business option. It would also be an elective for students in the MSIS (Info Science) program who have an entrepreneurial orientation.

### **BUSAD 530. Biotechnology and Health Industry Overview (3)**

BUSAD 530 explores current issues and trends in the biotechnology, pharmaceutical, and health industry. The classic cost, quality, and access paradigm is applied from the perspective of multiple stakeholders. Organization, financing, policy, regulatory, and ethical problems and issues are emphasized. Teaching methods include video and didactic presentations, small group and class discussions, guest lectures by industry executives, and case study analysis. Student evaluation methods will include individual and team projects, presentations, and papers. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies' MBA program and is a required course in the Penn State Great Valley MBA program option in biotechnology and health industry management.

**BUSAD 545 Negotiation Strategies (3)** This course covers strategies and tactics for understanding conflicts, for negotiating effectively, and for dealing successfully with power in organizations.

**BUSAD 545 Negotiation Strategies (3)**

Although situations involving international incidents, corporate acquisitions, or national collective bargaining contracts demonstrate the dramatic effects of the need for negotiation, it is something that most people do every day. Negotiation is not a process reserved for skilled diplomats, top salespeople, or leaders of labor unions. The structure and processes of negotiation at the interpersonal level are fundamentally the same as at the corporate or international level. For this reason, knowledge about and skill in negotiating is essential to anyone who works with and through other people to accomplish objectives. It is part of the normal "give and take" of any business situation, such as negotiating salaries, arranging deals with vendors, or allocating resources for a project. Unfortunately the ability to simply recognize conflict and the need for bargaining does not insure successful negotiating situations. Negotiation is a complex human activity, involving a dynamic interpersonal process. The skilled negotiator possesses a number of skills including: the intellectual ability to understand the key facts that shape and characterize different negotiation situations; the skills to diagnose problems and select appropriate strategies and approaches to address them; and the understanding of one's own personality and value system, which affect the perception of a situation and the choice of tactics and strategy. Negotiation is a learnable process. In this course students will learn how to recognize and resolve conflict through bargaining, what the bargaining process involves, and how to plan and carry out a successful negotiation.

**BUSAD 551 Business, Ethics, and Society (2-3)** The course focuses upon the exploration and analysis of the ethical, political, technological, social, legal and regulatory environments of business.

### **BUSAD 551 Business, Ethics, and Society (2-3)**

Students will explore and analyze the challenging issues that lie at the intersection of business, government, and society through a lens of business ethics. Topics covered include the importance of ethics in the business decision process and the types of ethical issues business practitioners face in the business environment; consequentialist and nonconsequentialist ethics principles and their application to business decision-making; the role of personal and organizational values in business decision-making and the impact that organizational culture has on the ethical dimension of decision making. Students will evaluate and analyze the ethical dimension of decision-making; become familiar with the stakeholder concept and utilize it in the business decision-making process; identify the constraints societal values place upon the firm; examine the role government plays in the marketplace; explore the social and ethical dilemmas that arise from the globalization of business; and understand and explain the process through which corporations attempt to influence societal and government institutions.

**BUSAD 555 (LEAD 555) Full Range Leadership Development (3)** Development of behavioral skills associated with outstanding leadership of individuals, teams, and organizations through advanced information technology, experimental exercises, and case analysis.

### **BUSAD (LEAD) 555 Full Range Leadership Development (3)**

Leadership is one of the world's oldest preoccupations. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased globalization, diversity, restructuring, e-business and innovation in today's business environment, finding answers to this question is important for maintaining organizational competitiveness.

The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance.

The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lectures, case discussions, exercises and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students' organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

**BUSAD 558 Knowledge Management (3)** This course examines the strategic value of knowledge and how organizations can manage their knowledge assets for competitive advantage.

### **BUSAD 558 Knowledge Management (3)**

This course is designed to explore the topic of knowledge management (KM), which differs from information management in critical ways. Knowledge pertains to the subset of all information that embodies experience, experimentation, organizational learning, best practices, and techno-scientific knowledge. Knowledge thus differentiates average firms from great ones; e.g., Google vs Alta Vista. KM is now on the short list of strategic objectives for firms large and small. Future managers thus need to better understand the issues and challenges posed by knowledge management.

Students taking the course will learn about KM as a human social process as is evident in Communities of Practice. We will examine the processes of knowledge creation, acquisition, retention and utilization. To understand how knowledge-based systems and practices are implemented in the "real world" (e.g., Merck, Lockheed Martin, Vanguard) we will review various case examples that highlight the unique problems posed by KM to business organizations. Experts from industry will be invited to speak to the class and students are invited to attend the Knowledge Management Group of Philadelphia ( [www.kmgphila.org](http://www.kmgphila.org)) meetings that meet once a month.

The course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor's. We will learn about each of the topics noted above through a variety of means. Our interaction will include general group discussions, lectures, case discussions, exercises, small group meetings, and on-line chats.

**BUSAD 577** Management of Information Technology (3) This course focuses upon the challenges of aligning IT strategy with organizational goals.

**BUSAD 577 Management of Information Technology (3)**

This course identifies the challenges facing managers of information technology resources and addresses the methods of managing them. These resources include hardware, software, networking, data, information, and personnel. The course takes the approach of high-level management of what has become an important strategic resource in almost every organization. Therefore, it focuses on strategies rather than project management of individual efforts. The course focuses on decision making at the level of chief information officers and their immediate underlings. Its premise is that to succeed, an organization must align its IT strategy with the general organizational and business goals.

**BUSAD 578** Managing Business Processes (3) Develop and evaluate process models, performance metrics, and information flow to facilitate cross-functional business processes for 21st century organizations.

**BUSAD 578 Managing Business Processes (3)**

Twenty-first century executives cross-functional business processes rather than managing their organizations as independent functional silos. Consequently, the ability to design and implement process oriented organizations has considerably evolved over the past decades. More importantly, initiatives related to Service Oriented Architectures (SOA) and Business Process Management (BPM) systems are predicated on the existence of well-designed business processes. However, the task of designing processes has become harder due to the disappearance of boundaries both within and across enterprises. Managing Business Processes provides students with an understanding of the key aspects of business processes such as collaboration, information flow, people, and business rules. The main objective is to provide an overview of various techniques and tools for analyzing, improving, and implementing business processes and information system controls. The course will utilize cases, process modeling methodologies, and simulations to strengthen the students' understanding of business processes and their contribution to business performance.

**BUSAD 581** Venture Strategy, Planning and Development (3) This is the capstone course in the New Ventures option of the MBA program. Students develop a strategic or operational plan for a new venture.

**BUSAD 581 Venture Strategy, Planning and Development (3)**

The purpose of the New Venture option in the MBA program is to prepare students to develop and start their own entrepreneurial ventures or to prepare them to head new ventures in their existing organizations. This course allows them to integrate the material they have learned in the MBA program and the New Venture option, which can lead to the development of a venture.

Evaluation will be on participation in discussion of cases and contributions to fellow classmates. The major weight for evaluation will be on the project. Students with strong papers will be encouraged to apply for funding for their proposals via grants, internal budgets or competitions.

This is the capstone course in the New Ventures option. It will typically be the final course taken, although it is possible that, because of scheduling limitations, one or two courses may be taken after this one, since it will not be offered every semester. It integrates the material from many of the New Venture courses into the final product. It could also be taken as an elective by information science and other students who have taken at least one New Venture course.

**BUSAD 582 (LEAD 582) Social Entrepreneurship and Community Leadership (3)** This course will provide an opportunity for students to explore concepts of developing and leading businesses that create social value.

**BUSAD (LEAD) 582BUSAD (LEAD) 582 Social Entrepreneurship and Community Leadership (3)**

This course uses entrepreneurial and leadership skills to craft innovative responses to social needs. Entrepreneurs are particularly good at recognizing opportunities, exploring innovative approaches, mobilizing resources, managing risks, and building viable, sustainable enterprises. Entrepreneurial skills are just as valuable in the social sector as they are in business. Social Entrepreneurship aims at social impact but does not exclude economic wealth creation. Therefore it is not limited to the non-profit sector. Despite a sustained economic boom in this country, numerous social problems remain and some seem to be getting worse. The course will focus on introducing business leadership and entrepreneurship principles to both profit and non-profit organizations whose products and services are designed to create social value.

**BUSAD 583 Future of the Biotechnology and Health Industry: Strategic Implications (3)** Strategy in biotechnology, pharmaceutical, and health industries; impact of technological innovation and economic, social, political trends, and events.

**BUSAD 583. Future of the Biotechnology and Health Industry: Strategic Implications (3)**

BUSAD 583 explores and analyzes future trends in the biotechnology, pharmaceutical, and health industries. An analysis of trends in technology, administration and control, advances in research methods, emerging products and services, and preparing for the future will be undertaken. The strategic management impact of these trends will be explored from the perspective of suppliers of goods and services, professional care providers, payors and governmental and regulatory activities. Teaching methods include facilitator led didactic presentations, class discussions/classroom exercises, small group activities centered on case studies, team project/group presentations, and papers. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies' MBA program and is a required course in the Penn State Great Valley MBA program option in biotechnology and health industry management.

**BUSAD 585 Research in Security Valuation (3)** Analysis and valuation of equity investments.

**BUSAD 585 Research in Security Valuation (3)**

BUSAD 585 focuses on the analysis and valuation of a firm's equity securities in the financial market using a fundamental analysis. Students will learn how to use different valuation techniques for different types of companies (e.g., companies in financial distress/bankruptcy, private companies, start-up companies with no earnings). The course integrates topics discussed in various finance courses to help students to develop their analytical ability to identify strategies that enhance value creation. The philosophical basis for this topical integration is that valuation of a firm's securities requires one to know not only the accounting issues involved in the preparation of financial statements and how to analyze financial statements, but also to understand the impact of monetary policy, the operation and regulation of financial markets on the value of the firm's equity securities. Moreover, because firm value depends on how well the company is managed, a good understanding of its operations in the global markets, its internal control and risk management strategy is also essential. Finally, because valuation is also based on quantitative models, knowledge of quantitative methods is paramount.

**BUSAD 802** Cornerstone of Sustainability (3) In-depth exploration of the social, environmental, and organizational sustainability challenges facing business leaders in the 21st Century.

**BUSAD 802 Cornerstones of Sustainability (3)**

BUSAD 802 provides students with an overview of the social, environmental, and organizational sustainability challenges facing 21st Century business leaders. The course seeks to develop students' critical capacities for reflection and action based upon a systems thinking framework. Topics to be explored include the history of the sustainability movement, an overview of pressing environmental and social issues, and alternative perspectives on the local and global economy. The course addresses local and global issues surrounding sustainable management and reviews the major frameworks of sustainability that provide the scientific foundations and economic principles of how sustainability can help organizational leaders to achieve natural competitive advantage. Students will apply theoretical and practitioner frameworks to real world cases.

**BUSAD 835 Commercialization of Biopharmaceuticals (3)** Review organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceuticals in the United States and globally.

### **BUSAD 835 Commercialization of Biopharmaceuticals (3)**

This course reviews organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceutical products in the United States and globally. Business development strategies and tactics that encourage innovation and enable biopharmaceutical organizations to prosper in changing business environments are emphasized. The regulatory environment globally and nationally is reviewed for its impact on biopharmaceutical discovery and commercialization, including the IND (investigational new drug) and NDA (new drug application) process and quality control/assurance. Organizational dynamics including culture, structure, ethical dimensions of management, and special considerations in global marketing are explored. Marketing and brand management, financial forecasting, and structuring sales and marketing are examined for their impact on successful commercialization of biopharmaceutical products.

### **BUSAD 879 Sustainable Supply Chain Management (3)**

BUSAD879 provides students a set of tools and skills to identify, evaluate, and improve the sustainability of manufacturing and supply chain operations. This course enables students to understand the core concepts related to both supply chain and sustainability. After taking this course, students will be able to design sustainable manufacturing, transportation and supply chain operations. The emphasis in this course is on the design and operations of supply chains to minimize their environmental footprint. Students will also learn how to evaluate suppliers' sustainability to assign purchasing contracts to minimize the environmental impact. Other important concepts such as product remanufactureability design and techniques to reduce energy usage and raw materials will also be discussed.

## **Business Administration (B A)**

**B A 411 Analyzing Business and Industry (3)** Prepares students to obtain an enterprise-wide view of business and industry by integrating operational and financial decisions in a team and learning environment.

### **B A 411 Analyzing Business and Industry (3)**

The course provides the students with a methodology for analyzing the business, introduces the students to sources of financial information available from private and public sources and trains the student to prepare and professionally present business analysis reports. The course, which adopts a user perspective, extends the students' basic knowledge of financial reporting and provides them with a broader context for understanding business that includes economic and social forces, the regulatory environment of businesses and their financial reporting, capital market operations and corporate governance. It applies concepts and decision tools that are studied throughout the curriculum such as present value, financial ratio analysis, break-even point analysis and statistical analysis.

**B A 420 Preparation for Career Management (1)** This course emphasizes effective career planning by closely examining oneself, the business world, communication styles and strategies.

**B A 420 Preparation for Career Management (1)**

BA 420 develops students' career preparation and management skills through the close examination of self, the world of work and communication styles and strategies. This course is one of a series in the program which collectively develop the skills and competencies necessary for the business administration student.

The course is designed on the belief that (1) career decision-making is greatly enhanced by considering personal traits such as one's interests, values, goals, and approach to making decisions; and (2) through the exploration of self and world through out-of-classroom learning experiences. The student becomes empowered to apply prior classroom learning outside of the academic environment. These skills are utilized throughout a person's career

Students who successfully complete the course will be able to:

- Prepare resumes targeted to a range of industries and positions.
- Write effectively to prospective employers.
- Identify personal traits and qualities in the context of career management.
- Demonstrate effective interview techniques.

**B A 421 Project Management (3)** Introduction to Project Management covering all phases of a project including proposal development, planning, execution, and closing.

**B A 421 Project Management (3)**

BA 421 is designed to provide the fundamental skills necessary for success in the business environment. BA 421 is one of a series of courses that collectively develop the the skills and competencies necessary for business administration students.

BA 421 is designed to provide students with the fundamental understanding of the Project Management Book of Knowledge that defines the standards of the Project Management Institute (PMI) which is the professional credentialing body of the discipline. This introductory course in project management covers all phases of a project, including; proposal development, planning, execution and closing.

The course will also explore the application of the Theory of Constraints to project management, and will use project management software to demonstrate and reinforce class concepts. The software will also be instrumental in the execution of a business project.

By the end of the proposed new course, students should be able to:

- Identify the role of the project manager within organizations and projects.
- Understand the Processes and Procedures needed to Plan and Control a Project.
- Recognize the options available as well as the inherent strengths and weaknesses of different approaches.
- Define the project scope and priorities.
- Create Work Breakdown Structure (WBS) and integrate it with the organization.
- Estimate and interpret project times and costs.
- Construct project networks and find critical paths.
- Understand and Implement Activity Precedence Logic
- Identify, assess and respond to project risks.
- Schedule project resources and evaluate resource constrained projects.
- Differentiate between the options to accelerate project completion.
- Use Microsoft Project Management Software as a skilled tool for Project Management.

**B A 422W Strategic Business Planning (3)** Study of strategic planning and implementation in multi-industry, multi-cultural, and multi-national settings with emphasis on sustaining competitive advantages.

### **B A 422W Strategic Business Planning (3)**

BA 422W is the capstone of the series of business administration courses in the BSB degree. These courses collectively develop the the skills and competencies necessary for the business administration student.

BA 422W is designed for students to examine the discipline of strategic management and to develop an appreciation of the criticality of strategic management in guiding a business entity through a changing and challenging environment. The course requires students to build upon their knowledge of business structure, internal and external environments, and functional design as each relates to strategy development and implementation. Students explore methods and techniques to identify strategies best suited to accomplish an entity's mission and its business objectives.

As a writing intensive (W) course, there is a strong emphasis on development and reinforcement of effective writing skills. Students prepare well reasoned, organized, and constructed bodies of work.

Upon successful completion of the course, students will be able to:

1. Identify environmental threats and opportunities impacting a firm.
2. Identify strengths, weaknesses and competencies of a firm.
3. Effectively apply critical thinking skills to design strategic alternatives and then recommend the best alternative.
4. Critique and evaluate strategic actions taken by firms.
5. Explain the profound effects that a strategic move (either at the corporate level or at the business level) can have on the entire organization.
6. Demonstrate exceptional skills in presenting complex business information and issues.
7. Efficiently research a firm or industry using a variety of sources.
8. Demonstrate proficiency in analyzing business cases and formulating well reasoned recommendations when no "right" answer exists.
9. Demonstrate effective leadership skills in a group environment.

**B A 441 Strategies for Enterprise Sustainability (3)** An understanding and analysis of how environmental and sustainability issues are impacting business strategies and ultimately profits.

### **B A 441 Strategies for Enterprise Sustainability (3)**

Enterprise globalization warrants a greater level of awareness and responsibility in seeing that products and services maintain a high level of integrity, quality, and reliability; products need to be produced and moved throughout the supply chain in a manner that does not cause unacceptable environmental or social burdens, but that also allows for acceptable profits. We will examine both external and internal forces, such as environmental groups, policy-makers, and consumers that impact business strategies. This will be put into the context of the "triple bottom line" with an understanding of its challenges and opportunities. Business students will benefit by a better understanding of environmental/sustainability issues that impact operations and strategies. Students will learn via analyses of cases studies and by working in teams to solve real-world problems faced by chosen organizations. Focus will include all key aspects of an enterprise, from procurement to product development, and from human resources to supply chain solutions.

