With the completion of the human genome project, genes underlying almost all "simple" mendelian traits have now been identified. How are chromosomes and genes analyzed? How were these disease genes located? How does the identification of the gene and specific mutations explain patient phenotypes? How does this information translate to the genetics clinic for counseling families? These questions and more will be discussed in this selective course.

This course will be offered as part of 3 one-unit courses in Human Genetics that cover (1) identification and analysis of chromosomes and disease genes, (2) the human genome and complex traits , and (3) chromosome behavior and non-mendelian inheritance. The full three unit series may be taken in its entirety although each one-unit course is completely independent of the other two courses.

Students will be evaluated by their class participation and performance on take-home assignments that require the students to solve problems, evaluate experiments, or logically address research questions.

**GENET 585 Human Genetics B: Non-mendelian Genetics (1)** This course explores genetic disease mechanisms that alter chromosome behavior or show non-mendelian patterns of inheritance.

GENET 585

**GENET 585 Human Genetics B: Non-mendelian Genetics (1)**

Many genetic diseases do not show straightforward patterns of inheritance. Was Gregor Mendel wrong? How can a disorder be inherited without causing primary DNA sequence changes? What is the biological basis behind disorders that do not show simple mendelian inheritance? What are the phenotypic consequences of disorders that alter fundamental aspects of chromosome mechanics? These topics and more will be covered in this selective course.

This course will be offered as part of 3 one-unit courses in Human Genetics that cover (1) identification and analysis of chromosomes and disease genes, (2) the human genome and complex traits, and (3) chromosome behavior and non-mendelian inheritance. The full three unit series may be taken in its entirety although each one-unit course is completely independent of the other two courses.

Students will be evaluated by their class participation and performance on take-home assignments that require the students to solve problems, evaluate experiments, or logically address research questions.

**GENET 586 Human Genetics C: Complex Traits (1)** This course explores the human genome landscape, how individuals vary, and gene identification for multigenic traits and disorders.

GENET 586

**GENET 586 Human Genetics C: Complex Traits (1)**

With the completion of the human genome project, genes underlying almost all "simple" mendelian traits have now been identified. A new challenge is to identify genes involved in common traits and disorders such as hypertension or obesity. This course will explore the human genome landscape, human genome variation, principals of population genetics and experimental approaches to identify genes involved in these important complex disorders.

This course will be offered as part of 3 one-unit courses in Human Genetics that cover (1) identification and analysis of chromosomes and disease genes, (2) the human genome and complex traits, and (3) chromosome behavior and non-mendelian inheritance. The full three unit series may be taken in its entirety although each one-unit course is completely independent of the other two courses.

## **Geodesign (GEODZ)**

**GEODZ 511** Geodesign History, Theory, Principles (3) Students study the theory and principles of geospatially-based design by investigating the methods and collaborative nature of the geodesign process.

**GEODZ 511 Geodesign History, Theory, Principles (3)**

GEODZ 511 consists of lectures, readings in course literature, small group discussion forums, and individual topic investigation. In this course students will explore the questions, challenges, and the values of the geodesign framework. The course provides a comprehensive overview of the geodesign process, including designing in geographic space, issue identification, process evaluation, fast iteration and alternative scenario generation, multidisciplinary collaboration, and the role of science- and value-based decision making. The course culminates in a final project in which students independently research the physical and social characteristics, data, and teaming-expertise required to deploy a study for their topic, and report on how their proposed geodesign framework enables creative change for that location.

Students who successfully complete the course will be able to associate different types of design and planning issues and

challenges to the appropriate geodesign workflow and identify possible models to use to promote creative change for a place. They will be able to prepare a description of a scenario and the team needed to perform a geodesign study, and illustrate which tools or techniques may be best suited for a scenario.

**GEOG 412W** Climatic Change and Variability (3) Theories and observations of past, present, and future climatic change and variability; introduction to techniques used in climatic change research.

GEOG 412W

**GEOG 412W Climatic Change and Variability (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Geography 412W introduces students to the physical dimensions of climate change and variation. Climate change topics include radiative forcing, greenhouse gases, scenarios, equilibrium models, and time-dependent models. Important Climate variation topics are teleconnections and the El Nino-Southern Oscillation phenomenon. Geography 412W would appeal to students with interests in Earth and atmospheric sciences, as well as environmental protection.

As a writing-intensive course, Geography 412W aims to help students improve their ability to communicate scientific information. The course devotes considerable class time to the mechanics of reading, writing, speaking, and especially report production. Students not only write, but also learn to edit and critique writing.

Because most professional research on climate change and variation involves collaborative science teams, Geography 412W focus on collaboration and participation. Students form teams, conduct research, and compile formal collaborative

reports on climate change and variation. Students document their individual contributions by producing portfolios.

**GEOG 414** Principles and Applications in Landscape Ecology (1-3) Introduction to the ways in which spatial patterns and processes operate in an ecological context.

### **GEOG 414 Principles and Applications in Landscape Ecology (1-3)**

Landscape ecology is a rapidly evolving discipline that is poised to address contemporary challenges in sustainability science, land management, and conservation. The focus of landscape ecology is on the controls, interactions and outcomes of spatial patterns and processes on ecological dynamics at multiple spatial scales. Landscape ecology explores how energy and nutrients flow across spatially variable patches, how dispersal and migration of aquatic and terrestrial organisms are affected by spatial networks, and how disturbances propagate across complex terrain. Grounded in related fields of ecology, geography, and spatial analysis, landscape ecology provides additional theoretical tools and approaches to guide applied conservation decision-making in a dynamically changing world.

The objective of this course is for students to apply the methods, theories, approaches and practical applications of landscape ecology to inform landscape decision-making. Particular emphasis is placed on how humans modify landscapes and how species, ecological communities, and ecosystems have responded to these changes. These objectives will be met through lecture and discussion of prominent landscape ecology topics (scale, pattern quantification, agents of pattern formation, green infrastructure, and conservation biology), computer laboratory exercises, written papers, and group presentations.

By the end of the course students will be able to (1) articulate in written and oral form the concepts of scale and pattern, (2) use landscape pattern metrics, spatial statistics, and models to characterize ecological pattern on landscapes, and explain how ecological patterns develop, and (3) apply knowledge of spatial pattern-process interactions to issues of sustainability, conservation, and landscape management.

**GEOG 417** Satellite Climatology (3) A discussion of the application of satellite data to current and planned large-scale climate experiments.

GEOG 417

### **GEOG 417 Satellite Climatology (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Geography 417 presents the *theory* and *practice* of satellite remote sensing as applied to the study of climate. Remote sensing refers to the acquisition of information about a target or phenomenon from a distance; climate is the low-frequency signal of weather that involves interactions among Earth's environmental systems (atmosphere, biosphere, cryosphere, hydrosphere). Combining these two disciplines into Satellite Climatology is logical because the fundamental basis of both remote sensing and climate is radiation transfer through Earth's atmosphere. The course emphasizes understanding the different techniques used to determine, from space-borne platforms, the atmospheric, oceanic and land surface conditions important to climate and its variations, and the interpretation of these remotely sensed data in the context of "climate dynamics" and "synoptic climatology." Specific topics include the following: *Satellite systems (platforms, sensors, orbits, data processing); Remote sensing clouds and cloud systems; Retrieval of atmospheric temperature, moisture, and precipitation; the Earth-atmosphere radiation and energy budgets; and Land-surface conditions and their modification by humans*. In addition, examples of the different satellite-based climatologies, and their advantages and limitations with respect to conventional observations ("ground truth"), are presented.

**GEOG 420Y** (US;IL) Comparative Urbanism (3) This course investigates selected urban issues through the lens of comparative urbanism.

**GEOG 420Y Comparative Urbanism (3)  
(US;IL)****(BA) This course meets the Bachelor of Arts degree requirements.**

As an upper level urban geography seminar, this course investigates selected urban issues through the lens of comparative urbanism and requires active class participation. Examination of readings from the growing literature on comparative urbanism will introduce students not only to possible ways to design an effective comparative study but also to the varying goals of such work. Other readings, drawn from a wide variety of sources, will target particular issues facing urban areas that may vary from year to year, such as economic restructuring, uneven urban redevelopment, transportation planning, historic preservation, arts districts, the social construction of race and ethnicity, aging in place, and urban poverty. Students in turn will be required to design and carry out a comparative research project focusing on a particular urban issue, highlighting both the similarities and the differences between their selected case study cities and placing them in local, regional, and global contexts. This course is reading and writing intensive and satisfies United States Cultures and International Cultures requirements, as well as the Bachelor of Arts Social and Behavioral Sciences Field.

**GEOG 423Y (US) Historical Geography of North America (3)** Exploration, settlement, and changing patterns of human occupancy from the seventeenth century to the 1930s.

**GEOG 432Y Historical Geography of North America (3)  
(US)****(BA) This course meets the Bachelor of Arts degree requirements.**

This is an upper-division, writing-intensive course that presents an overview of current scholarship on the evolving historical geography of the continent. It does this through a set of lectures given by the instructor, through directed readings that will be the basis of class discussion, and centrally through research essays that offer students the opportunity to research, write and argue historical geographies. Research in historical geography is a process of engagement with partial evidence and with secondary material to open windows on aspects of past lives, past economies, and past places.

Since an introductory level overview of the historical geographies of the continent is presented in GEOG 122: The American Scene, this class does not offer a comprehensive survey of regions and periods. Rather, it focuses on three themes— staples and the colonial era, local transformations in agricultural and industrial communities in the nineteenth and early twentieth century, and the packaging of memory—as a way to expose students to primary evidence and current debates.

In the unit on the colonial era, the focus is on a variety of records that illuminate the development of economies based on staples such as fish, fur, tobacco, rice and iron, drawing on evidence from the Lords of Trade and Plantations in London, and from correspondence between merchants and planters, as well as scholarship on the material culture of houses, farms and settlements.

For the unit on local change, workshops illustrate how to tease out information from the manuscript census, county atlases and corporate histories; students then pursue similar material for a locale of their own choice and submit drafts of an evolving research essay. A short presentation to the class encourages the effective distillation of visual and data evidence to communicate research findings.

On the packaging of memory, the class critically examines how historic sites are presented, and how interpretations have changed in response to shifting academic and popular concerns.