**B A 442 Sustainable Behavior of Consumers, Firms, and Societies (3)** Strategies to influence sustainable behavior considering consumer response and marketing communications.

**B A 442 Sustainability Behavior of Consumers, Firms, and Societies (3)**

Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

**B A 495A Business Internship (3-6 per semester/maximum of 6)** Guided professional practicum in business consisting of 3 or 6 credits of supervised fieldwork in business.

**B A 495A Business Internship (3-6 per semester/maximum of 6)**

B A 495A facilitates the application of students' prior classroom learning in a field setting. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student.

The course is designed to provide students with a firsthand opportunity to experience the challenges and rewards of the business professional. Essentially, an internship bridges the gap between the academic environment and the professional environment. Internships provide an opportunity for students to link theory with practice in a nonacademic setting. Internships provide practical, real-world experiences which cannot be simulated in the classroom.

Upon successful completion of an internship, students will:

- Have a better understanding of employer expectations related to career advancement.
- Have an enhanced strategic view of the industry/business segment in which they worked.
- Have experience integrating and using their knowledge and skills from the classroom.
- Have increased awareness of professional and technical areas of strengths and weakness.

**B A 495B Undergraduate Research in Business (3-6 per semester/maximum of 6)**

BA 495B provides students an opportunity to apply prior coursework to address a business problem or research question in far greater depth than a traditional research paper. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student.

The course provides the students with an opportunity to work intensively on a research project of extended duration and depth of analysis with a supervising faculty member. This course introduces the students to conducting business research on a more advanced level. Students will have the opportunity to develop the research question(s), read extensively in the academic literature, gather and analyze data, and thereby extend learning from prior coursework in a research setting.

**B A 495C Undergraduate Research in Business (3-9)** Guided student research in business administration; application of analytical or research techniques to business problems.

**B A 495C. Undergraduate Research in Business (3-9)**

This course is a senior-level project activity that is intended to build upon all of a student's previous coursework in business, links the theoretical with day-to-day practical applications, and represents the single largest event in the Bachelor of Science in Business (BSB) program. This course is where the student will design a research project in which they have a particular interest and under the supervision of a faculty member will carry out data collection and analysis, prepare a comprehensive paper, and give a presentation of their work. Research as defined for this course means original research of actual business situations or phenomena, the findings, or results of which may be of value to others.

As with many of the other courses within the BSB curriculum, this course further reinforces the development of writing and presentation skills, but also builds upon the competencies attained in project management whereby the student rather than the instructor drives the time schedule and must coordinate their own unique set of resources, including scheduling time as needed with the supervising instructor.

This is one of the five signature BSB courses (B A 321, B A 322, B A 421, B A 495A, B, or C and B A 422W) and should be taken as close as possible to the end of the course of study. It is recommended that B A 495C be taken concurrently with A 422W, the capstone course for the BSB degree.

**B A 502** Competencies for Converging Economies: Teams, Negotiations, and Ethical Leadership (2)

B A 502 provides students with some basic knowledge about predictable team dynamics and how to constructively deal with issues that arise in the first year MBA teams. The course focuses on observation, diagnosis, and intervention skills for developing effective teams. Topics include diagnosing group dynamics, giving and receiving feedback to teammates, cross-cultural communication and conflict management techniques. The course provides a real-time practicum for diagnosing team issues and addressing team problems and conflicts. Students apply team process concepts and techniques as they work to complete team projects in their other core MBA classes. Students leave the course with an understanding of how to successfully lead a team and how to diagnose and correct dysfunctional team behaviors.

**B A 505 Negotiation Theory and Skills (1-3)** Development of managerial skills for distributive and integrative negotiations at the two-party and team levels.

#### **B A 505 Negotiation Theory and Skills (1)**

The ability to effectively negotiate is an essential skill for managers. Negotiations not only occur with customers or clients, but also between bosses and subordinates, among teammates and across departments. Being able to craft a successful deal, especially in difficult circumstances, requires knowledge of yourself, as well as the substantive material that you are negotiating. Effective negotiators know their own limitations as well as their strengths. They also listen well and have good analytical skills. And, they can craft agreements that garner gains for themselves as well as for others if such gains are possible. Successful negotiating is also closely allied with successful teamwork since both processes require listening, persuasion and influence skills and creativity.

This course will introduce students to the difference between traditional (distributive) bargaining and interest-based (or integrative) negotiations. Students will learn the rudiments of interest-based negotiating and practice it in several negotiation simulations. They will learn how to identify their own and others' interests, to create and claim value and to craft constructive agreements for all parties. The course will concentrate on two person and small group negotiations as well as to deal with difficult opponents.

**B A 536 Global Immersion (1-3)** Exploration of the opportunities and the challenges of doing business in another economic region.

**B A 536 Global Immersion (2)**

Global Immersion is designed around a visit to another economic region. In the past, MBA students have visited such countries as Belgium, Brazil, Chile, China, Czech Republic, France, Ireland, Turkey, and Singapore. In each country, students visit both local and multinational businesses to understand how a business gets established and run in another country; students also meet with industry and government officials to get their perspectives on the economic policies of the country. Each Immersion is coordinated by a faculty leader who plans the visit so as to appeal to a wide range of student interests.

**B A 571 Strategic Management for Converging Economies (3)**

This course introduces students to the field of strategic management and the skills and tools used by general managers to make strategic decisions. Students learn to use frameworks and perspectives for analyzing industries, competitors, and companies with an overall objective of positioning the firm to attain and sustain competitive advantage. Students learn how to identify the industry and firm-level determinants of profitability and then relate those factors to the development of competitive strategy within the context of responsible business practice. Students also learn how to evaluate strategies to understand how and why companies are successful or not. Finally, students will learn how senior managers use integrative approaches for solving strategic problems.

**B A 575** Capstone Business Case (4) A team-based project course that requires students to analyze an actual business problem from a firm or nonprofit organization.

**B A 575 Capstone Business Case (4)**

The Capstone Business Case course is designed to allow second-year MBA students the chance to integrate the knowledge they have gained to date in the program. True business problems are not narrow, functional area problems; rather they require teams of people to come together to jointly solve a problem that extends across many areas. For example, to assess the commercial viability for a new product requires contributions from economics, marketing, supply chain, finance, strategy, and corporate innovation. The more opportunities students have to work on real cross-functional problems, the better prepared they will be to solve them once they are actually on the job. In addition, working on a team and having to present the results gives students the ability to practice communication, teamwork, and leadership skills that are vital to success on the job.

## **Business Analytics (BAN)**

**BAN 530** Business Strategies for Data Analytics (3) Data analytics problem-solving strategies applied to a real-world business context.

### **BAN 530 Business Strategies for Data Analytics (3)**

BAN 530 integrates the descriptive/prescriptive/predictive framework for business analytics courses and sets analytics problem solving in a real-world business context. The objective is to provide students with experience with noisy data sets, potential compliance issues, non-standard measures across business units, and other real-world considerations in using data to drive decisions.

The course will examine the entire life cycle of a data analytics project, from data origination through collection, filtering, tool selection, calculation, and communication. Particular emphasis will be placed on problem formulation: identifying what the business issue is at hand, what data might be useful in understanding that issue, and what tools can be most usefully applied in a particular context. In addition, communication skills will be emphasized: how data informs the

decision-making process when the audience likely lacks the specialized quantitative literacy of the project team. Other important considerations include many facets of information privacy: students will consider the ethical and legal implications of de-anonymization, of deep insight into individual behavior, and of opt-in versus opt-out models of participation.

General Education: None

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**BAN 540 Marketing Analytics (3)** Systematic and analytical approaches to marketing decision-making within modern day enterprises.

### **BAN 540 Marketing Analytics (3)**

The course objectives are to demonstrate the benefits of using a systematic and analytical approach to marketing decision-making, and to build the skills and confidence of students for undertaking such analyses and decision-making in a modern enterprise. The analytical approaches covered in the course will enable students to identify alternative marketing options and actions that enhance business performance, predict the expected market and consumer reactions associated with potential marketing actions undertaken by a business, calibrate the opportunity costs associated with each action, and choose one or more actions that have the highest likelihood of achieving established business goals. The course will help students to develop skills that will enable them to propose and justify marketing expenditures using a Return on Investment (ROI) logic that businesses are increasingly asking of their executives.

This course builds on the basic business analytics concepts and methods that business students are expected to have. The "hands-on" learning approaches used in the course (e.g., exercises and cases using real-world data) will enable students to apply course concepts and methods to develop integrated marketing programs that can be deployed across online and offline media and channels. The topics will include traditional marketing analytics such as segmentation, targeting, positioning, product design, and marketing resource allocation as well as emerging analytics such as search engine analytics, social influence measurement, and attribution analysis.

General Education: None

**BAN 550 Prescriptive Analytics for Business (3)** Development of methods for prescriptive analytics with a focus on business supply side decisions and risk mitigation.

### **BAN 550 Prescriptive Analytics for Business (3)**

Analytics, defined as the scientific process of using data and quantitative techniques to make better decisions, has permeated virtually all aspects of business. The widespread availability of large amounts of detailed data combined with analytics methods permits an extensive examination of the tradeoffs that inform business decision making, with the ultimate goal of choosing "best" courses of action.

BAN 550 explores the use of prescriptive analytics methods in a variety of business contexts. In the early part of the course, the focus is on the tools and methods of prescriptive analytics. As the course progresses the emphasis shifts to the effective integration and implementation of prescriptive analytics in supply-side decision making processes such as supply chain management, service management, operations, logistics and transportation. The applications areas within business will reflect the interests of the instructors and will evolve as new areas of theory and practice develop.

General Education: None

**BAN 888 Implementing Analytics for Business (3)** Sets business analytics in real-world context. Explores project life cycle from business problem framing to model lifecycle management.

**BAN 888 Implementing Analytics for Business (3)**

The capstone course for the Business Analytics option in the Data Analytics MPS degree program, this course sets analytics problem solving in a real-world context, including communication to non-statistically trained executives. Key topical areas are derived from the common activities of the business analyst and include business problem framing, analytics problem framing, data sourcing, cleaning and integration, analysis methodology selection, model building, model deployment and model lifecycle management including benefit assessment.

Topics align with the body of knowledge in the Institute for Operations Research and the Management Sciences (INFORMS) Certified Analytics Professional Study Guide. Students explore each topic in a real world context, by developing solutions to cases in a team setting. Each team selects a case and works through all elements of the analytics body of knowledge, with group presentations on problem framing, analytics model selection and development, and model lifecycle management in a business setting.

**Business Economics (BUSEC)**

**BUSEC 502 Economics for Managers (3)** Demand & supply; price and output determination in different markets; determination of income, employment, interest rates, and inflation; stabilization policy.

**BUSEC 502 Economics for Managers (3)**

The course consists of two main segments: Microeconomics and Macroeconomics.

The course begins with basic economic principles of price and output determination in markets. Students will get an understanding of cost structures of firms in the short and long run, and how firms choose to operate. With this foundation, students will proceed to examine market structure, which is the nature of competition among firms, ranging from perfect competition (many non-dominant suppliers) to monopoly (one dominant market supplier). While studying firms in different market structures, most of the focus will be on business firms which have some market power: monopolistic competition and oligopolies (a small number of inter-dependent suppliers). Strategic behaviors of firms and different oligopoly models will be studied in detail.

Business firms operate within an economic environment that provides opportunities, constraints, and threats. The second part of the course focuses on the economic environment over time, generally described as the business cycle. The course will begin considering business cycles by looking first at main indicators such as growth of real GDP (Gross Domestic Product), unemployment rates, and inflation rates. Students will employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions.

Financial markets are important in determining economic conditions. Students will learn about the role of financial markets in determining availability and costs of funds.

Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policy consists of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change.

Domestic economic conditions are increasingly shaped by global conditions. Therefore, a part of the course will be devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other countries. In addition, students will analyze the impacts of barriers to international trade (primarily quotas, tariffs, and foreign exchange controls) and investment.

**BUSEC 503 Economic Environment of Business (2)** Analysis of the regulatory and global economic environment within which the firm operates and its implications for business strategy.

### **BUSEC 503 Economic Environment of Business (2)**

Most courses in the School's M.B.A. program focus on managing the individual firm. However, business firms operate within an economic environment that provides opportunities, constraints, and threats. This course enables the firm's decision-makers to assess this environment and to design strategies that are appropriate for conditions in the firm's global, domestic, or regional spheres of operation.

The path of changes in the economic environment over time is generally described as the business cycle. The course begins with consideration of business cycle indicators, such as growth of real GDP, unemployment rates and inflation. Students employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Class discussions will include consideration of appropriate managerial decisions under each of a variety of these conditions.

Financial markets are important in determining economic conditions. Students learn how the interest rate yield curve and other financial market indicators give insight into expectations about credit conditions and economic change. Financial markets also play important roles in determining availability and costs of funds.

Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policies consist of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change.

Domestic economic conditions are increasing shaped by global conditions. Therefore, a significant part of the course is devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other nations. In addition, students will analyze the impacts of barriers to international trade (primarily quotas and tariffs and foreign exchange controls) and investment.

The course concludes with examination of government regulation and its effect on business. Many regulations are designed to counter-act negative external effects of decisions made by private profit-pursuing firms, especially with regard to pollution of the natural environment. Anti-trust policies, patent and copyright laws. These regulations provide constraints and opportunities for business managers.

Students demonstrate achievement through completion of short cases, class discussions, and an examination.

## Business Law (B LAW)

**B LAW 424** (R M 424) Real Estate Law (3) Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property.

### **B LAW 424 B LAW (R M) 424 Real Estate Law (3)**

Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

**B LAW 425** (R M 425) Business and Environmental Regulation (3) Examines the interplay between environmental regulation and commercial activities, including property interests.

### **B LAW (R M) 425 Business and Environmental Regulation (3)**

R M/B LAW 425 is an advanced business law course based on foundation knowledge in legal regulation, property rights, and enterprise. The course explores the interplay between environmental laws and property rights and includes topics such as; common law regulation of the environment, government power and private rights, zoning, protecting endangered species, regulating the transportation and storage of hazardous materials, and Federal regulation of water quality. Students will develop their comprehension and analysis of the legal reasoning processes along with the ability to identify legal issues from the perspectives of the government, property owners, and environmental interest groups. The instructional methods will include class discussions of readings and video presentations. To facilitate thorough analysis of the competing interests affecting environmental law, this course will employ the Socratic teaching method and place a special emphasis upon class discussion and interaction.

**B LAW 444** Advanced UCC and Commercial Transactions (3) All articles of the Uniform Commercial Code, banking relationships, debtor- creditor law, and bankruptcy law.

### **B LAW 444 Advanced UCC and Commercial Transactions (3)**

This course is designed to: (1) provide the student with a systematic study of the laws governing sales transactions, the instruments for financing those transactions and rights and liabilities of debtors and creditors (the Uniform Commercial Code governs these issues); (2) to explore current trends in the law affecting commercial transactions; (3) to develop further the student's legal reasoning processes; (4) to enhance the student's ability to identify legal issues from the business decision maker's and financial auditor's perspectives. Instructional methods will include lectures, readings,

multimedia content, and class discussions. Student progress and mastery of the material will be evaluated through periodic examinations. Some state C.P.A. Boards require completion of this course as a prerequisite to obtaining certification as a public accountant. Completion of the course will be credited toward fulfillment of the requirements for the Legal Environment of Business Minor.

**B LAW 445** Advanced Intellectual Property and Competition Law (3) Copyrights, trademarks, patents, and trade secrets followed by related topics in the regulation of competition.

### **B LAW 445 Intellectual Property & Competition Law (3)**

The objectives for this course are to (1) provide students with an understanding of U.S. and international law that supports the creation of beneficial information via intellectual property rights, allows government to regulate information property through antitrust and privacy statutes, and promotes business development by encouraging competitive uses of information; (2) teach students the ability to spot the legal issues arising from the above as future business leaders and (3) introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. The course builds on the introductory business law curriculum by providing an advanced and detailed study of specific areas of law that are highly valuable to modern, technology-driven businesses.

**B LAW 446** Employment Law (3) Examines the legal and regulatory environment of employment relationships. Topics include anti-discrimination; worker health and safety; and labor relations laws.

### **B LAW 446 Employment Law (3)**

The course is designed for business students seeking a solid understanding of labor relations and employment law. It is not a general overview or introduction to law course for those seeking to enter law school. Labor and employment law has developed and changed over the past seven decades, and continues to evolve as the economic model and means of productions changes globally. With the passing of the National Labor Relations Act and subsequent amendments thereto, including development in the ability of public employees to engage in concerted activity, the understanding of the modifications in the employer-employee relationships is necessary for successful business executives and front-line managers. While a thorough understanding of the underpinnings of these laws is necessary, this is only a portion of the issues at hand. The ability to apply these laws in current working environments along with interpreting and critiquing these laws will assist in the preparation of future corporate managers.