Lectures are interspersed with discussions of readings, workshop demonstrations, and by student presentations. Eleven distinct writing exercises are used as the basis of allocating the overall grade.

**GEOG 425 (US) Geography of Race, Class, and Poverty in America (3)** This class examines the spatial interactions of race, class and poverty in the United States.

**GEOG 425 Geography of Race, Class, and Poverty in America (3)  
(US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The terms "race," "class," and "poverty" are often discussed in the same breath in academic scholarship. Research portrays the interwoven relationships between economic status, economic security, and ethnic heritage. Despite this powerful and abundant literature, few scholars examine the spatial interactions among race, class, and poverty. The class introduces students to a range of literatures on the meaning of race, class, and poverty in the contemporary United States. We will situate these terms in their local spatial context and investigate how location influences perceptions of the meaning of race, class, and poverty. We will blend historical, contemporary, theoretical and empirical scholarship as we investigate the meaning, understanding and manifestation of race, class and poverty in the U.S. Beginning with history, we will move through the 20th century examining how economic and political cycles have influenced social understanding of these terms. There will be a particular focus on deconstructing the measurement and meaning of the terms and their use in public policy discussions based on perceptual understandings of the terms "race," "class," and "poverty." We will examine powerful historical and contemporary media images of race, class, and poverty as seen through the lens of place and identity.

**GEOG 426Y (US;IL) (WMNST 426Y) Gender Geographies (3)** Description and explanation of the links between gender relations and spatial structures.

**GEOG (WMNST) 426Y Gender and Geography (3)  
(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Until the 1970s women remained invisible in the analyses of social space: human geography was indeed just that--(hu)man. Recently, feminist geography began to challenge the implicit masculinity of the subject of geography; this course will examine the evolution of the feminist challenge. The course addresses gendered geographies across multiple scales, such as the body, home, public space, community, nation and globe. Students explore each of these through readings and will produce a series of essays throughout the semester. As a point of entry to discussion of place, space and gender, this course explores the diverse ways in which feminists have seen space as central both to masculine power and to feminist resistance. In particular we will explore arguments from interdisciplinary paradigms, stemming from cultural, post colonial, subaltern, sexuality, gender studies and critical race theory, all of which have influenced current debates across the field of geography.

**GEOG 427 (US;IL) Urban Historical Geography (3)** Study of the development and transformation of the historical urban built environment.

**GEOG 427 Urban Historical Geography (3)  
(US;IL)****(BA) This course meets the Bachelor of Arts degree requirements.**

Close up, cities can be seen as sets of buildings - some that are lived in, some that are places of work, and others that are places of cultural celebration. The streetscapes created by these sets of buildings can be decoded as a palimpsest of the past. Likewise, the patterns and names of streets, lanes and alleys between buildings contribute to morphological databases of property parcels and land uses that help in the analysis of the historical transformations of urban form. Seen at a more distant scale, cities are also nodes - centers for surrounding regional trading systems, and partners with other places in national and global trading systems - that have evolved over a set of decades or even centuries.

This course offers an investigation of such multiple frames on the urban past. Examples will be drawn from the Americas, but many will be from Europe, Africa and Asia. Imperialism and its associated colonial mercantile practices meant that variants of urbanism were mapped on to other parts of the world where they often created hybrid forms of cities over time. In the industrial era, new relations between cities and the countryside emerged, as new forms of production developed and as resources were harnessed from a more global hinterland. Radically different types of cities have emerged in the past two centuries.

Geography 427 will survey the global urban past and explore ways of decoding urban morphological complexity through historical cartographic record and extant landscape evidence. The ultimate objective is for students to develop an appreciation for the complexity of urban life and landscapes in times past and to understand some of the ways in which American urban forms adapt or draw distinction from urban forms elsewhere.

At the same time, the course aims to enhance student oral and written communication skills. To enhance their oral communication skills, each student will be expected to make two presentations on their research and to participate in class workshops. To enhance their written communication skills, students are required to write two papers that include instructor feedback on interim drafts, to craft three article summaries, and to write short log responses to most lectures.

**GEOG 429 (US;IL)** Geographic Perspectives on Global Urbanization (3) This course reflects critically on a number of issues related to global urbanization, including the culture and political economy of urban space.

**GEOG 429 Geographic Perspectives on Global Urbanization (3)  
(US;IL)****(BA) This course meets the Bachelor of Arts degree requirements.**

One of the major themes in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 030 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as "coupled social-ecological systems." The course uses a geographic perspective to understand how differently these linkages are shaped in various

ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A recitation section is crucial because it allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues.

**GEOG 430 Human Use of Environment (3)** The human use of resources and ecosystems and social causes and consequences of environmental degradation in different parts of the world; development of environmental policy and management strategies.