The course goes into detailed discussion regarding the employment at will doctrine, wrongful discharge, workplace torts, and employee privacy and monitoring. With this foundation, the course then covers civil rights and discrimination based on race, color, religion, gender, sexual orientation, family obligation, disability, and national origin are covered using Supreme Court cases that have tested the validity and soundness of our federal legislation. The closing part of the course focuses on organized labor through the process of unionizing and union membership, negotiations and economic pressure used to obtain concessions in collective agreements. Additionally, fair labor laws and occupational health and safety requirements to diminish workplace accidents and improve productivity is discussed.

For each of the topics presented, detailed analysis of prominent cases will be discussed with the expectation that students can apply these case decisions to current employer/employee situations. Exposure to differing opinions, reversed rulings, and detailed legal processes will provide students with a broad understanding of the complex nature of legal proceedings and how these processes impact labor and employment relations in the United States. Content synthesis and critical analysis are the learning goals of the course.

**B LAW 525** Business Law for Innovation and Competition (2) Nature of intellectual property rights, as well as process for obtaining and enforcing them.

**B LAW 525 Business Law for Innovation & Competition (2)**

Primary areas of focus include intellectual property ("IP") law (patents, trademarks, copyrights and trade secrets) and antitrust law, as well as basic principles of U.S. law and the legal rules for related industry practices such as licensing. Students will also learn the legal rules designed to encourage competition (and punish anticompetitive behavior). Finally, the course will help students to better appreciate when professional legal counsel is necessary, and how to manage those interactions more cost effectively. Although the course will impart advanced legal concepts, prior coursework in business law is not required.

## **Chemical Engineering (CH E)**

**CH E 410** Mass Transfer Operations (3) Introduction to principles and applications of mass transfer, with focus on the design of equilibrium stage and continuous contacting separation processes.

#### **CH E 410 Mass Transfer Operations (3)**

The objective of this course is to present the principles of mass transfer and their application to separation and purification processes. The course integrates fluid dynamics and thermodynamics and proceeds to develop rate expressions for mass transfer in multiphase, multicomponent systems. Starting with Fick's law and macroscopic balances the course moves to the design of large scale separation processes such as equilibrium stage separations (distillation, extraction) and continuous separation (absorption towers, scrubbers) for the separation and purification of chemical compounds. The course also introduces the use using modern software tools such as HySys, used in the actual design of such processes and also in the capstone design course.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2013  
Prerequisite:

**CH E 423 Chemical Energy Technology (3)** This course provides an overview of current and prospective chemical energy storage and conversion technologies.

### **CH E 423 Chemical Energy Technology (3)**

This course provides an overview of chemical energy storage and conversion technologies. Current fossil fuel based conversion processes in power plants and transportation applications will be surveyed. The course will emphasize critical evaluation of alternative conversion technologies, with the goal of providing the skills for quantitative assessment of the potential of various storage and conversion technologies. Current conversion technologies surveyed will include coal power plants, petroleum refineries, and internal combustion engines. Alternative technologies will consider unconventional fossil fuel processing, electrochemical energy conversion, solar energy conversion, and agricultural/biological fuel conversion. A semester long student project will involve generation of a future energy scenario 25-50 years in the future. The class structure is interactive, with readings motivating class period discussions.

**CH E 430 Chemical Reaction Engineering (3)** Chemical reaction rates and equilibria, reactors, reactor design; emphasis on industrial chemical processes.

### **CH E 430 Chemical Reaction Engineering (3)**

This course teaches the principles of reaction engineering and reactor design. It is one of the core subjects in the chemical engineering curriculum and it is normally scheduled in the senior year. Students learn how to apply stoichiometry in combination with a rate law to design a chemical reactor that produces the desired conversion of reactants. The design of various types of chemical reactors is discussed at length, including continuous stirred-tank (CSTR), plug-flow (PFR), continuous-operation and batch-operation reactors. Additional topics include heterogeneous reactors, catalytic systems and fluidized beds, the design and optimization of reactor networks, and safety. The course integrates fluid mechanics and heat transfer to the design and analysis of isothermal and non-isothermal reactors. It leads to the capstone design course in which chemical reactors are integrated into a chemical plant.

General Education: None

**CH E 438 Bioprocess Engineering (3)** Introduction to the biotechnology field including consideration of upstream and downstream processing of biochemicals.

### **Bioprocess Engineering (3)**

General Education: None  
Diversity: None

Bachelor of Arts: None  
Effective: Summer 2007  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CH E 442 (MATSE 448) Polymer Processing Technology (3)** Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations.

### **CH E 442 (MATSE 448) Polymer Processing Technology (3)**

CH E 442 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, CH E 442 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CH E 443 Introduction to Polymer Science (3)** Introduction to synthesis, structure, characterization and processing of polymers. Single molecule properties, polymer solutions, glasses, crystals and blends.

### **CH E 443 Introduction to Polymer Science (3)**

The objective of this course is to introduce students to the synthesis, structure, characterization and processing of polymers. Emphasis is placed on the molecular origins of polymer properties. The course will provide an overview of single molecule properties and polymeric solutions, glasses, crystals and mixtures from a Chemical Engineering perspective. The course builds on CH E 320, Chemical and Phase Equilibria, to develop a more in-depth description of the thermodynamics of polymers. This course will also build on CHEM 210, Organic Chemistry, to analyze more in-depth strategies for the synthesis of polymers. At the end of the course, the students will be able to evaluate the viability of synthetic pathways for various polymers, estimate the size of polymer chains in solution and in the melt, calculate thermodynamics phase diagrams of polymer blends and solutions, and compare and contrast different approaches to describe the physical properties of polymers.

General Education: None

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CH E 446 Transport Phenomena (3)** Fundamental treatment of mass, heat, and momentum transfer; emphasis on transport properties and mathematical models of chemical engineering transport processes.

### **CH E 446 Transport Phenomena (3)**

This is an intermediate course in transport phenomena intended to expand on the materials introduced in the required undergraduate courses on momentum, heat and mass transfer. It introduces the student to the rigorous formulation of transport problems using the conservation principles and flux expressions, and identifies the similarities and differences among the transport processes for momentum, heat, and mass. The main focus of the course is on microscopic treatment of transport problems, with particular emphasis on proper use of dimensional analysis and scaling arguments. Transport phenomena is a rather mathematical subject and the student is assumed to be familiar with ordinary and partial differential equations, elementary vector analysis, and elementary numerical techniques. This course is intended to prepare the student for a graduate-level course in transport phenomena.

**CH E 449** Bioseparations (3) Analysis and design of separation processes for the purification of biological molecules.

**CH E 449 Bioseparations (3)**

This course introduces students to the principles and applications of separation processes used for the purification of biological molecules, including fine chemicals, pharmaceuticals, and therapeutic proteins. By the end of the course students will be able to perform preliminary design calculations and scale-up of specific separation systems including centrifugation, filtration, chromatography, and membrane processes. Students will also be able to develop outlines of overall separation schemes appropriate for the purification of different biological products. This course is required for the Bioprocessing and Biomolecular Engineering Option in Chemical Engineering.

**CH E 450** Process Dynamics and Control (3) Analysis of time-dependent variables in chemical process plants; reactor design and control; computer applications.

**CH E 450 Process Dynamics and Control (3)**

The course is an introduction to chemical process dynamics and control and is offered as a technical elective. The first part of the course is devoted on the dynamical behavior of systems and the mathematical tools (differential equations, Laplace transforms) used in their analysis. The second part of the course covers the design and operation of various types of controllers, including proportional, integral and differential and their combinations. The theoretical principles are demonstrated with applications to chemical engineering processes such as storage tanks, chemical reactors and separation processes.

**CH E 452** Chemical Process Safety (3) This course provides an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant addidents.

**CH E 452 Chemical Process Safety (3)**

The course will provide an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents, their causes, and steps to eliminate them, with emphasis on inherently safe designs. Chemical Plant accidents deal most often with Flammability and Toxicity issues and these are dealt with in great detail. The role of Human Error in accidents is also examined Actual case studies (including Bhopal, BP Texas City, Piper Alpha) will be examined to show the relevance in today's workplace. The course requires active student participation via discussions of system designs, their weakness and improvements. Guest lecturers will also be invited to supplement the material. This is offered as a senior elective in Chemical Engineering.

**CH E 470** Design of Chemical Plants (3) Lectures and practicum on methods and calculations, including economic evaluations for the design of chemical plants; formal technical report required.

**CH E 470 Design of Chemical Plants (3)**

The chemical engineering capstone design course introduces the principles of process design and economic evaluation utilizing various industry computer tools, with special emphasis on process simulators. The student will develop critical design logic to evaluate a process, starting with block flow diagrams and simple material balances utilizing practical heuristics and then build the process flowsheet through computer simulation, flowsheet optimization, and detailed equipment design.

**CH E 480M** Chemical Engineering Laboratory (Honors) (3) Data interpretation and analysis from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports.

#### **CH E 480M Chemical Engineering Laboratory (Honors) (3)**

CH E 480M is the laboratory course in chemical engineering. The objectives of CH E 480M is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior-senior-level classes. This course does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The special aspect of the honors section is that students will be given an open-ended experimental research project.

**CH E 480W** Chemical Engineering Laboratory (3) Data interpretation and correlation from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports.

#### **CH E 480W Chemical Engineering Laboratory (3)**

This is the laboratory course in Chemical Engineering. Its objective is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior- and senior-level classes. CH E 480W does not introduce new material but focuses instead on planning, execution and interpretation of experiments.

The course is team-based and includes laboratory sessions as well as lectures. Evaluation is based on the written and oral reports given based on experiments performed. These reports undergo several drafts, in which at different times students or faculty evaluate the report, suggesting corrections. Course evaluation may also include a "pre-exam" to assure that the students understand technical material coming into the course. Peers assess each others' performance (contributing to the grade), as does the faculty.

#### **CH E 494H Research Projects in Chemical Engineering (1-6)**

Undergraduate research projects for honors students leading to the generation of a thesis for the Schreyer Honors

College. The content of this course typically falls within the research interests of the chemical engineering faculty. The work can be computational, theoretical or experimental in nature and culminates with the writing of an honors thesis. Students should select a thesis advisor prior to enrolling in this course and file an honors thesis proposal report form with the Schreyer honors College. A student outside of chemical engineering can take the course if they are working towards an honors thesis in chemical engineering. A student in chemical engineering can take this course with a co-advisor outside of chemical engineering; however, the CH E Faculty member is responsible for assigning the grade.

**CH E 510 (MATSE 510) Surface Characterization of Materials (3)** Physical and chemical principles of characterization techniques widely used in materials science, chemistry and engineering.

### **CH E (MATSE) 510 Surface Characterization of Materials (3)**

Surface and interface characterization is an important subject in nanotechnology, heterogeneous catalysis, semiconductor processing, advanced functional materials, biomaterials, corrosion, environmental science, and tribology. This course will study the physical and chemical principles of representative characterization techniques widely used in these research areas. Topics covered in this course include surface chemistry and physics fundamentals, x-ray and electron-based spectroscopy, vibration spectroscopy, ellipsometry, microscopy with physical probes, and multivariate data analysis. Physical principles and practical applications will be studied through theoretical calculations, data analysis, and literature reviews.

**CH E 512 Optimization and Biological Networks (3)** Mathematical optimization, formulation and solution techniques for linear, nonlinear, and mixed-integer problems; optimization-based tools for reconstruction, analysis, and redesign of biological networks.

### **CH E 512 Optimization and Biological Networks (3)**

This course focuses on the principles and applications of mathematical optimization in biological systems. The first part of the course addresses optimization theory, solution algorithms, and implementation software. Topics include nonlinear optimization, linear programming, mixed-integer linear and nonlinear optimization, and bi-level optimization. Emphasis will be placed on understanding the logic of the methodology, underlying key assumptions, comparative merits and shortcomings, and applications for solving engineering problems. Valuable hands-on experience will be provided on coding optimization models using GAMS (General Algebraic Modeling System) and specialized optimization solvers. The latter part of the course concentrates on applying the tools necessary to address the challenges arising in biological networks. Specifically, the use of optimization in reconstructing and analyzing genome-scale models of metabolism, protein library design strategies, regulatory network elucidation, and synthetic circuits design as well as optimal modifications in metabolic networks for various bioengineering tasks will be studied.

**CH E 576** (C E 576) Environmental Transport Processes (3) Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers.

### **CH E(C E) 576 Environmental Transport Processes (3)**

This course covers the fundamentals of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (rivers, lakes, and groundwaters). The course is open to all graduate students interested in the fate and transport of chemicals in the environment, and it is required for all students pursuing a graduate degree in environmental engineering.

Course grades are based on three exams and graded homework assignments. This course is taught every fall semester at the University Park campus.

Bachelor of Arts: None  
Effective: Summer 2007  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CHEM 402** Chemistry in the Environment (3) Chemistry of the atmosphere, natural waters, and the land surface with particular focus on human influence on processes occurring therein.

### **CHEM 402 Chemistry in the Environment (3)**

Fundamental and descriptive aspects of the sources, reactions, transport, and effects of chemical species, both natural and synthetic, in water, air, soil, and living systems, and the influence of human activities on these processes. The goal of the course is to gain an understanding of the theory and application of the fundamental processes that determine the distribution and transport of inorganic and organic substances in the environment; the techniques for determining important physicochemical properties that influence environmental fate; and the major sources of important classes of environmental chemicals. Rapid increases in technological sophistication have led to startling innovations in our everyday lives almost unthinkable a century ago. However, at the same time, advances in science and engineering have complicated how we live and react to the new technologies and, at times, force consideration of complex issues before our need for reflection. Approaching problems from different directions and perspectives is fundamental to our understanding of Earth processes. New and continued emphasis in global warming, loss of biodiversity, ozone layer depletion, acid mine drainage, sustainable development and energy use are only a few of the major environmental threats which require an intelligent and informed response. As such, the course provides a balanced discussion of the hard science and social sciences aspects of environmental issues.

**CHEM 406** (NUC E 405) Nuclear and Radiochemistry (3) Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation.

### **CHEM 406 Nuclear and Radiochemistry (3)**

CHEM 406 provides a basic introduction to many of the important physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452.

Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i. e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy, binding energy, and mass, are developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi's phase-space theory of beta-decay, and the selection rules for gamma-ray decay are then presented. Final topics include the interactions of radiation with matter and the biological effects of radiation.

**CHEM 408** Computational Chemistry (3) Introduction to numerical and nonnumerical computer uses in physical science.

**CHEM 408 Computational Chemistry (3)**

CHEM 408 introduces some of the many ways in which computers are used in modern chemical research. The main emphasis is on "molecular modeling" including such topics as electronic structure calculation, molecular mechanics, molecular dynamics and Monte Carlo simulation methods. In lesser detail, chemical informatics will also be considered, time permitting. Discussion of the theoretical underpinnings of these various methods and their range of applicability will be combined with exercises illustrating the use of several current chemical software packages and with assignments based on critical reading of illustrative literature papers.

**CHEM 410** Inorganic Chemistry (3) Conceptual and descriptive aspects of nontransition elements, covering structural, thermodynamic, and kinetic features.

**CHEM 410 Inorganic Chemistry (3)**

CHEM 410 covers structure and bonding in inorganic chemistry, including the chemistry of main group elements and selected topics in transition metal chemistry. Theories and models of chemical bonding (valence bond theory, crystal field theory, and molecular orbital theory) are applied to inorganic molecules, coordination compounds, and solids. The course also covers the following topics: periodic trends in the chemistry of the d- and p-block elements, structural solid state chemistry, magnetism of transition metal complexes and inorganic solids, ionic and covalent bonding in solids, electronic properties of metals, alloys, superconductors, and semiconductors, synthesis of inorganic materials, and properties of nanoscale inorganic solids.

**CHEM 412** Transition Metal Chemistry (3) Structure and bonding of compounds containing transition metals.

**CHEM 412 Transition Metal Chemistry (3)**

CHEM 412 covers the chemistry of the transition metals, and in particular the d-block elements. Major areas of emphasis include coordination chemistry, organometallics, and the role(s) of transition metals in biology. The course covers the following topics: molecular symmetry with applications to bonding and vibrational spectroscopy, coordination chemistry, structural and optical isomers, crystal and ligand field theories, electronic structure and electronic transitions, spectroscopic methods for probing transition metal complexes, kinetics and thermodynamics of ligand substitution reactions, oxidation-reduction reactions, organometallic complexes and their basic reaction types, homogeneous and heterogeneous organometallic catalysts and their reaction cycles, the interactions of metal ions with biological molecules, the function of transition metal ions in metalloproteins, and medically-important transition metal complexes.

**CHEM 423W** Chemical Spectroscopy (4) Modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis.

#### **CHEM 423W Chemical Spectroscopy (4)**

This course reviews modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. Topics include electronics, optics, and atomic and molecular spectroscopy (UV-VIS, Fluorescence, FTIR, Raman, liquid- and solid-state NMR). The course thoroughly integrates lecture and laboratory activities. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write research papers during the semester. The reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature.

The course is designed to be rigorous and comprehensive in scope. The writing component for this course includes: maintaining a proper laboratory notebook; reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants.