GEOG 430

**GEOG 430 Human Use of Environment (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Geography 430 examines the human use of resources and ecosystems, the multiple causes and consequences of environmental degradation, and adaptive institutional and policy arrangements as prerequisites for resilient and sustainable management and development in different parts of the world. The major objective of this course is to help geographers, earth scientists, and other professionals to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of human use of the environment and of the ways in which resource-management decisions are made in human society. This is a capstone course that encourages students to place their individual major and technical skills within the context of multiple approaches to environmental decision making and management in complex and dynamic social-ecological systems. GEOG 430 is designed as a collective/social learning experience. This implies that the professor and students share responsibility for the learning process and take advantage of collective skills, insights, experiences, and efforts of each other. As in system dynamics, this requires both commitment and flexibility and the willingness to explore foreign territory. As part of this philosophy, learning consists not only of information flow from professor to student, but also from student to student and student to professor. The course follows a case study approach to explore real life lessons of adaptive management around the globe. To make this process work, attendance and active participation are imperative. The course is run more like a seminar than a lecture course and integrates lectures, in-class discussions, presentations, and interactive activities. Student performance is evaluated based on active participation in all of the above, individual short assignments, group projects, in-class quizzes and exams, and one major writing assignment, varying by faculty teaching. This course is offered every semester.

**GEOG 431 Geography of Water Resources (3)** Perspectives on water as a resource and hazard for human society; water resource issues in environmental and regional planning.

**GEOG 431 Geography of Water Resources (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Geography 431 is designed to help geographers, earth scientists, planners, other environmental professionals as well as non-science majors to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of water as a resource and hazard, and of the ways in which resource-management decisions made in human society are strongly related to the availability, quantity, and quality of water. The course traces the hydrologic cycle as a cascading system, addressing factors contributing to flow of water through the system, models of each process, and how processes affect (and are affected by) other land use change and related resource decisions. The course then turns to issues of water resource management, including issues surrounding irrigation; dams and dam removal; provision of safe potable water; water quality including human and wildlife effects; the water economy including bottled water, privatization, and water as a free good; water law; institutions for water management at the global, national, regional and local scale; and issues of

water for national security and international peace.

**GEOG 432 (EME 432) Energy Policy (3)** Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.

### **GEOG (EME) 432 Energy Policy (3)**

As concerns for a secure, stable, and clean energy future grow, so does the need for individuals who can develop, assess, and implement effective energy policies and practices. GEOG 437 / EME 437 provides students with an in-depth exploration of energy policy development, implementation, and assessment at multiple governmental and corporate scales. The course utilizes contemporary real-world problems and actions to provide students context for the drivers, frameworks, and assumptions of energy policy.

The course is structured to provide students with the expertise necessary to identify energy policy needs, craft policy alternatives, and evaluate energy policy. Emphasis on tailoring energy policy to meet not just economic goals but also environmental and social goals creates a global perspective from which students learn to approach energy policy challenges. Students will undertake a course-long project in which they must research and write an energy policy at a scale and on a topic of their choosing. They will utilize activities from each lesson in the course to refine their topic, research policy options, and develop an energy policy. Because the demand for highly analytical individuals is so great among energy professionals, students will also anonymously critique another student's policy. This Capstone Project of the course will hone the analytical and communication skills necessary to complete this degree program.

**GEOG 434 Politics of the Environment (3)** This course explores politics related to the use, transformation, valuation, and representation of the environment.

GEOG 434

### **GEOG 434 Politics of the Environment (3)**

Scholarship in geography and related disciplines has demonstrated that nature in general and specific environments in particular are unavoidably political. Environmental management can thus never be a purely scientific or technological challenge; it requires critical analysis of cultural, political, and economic contexts, factors, and effects. For instance, effective environmental management requires consideration of how culture shapes how we perceive and value our environments, who wins and who loses in any particular approach to environmental management, and what the relative advantages and disadvantages of competing institutional approaches to environmental management are.

This course examines the development of environmental governance, with a primary focus on the United States. It explores both how various groups within society conceive of and value the environment, and multiple approaches to environmental governance and protection. It reviews the history of environmental movements and regulation, and contemporary issues and debates in environmental governance, with particular attention to the effects of institutional forms and social movements. In particular, it examines competing arguments for and against governance approaches centered on state action, market mechanisms, and prominent roles for NGOs and social movements.

Students will be evaluated based on: 1) their participation in class discussions, based on critical engagement with material from course readings and lectures; 2) their performance on a midterm and a final examination; 3) an individual research project on a topic relevant to the course, to be designed and carried out under the supervision of the course instructor.

**GEOG 435H (IL) Global Change and Sustainability - Bulgaria (3)** Sustainability in the context of climate change, global socioeconomic change and regional transformation in Bulgaria; embedded foreign fieldwork (honors).

**GEOG 435H Global Change and Sustainability - Bulgaria (3)  
(IL)**

This course focuses on sustainable development and global change - vital issues for humanity - with specific attention to the challenges in Bulgaria of the transition from a centrally planned state to an open market economy with an emerging civil society. It is highly integrative in themes and case studies, including seminar work on-campus and field work in Bulgaria. Acquiring knowledge, understanding foreign environment, and developing new values embracing sustainable development are ultimate objectives of the course. Topics include rethinking established ways of production and consumption; policy and decision making affecting sustainability; finding new ways of greening economics, social accounting and planning; constraining consumerism; sustainable transportation, energy, engineering, architecture and construction; agriculture, forestry and water resources in a changing global climate; and the role of media, communication and NGOs. The course focuses on Bulgaria with the multiple challenges of the transition, globalization, global climate change, and important local land use and energy changes, including a critical assessment of sustainable aspects of former socialist states (e.g. compact cities, public transportation) in contrast to contemporary trajectories (e.g. urban sprawl, private automobile use). Within the general student-involved-learning framework of the course, students develop individual or team foci based on their academic major and personal interests, developing a proposal for in-country activity and post-field-session synthesis of a sustainability issue and the Bulgarian case. Special attention is given to meeting the goals of Schreyer Honors College: to demonstrate academic excellence with integrity, students will be held to a high standard of scholarly curiosity and performance, including developing skills and attitudes necessary for responsible and ethical interaction with local officials, scholars and host families. For building a global perspective, students will be challenged with seeing global and regional change from a non-North-Atlantic perspective reflecting the wider post-socialist world. For creating opportunities for leadership and civic engagement, students will be expected to show in their individual proposals and final projects aspects of their own learning and intellectual curiosity that will be shared with the people who assist them in Bulgaria. The course has honors expectations in the level of participation and collaborative learning, the formal project proposal, field work activities for achieving the proposal goals, and in the final symposium presentation and paper. The course contributes to a new generation capable of making vital decisions for a sustainable future in the face of climate change as well as social and economic transitions.

**GEOG 436 Ecology, Economy, and Society (3)** Analyses of major themes in ecology and economic development, poverty-alleviation, and sustainability.

GEOG 436

**GEOG 436 Ecology, Economy, and Society (3)**

For many years, it was believed that there was a direct tradeoff between economic growth and a clean environment. Sustainable development has been proposed as an framework within which these two objectives can be pursued in harmony and actually can reinforce one another. This course focuses on sustainability issues at the broader (macroeconomic) level, as opposed to the operation of individual businesses (microeconomic, or industrial ecology) level.

The course will have two main emphases: 1) to evaluate the major conceptual ideas surrounding natural resource management and sustainable development, including equity, poverty, fairness, power, knowledge, and community empowerment; 2) to use empirical case studies to examine the practical, material and policy relevance of these concepts. The first part of the semester will be used to untangle and clarify the ideological and theoretical bases (biases) of broad human-environment discourses as they pertain to community empowerment and resource development. The final part of the semester will be used to analyze case studies in order to assess the relevance of existing theoretical framework for resource empowerment and community development in industrialized countries and the Third World, especially Africa.

**GEOG 438W Human Dimensions of Global Warming (3)** Human dimensions of climate change: human causes, human consequences, and policy implications of global warming.

**GEOG 438W - Human Dimensions of Global Warming (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Geography 438W, the Human Dimensions of Global Warming, covers both the human causes and consequences of what many people view as the most significant problem facing society. Humans cause climate change primarily by emitting heat-trapping greenhouse gases through everyday activities associated with industrialized society (such as energy production and consumption, transportation, and manufacturing) and land transformation (such as agriculture and deforestation). People experience the consequences of climate change directly through reduced resources (such as food,

fiber, forests, and fisheries) or increased natural hazards (such as droughts, floods, and intense storms). They also experience the consequences indirectly through such mechanisms as higher prices for food or larger insurance premiums. GEOG 438W does not address the physical science of climate change; instead, it concentrates on social science issues surrounding the topic.

GEOG 438W has two goals: (1) to develop understanding of a set of issues related to the human dimensions of climate change; (2) to develop and apply communication skills by discussing and writing about the topic. The specific content of the course will change with the instructor, but the focus on the human causes and consequences of climate change and on skill-development in writing will be constant.

Students will be evaluated on both the course goals: (1) understanding of the human dimensions of climate change; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, regular written assignments with instructor feedback, and in-class discussion and participation.

**GEOG 439** Property and the Global Environment (3) This course reviews theoretical and empirical relationships between multiple legal, economic, and cultural approaches to property, and environmental quality and conflicts.

GEOG 439

### **GEOG 439 Property and the Global Environment (3)**

Property relations are among the most powerful and pervasive institutions in human societies. Fundamental rules governing and legitimating who can do what, and where, they shape and reveal interactions between human societies and physical environments, a concern at the heart of geography. Our own property relations are often all but invisible to us precisely because they are so deeply woven into our perceptions, consciousness, social structures, and everyday experiences of the world. It is thus easy to overlook the fact that we live within highly specific and contingent property arrangements and that changing circumstances are prompting important changes in contemporary property relations.

This course explores these issues with a particular focus on their implications for environmental politics and regulation. We will address questions such as: Is the privatization and commodification of nature a recipe for ecological disaster, or the most effective means of preservation? Can we own the weather? What were the historical-geographical circumstances surrounding the development of major modern property forms, and are those forms adequate to the environmental problems we now confront? Are there property relationships outside of the law? How do property relations and conflicts change in response to changing human control over nature, and how can different kinds of property arrangements lead to, or help to solve, environmental and social problems? Readings will review debates over common property; the benefits and dangers of privatization of environmental goods; distinctions between formal and informal property rights; the development of zoning and other regulation of private property; and contemporary debates over intellectual property rights in nature, and relationships among trade, property rights, and environmental quality.