**CHEM 427W (FRNSC 427W)** Forensic Chemistry (4) Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence.

#### **CHEM (FRNSC) 427W Forensic Chemistry (4)**

The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in private, state and federal crime labs in the analysis of trace evidence. The course thoroughly integrates lecture and laboratory activities to explore the history, controversies and current issues related to each topic. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write five research papers during the semester. Four of the reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature.

The course is relevant to any student majoring in Forensic Sciences or who has an interest in obtaining employment in a crime lab. The course is required for accreditation through the American Association of Forensic Sciences and is recommended by the National Institute of Justice in their published recommendations for undergraduate curricula in the forensic sciences. The proposed course and the course in Forensic Anthropology/Biology comprise the core 400-level science courses required in the Forensic Sciences major.

The course is designed to be rigorous and comprehensive in scope. Grades will be based on in-class lecture examinations (20%), problem sets (10%), laboratory notebooks (15%), laboratory write-ups (30%), and a term project (written and oral presentations; 25%). The writing component for this course includes: maintaining a proper laboratory notebook; five approximately 10-page reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants. Students are allowed to correct, or rewrite, and resubmit notebook entries for three separate submissions (notebooks are graded a total of eight times throughout the semester) and the written reports excluding the final project report. Students are required to submit a preliminary poster for a ) non-graded)

review prior to the oral presentation. The writing component of the course accounts for 55% of the total course grade.

**CHEM 430** Structural Analysis of Organic Compounds (3) Spectroscopic methods as tools in gross and detailed structural analysis and interpretation within the framework of modern theory.

### **CHEM 430 Structural Analysis of Organic Compounds (3)**

This course is designed to introduce students to the spectroscopic techniques that are used to elucidate the structures of organic molecules of various molecular weights. Some theoretical background will be provided and is necessary, but the emphasis is on solving problems. The course starts with fundamental concepts and techniques learned in sophomore organic chemistry and builds toward state-of-the-art methods used by modern organic and bioorganic chemists. Topics to be covered include: UV spectroscopy, 1D- 1H and 13C NMR, spin-spin (scalar) coupling and chemical shifts, IR spectroscopy, simple and advanced mass spectroscopic techniques, stereochemistry, advanced NMR topics including advanced 1D and 2D NMR and correlation spectroscopies. Some consideration will also be given to the challenges associated with structure determination in biomolecules.

Bachelor of Arts: None  
Effective: Fall 2010  
Prerequisite:  
Concurrent: CHEM 213

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CHEM 431W** Organic and Inorganic Preparations (4) Preparation, purification, and characterization of both organic and inorganic compounds by modern methods.

### **CHEM 431W Organic and Inorganic Preparations (3)**

CHEM 431W is a one-semester, writing-intensive advanced laboratory course that focuses on the preparation, isolation, purification, and characterization of organic, organometallic, and inorganic compounds. Students are expected to use the techniques learned in the introductory organic chemistry laboratory and will learn more advanced techniques such as the use of air-free and anhydrous reaction conditions, glove bags, vacuum manifolds, vacuum distillations, flash chromatography, solvent stills, and gas-tight syringes. Molecular modeling techniques are also introduced. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are expected to search the chemical literature using databases and online journals and to write formal lab reports in ACS style. The lab assignments include syntheses, separating an unknown mixture, and a team project, which includes a written proposal, synthetic work, a final report, and a poster presentation.

Bachelor of Arts: None  
Effective: Summer 2012  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CHEM 440** Instrumental Analysis (3) General instrumental theory and methods used in common atomic and molecular analyses.

**CHEM 440 Instrumental Analysis (3)**

This course presents analytical methods used by the chemistry community in a way that extends and complements the treatment in CHEM 221. Preliminary discussions will entail sample preparation for organic and inorganic samples, quantitative measurements, sensitivity and limit of detection. Techniques addressed will cover the areas of separation, qualitative and quantitative optical spectroscopic techniques, mass spectrometry, electroanalytical techniques and surface analysis. In separation techniques, methods presented will be capillary electrophoresis, gas, liquid, and ion chromatography. In optical spectroscopy, methods presented will be infrared, Raman, nuclear magnetic resonance, ultraviolet and visible molecular absorption, chemiluminescence, inductively coupled plasma emission, atomic fluorescence, atomic absorption and emission spectrometry. Mass spectrometry methods presented will include time of flight, magnetic sector and electric sector mass spectrometry as well as interfacing with gas chromatography, liquid chromatography and capillary electrophoresis. Electroanalytical methods include amperometric, voltammetric and potentiometric techniques. Surface analysis methods discussed will be atomic force microscopy, scanning tunneling microscopy, Auger electron spectroscopy, X-ray photoelectron spectroscopy and secondary ion mass spectrometry.

**CHEM 441 Elemental Analysis and Instrumental Design Laboratory (1)** An introduction to the use of modern instruments for problems in chemical structure and analysis.

**CHEM 441 Elemental Analysis and Instrument Design Laboratory (1)**

CHEM 441 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 441 are: 1) optics, flame atomic emission spectrometry & microwave induced plasma emission spectrometry, 2) electronics and data acquisition/signal analysis, and 3) basic ultraviolet-visible instrument design. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific experiment using each one.

**CHEM 446 X-Ray Crystallography (3)** Theoretical and practical aspects of structure determination using x-ray diffraction, from crystal growth to structure solution.

### **CHEM 446 X-Ray Crystallography (3)**

CHEM 446 introduces the student to the basic principles of molecular structure determination through the diffraction of X-rays by single crystals. The emphasis is on small organic, coordination and organometallic compounds. However the principles can provide the basis for extensions into disciplines ranging across geology, materials, molecular biology, and nanoscience. The course is organized in the same way that an actual crystal structure determination might proceed, with theoretical considerations introduced as needed. Techniques of crystal growth and selection are summarized. X-ray sources and instrumentation are described briefly. Unit cells, Miller planes, unit cell geometry and Bragg's law give rationale to the diffraction experiment. Space group symmetry is connected with data collection and the contents of the unit cell. Practical considerations of data collection and instrumentation are covered next. The theoretical description of structure factors and Fourier synthesis leads to consideration of solutions to the phase problem. The remainder of the course illustrates the process of structure solution using real data and software readily available to the students. All the details of publication of a crystal structure; the CIF, ORTEP figures and the format of the experimental section of most journals is described using actual student selected publications. Related structural techniques such as protein crystallography and molecular modeling may be reviewed time permitting.

**CHEM 448 Surface Chemistry (3)** Surface chemistry, emphasizing the physical and chemical aspects of surfaces important for applications in colloids, catalysis, microelectronics and biocompatibility.

### **CHEM 448 Surface Chemistry (3)**

CHEM 448 introduces the student to the basic principles of the chemical behavior of surfaces with an emphasis on the fundamental aspects, including surface structure, bonding, thermochemistry and dynamical behavior. The course is intended to provide the basis for extensions into disciplines ranging across geology, materials, environmental engineering, biology, agriculture, physics and nanoscience. Fundamental concepts and relationships of the chemical behavior of organic and inorganic substances that the student has already learned in previous courses will be assembled, correlated and directed towards understanding the behavior of the special case of the surfaces and interfaces of liquids and solids. Starting from the basic principles the student will be guided to evolve a fundamental understanding and predictive ability for important man made and natural applications and phenomena of practical interest, including colloids, surface coatings, lubrication, heterogeneous catalysis, weather, geology, chemical sensing, microelectronics and biocompatibility.

**CHEM 450 Physical Chemistry - Thermodynamics (3)** Introduction to physical chemistry with primary emphasis on chemical thermodynamics and its molecular interpretation. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.)

### **CHEM 450 Physical Chemistry - Thermodynamics (3)**

CHEM 450 is a physical chemistry course that introduces students to chemical properties of matter and the fundamentals of chemical thermodynamics. The theoretical foundations of thermodynamic principles are covered and illustrated with a wide variety of examples from the sciences, engineering and technology fields. The course covers the following topics: gas laws, equations of state, the First Law of Thermodynamics, work and heat, internal energy, enthalpy changes, heat capacity, the Second Law of Thermodynamics, entropy and entropy changes, the Third Law of Thermodynamics, Helmholtz and Gibbs energies, phase stability and phase boundaries, phase diagrams, phase equilibrium, surface tension,

capillary action, partial molar quantities, thermodynamics of mixing, chemical potential, solvent and solute activities, colligative properties, the phase rule, thermodynamics of two-component systems, chemical equilibrium, spontaneity of chemical reactions, the response of equilibria to experimental conditions, and equilibrium electrochemistry.

**CHEM 452 Physical Chemistry - Quantum Chemistry (3)** Introduction to physical chemistry with primary emphasis on molecular structure, spectroscopy, and chemical kinetics. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.)

### **CHEM 452 Physical Chemistry - Quantum Chemistry (3)**

CHEM 452 is an introductory physical chemistry course that covers quantum chemistry, atomic and molecular spectroscopy, and chemical kinetics. If time permits, other possible topics include statistical thermodynamics, nuclear magnetic resonance, electron spin resonance, structures of solids, X-ray scattering, and processes at surfaces.

Quantum chemistry includes: development of wave mechanics, Schrodinger's equation, particle in a box, in a ring, on a spherical surface, free particle, barrier penetration, harmonic oscillator, postulates, hydrogen atom, helium atom, electron spin, atomic and molecular structure and symmetry. Spectroscopy includes: atomic spectra, microwave, infrared, and visible spectra of molecules. Chemical kinetics includes: rate laws, mechanisms, chain reactions, polymerization reactions, catalysis, molecular reaction dynamics (collision theory and activated complex theory), and nature of potential energy surfaces for reactions.

**CHEM 457 Experimental Physical Chemistry (1-2 per semester/maximum of 2)** Laboratory experiments designed to illustrate the principles of physical chemistry and teach techniques of error analysis and the presentation of quantitative data. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.)

CHEM 457

### **CHEM 457 Experimental Physical Chemistry (2)**

CHEM 457 is a laboratory course designed to illustrate some of the principles of physical chemistry presented in CHEM 450 and 452 and to teach proper treatment and presentation of quantitative data. In this course, students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. In doing so, students should become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

**CHEM 459W Advanced Experimental Physical Chemistry (4)** Laboratory experiments and projects for students interested in advanced study in physical chemistry.

### **CHEM 459W Advanced Experimental Physical Chemistry (4)**

CHEM 459W Advanced Experimental Physical Chemistry is a project-based course designed as a follow-up to CHEM 457. CHEM 459W provides students with further experience in laboratory techniques used for quantitative experimentation and with the processing and interpretation of quantitative data. Experiments and short research projects are designed to complement the theoretical knowledge acquired in lecture courses so as to enhance students' competence in problem solving in a research environment. Particular attention will be devoted to written communication of experimental results in an effective and concise manner according to American Chemical Society journal standards.

**CHEM 464** Chemical Kinetics and Dynamics (3) Introduction to chemical kinetics and molecular dynamics.

### **CHEM 464 Chemical Kinetics and Dynamics (3)**

CHEM 464 is a one-semester course that introduces students to chemical kinetics and molecular dynamics, the branch of chemistry concerned with the rates of chemical reactions and the microscopic details of how reactions occur. The course covers old and new experimental, theoretical, and computational methods for kinetics and dynamics. Example systems are chosen from a variety of application including gas-phase reactions, reactions in solution, atmospheric chemistry, and reactions in biological systems. Topics covered are: basic concepts, phenomenological treatments, mechanisms, chain reactions, potential energy surfaces, collision theory, transition state theory, analysis, reactions of surfaces, photochemistry, molecular beams, Monte Carlo methods, molecular dynamics, energy requirements for reaction, and energy disposition.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CHEM 466** Molecular Thermodynamics (3) Introduction to physical chemistry with a primary emphasis on the statistical and molecular interpretation of thermodynamics.

### **CHEM 466 Molecular Thermodynamics (3)**

CHEM 466 is a physical chemistry course that emphasizes the statistical and molecular interpretation of thermodynamics. This focus enables the student to consider macroscopic properties based on the constituent molecular properties. After a very brief introduction to classical thermodynamics, the statistics of large systems is introduced, used to develop the Boltzmann distribution of energies and then combined with the quantum mechanical structure of energy levels to form a basis to predict and understand atomic and molecular properties such as heat capacity and chemical reaction equilibrium. Solution thermodynamics, interfacial phenomena and colligative properties are discussed in terms of lattice models. The course then turns to a molecular view of transport and chemical reaction rates. Molecular transport is described in terms of random molecular motion and intermolecular forces that tie together to give macroscopic behavior such as ionic conductivity and mass diffusion. Reaction rates are formulated in terms of the distributions of energies and statistical probabilities of the combined reactants in a transition state. Cooperativity in phase transitions is discussed, followed by adsorption and catalysis. Examples with proteins and other biomolecules, as well as polymers and various solutions, appear throughout the course.

**CHEM 472** General Biochemistry I (3) Basic structure and function of cellular components; principles of enzyme kinetics and regulation.

### **CHEM 472 General Biochemistry I (3)**

CHEM 472 will serve as an introductory course in biochemistry. The course will begin with a review a number of chemical concepts applicable to biochemistry including molecular interactions, acid-base reactions, buffers, titrations and basic thermodynamic and kinetic concepts. The focus will then shift to a discussion of the structures of the biomolecules that make up living matter including carbohydrates, lipids, membranes, proteins, and enzymes, emphasizing the relationship between chemical structure and biological function.

**CHEM 474 Organic Synthesis (3)** Theory and methodology of organic synthesis applied to complex organic molecules.

**CHEM 474 Organic Synthesis (3)**

CHEM 474 will present the theory and methodology of organic synthesis. The course will initially focus on the methodology necessary to synthesize complex organic molecules. This will include an in-depth look at functional group transformations, carbon-carbon bond forming reactions, ring-forming reactions, aromatic chemistry and heterocyclic chemistry. We will then discuss the use of retrosynthetic analysis and the "disconnection approach" to logically guide total synthesis. Finally, a number of literature syntheses will be used to examine the strategies involved in formulating a total synthesis emphasizing the compatibility of functional groups, sequence of reactions, use of protecting groups and the impact of stereochemistry.

**CHEM 476 Biological Chemistry (3)** Fundamentals of Biochemistry for Chemists. Students cannot receive credit for both CHEM 476 and B M B 401.

**CHEM 476 Biological Chemistry (3)**

This course is designed to be an introduction to biological chemistry from a chemistry student's perspective. The course will cover the basics of protein, nucleic acid, lipid and carbohydrate structure. The three-dimensional structural aspects of these biological macromolecules will be emphasized, showing their structure-function relationships. The course will also cover some of the chemical logic in enzymatic reactions, drawing from advanced organic and inorganic chemistry concepts, and include a focus on physical processes such as reaction kinetics and binding equilibria. More advanced topics of interest to chemistry students will also be covered, including the biochemical aspects of drug design and discovery. Throughout, the approach will be to introduce the analytical tools that have led to major advances in biochemistry as well as the physical and chemical principles underlying each topic. The course will follow a textbook designed for chemistry students. It will also include reading assignments of several types, including historical papers and current scientific literature dealing with recent advances in the field. The course also includes assignments that require students to familiarize themselves with modern biochemical databases such as those from the National Center for Biotechnology Information.

**CHEM 500** Seminar in Chemistry (1-2 per semester) No description.

**CHEM 500 Seminar in Chemistry (1)**

CHEM 500 is a course in which 1st and 2nd year Chemistry graduate students write about and present a seminar on current chemical research. During their first year of graduate study students are asked to write 6 or more brief reports summarizing and critiquing designated seminars in one of the department's five regular seminar series. These reports are graded for both their scientific content and writing quality. During their second year of graduate study students are asked to write a more lengthy report and give an oral presentation on a topic of current interest in chemistry, but one not closely related to research being done at Penn State. The written and oral portions of this exercise are also graded.

**CHEM 511 Chemical Nanoscience (3)** Chemical aspects of matter at the nanoscale.

**CHEM 511 Chemical Nanoscience (3)**

This course covers chemical aspects of nanoscience. Topics to be covered include how nanoscale matter differs from bulk material; strategies for synthesis, characterization, purification, and chemical functionalization of nanostructures; forces involved in nanoparticle stabilization and assembly. Emphasis will be placed on wet chemical methods of nanostructure syntheses rather than traditional top-down nanofabrication. Properties of the resulting nanomaterials of interest for uses including biology and medicine, environmental remediation, electronics, optics, catalysis and solar energy conversion will be discussed. The course will emphasize both the primary scientific literature and review articles, and assumes prior knowledge of organic and physical chemistry.

**CHEM 517 Organometallic Chemistry (3)** Organometallic compounds and their use in catalysis and organic synthesis.

**CHEM 517 Organometallic Chemistry (3)**

CHEM 517 provides a graduate-level foundation to a broad range of topics in organotransition metal chemistry with a particular emphasis on catalytic applications in polymer chemistry and organic synthesis. The course assumes a B.S.-level understanding of inorganic and organic chemistry. Topics to be covered include the following: basic principles of bonding and structure, elementary reaction mechanisms, and catalytic applications including olefin insertion reactions, cycloisomerization reactions, carbenoid chemistry including olefin metathesis, carbonylations, reactivity of metal allyl complexes, cross coupling and related C-C bond formations, oxidations, reductions and alkylations. Upon successful completion of this course, students can expect to: 1) understand basic concepts in bonding and molecular structure of organometallic compounds, 2) be able to connect electronic and molecular structure with chemical reactivity, 3) describe organometallic reactivity in a mechanistically rigorous fashion, 4) be familiar with common catalytic paradigms that rely on organometallic catalysts, 5) be equipped to critically evaluate the modern primary literature in this field.