The course will be of interest to students interested in environmental policy, land use planning and management, law, the areas of nature-society relations and historical geography, and environmental history. Students will gain a sophisticated understanding of the central underpinnings of much property and environmental regulation, and familiarity with many cutting-edge debates in these domains, both domestically and internationally. Evaluation methods will include examinations and an independent research paper and presentation by each student. The course will be offered every other year, with enrollment capped at 30 students.

**GEOG 444 (AFR 444)** African Resources and Development (3) Ecological and cultural factors in the geography of Africa; natural resources and development.

### **GEOG (AFR) 444 African Resources and Development (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is designed to analyze the ecological, economic, political and cultural factors, which influence development in sub-Saharan Africa. The traditional system, colonialism, modernization, post-colonial philosophies are four conceptual artifacts used to address some of these issues. Within these broad frameworks, the course focuses on existing debates surrounding key development ideologies and narratives in the region, including, poverty, conservation, population, debt, food security, land reform, foreign intervention and global politics. The topics and texts for the course are chosen

carefully to provide general factual material as well as exposure to the major discourses surrounding the region's development. The views of many Americans concerning Africa are often both unitary (Africa is a country) and unidimensional (Africa is a place of conflict, poverty, corruption and crisis). Assuming that a number of students are likely to join the class with this general background, the main objectives of the course will be : (i) to provide a broad geographic and historical tutorial to dispel myths and stereotypes about the region; (ii) to explore the literature, which analyzes the historical, geographic and political factors that underlie the region's present status in the global economy; and (iii) to gain insights into the intellectual and ideological dimensions of the 'raging' debates surrounding issues like environment, conservation, population, corruption, and poverty in the region. By the end of the semester, students should have acquired the skills to accomplish the following goals:

- develop a 'mental map' of the broad physiographic, ecological, economic and political zones (blocs) in the region;
- be able to discriminate between stereotype and reality on information pertaining to the region;
- be able to interpret and analyze the internal (national, regional) dynamics of the region's development;
- be able to interpret and analyze the global factors, which influence the environment, economy, and politics of the region;
- develop an informed background on the ideological narratives that guide policy in the region, for example, population, sustainable development, post-colonialism, 'empire' (whether, American, European, Indian, Chinese, South African?).

**GEOG 461W** Dynamic Cartographic Representation (3) Theory and practice of mapping and geo-representation in a dynamic media context. Applications in science, policy, travel, and education.

GEOG 461W

### **GEOG 461W Dynamic Cartographic Representation (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Most maps produced today are electronic, dynamic, and often ephemeral -- with millions of maps generated on the web each day. At the same time, computer graphics technologies developed to enable scientific visualization generally, are being adapted and extended for applications with geographic information. The goal of this course is to provide students with both the conceptual understanding and practical experience needed to design effective dynamic representations and assess their effectiveness.

During the term we will explore the potential and implications of recent advances in cartography, exploratory data analysis, and information visualization as they relate to the theory and practice of geographic visualization (geovisualization). A key focus of the course is on "dynamic" representations of geographically referenced information. Dynamic representations are those that change as a result of user actions or data updates. Topics include: animated and interactive maps, exploratory multivariate spatial data analysis, geovisualization to support knowledge construction, interactive web maps, navigation aids for real and virtual worlds, map-enabled decision-support, collaborative geovisualization, dynamic maps to enable learning, semiotic principles for design of dynamic maps and related geovisualization tools, and perceptual/cognitive issues in dynamic geo-representation (including methods for studying the success of visual displays and interaction devices).

As a writing intensive course, particular attention will be given to writing for geographic information science (GIScience). This writing will include laboratory project reports, reviews of published literature, and a term project.

**GEOG 464** Advanced Spatial Analysis (3) Skills and knowledge for applying quantitative methods to analyze information

with spatial distributions.

GEOG 464

### **GEOG 464 Analysis and GIS (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Geography 464 is a course in methods for analyzing spatial data--methods that can and should be used when the geographic arrangement of a set of measured observations is thought to be of significance in explaining the values of those measurements. The methods of spatial analysis looked at in this course can be distinguished from conventional statistical analysis techniques, and also from many of the analysis functions programmed into many GIS packages. In fact several spatial analysis methods considered in this course the result of attempts to alter and extend conventional statistical techniques to take account of locational similarity and distance measurements (which is why Geography 364 or an equivalent primer in introductory statistical methods is a prerequisite). This means that the techniques that will be introduced in the course are often quite complex mathematically or statistically. Having said this, the overall goal of the course is to provide sufficient conceptual understanding and practical experience so that students become competent in selecting and applying methods appropriate to a variety of frequently-encountered analytical situations.

GEOG 468

### **GEOG 468 Geographic Information Systems Design and Evaluation (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course teaches GIS design, project management and communication skills and an appreciation of the ethical, legal and social issues surrounding maps, GIS and geographical data. It also introduces some of the newer information-technology aspects of handling geographic information, such as location-based services and sensor webs, that affect how GIS data are accessed and used. The bulk of practical component of the course is taken up with a large group project (four to six persons per group). The project gives students the opportunity to engage in an exercise that spans the entire range of GIS design and implementation: from problem inception to solution testing.

Outcomes revolve around the experienced gained by conducting a GIS project from inception to solution, including specification, design, implementation and evaluation, and specifically:

1. Practical experience with technical writing relating to GIS systems lifecycle, including interviewing, fact finding, description of the contents of the various project deliverables and their importance.
2. An appreciation of legal and ethical issues surrounding GIS, maps and geographic including copyright, responsibility and liability and computing law.
3. An understanding of newer technological innovations that will impact the access and use of geographic information, including: data sharing (interoperability), digital libraries and information portals, web services and grid computing.
4. A portfolio of practical systems development work, that documents all stages in the lifecycle of a GIS project.

**GEOG 469** Energy Industry Applications of GIS (3) Roles of geographic information systems in energy siting decisions focusing on electric energy transmission networks.

### **GEOG 469 Energy Industry Applications of GIS (3)**

Over 2 million miles of oil and gas pipeline and nearly 200,000 miles of electric transmission grid currently traverse the U.S. Geographic information systems (GIS) are used to help maintain these far-flung and extremely expensive energy infrastructures. GIS is also used to help determine optimal routes for pipelines and transmission lines as energy demand and production increase, and as the grid is extended to connect to new energy sources and consumers. GEOG 469 provides students with an in-depth exploration of the complexities of siting decisions. The course introduces a variety of siting challenges that confront the energy industry and its customers and neighbors, but focuses on the siting of electrical transmission lines. The course also provides hands-on experience with a common decision support technology, and considers how the technology may be used to facilitate public participation in siting decisions.

Students will undertake a term-length project in which they must propose, research, develop and implement a siting recommendation for an electrical transmission line. They will utilize activities from each lesson to develop primary and alternative routes. Using GIS, students will develop overlays, weights and rankings to determine the most suitable location for a proposed transmission line. Students' final product will be maps showing proposed routes based on the siting criteria and rankings developed to minimize the impacts associated with the various siting criteria used. To help students develop the critical thinking skills needed in the energy industry, students will learn to critique their peers' analyses systematically from the perspective of local stakeholders who are most affected by siting decisions.

GEOG 469 is designed to help students achieve two of the programmatic educational objectives established for the Energy and Sustainability Policy degree. It fosters energy industry knowledge by illuminating the difficulties intrinsic to facilities siting decisions. And it nurtures analytical skills by familiarizing students with GIS methodology, and by teaching them how to critique GIS analyses systematically.

**GEOG 475H (LER 475H)** Labor in the Global Economy: U.S. and South African Perspectives (3) This course focuses on how the nature of work is changing in the global economy, and the implications for economic opportunity and inequality in both.

GEOG 475H

### **GEOG (LER) 475H Labor in the Global Economy: U.S. and South African Perspectives (3)**

This seminar focuses on how the nature of work is changing in the "new economy", and the implications for economic opportunity and inequality in both the United States and South Africa. Sections of the course examine: theoretical approaches to understanding contemporary process of labor restructuring, including globalization, rise of an information economy, and growth in service sector employment; case studies of restructuring processes in different industrial sectors in both the U.S. and South Africa; and innovative labor organizing initiatives at a local, regional and global scale. This course aims to develop a framework for understanding the nature of contemporary processes of economic restructuring and its impact on the world of work. Drawing on research in both a South African and U.S. context, key case studies in the changing nature of work will be examined. This will provide a deeper understanding of how broad macro-level changes in the nature of contemporary capitalism are mediated by a variety of technological, political, and socio-economic factors in particular industries and geographic contexts. Finally, an in-depth look at workers' responses to these changes at different scales (local, regional, global) will help deepen our understanding of the contested nature of workplace restructuring while exploring promising strategies for improving working conditions. This is a reading-intensive course dealing with the theoretical literature on rapid economic restructuring and how this is shaping work and employment. It is run in collaboration with the Sociology of Work Program at the University of Witwatersrand in Johannesburg, South Africa, with video-conference discussions linking the two courses.

GEOG 482

**GEOG 482 The Nature of Geographic Information (2)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course serves as an orientation to the study of geographic information systems in the Master of Geographic Information Systems degree program. It is also the first in a series of four courses that leads to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of readings, quizzes, projects, and discussions about fundamental properties of geographic data, how such data are produced, and how they are used. The course provides a comprehensive overview of geographic information technologies, including the global positioning system, land surveys, aerial surveys and photogrammetry, topographic mapping, social surveys such as the U.S. Census, and satellite remote sensing. It also ensures that helps students develop the skills required to become successful online learners. The course culminates in a final project in which students independently research, critically evaluate and report on the characteristics and availability of a particular data product, service, or mapping technology. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

General Education: None  
Diversity: None  
Bachelor of Arts: Social and Behavioral Science  
Effective: Summer 2004

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 483 Problem-Solving with GIS (3)** How geographic information systems facilitate data analysis and communication to address common geographic problems.

GEOG 483

**GEOG 483 Problem-Solving with GIS (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 483 is a required course in the Master of Geographic Information Systems degree program. It is also the second in a series of four courses that leads to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of projects, associated readings, quizzes, and discussions about concepts, operations and tools in geographic information systems. Students confront realistic problem scenarios including such operations as geoprocessing, attribute and spatial joins, map projections, address geocoding and buffering. Students who successfully complete the course are able to access, display, manipulate, edit, and analyze geographic data. They are able to perform common GIS tasks using industry-standard tools and operations. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July and October).