**CHEM 519 Materials Chemistry (3)** An overview of the role played by chemistry in the field of materials science.

### **CHEM 519 Materials Chemistry (3)**

The goal of this course is to provide students with an understanding of the ways in which fundamental chemical principles are utilized in the field of materials science. The approach is to illustrate the crucial importance of synthesis and structure-property chemical relationships in the development of new materials and their utilization in devices. Topics include glasses, oxides and non-ceramics, polymers, metals, semiconductors, superconductors, hybrid materials, and nanomaterials together with the broad range of energy-related, electronic, biomedical, and optical devices on which modern civilization depends. Most of the different types of materials will be discussed, together with approaches to overcome their limitations.

**CHEM 524 Electroanalytical Chemistry (3)** Electrochemical principles, techniques, and analytical applications.

### **CHEM 524 Electroanalytical Chemistry (3)**

CHEM 524 covers the fundamental background and applications of electroanalytical methods. Potentiometric methods are discussed in the context of the basic principles of electrochemical equilibrium. Amperometric methods - chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse and hydrodynamic techniques - are also discussed in the context of mathematical models for mass transport and electrode kinetics. Applications including spectroelectrochemistry, photoelectrochemistry, ultramicroelectrodes, corrosion, and scanning electrochemical microscopy are covered. The course involves solving differential equations relevant to electrochemical problems by analytical methods as well as by means of digital simulations, so prior knowledge of a programming language is recommended.

**CHEM 543 (MATSE 543) Polymer Chemistry (3)** This graduate course discusses the new advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties.

### **CHEM (MATSE) 543 Polymer Chemistry (3)**

This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers.

This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymer materials with controlled polymer structures, compositions, and properties, as well as economic and "green" processes.

This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course).

In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.

**CHEM 572 (BMMB 572)** Nucleic Acids Chemistry (3) Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids.

**CHEM 572 Nucleic Acids Chemistry (3)**

The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.

## Chinese (CHNS)

**CHNS 401** (IL) Level Three Chinese A (4) Emphasis on oral proficiency through discussions of aspects of contemporary Chinese culture.

**CHNS 401 Advanced Conversation (4)**  
**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course aims to enhance students' abilities in speaking, listening, reading, and writing. The objectives in this course are: 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of characters, vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, 5) to be able to write short compositions.

General Education: None  
Diversity: IL  
Bachelor of Arts: Second or Beyond 12th Level Foreign Language  
Effective: Spring 2011  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CHNS 402** (IL) Level Three Chinese B (4) Readings in representative works of traditional and modern literature; practice in composition; study of aspects of Chinese culture.

**Level Three Chinese B (4)**

General Education: None

**CHNS 403W** Level Four Chinese A (4) Continuation of CHNS 402. Aims to improve students' proficiency in all four language skills, with a special emphasis on writing.

**CHNS 403W Level Four Chinese A (4)**

This is a four credit course designed for those who have completed Level Three Chinese B or the equivalent. The course aims to further develop students' proficiency in all four language skills, with a special emphasis on writing. Students will study several topics on current social issues in modern Chinese society, such as education and housing issue, woman's status, through a selected textbook, news reading, and by interviewing native speaker of Chinese from different regions. Via all the debatable topics, students will be guided to explore and practice various writing styles, such as description, narration, argumentation, and expository writing throughout the semester. Comparison of rhetorical strategies between Chinese and English writing will also be introduced to help students think and write more like a native when using the target language. The majority of reading and writing assignments will be done outside of class, with some guidance from

the instructor. Class time will be used mainly for discussions of content, feedback on writing. All class activities will be conducted in Chinese.

Writing exercises include short response papers on topics, summaries of the readings, and short essays. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence.

This course will help students further advance their writing skills by continuously building their vocabulary, understanding the target culture, and its social issues through various sources of structured and authentic materials. Students will also write a resume and formal letter that help them start building their career in Chinese.

**CHNS 404** Level Four Chinese B (4) Continuation of CHNS 403W. Aims to improve students' proficiency in all four language skills through content-based language learning.

#### **CHNS 404 Level Four Chinese B (4)**

This is a four credit course designed for those who have completed Level Four Chinese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics on current social issues in contemporary Chinese society. For example, economic spurt in China, environmental protection, values conflict between traditional Chinese culture and Western culture, etc. Students will learn those topics via a textbook, interviewing native speakers of Chinese from different regions, and variety of media, such as newspaper, TV news, and movie. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Students will be guided to use appropriate resources such as dictionaries, reference books, online dictionaries and other online resource to facilitate their learning. Class time will be used mainly for discussion of content, feedback on writing, and presentations by students. All class activities will be conducted in Chinese.

Students will be mainly evaluated by writing exercises and presentations. Writing exercises include short response papers on topics, summaries of the readings, short essays and a final thesis. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. Presentations include debates, individual and group presentation, which will help students advance their communication and presentational skills. E-portfolio will sample the work students have done in the course.

**CHNS 410 (IL)** Chinese Through Film (3) This course is designed for students who finish Level Two Chinese or higher and aims to help them develop Chinese proficiency through movies.

#### **CHNS 410 Chinese Through Film (3) (IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course aims to provoke students' critical thinking on China-related issues and improve their Chinese language proficiency by encouraging them to reenact and remake selected scenes from the movies, investigate and discuss the social issues as shown from the movies. This is a three credit course designed to go beyond the day-to-day topics to further develop students' understanding of the social issues in contemporary China and thus enhance their Chinese language proficiency. Through watching movies in Chinese, students will listen to authentic Chinese and expose to broader aspects of Chinese people's lives and Chinese society. In addition, they will have opportunities to conduct culture comparisons between China and the U.S., East and West, which will enable them to make in-depth analysis when examining a complex social, political or economic issue in China. The follow-up class activities include both speaking and writing assignments. Depending on the topics, speaking assignments may include: reenactment or recreation of a selected scene from the movies, class or group discussions, debates and presentations. Writing assignments may include: writing a new story or different ending for the movies, and reflection essays.

**CHNS 411 (IL) Chinese Written Characters (3)** This course aims to establish a solid foundation of students' Chinese orthography and prepare students for continuing study in subsequent Chinese courses.

**CHNS 411 Chinese Written Characters (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course aims to equip students' knowledge and skills of Chinese orthography through both cognitive and meta-cognitive approach of learning, where it is expected to lay a solid foundation for students' continuing study of subsequent Chinese language courses. Students will learn and apply radical and component-building approach to synthesize their already-acquired characters, and further learn approximately 500 additional characters. Characters selected for study in this course are based upon the references of HSK (Hanyu Shuiping Kaoshi) Level V and TOP-Huayu (Test of Proficiency- Huayu) Intermediate level. Building upon these characters, students will further expand their vocabulary volume through character association strategy and extensive reading. Cooperative learning approach will be largely incorporated to promote in-class active learning, such as developing and sharing character learning strategies through keeping learning journal, group reading, discussing cultural connotations of selected amount of characters, etc. Students will also learn the origin, history and evolution of Chinese characters through textbook reading and multimedia materials learning, such as DVD and You Tube video clips that help visualize the evolution process of selected characters for demonstration.

Instructional Objectives (what the student is expected to learn; what skills s/he will develop):

1. Understand the origin, history and evolution of Chinese characters
2. Develop and apply strategies on learning Chinese characters
3. Familiarize with available resources that assist Chinese characters learning and memorizing
4. Strengthen and synthesize students' existing knowledge of Chinese orthography
5. Learn approximately 500 new characters
6. Expand vocabulary volume derived from the acquired characters
7. Expand reading experience by reading semi-authentic and authentic articles that are constituted of the acquired characters
8. Strengthen listening and speaking skills of the target language through intensive in-class discussions and lectures

**CHNS 421 (IL) China Beyond China (3)** Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts.

**CHNS 421 China Beyond China (3)  
(IL)**

In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China's inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material—as well as a small number of theoretical essays—this course will focus on:

- 1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China
- 2) The ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization.

Course Objectives include:

1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes.
2. Critically analyze processes of cultural contact and the representations of cultural differences.
3. Think critically about globalization with its impact on such categories as the local and the national.
4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may differ from (or be shared with) your own.

**CHNS 422 (IL) Gender and Sexuality in China (3)** Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China.

**CHNS 422 Gender and Sexuality in China (3)  
 (IL)**

This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People's Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general).

Course Objectives include:

1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film
2. Reflect critically on different ways of understanding and representing gender difference.
3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts.
4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

**CHNS 423 (IL) The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3)** This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost.

**CHNS 423 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3)  
 (IL)**

A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however, a long tradition of the vernacular novel that remains influential till today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesan fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Ming-Qing period (14th -20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required.

From year to year the content we cover might change, but this course will always explore:

- 1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century.
- 2) Pre-modern practices of literary reading and criticism and pre-modern notions of literacy, literature, and modes of circulation.

Course Objectives include:

1. Critically analyze major texts and genres of the classical Chinese novel.
2. Understand pre-modern practices of story-telling, literary circulation, reading, and criticism.
3. Think critically about pre-modern societies and their connections with the contemporary world.

**CHNS 424 (HIST 482, ASIA 482) Confucius and the Great Books of Early China (3)** This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China.

**CHNS 424 (HIST, ASIA 482) Confucius and the Great Books of Early China (3)**

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period. As the first part of a two-seminar series of courses (HIST 484), it provides an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

**CHNS 426 (IL) The Chinese Rhetorical Tradition (3 per semester/maximum of 6)** Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric.

**CHNS 426 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

**CHNS 452** (IL) Contemporary China: Culture and Trends (3 per semester/maximum of 6) Survey of aspects of the contemporary Chinese-speaking world. Includes readings from Chinese newspapers, magazines, and fiction. Topics may vary each semester.

**CHNS 452 Contemporary China: Culture and Trends (3)  
(IL)**

**BA - This course meets the Bachelor of Arts degree requirements.**

**This course surveys Chinese cultural production in the contemporary period**, with an emphasis on literature. Taught in Chinese; readings and assignments in Chinese.

The course will examine the diverse forms of cultural expression (literature, film, new media, theater, television) throughout the Chinese-speaking world. Students will learn about major cultural trends in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folktale, short story, novel, prose fiction, and drama. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works in the contemporary period. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others.

Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities.

Chinese 452 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. The course is designed to count as international cultures, and as a B.A. "Other Cultures" course.

This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

(IL)**

**BA - This course meets the Bachelor of Arts degree requirements.**

**This course surveys Chinese film from the early twentieth century to the present time**, with an emphasis on film and national history. Taught in Chinese; readings and assignments in Chinese.

The course will examine the diverse forms of film language in the works of filmmakers from mainland China, Taiwan, and Hong Kong. Readings will include interviews, reviews, film criticism, and other relevant texts (such as a short story that inspired a film).

Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired Chinese-language films. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others.

Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities.

Chinese 453 is designed to be suitable for students (Chinese majors) who have completed Chinese 401.

This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

**CHNS 454** (IL) Introduction to Classical Chinese (3 per semester/maximum of 6) Basic patterns and structures of Classical Chinese to the first millennium B.C. to the 19th century.

**CHNS 454 Introduction to Classical Chinese (3)  
(IL)**

**BA - This course meets the Bachelor of Arts degree requirements.**

This course introduces students to the basic patterns and structures of Classical Chinese. Classical Chinese is a language shaped in the latter half of the first millennium B.C. that still persists as a living medium of expression today. Knowledge of Classical Chinese is important to help students read and understand sophisticated modern Chinese texts, which make frequent use of Classical allusions and constructs. In this course, students will learn basic grammar, syntax, and commonly-used vocabulary. The cultural and literary implications of classical Chinese will be discussed throughout the course in order to provide the students not only with the linguistic knowledge of classical Chinese, but the rich historical backgrounds implied in this particular style of Chinese.

The main goal of the course is for students to acquire skills in reading Classical Chinese and expand their knowledge and understanding of ancient Chinese culture, society and history in relation to modern and contemporary Chinese culture, such as Confucianism and family values. With this knowledge and training, not only will students be more comfortable reading the Chinese Classics, they will also thereby increase their proficiency in modern Chinese and their knowledge of Chinese culture.

This course will fulfill the Intercultural Cultures and B.A. "Other Cultures" and foreign language requirements.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**CHNS 455** (IL) Masterpieces of Traditional Chinese Literature (3) Survey of traditional Chinese literature, including poetry, historical narratives, philosophical texts, and drama and novel.

**CHNS 455 Masterpieces of Traditional Chinese Literature (3)  
(IL)**

**BA - This course meets the Bachelor of Arts degree requirements.**

CHNS 455 Masterpieces of Traditional Chinese Literature presents an overview of China's literary tradition, focusing, in particular, on literary techniques used in a variety of text types such as poetry, essays, fiction and drama.

This course aims to develop students' advanced knowledge of the features of traditional Chinese literature and its intellectual, cultural, and social background. Through close reading of selected major works, students will become familiar with the features of various genres.

For example, students will study prose writings, the major poetic forms and some of the important poets from the Tang period, and aspects of literati culture through close reading of texts from the late imperial period.

At the end of this course, a student will have read and discussed sample writings from philosophical and poetic traditions and well as sample writings on the cultural and scholastic activities of the literati. Students should also be able to deal with classical texts on a reasonable level, to identify problematic passages and to be able to clarify them with the help of secondary reference material. Students should also be able to appreciate some of the civilizing aspects of Chinese culture as well as literary and poetic devices such as tonal patterns, rhyme schemes, structure and writing techniques, and discussion of the poets and their work, and have an understanding of the main genres in classical Chinese literature and philosophy.

## **Civil Engineering (C E)**

**C E 410W** Sustainable Residential Subdivision Design (3) Residential subdivision process; site selection; conservation and neo- traditional design; utility design and layout; best management practices for erosion and stormwater.

#### **C E 410W Sustainable Residential Subdivision Design (3)**

The course is designed for seniors and graduate students in Architectural and Civil Engineering interested in learning the principles of sustainable residential design and development. The course is typically offered one semester each year. The objective of this course is to provide the students with a working example of the residential land development process from a regional perspective.

The course provides an overview of zoning legislation and regulations followed by an analysis of market trends and information sources. Conservation and neo-traditional design techniques emphasize sustainable development principles for maximizing profits while complying with open space zoning. Access design principles focus on traffic calming strategies and development of a well-defined transportation hierarchy. Students are introduced to key components in utility design including the basic principles of water and wastewater transport. Best management practices for erosion control and stormwater management are reviewed and included as part of the residential design process. Finally the students are asked to use realistic data to estimate costs and profit margins for development.

To work effectively in residential design, students must be proficient in applying the principles of mathematics, economics and engineering software (CAD or similar) included in accredited programs of engineering. Students will be exposed to engineering/design calculations associated with each of the phases of residential land development. Technical Release 55, the stormwater management design manual, and the BMP Handbook for erosion control and stormwater management supplement the text. The CAD lab will be utilized for approximately 25% of the class.

At the completion of the class, students will present a written project narrative and an oral presentation describing a full-scale residential development designed by the project team. This project is open ended and includes at a minimum a market analysis, engineering calculations, a cost estimate, and a full set of engineering drawings which include, soils, contours, open spaces, lot boundaries, roads, utilities and stormwater control systems details. Five preliminary mini-reports will be written and submitted over the course of the semester. These reports will be evaluated by the instructor for both content and professional writing, and returned to students. Students will be encouraged to consult with the instructor for additional feedback. The reports will be revised and incorporated into the final report. In addition to the team development project, students will receive a mid-term and final exam.

**C E 421W Transportation Design (3)** Design of streets and highway facilities; emphasis on geometric elements, intersections and interchanges, roadway drainage, and pavement design.

**C E 421W Transportation Design (3)**

This course provides advanced study in highway engineering and is designed for civil engineering students who are interested in Transportation Engineering careers. It includes topics such as functional classification, highway cross-sections, horizontal and vertical alignment and sight distance. Other topics are pavement design, drainage intersection and interchange design and highway signs. The students will also have a CAD lab where they design a complete highway system. The semester project provides hands-on highway design experience and includes the planning and operational aspects of a new highway design. This course serves as a capstone design course with writing projects. Students are expected to do in-class presentations of their projects.

**C E 441 Structural Design of Foundations (3)** Design of concentrically and eccentrically loaded square, rectangular, and combined footings; analysis and design of mat foundations; retaining walls; piles caps; flexible retaining design, and caissons.

**C E 441 Structural Design of Foundations (3)**

This course prepares the structural engineering student to analyze, proportion, size reinforcing, and select steel sections for structural foundations designs based on the state of practice presented in ACI 318, AISC, and available industry literature. Structural foundation analysis techniques for many foundation types are presented with extensive use of EXCEL in the design process. Analysis and design of foundation systems are developed for concrete shear walls, concentrically loaded square and rectangular footings, eccentrically loaded square and rectangular footings, and combined footings. Use of approximate and finite element analysis methods for analyzing mat foundations and grid foundations are presented. Working knowledge of retaining wall, pile cap, and flexible earth retaining structure design methods are also developed. This course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in structural engineering and advancement to the structures capstone course. This course is delivered in lecture format and concentrates on practice-oriented structural foundation analysis and design problems.

**C E 445 Advanced Structural Analysis (3)** Analysis of trusses and frame stiffness matrix method of analysis. Analysis of indeterminate beams, trusses, and frames using classical methods.

**C E 445 Advanced Structural Analysis (3)**

The CE 445 is an advanced structural analysis course that includes an analysis of structures using classical and matrix methods. Topics covered include the analysis of statically determinate and indeterminate beams, trusses, and frames. An introduction to the stiffness method and a software package for structural analysis will also be covered. The objectives of this course are to develop a strong competence in the analysis of statically determinate and statically indeterminate structures, including plane trusses, space trusses, two and three dimensional beams, and frames using a stiffness method of analyzing structures. The students will also learn classical method of analyzing indeterminate structures by the force and displacement methods, which includes plane trusses, beams, and frames. The presentation of work (neatness) and follow-ability of that work is emphasized, along with the professional importance related to such presentation. Successful students will develop a better understanding of how structural analysis fits into the design process and will gain a good understanding of how the future design courses (steel, concrete, wood, etc.) will mesh with the analysis requirements.

**C E 458 Construction Management II (3)**

This course presents policies, procedures, and applications in construction management and organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. The course encompasses construction tenets and fundamentals including planning, organizing, staffing, directing, and controlling. Students who successfully complete this course will be able to:

- 1) understand organizational issues concerning development of a project delivery system
- 2) comprehend the roles and responsibility of the Resident Project Representative and members of the construction team and the respective utility of the resident inspection office responsibilities
- 3) know the various documentation construction records/reports normally
- 4) recognize the salient features of specifications and drawings and the fundamentals for using them in contract administration
- 5) become familiar with the prevailing construction laws, policies, and procedures dealing with labor and safety
- 6) understand the utility of meetings during construction and the principles and techniques of negotiation
- 7) apply risk management through contractual allocation of risk and liability
- 8) become well versed in planning/orchestrating during reconstruction operations
- 9) apply management principles of directing and controlling construction operations and resources including CPM scheduling, inspections, tests, and contractor submittals
- 10) understand the concept of value engineering in construction operations
- 11) understand the critical control issues involved with measurement and payments, controlling construction materials and workmanship, and changes and extra work

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**C E 475 Water Quality Chemistry (4)** Chemistry applicable to the understanding and analysis of water quality, pollution, and treatment.

**C E 475 C E 475 Water Quality Chemistry (4)**

C E 475 Water Quality Chemistry is a senior/graduate-level course focused on both theoretical aspects of water chemistry and applied aspects of engineering practice. The course will cover a wide range of fundamental chemical principles that will be investigated further in the laboratory exercises and through an independent research project. The course covers reaction stoichiometry and reaction type with specific examples of processes typically encountered in water, wastewater and hazardous waste treatment situations. The course distinguishes between kinetic and equilibrium reactions and presents mathematical formulations for both types of reactions. The course reviews thermodynamics and electrochemistry and relates them to equilibrium constants and the spontaneity of reactions. The course covers redox reactions especially with respect to the corrosion of civil infrastructure, the generation of acid rock drainage, and biological wastewater treatment processes. The course covers acid/base reactions especially with respect to disinfection of drinking water and pH adjustments commonly used to enhance air stripping of pollutants. The course introduces the use of computer models for determining chemical speciation of acid/base constituents. The course covers alkalinity and the carbonate system especially with respect to the issues of acid rain, acidification of the Earth's oceans, and limestone buffering of surface waters in Pennsylvania. Computer models are used to calculate chemical speciation in carbonate-containing systems. The course covers pH-dependent solubility of common minerals – primarily carbonates, hydroxides and aluminosilicates. The course covers engineering applications related to metal solubility including water softening, coagulation for turbidity removal in water treatment plants, heavy metal generation from acid rock drainage, and heavy metal removal in hazardous waste treatment. The course covers complexation reactions especially with respect to effects on metal solubility and toxicity. Computer models are used to calculate chemical speciation in multi-complexant systems. The course covers analytical chemistry especially with respect to the most common parameters measured in water and wastewater treatment systems, and with respect to the principles of measurement (i.e. gravimetric, spectrometric, volumetric, potentiometric analyses). The course involves a research project on a local water quality problem of concern. In the past, this project has focused on the proposed "Beneficial Reuse" of wastewater in Centre County, and on the impact of acid rock drainage from the construction of I-99 on Buffalo Run in Centre County.

**C E 476 Solid and Hazardous Wastes (3)** Characteristics and treatment of solid wastes and hazardous wastes.

**C E 476 Solid and Hazardous Wastes (3)**

Solid waste management continues to be a major area of concern for the Environmental Engineering profession. Based on the principle of the conservation of mass, we know that all of our wastes must be deposited in either the air, water or land environments. With improvements in air and water pollution control technologies, resulting in solid residuals, an increasing waste load is being placed on the land. Environmental impacts are being addressed as a future need.

**C E 479 Environmental Microbiology for Engineers (3)** Intro microbiology for engineers; microbe structure, function, and diversity; environmental ecosystems; diagnostic labs.

**C E 479 Environmental Microbiology for Engineers (3)**

C E 479 Environmental Microbiology for Engineers is a senior/graduate-level course comprised of three main sections: (1) the fundamentals of microbial structure, function, nutrition, and growth for students with no prior formal instruction in microbiology; (2) microbial diversity and ecology; and (3) the application of these fundamental microbial principles to environmental systems. In the fundamentals section, the course covers microbial nomenclature, macromolecules, cell biology, energetics, growth, and genetic regulation. This is illustrated with calculations of thermodynamic constraints in microbially catalyzed reactions, the calculation of efficiencies based on energy conservation from common pathways, and the connection of these efficiencies to microbial growth in a chemostat. Building on these fundamental concepts of metabolic potential and conserving energy and acquiring reducing equivalents from redox reactions, the second section covers the reactions and energetics of the primary microbial functional diversity such as phototrophy, lithotrophy, autotrophy, anaerobic respirations, and fermentations. It also introduces modern molecular biology techniques for studying microbial systems, and pulls the concepts of functional diversity together by illustration with the major nutrient cycles, including discussions of the material to environmental microbiology research and application. Complementing the progression of the lectures are eight instructional laboratories that provide hands-on application of diagnostic microbiological techniques to the characterization of environmental enrichment cultures and pure cultures. For example, a microscopy lab immediately follows the lecture material on cell biology, an enrichment experiment follows the material on nutrition, an enumeration experiment follows the section on microbial growth, etc. The final seven weeks of the laboratory period are devoted to group projects, in which students apply the techniques they have learned as appropriate to answer specific short-term research hypotheses. The final period is devoted to group presentations of their projects.

**C E 488C Capstone Project - Construction (4)** This course consists of a project either selected by the students with approval or assigned by the instructor.

**C E 488C Capstone Project - Construction (4)**

This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course serves as the capstone of the senior student's education courses.

The course C E 488C identifies the student selection of a construction capstone project.

The student works on a team during the course project process. The team will be evaluated on different assignments during the project as well as the final product. The team will submit a final written report as well as make an oral presentation. The SDCET advisory board is invited to participate in the oral presentations.

The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

**C E 535 Integrated Project Management for Civil Engineers (3)** Apply the project management process to civil and environmental engineering projects.

**C E 535 Integrated Project Management for Civil Engineers (3)**

This course will present the project management process to students pursuing a graduate degree in Civil Engineering. The course will utilize a project/group based learning process to teach project management's value, methodology and application to civil and environmental engineering projects in the student's particular emphasis area (Infrastructure, Transportation Systems, or Water and Environment). Students will learn how to initiate, plan, organize, staff, direct, control and closeout a project. Key topics to be discussed include: the role of the project manager, civil engineering project procurement/proposal development, importance and skills of communications, project team development and leadership, team conflict resolution, design management, scope management, work breakdown structure (WBS), scheduling/time management, budgeting/cost management, risk management, resource management, crisis management, earned value, project evaluation and control, and project closeout and termination. Students will be evaluated on their comprehension of the course through homework, exams and/or quizzes, class participation and successful completion of a team-based project. The team-based projects will be specific to the student's engineering emphasis and may be developed by the instructor or student selected from previous project experience. This course will be required by all MEng students in Civil Engineering in the second semester of their degree program and serve as a culminating experience for their emphasis area courses. This course will be invaluable to those students who have or will

pursue careers in professional practice or industry. The course will be offered every Spring Semester and approximately 30 - 40 students are expected to enroll.

**C E 540** Statically Indeterminate Structures (3) Analysis of statically indeterminate straight/curved beams, grids, 2D/3D frames, arches, cables, and shells using classical and modern techniques.

### **C E 540 Statically Indeterminate Structures (3)**

This course introduces students to various methods for analyzing statically indeterminate structural systems, including: straight and curved beams, grids, 2D and 3D frames, arches, cables, and shells. Both classical hand calculation approaches and more modern computer based approaches that utilize force and displacement based methods are discussed. Additional analysis topics, such as plastic analysis and the examination of beams on elastic foundations are presented. The procedures are introduced to the students so that their ability to analyze statically indeterminate structural systems is enhanced. In addition, practical applications for the methods that are discussed are presented.

**C E 542 (A E 542) Building Enclosure Science and Design (3)** The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints.

**C E (A E) 542 Building Enclosure Science and Design (3)**

The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science--concerning primarily heat, moisture, and air--is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies, is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in sonic detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering

**C E 544 Design of Reinforced Concrete Structures (3)** Advanced topics in design of reinforced concrete structures. Torsion and shear; beam moment-curvature; two-way slab systems; slender columns; strut- and-tie methodology.

**C E 544 Design of Reinforced Concrete Structures (3)**

This course explores advanced topics in the design of reinforced concrete structures in conformance with standardized building codes. Topics covered include load combinations, principles of structural modeling, torsion and shear in reinforced concrete members, two-way slab systems, moment-curvature of beams, slender columns, and strut-and-tie models. Students enrolled in this course should have prior knowledge of the design of reinforced concrete beams, one-way slabs, and short columns. Due to the course content, students must be familiar with the American Concrete Institute (ACI) Building Code Requirements for Reinforced Concrete.

This course will generally be offered each fall, with an anticipated enrollment of 10. Grades will be based on two examinations, assignments, and a comprehensive final examination.

**C E 561** Surface Hydrology (3) Quantification of the processes that govern the movement and storage of water near the land-surface including precipitation, evapotranspiration, and runoff.

**C E 561 Surface Hydrology (3)**

Water is an important factor in numerous engineering and scientific problems. It can be both a hazard and a resource. Knowledge of the movements and storage of water in the terrestrial, oceanic, and atmospheric environments is fundamental in many such applications. This course provides a graduate level introduction to surface hydrology, which focuses on the quantification of water pathways near the land-surface. It presents basic properties of the terrestrial, oceanic, and atmospheric environments and develops water and energy budget equations for different settings and scales. The course also provides detailed quantitative descriptions of the main processes responsible for the movement of water in the environment including precipitation, evapotranspiration, snowmelt, infiltration, surface runoff, groundwater recharge, subsurface runoff, and streamflow.

Effective: Spring 2005

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**C E 566** Uncertainty and Reliability in Civil Engineering (3) Introduction to probabilistic modeling, simulation, uncertainty analysis, and reliability estimates applied to civil engineering.

**C E 566 Uncertainty and Reliability in Civil Engineering (3)**

The objective of this course is to develop understanding of the uncertainty in Civil Engineering analyses, design, and construction and to introduce reliability-based methods of analysis. The course covers review of probability and statistics, uncertainty analysis, probabilistic models of load and resistance, and the application of reliability analysis to problems in Civil Engineering.

**C E 567** River Engineering (3) Introduction to river mechanics and fluvial geomorphology applied to problems of sediment transport and channel morphology.

**C E 567 River Engineering (3)**

River Engineering will introduce students to the concepts of flow and sediment transport in canals and alluvial rivers. This course covers: river morphology and hydraulic geometry; hydraulics of flow in river channels; measurement of velocity; rating curves; properties of sediment; scour-related problems; stream stability and classification; sediment movement in rivers; channel design; software for erodible channels; stream bank, bridge pier, and bridge abutment protection; environmental considerations; and stream restoration. During the semester, the students will visit local streams for the purpose of making various observations and measurements.

**C E 576 (CH E 576) Environmental Transport Processes (3)** Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers.

**C E 576 Environmental Transport Processes (3)**

Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters).

**C E 591 Environmental Engineering Seminar (1)** Seminar topics selected by faculty and students based on research interests on topics related to environmental engineering and science.

**C E 591 Environmental Engineering Seminar (1)**

This is a seminar course offered primarily for graduate students in Environmental Engineering, although other graduate students with interests in environmental research take this course. Graduate students may receive only 1 credit of this seminar towards a degree in Environmental Engineering, however, they are encouraged to register and attend every semester during their graduate career. This course is offered for 1 credit for both fall and spring semesters. Students making presentations receive letter grades, while others receive a satisfactory/unsatisfactory grade.

Seminar topics are selected by faculty and students based on research interests on topics related to environmental engineering and science. Most of the talks will be by environmental engineering graduate students. However, during the semester there will typically be three outside speakers that will be invited to give talks. Students in this class are expected to meet with these outside speakers in the laboratory to discuss their own research projects.

Students in this class give short presentations on their research topics. Each presentation should be about 20 minutes in length, allowing for 10 minutes of questions concerning the technical content of the presentation. The rest of the class is used for general discussion. Students are encouraged to give a seminar even though they have not completed all of their research (i.e. prior to their defense). Feedback from faculty and other students in this informal setting can be used to help improve research ideas and stimulate new ideas and research directions during the course of their research work.

**C E 592 Environmental Engineering & Science Topics (1)** Current topics in environmental engineering and science.

**C E 592 Environmental Engineering & Science Topics (1)**

This is a literature review course for graduate students interested in topics related to environmental engineering. The subject of this seminar changes each semester. Examples of topics include: membrane bioreactors; biological hydrogen production; metal reduction by soil bacteria; anaerobic respiratory pathways used by bacteria for pollutant degradation.

This class is highly participation-oriented. Each week we review a single paper selected by the instructor or by a student

in the class. The first two papers are selected by the instructor. Thereafter, students choose the paper. The paper must be selected one week in advance, and sufficient copies will either be brought to class or a pdf file will be provided by email to all participants one week prior to the class. The student choosing the paper will be expected to lead the discussion by: prompting others to provide a summary of the paper or of key items; suggesting areas that require closer inspection; stimulating a critical evaluation of the paper. No background is needed on this topic other than general environmental engineering courses typical of an M.S. program in Environmental Engineering.

## **Classics and Ancient Mediterranean Studies (CAMS)**

**CAMS 400W** Comparative Study of the Ancient Mediterranean World (3) Comparative study of ancient Mediterranean civilizations.

**CAMS 400W Comparative Study of the Ancient Mediterranean World (3)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

CAMS 400W provides students in the Classics and Ancient Mediterranean Studies (CAMS) Major, and other undergraduate and graduate students in allied fields, a capstone overview of research methodologies as they are applied to contemporary issues in ancient Mediterranean studies. The course is interdisciplinary in nature, and stresses the interactions among the ancient cultures of the Mediterranean region. The specific course content varies depending on the current research interests of the department faculty and the work undertaken by participating students. The course is organized as a seminar with participation by department faculty, and, when appropriate, visiting speakers. The topics concern issues of chronological, geographic, and cultural breadth. Students are expected to give an oral presentation of their research on a relevant topic during the last three weeks of the semester.

This course requires a sequence of written assignments that constitute drafts in the process of writing an extended research paper. These consist of a statement of the problem, an annotated bibliography, a preliminary draft, and a final paper revised in light of the instructor's comments on the assignments. This paper and an oral presentation in class based upon it will constitute about half of the final grade. A quiz and essay final examination will constitute the remainder of the grade.

**CAMS 405 (IL) Law & Economy in the Ancient Near East (3)** This course is an overview of the legal and economic texts and institutions in the Ancient Near East.

**CAMS 405 Law & Economy in the Ancient Near East (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will introduce the students to the legal and economic institutions of the Ancient Near East, as well as to the many theoretical issues raised by their study, such as: the matter of land tenure; the role played by the temple and the palace in the economic structure; the nature of law within political theology and kingship; and the legal and economic status of specific social groups (women, the elderly, slaves, children).

Since most of the topics to be examined are widely debated, the course will provide the students with a broad overview of scholarly theories and intellectual schools. In order to accomplish such an objective, the readings for the class will include both introductory works (taken, for instance, from Sasson, *Civilizations of the Ancient Near East*) and more advanced and specific articles and works (e.g., R. Westbrook, *A History of Ancient Near Eastern Law*). Students will be asked to prepare these readings, which will be available in the library or in electronic format, so they will be ready to take part in class discussions.

The source book for the basic legal texts will be M.T. Roth's edition of law collections. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accomplished by some handouts.

Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide detailed overviews of major civilizations of the Mediterranean and Near Eastern regions.

**CAMS 411W Classical Drama (3)** Masterpieces of Greek tragedy (Aeschylus, Sophocles, Euripides) and comedy (Aristophanes, Menander); their influence on Roman writers.

**CAMS 411W Classical Drama (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The aim of this course is to read, interpret, discuss, and write about the best known and most influential examples of classical drama (in English translation). Students will become conversant with the formal and thematic aspects of Greek tragedy and comedy. (The course could also include a module devoted to Roman adaptations of Greek drama.) The Greek playwrights to be read are Aeschylus, Sophocles, Euripides, and Menander. (Roman playwrights would include Plautus, Terence and Seneca.) The objectives of this course include learning how to read, analyze, and interpret tragedy and comedy within a literary, cultural, and historical framework that is fundamentally different from our own. At the same time as students come to grips with the cultural differences of Greek drama, they will be invited to ponder why these texts are still relevant to modern readers and audiences. The second objective of this course is to give students a forum in which they may reenact the critical debates and dramatic conflicts that characterize the ancient Greek theater. Class time will be devoted to structured discussion on set topics. Toward the end of the semester students will give 15-minute presentations on different aspects of classical drama that illuminate the texts read in class: for example, the design of Greek theaters and ancient theatrical production, the religious and civic functions of tragedy, gender roles, tragic and comic heroism, myth, rhetoric, philosophy, and the legacy of Greek tragedy and comedy in the modern world. The third objective of the course is to focus on developing critical writing skills and communicating clearly with readers. Students will write six papers of varying length (three papers in two drafts) and two essay exams (mid-term and final). The process of writing will provide a vehicle for close-reading and critical interpretation of classical drama. Students will also learn in classroom discussion and in feedback from the instructor and other students that critical writing entails drafting ideas and revising them. Finally, participants will learn how to write properly documented and well-argued research papers.

**CAMS 420** Introductory Targumic Aramaic (3) Fundamentals of Aramaic grammar, syntax, and vocabulary.

**CAMS 420 Introductory Targumic Aramaic (3)**

The aim of CAMS 420 is to introduce students to the fundamentals of Targumic Aramaic as quickly and thoroughly as possible. Targumic Aramaic, is the dialect used by Jews in the last few centuries BCE in their translations of the Bible into Aramaic. Targumic Aramaic texts remain vital within Judaism and Biblical study. This course focuses primarily on the morphology and syntax of Aramaic. Drills on each point of grammar, as well as translation of sentences from Aramaic to English and English to Aramaic, and brief passages taken from the native texts are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of actual Aramaic. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS will prepare students to work with Aramaic in related courses in CAMS, in particular those dealing with other Aramaic dialects, the Bible, and other related ancient languages. The course goals, in addition to providing the students a basic understanding of the history of the Aramaic literary tradition. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to real Targumic Aramaic texts, which are of great importance to understanding the history of Biblical textual transmission.

**CAMS 425W (J ST 425W, RL ST 425W)** Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship.

**CAMS (J ST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12)**

The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and

literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

**CAMS 440W** Studies in Classical and Ancient Mediterranean Archaeology (3-6) Selected topics in the literary sources and material evidence for classical and ancient Mediterranean society.

### **CAMS 440W Studies in Classical Archaeology (3-6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

CAMS 440W is a writing-across-the-curriculum upper level archaeology course on various topics in the broad field of ancient Mediterranean archaeology. The course will vary depending on the specific topic, which could be a study of authors such as Herodotus and/or Pausanias in relation to the archaeological record; epigraphy; numismatics; food production and consumption (e.g., diet, subsistence requirements, public dining, symposia, Roman dining, furnishings) from the literary and archaeological record; various classes of ancient Mediterranean ceramics; or the archaeological study of a specific urban site, such as Troy, Babylon, Egyptian Thebes, the Athenian Agora, or Pompeii with an emphasis upon economic and social organization.

In most semesters the topic will emphasize interdisciplinary themes, such as comparative state formation, or Egyptian-Greek-Persian relations, or the cultural development of a particular society, such as the Etruscan, that was strongly influenced by interaction with other Mediterranean cultures.

Students will learn of major publications in the field of study, and how to conduct searches of the previous archaeological literature and the related literary record. As one requirement, students will complete a research paper on a topic related to the particular theme of the course that semester. The sequence of writing assignments is designed to allow students to develop a project, to search for related publications, to develop a proposal, and to revise drafts of the final paper.

The course is also intended to provide students with a practical background in Classical and ancient Mediterranean archaeology that will help prepare them for fieldwork at ancient Mediterranean sites, for the interpretation of archaeological publications, and, as relevant, for utilizing the literary and/or epigraphic record for interpreting archaeological evidence.

Those considering enrolling in this course may obtain information about the specific topic by asking the faculty member listed as teaching the course or the Undergraduate Officer in the Department of Classics and Ancient Mediterranean Studies.

### **CAMS (KINES) 442 Sport in Ancient Greece and Rome (3) (IL)**

This course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process.

The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics[Kinesiology] as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics.

Typical topics include athletics during the Minoan /Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.

**CAMS 470 (IL) Languages and Cultures of the Ancient Near East (3)** This course is an overview of the languages and cultures that populated the Ancient Near East.

**CAMS 470 Languages and Cultures of the Ancient Near East (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course aims to provide students with a wide overview of the languages spoken in the Ancient Near East. The goal is to go beyond the merely linguistic sketches of the main grammatical features of these languages. In fact, the focus will be placed on historical, literary, social, anthropological, and ethnic matters: language contact settings; relations between language and ethnicity; sociolinguistic aspects of language evolution, language variation, bilingualism, and diglossia; relations between historical and social patterns and the literary, bureaucratic, and popular uses of language; etc.

In order to address this ample variety of issues, the students will be introduced first to the essential set of facts needed to comprehend the sociolinguistic history of each region, i.e., basic overviews of the languages in question, their linguistic affiliation, the main periods of their history as evolving linguistic realities, and their different writing systems. These overviews will immediately open the door to the discussion of a tapestry of topics concerning the realities behind these languages, especially their speakers and their ethnic, historical, and political identity. This inquiry into the facets of language as an inherently human reality will lead to a miscellaneous constellation of problems, such as, for instance, the construction of a national identity through the use, revival, or vindication of a concrete language or dialect.

Students will be required to do a number of readings before each class. These readings will include basic historical sketches of the languages and linguistic traditions with which the course will deal. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of a lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accompanied by some handouts.

Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide overviews of major civilizations of the Mediterranean and Near Eastern regions.

**CAMS 471 Sumerian (3)** Introduction to the Sumerian language and the cuneiform writing system.

**CAMS 471 Sumerian (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Sumerian was the language originally spoken in the south of Ancient Mesopotamia (modern Iraq) during the third millennium b.c.e. After it died out as a spoken language, Sumerian became the essential cultural vehicle for a wide variety of literary, scholarly, and religious genres, and it was preserved in writing until the practical disappearance of the Mesopotamian civilization by the second century of our era.

This course aims to familiarize students with the basics of Sumerian grammar and enable them to read royal inscriptions from the Early Dynastic and Ur III periods (3rd millennium b.c.e.) as well as provide them with a preliminary introduction to some literary and non-literary texts. Students will be introduced to a variety of genres: royal inscriptions, administrative documents, letters, incantations, and literary texts.

Because of the specific nature of the writing system and the fact that most Sumerian texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs.

Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put

on class participation: every students will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to as essential language of the Mediterranean and Near Eastern regions.

**CAMS 472 Akkadian (3)** Introduction to the Akkadian language (Babylonian & Assyrian) and the cuneiform writing system.

### **CAMS 472 Akkadian (3)**

(BA) This course meets the Bachelor of Arts degree requirements.

Akkadian is the cover term for the East Semitic dialects spoken and written in Mesopotamia (modern Iraq) from the mid-third millennium b.c.e. to about the first century c.e. These dialects (Babylonian and Assyria) are all quite similar. As is customary, the course will focus on Old Babylonian, as this is the "classical" variety of the language, and served as the basis for the dialect of the vast majority of later Akkadian texts (Standard Babylonian). This course aims to familiarize students with the basics of Akkadian grammar and enable them to read a wide variety of genres: legal texts, letters, omens, royal inscriptions, and literary compositions.

Because of the specific nature of the writing system and the fact that many texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Every meeting will follow a similar structure: the first part will be devoted to the exercises corresponding to the lesson in the textbook that was explained the previous day; and the second part will be an explanation of the next lesson, the exercises of which will have to be prepared for the next meeting.

Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination.

This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies. Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

**CAMS 481 (IL) Introduction to Middle Egyptian & Hieroglyphics (3)** An introduction to the language and script of Ancient Egypt, familiarizing the student with grammar, syntax and lexicon.

### **CAMS 481 Introduction to Middle Egyptian & Hieroglyphics (3)**

This course is offered as a basic introduction to that stage in the evolution of the Egyptian language known as "Middle Egyptian" (used as a vernacular c. 2300-1700BC, and as a "literary" dialect c. 2200-1350BC). First encountered in caption texts and snippets of conversation of the workers and peasants in late Old Kingdom mastaba depictions, Middle Egyptian originally was the vernacular of the "street" during the outgoing Old Kingdom. In the upheaval that swept away the monarchy and elite of the Old Kingdom the language which characterized the Pharaonic court (Old Egyptian) was swept away as well. In the subsequent First Intermediate Period, the language that everyone speaks is a lower class register. Middle Egyptian was given a fillip shortly after the turn of the millennium when the new regime of the 12th Dynasty (c. 1991-1786 BC) established a writing school and adopted this dialect as the accepted literary medium. The scribes of this

institution produced a number of literary pieces, hymns and poetry which although created in writing, were intended for oral dissemination *parlando*. They rapidly became classics and were copied and learned by heart for centuries into the future. Middle Egyptian was used in every walk of life from monumental inscriptions, religious, and mortuary texts to letters, business documents and accounts, and the output from Dyn. 12 through 18 was prodigious. Even beyond the 14th Century BC learned scribes would continue to make the attempt at composing in Middle Egyptian, even though the language was no longer spoken, and as a quasi-ecclesiastical speech it continued down to Greco-Roman times. By that time its restriction to temple texts gave the false impression that both language and script had always had the purpose of conveying religious concepts, hence the Greek misnomer 'hieroglyphs', i.e. holy script.

**CAMS 490** Ancient Mediterranean Languages (3-6) Variable topic study of an ancient language of the Mediterranean basin and related areas, other than Greek, Latin, or Hebrew.

### **CAMS 490 Ancient Mediterranean Languages (3-6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

CAMS 490 is a variable topic course in ancient languages, other than Greek, Latin, and Hebrew, that are offered by the Department of Classics and Ancient Mediterranean Studies. The course expands the range of ancient languages of areas in the Mediterranean region which students may study at Penn State. The course permits students of Latin, Greek, or Hebrew to learn the basics of other ancient Mediterranean languages, thereby extending their understanding of the structural similarities and differences of the region's writing systems. The languages taught at present include Egyptian and Sanskrit. Other languages, such as Akkadian, Hittite, Ugaritic, or Aramaic may be offered in future years. The course consists of three major components: The course begins with an overview of the language of study with respect to the language systems of the ancient Mediterranean world in a historical context. Next students learn the essential features of the language of study including its forms, grammar, and lexicon. In the second part of the semester, students read selected texts of various genres as appropriate, including literary and historical texts and inscriptions. The known features of the oral language will also be discussed. The course complements advanced courses such as LATIN 450W, The History of the Latin Language, and other advanced language offerings in Greek, Latin, and Hebrew. It also complements offerings in historical-comparative and Indo-European linguistics such as LING 102(GH).

**CAMS 492** Intermediate Field Methods (3-6) On-site experience in archaeological fieldwork in the ancient Mediterranean region.

### **CAMS 492 Intermediate Field Methods (3-6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Students will have the opportunity to participate in a practicum in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include surveying recognition and recording of stratigraphy and standing remains, recovery of artifacts and ecofacts, and on site conservation. Students will keep a journal and be graded on it as well as on their development of skills in excavation and interpretation. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty. Estimated enrollment will vary depending on project, funding, etc.

**CAMS 493 Intermediate Field Analysis (3-6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Students will have the opportunity to participate in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include analysis of materials recovered in archaeological projects including maintaining an objects database, artifact sorting and reparation, recognition of pottery types, recording finds, proper handling and storing of finds, and understanding the role of artifacts in archaeological interpretation. Students will keep a journal and be graded on it as well as on their development of skills in recording and interpreting archaeological data.

This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty.

**CAMS 504** Topography of Ancient Rome (3) Lectures and readings on physical development of the ancient city of Rome from earliest habitation to time of later empire.

**CAMS 504 Topography of Ancient Rome (3)**

This is a course in the topography of the ancient city of Rome. That is, this course is concerned with the study of the physical reality of the ancient city of Rome: how it was perceived in antiquity; how we identify its elements today. The chronological scope is from the foundations of the city in ca. 800 BCE through late antiquity/the early medieval period (ca. 650 CE). Major topics of discussion and study include how the city expanded over time, the distinctions between public and private urban space, the nature of identifiable neighborhoods, the relationship between political governments and monumental architecture, the evolution of public and private urban religious structures, the physical infrastructure of the city (for example: roads, water, sewer), housing, and population.

The objective of this course is the acquisition of a scholarly understanding of the ancient city of Rome's physical identity: its foundation, development, and expansion, with particular attention to the identification of physical structures for which there is evidence either archaeological or literary or both.

This seminar complements graduate programs of study in Ancient, History, Art History, Anthropology, and is integral to the graduate curriculum in Classics and Ancient Mediterranean Studies.

Evaluation of student seminar work is based on (1) active participation in seminar discussions; (2) oral presentation of research reports; (3) a major research paper. This seminar has a limited enrollment of 8 and is offered once a year.

**CAS 409** (PL SC 409) Democratic Deliberation (3) Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions.

**CAS (PL SC) 409 Democratic Deliberation (3)**

Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

**CAS 421 Communication and Aging (3)** Concentrates on the pivotal role that communication plays in the social process of aging.

### **CAS 421 Communication and Aging (3)**

Communication and Aging is a course that concentrates on the pivotal role that communication plays in the social process of aging. An understanding of the communicative behavior of older adults can result in significant improvements in our ability not only to describe the essential components of a quality life, but to actively intervene in the various factors that help each of us adapt to the many physiological, psychological, social and economic challenges of the aging process. Topics covered in this course include: the theories of social aging; attitudes and ageism; mass media use and portrayals; work, leisure, and retirement; family relationships such as siblings, grandparent-grandchild, parent-child; friendships; health and aging; death and dying; and successful aging. This course places communication and our interactive behavior at the heart of the aging process and helps us combine the growing bodies of literature in physical, psychological and social aging as we attempt to grasp the process of life long development.

**CAS 422 (US) (AF AM 422) Contemporary African American Communication (3)** A focused study on the continuities between African and African American culture and communication.

### **CAS (AAA S) 422 Contemporary African American Communication (3) (US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

At least once a year, this multidisciplinary course is designed to serve both Speech Communication and African and African American Studies. It is concerned with the relationship between a people's culture and world view and their systems of rhetoric/communication. It also provides a focus on the continuities between African and African American culture and communication. Specifically, it offers an approach to ascertaining the salient features of African and African American communication for community development. Special emphasis is given to the development and rhetoric of the Civil Rights Movement. The course utilizes videos, guest lectures, tapes of speeches, etc. to clarify objectives and stimulate classroom discussion. Students will be evaluated on two exams, one oral report, a final paper and class participation. Even though students need 400-level courses for their major and minor, this course is not required for Speech Communication majors. However, it does meet the Intercultural and International Competency requirement because it focuses on the communication of African Americans and how that communication has affected all Americans. The course will accommodate ten students in Speech Communication and ten students in African and African American Studies to ensure active discussion of issues.

**CAS 450W** Group Communication Theory and Research (3) Selected theories of problem solving through group discussion emphasizing participation and leadership.

**CAS 450W Group Communication Theory and Research (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

CAS 450W: Group Communication Theory and Research is a writing-intensive course in which students study a broad range of theories and perspectives concerning the role of communication in decision-making and problem-solving groups through a variety of writings by leading scholars in the area of Group Communication. The objectives of CAS 450W are: (1) to expose students to various facets of group life and theories that account for their performance; (2) to provide a summary knowledge of representative findings from research on group interaction; (3) to develop critical skill in the assessment of theoretical arguments and the adequacy of the evidence on which they are based; and (4) to enhance students' capacities for addressing, both orally and in writing, substantive issues posed by the subject matter. Theoretical material is examined with a view toward determining how to improve the performance of decision-making and problem-solving groups. Hence, the course has a strong concern with the identification of communication practices on which students can draw in making choices concerning how to participate in such groups. The course incorporates a discussion, rather than lecture, format. Attendance is required. Students will receive a set of questions in advance of each reading assignment that will provide a basis for discussion in the class sessions. The questions for the first five reading assignments will also serve as topics for a series of five short position papers that fulfill the writing intensive component of the course. In addition to the position papers, students are required to complete a midterm and final examination, both of the open-book, essay variety, and a course paper exploring a significant communication issue raised in the course. Among the topics covered in the course are the impact of member characteristics on interaction, the social dynamics of groups, the management of conflict, argument and decisional outcomes, leadership, and principles of meeting management. Students completing the course will have not only a better understanding of why decision-making and problem-solving groups both succeed and fail, but also a much improved basis for contributing effectively to them. CAS 450W satisfies requirements in the Communication Arts and Sciences Major and Minor, the Liberal Arts Business Minor, and the Dispute Management and Resolution Minor. It may also be used as an elective and is complementary to courses dealing with groups and group process in Psychology, Sociology, and Management.

**CAS 452W** Organizational Communication Theory and Research (3) Explores the nature and functions of communication in organizations; emphasis on writing and exploring concepts, tools, and skills for effective management of communication.

**CAS 452W Organization Communication Theory and Research (3)**

This course is designed to further introduce you to the field of Organizational Communication. Emphasis is placed on macro-organizational variables that can systematically affect micro-communication behaviors: in other words, how could something like the hierarchy of the organization influence who you talk with as an organizational employee. The purpose of the course is to provide you with a basic understanding of communication-relevant behaviors and activities in organizations. This includes things like leadership, teamwork, conflict management, and diversity. Additionally, we will examine various theories of and approaches to studying communication within organizations. My hope is that when you've

successfully completed the course you've mastered these objectives:

- Develop a vocabulary and understanding of organizational communication concepts.
- Become familiar with the historical, current, and future issues and problems facing organizations.
- Apply theoretical perspectives and concepts to organizational situations and settings.
- Identify and understand the relationships between macro (e.g. structure and hierarchy) and micro (e.g. social support and stress) organizational communication variables.
- Experience locating, reading, synthesizing, and evaluating scholarly research appropriate for organizational communication phenomena.

**CAS 453 Health Communication Theory and Research (3)** Principles of communication about health across the lifespan and within health-care contexts.

### **CAS 453 Health Communication Theory and Research (3)**

This is an upper division course designed to provide students with a comprehensive introduction to multiple discourses about health and health care. CAS 453 emphasizes the communication about health and health care that reaches us everyday through many and varied professional, personal, and mediated forms. Interactions with health care providers were once limited primarily to physicians and nurses. Today, careers in health care are among the most rapidly expanding job areas, and a bewildering array of technicians and technical and professional titles greets the client of formal health care. Awareness and understanding of how to assess these various roles increases the ability of students to interact competently with care providers. Family, friends, and the cultural groups that nurture our youth and sustain our adulthood interact with us about health on a regular basis as well. Awareness and understanding of the impact that interactions with these primary social network members has on interactions with health care providers increases the likelihood that both provider and client will be better understood and better served.

Every message about health and health care carries an ethical dimension in its content. The course will increase a students' critical thinking and informed decision-making skills associated with others efforts to influence them regarding their own health practices. It also frames discussion about the ethics of and ethical decision-making associated with health communication. Students will examine communication about health in many situations and contexts to illustrate how it reflects efforts to assign labels to illness and disease, and sometimes the environmental and political contributors to the situation. Students will assess whether communication about health and health care places the responsibility on individuals, institutions, society, or some combination for the particular health condition or situation. Finally, students will evaluate how communication is used to invoke personal, professional, and societal norms of conduct associated with standards of conduct that should promote health and well-being.

The course is linked to the courses in interpersonal communication, organizational communication, health communication, and small group communication, as discourse about health crosses societal, cultural, and personal contexts. CAS 453 is one of the upper division courses that may be used to fulfill Major or Minor students' requirements for upper division credits.

**CAS 455 (US) (WMNST 455) Gender Roles in Communication (3)** Explores the literature on gender research in the discipline of human communication.

### **CAS (WMNST) 455 Gender Roles in Communication (3) (US)**

This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is "cross cultural," i.e., that women and men come from two different cultures, and therefore misunderstanding of each others' intent and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most -- relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how

theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communications Arts and Sciences and Women's Studies majors and minors due to emphasis on communication theory and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US requirement through 455.

**CAS 471 (US;IL)** Intercultural Communication Theory and Research (3) Intercultural and cross-cultural communication research theory and practice as applied within and across national boundaries.

### **CAS 471 Intercultural Communication Theory and Research (3) (US;IL)**

This course is designed to introduce theoretical approaches to cross-cultural communication from a variety of disciplines, e.g., speech communication, anthropology, linguistics, sociology, sociolinguistics, psychology, and has a double aim of combining theory with practical application and empirical observation. We will be utilizing a number of readings, films, and such mass media elements as films, magazines, newspapers, and television programs and commercials, as well as actual interviews with people from other cultures. Classes will be conducted through lecture sessions, class discussions, and small group activities. Specific: To examine characteristics of communication, language, and culture; to consider which aspects of language, communication, and culture may be universal, culture-specific or individual characteristics of speakers; to examine cultural values and their relationships to communication involving members of the same cultural group and members of groups outside of that culture; to raise awareness of both similarities and differences within and between cultural groups; to analyze how effective communication is achieved and to identify potential sources of miscommunication and/or misunderstanding; to raise awareness of our own cultural norms, preferences, and expectations; to increase acceptance, understanding, and appreciation of similarities and dissimilarities among people. Students will be evaluated on two midterm exams (undergrads) or two extended analytic journals (grads) 25%, observation journals (6 total) 15%, thought journals (4 total) 15%, article presentation and critique 15%, final paper and oral report 25%, and participation 5%. The content and focus of this course is related to any field which has the potential of dealing with persons of other cultures, including but not limited to biobehavioral health, business and marketing, and education. This course is inherently related to Speech Communication Majors and Minors, but is also valuable from a cross-disciplinary perspective since we deal squarely with issues of humanity, tolerance, values, and communication.

**CAS 490** Peer Tutoring for Public Speaking (3) This course will prepare students to become peer tutors in public speaking.

**CAS 490 Peer Tutoring for Public Speaking (3)**

This course will prepare undergraduates for work as peer tutors in the area of public speaking. Students will begin by considering peer tutoring as an opportunity for civic engagement, and public speaking as integral to the democratic process. Students will review and practice elements of the speaking process both to become excellent speakers themselves and also highly competent tutors for their peers across the university's curriculum. In addition to instruction on elements of public speaking, students will study and practice the art of critique. This course will include in-class instruction, discussion, and activities, as well as a practicum in which students will participate in reviews of peers' work at all stages of the speaking process.

**CAS 500 Historical Public Address (3 per semester, maximum of 9)** Special topics in American public address, 1765-1900; emphasis on rhetoric of revolution, reform, and reaction.

**CAS 500 Historical Public Address (3 per semester/maximum of 9)**

This is a graduate seminar focusing on special topics in the history of American public address, 1765-1900. It is designed to strengthen students' knowledge of the historical foundations of the American rhetorical tradition. Special attention is paid to key texts, debates, and movements shaping the origins and development of American nationhood. Emphasis is placed on the language of revolution, reform, and reaction. Special topics through which this course is to be taught may include: The Rhetoric of the American Revolution, Rhetoric of Abolitionism and Civil Rights, The Rhetoric of the Women's Suffrage Movement, Great Debates in American History, and Rhetoric and the American Presidency, 1789-1900. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 504 Contemporary Public Address (3 per semester, maximum of 9)** Special topics in recent history of American public address, including speeches, debates, persuasive campaigns, and social movements in America 1900-present.

**CAS 504 Contemporary Public Address (3 per semester/maximum of 9)**

This course is a graduate seminar focusing on special topics in the history of American public address since 1900. Through intensive study of great speeches and other rhetorical texts, important national debates and controversies, and significant persuasive campaigns and social movements, it cultivates specialized understanding of the distinctively American tradition of public advocacy and deliberation and illuminates how that tradition has evolved in response to political and social developments and new communication technologies. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: "The Rhetoric of the Progressive Era," "The Rhetoric of the New Deal," "The Manifesto in Contemporary Social Movements," "The Rhetoric of Contemporary Political Campaigns," and "The Rhetorical Presidency." Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 507 Issues in Rhetorical Theory (3 per semester, maximum of 6)** Theoretical, analytical, philosophical, and critical problems in human communication, with application of humanistic and social scientific research framework.

**CAS 507 Issues in Rhetorical Theory (3 per semester/maximum of 6)**

The seminar is available to members of the faculty who wish to explore specialized problems of a theoretical, analytical, philosophical, or critical nature in human communication research. Its content varies by instructor. Such subject areas of language and meaning, epistemology, ethics and moral philosophy, metaphysics and ontology, the functions of myth, cognition, child development, and brain function may be considered for the contributions they make to our understanding of rhetorical behavior. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: "Rhetoric, Myth, and Cosmology," "Rhetoric and Ethics," "The Rhetorical Construction of Social Identity," and "Rhetoric and Public Deliberation." Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 515 Rhetoric and Media (3 per semester, maximum of 9)** Seminar in the application of rhetorical theory and criticism to television, film, and other media.

**CAS 515 Rhetoric and Media (3 per semester/maximum of 9)**

Seminar in the application of rhetorical theory and criticism to television, film, and other media. In a recent offering of the seminar, we studied the films of Alfred Hitchcock from the point of view of The Rhetoric of the Thriller: The Films of Alfred Hitchcock as Art, Entertainment, and Social Text. This course offered an intensive examination of the art of Alfred Hitchcock, one of the great film artists of the twentieth century. Each week, the class screened one or more of Hitchcock's classic films. The class then met in small discussion sections for intensive analysis of the films and a series of related readings. Our discussions and readings explored Hitchcock as one of Hollywood's most successful popular entertainers, the "master of suspense"; as one of the great artists of the medium; as a critic of American culture; and as a persona whose reputation is a construction of his own efforts, and the product of reviewers and academic critics. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 530 Political Communication and Media (3)** Study of rhetorical and communicative dimensions of contemporary political communication with particular attention to electronic media.

**CAS 530: Political Communication and Media (3)**

This seminar explores the rhetoric of electronically mediated political discourse, including broadcast speeches, news coverage of politics and political campaigns, campaign debates, political advertising, talk radio, and political websites. Addressing key problems and issues in democratic theory and practical politics, the seminar explores questions frequently raised by both scholars and political pundits: How has the character of political discourse changed in the age of electronic media? How have new communicative technologies affected political discourse? Is it possible to have an engaged, informed, and responsible electorate in the age of 30-second Aspot@ ads and journalistic Asound bites?@ What might be done to improve the quality of political discourse and to enhance public deliberation? How might new media technologies

be used to combat political alienation and promote civic engagement? The specific focus of the seminar varies by semester. Recent seminars have focused on the rhetoric of presidential campaigns, conceptions of the public and public opinion in the age of mass media and polling, and the political significance of such non-traditional media as motion pictures and websites. Whatever the topic, the focus remains on the impact of mass media on the quality and character of political discourse in America. Students in the seminar will join in a larger scholarly conversation about the impact of new media technologies on democratic politics. Students in CAS 530 will read scholarly works on mass media and politics from a variety of disciplines, as well as more popular writings that have developed influential critiques of contemporary political communication or have advocated reforms in the laws and regulations governing mass media. Given the subject matter, the seminar is necessarily interdisciplinary in approach, and students will be encouraged to take interdisciplinary approaches to their own research and writing for the seminar.

**CAS 550 Social Influence** (3 per semester/maximum of 6) Theory and devices of persuasion; analysis of persuasive discourse.

#### **CAS 550 Social Influence (3 per semester/maximum of 6)**

This is a graduate-level seminar designed to provide students with social scientific theoretical principles for explanation, prediction, and practice in social influence contexts and situations. CAS 550 emphasizes the positive and negative outcomes likely to be associated with specific messages designed to influence others in social and societal settings. It emphasizes the importance of audience analysis and goal selection in guiding message design, and source and channel selection to communicate in ways that are intended to form, change, or reinforce and maintain others' beliefs, attitudes, values, and behaviors. It affords significant opportunities to address the gaps between theory and measurement in social scientific research pursuits. These attempts may employ a highly active cognitive approach or a more passive strategy. Both approaches are examined in this course.

The course content and setting reflects the above aims. The course begins by defining social influence, provides an overview of its history, and introduces the major theories associated with social influence formation, change, and reinforcement objectives. The course devotes significant time to the evaluation of existing social influence attempts, including review of the channel(s) and source(s) used to deliver particular messages. Students will also practice known strategies for designing influence messages. These activities will take place within the framework of knowledge generated by research findings associated with the influence theories examined in the class.

Evaluation will include participation in class, exams that include application in the form of a social influence case study, and a research proposal associated with the application of social influence theories to message design and evaluation.

The course complements graduate students' interests in pursuing academic, business, health, management, public relations, advertising, sales, and other career ambitions where communication is associated with the desire to influence others. The course will increase students' critical thinking and informed decision-making skills associated with others' efforts to influence them. It also frames discussion about the ethics of and ethical decision-making associated with persuasion.

CAS 550 will be offered every other year with 15 seats per offering.

**CAS 554 Small Group Communication** (3 per semester/maximum of 6) Communication variables in small groups. Experimental research and innovations in communication in vocational, therapeutic, and educational groups.

#### **CAS 554 Small Group Communication (3 per semester/maximum of 6)**

Group communication is a specialized area of study that has ties to the related areas of interpersonal and organizational communication. These ties reflect the fact that groups typically are part of some larger organizational structure and that it is the interaction among the members of groups that drive their performance. The major objectives of the course, which is presently offered once every two academic years, are to provide students with (1) an in-depth examination of what social scientific research has revealed about the functions communication among the members of groups in various interpersonal and organizational contexts and (2) the opportunity to engage in an even deeper examination of a specific issue relating to a specific function of communication in one of the types of groups included, that is, decision-making and problem-solving groups, familial groups, educational groups, work groups, and support groups, by means of an original research project. The first three weeks of the course acquaint students with the general domain of group communication as a specialized area of study, as well as the dominant theoretical and methodological approaches in evidence. In the fourth and fifth weeks, students come to understand how communication in groups functions generally to socialize the members and thereby shape their respective cultures, as well as influence the ways in which they characteristically fulfill the purposes for which they have been created. During the remaining ten weeks of the course, the accent is on particular types of group contexts and the unique ways in which communication is manifested in each. Finally, each student identifies and executes an original research project, the results of which he or she shares with other members of the class in the form of a scholarly paper which, if warranted, he or she subsequently modifies for presentation at a professional conference and possibly publication. Determination of overall mastery of the course content derives from a student's performance on a comprehensive final examination held during the regularly scheduled final examination period. The grade for the research project and the final examination combined provide basis for the recorded grade for the course. The course requires no special facilities other than a classroom. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 555 Interpersonal Communication (3 per semester/maximum of 6)** Investigation of the communicative management of ongoing relationships; examination of how communication both creates and responds to exigencies of friendship.

**CAS 555 Interpersonal Communication (3 per semester/maximum of 6)**

This course is intended for graduate students who want an in-depth understanding of interpersonal communication across contexts. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes. Structurally, the course begins with a review of definitional and philosophical issues underlying research and theory in interpersonal communication, then covers the major frameworks and theories that make up knowledge in the area. In addition, some of the primary issues debated in the literature will be discussed. Evaluation methods will include presentations and research paper(s), but may also include exams and participation. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 556 Relational Communication (3)** Examines theories and research focused on understanding communication in intimate (or potentially intimate) relationships.

**CAS 556 Relational Communication (3)**

This course is intended for students who want an in-depth understanding of interpersonal communication in intimate and potentially intimate relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in relational contexts. The focus will be on cognitive and social theories of relational encounters, including friendships, romantic relationships, and family relationships. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of relational communication. Then, students will shift their attention to the major social scientific perspectives on human relationships. Next, major theories would be discussed and the course would be completed with a more focused discussion of central issues related to relational communication. Evaluation methods will include, research paper(s) and presentations, but may also include exams, short papers, journals, quizzes, and creative activities.

**CAS 557 Health Communication (3)** Provides experience in making decisions about planning, implementing, and evaluating communication in community-based health campaigns to achieve health promotion/education.

**CAS 557 Health Communication (3)**

This is a graduate seminar designed to provide students with a comprehensive overview of health communication in community-based health campaigns. Health messages are a pervasive feature of contemporary American life. The study of health communication for community-based campaigns overviews strategies for informing, motivating, and selling ideas and behaviors based on health and health care. Students will select a target community and topic to use as a focal point for applying course readings. Students will prepare an evaluation plan for assessing policymakers' involvement in your health topic. This should include projection of the need for policymakers' involvement, using as many archival materials as possible to conduct a formative evaluation of the need and a plan to obtain the additional information needed to identify the gaps between current and projected levels of involvement. Students will also assess previous efforts to involve lay and expert communities in health promotion efforts associated with their topic, and summarize findings, preparing an organizational membership roster for both Expert Advisory Board and Community Steering Committee, and providing a mission statement to be used in recruitment. Provide a draft of a commitment contract to be signed by board and committee members. Students will also examine previous efforts to involve educational institutions, and lay and expert providers in promotion efforts, summarizing findings and developing a vision of how these audiences should be and could be involved. Previous efforts to involve businesses, retailers, and family in promotion efforts will also be assessed, with development of a vision of how these audiences should be and could be involved included.

The health communication seminar complements students' interests in pursuing academic, political, counseling, pastoral, business, health, management, public relations, advertising, sales, and other career ambitions where community-based campaigns comprise an important focus.