General Education: None

Bachelor of Arts: Social and Behavioral Science

Effective: Summer 2004

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 484 GIS Database Development (3)** Database design, creation, maintenance, and data integration using desktop GIS software.

GEOG 484

**GEOG 484 GIS Database Development (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 484 is a required course in the Master of Geographic Information Systems degree program. It is also the second in a series of four courses that leads to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of projects, associated readings, quizzes, and discussions about designing, constructing, and maintaining GIS databases. Students who successfully complete the course are able to specify and perform the tasks involved in creating a digital geographic database, including geo-registering scanned base maps, digitizing vector features, entering attribute data, and compiling metadata. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

General Education: None

Diversity: None

Bachelor of Arts: Social and Behavioral Science

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 485 GIS Programming and Customization (3)** Customizing GIS software to extend its built-in functionality and to automate repetitive tasks.

GEOG 485

**GEOG 485 GIS Programming and Customization (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 485 is an elective course in the Master of Geographic Information Systems degree program. It is also one of the optional capstone courses that lead to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of readings, quizzes, projects, and discussions about constructing tools that solve geographic problems not easily solved using out-of-the-box GIS software. Students learn to use the Visual Basic for Applications (VBA) programming environment to add functionality to *ArcGIS 8.x*. No previous programming experience is assumed. The course covers programming basics like object-orientation, COM, object model diagrams, loops, if-then constructs, and modular code design, as well as GIS-focused topics such as working with maps, layers, tables, and performing queries. Students who successfully complete the course are able to automate repetitive tasks, customize the *ArcGIS* interface, and share their customizations with others. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 486** Cartography and Visualization (3) Theory and practice of cartographic design emphasizing effective visual thinking and visual communication with geographic information systems.

GEOG 486

**GEOG 486 Cartography and Visualization (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 486 is an elective course in the Master of Geographic Information Systems degree program. It is also one of the optional capstone courses that lead to Penn State's Certificate of Achievement in Geographic Information Systems. The course consists of five projects and a capstone assignment. Each project includes readings, quizzes, and discussions about concepts and tools in cartography and visualization. Throughout the course, students complete "mile marker" assignments that are designed to help them progress toward the capstone assignment. Through the course projects, students confront realistic problem scenarios that incorporate such skills and concepts as creating symbolization schemes, coordinate systems and map projections, creating isoline and other terrain representations, interpolation, classification schemes, multivariate representation and representation of data uncertainty. Those who successfully complete the course are able to design and produce effective reference and thematic maps using GIS software, can create and analyze workflows, and can interpret and critique maps and related information graphics verbally. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

**GEOG 487** Environmental Applications of GIS (3) Real-world applications of GIS and spatial analysis to investigate a variety of current environmental issues.

**GEOG 487 Environmental Applications of GIS (3)**

GEOG 487 is an elective course in the Post baccalaureate Certificate Program in GIS and the Master of Geographic Information Systems (MGIS) degree program, both of which are offered exclusively through Penn State's World Campus. GEOG 487 consists of projects, associated readings, quizzes, and discussions related to environmental applications of GIS. Students are exposed to a variety of concepts, tools, data sources and formats, and environmental issues they are likely to encounter in a career involving GIS and environmental management. Like other courses in the GIS Certificate and MGIS programs GEOG 487 is offered in compressed 10-week terms that require a minimum of 8-12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October). GEOG 487 does not count toward the requirements of the resident B.A., B.S., M.S. or Ph.D. degrees in Geography, except by explicit permission of the student's graduate advisor and the Department of Geography's graduate officer.

**GEOG 488** Acquiring and Integrating Geospatial Data (3) Advanced technical, legal, ethical and institutional problems related to data acquisition for geospatial information systems.

GEOG 488

**GEOG 488 Acquiring and Integrating Geospatial Data (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 488 is an elective in the Master of Geographic Information Systems degree program. The course is organized around six projects and a final project that spans three weeks. Each project includes associated readings, quizzes, and discussions about acquiring and integrating GIS data. The course adopts a developmental learning approach that prepares students to successfully complete projects given progressively less detailed and more realistic project guidelines. Students confront realistic problem scenarios that incorporate such skills and concepts as definition of data needs, metadata content standards, legal and ethical issues related to data use, data formats and types, interoperability, field collection methods and contributing data for public use. Those who successfully complete the course are able to spec out a GIS project, identify appropriate and cost-effective data sources, create data dictionaries, assess and ensure data quality,

determine appropriate data formats given an intended data use, transform data from one format to another and understand GIS software functionality related to data conversion. The course is ten weeks in length and requires a minimum of 8/12 hours of student activity each week. It is offered quarterly (starting in January, April, July, and October).

**GEOG 489** GIS Application Development (3) Advanced topics in GIS customization, including the Systems Development Life Cycle, packaging and deployment, and consuming Web services.

GEOG 489

**GEOG 489 GIS Application Development (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 489 is an elective course in the Master of Geographic Information Systems degree program. The course consists of readings, quizzes, projects, and discussions about advanced GIS programming concepts and techniques. It builds on the material covered in GEOG 485: GIS Programming and Customization. Students will work with ESRI's ArcObjects component library to customize ArcGIS software products using Visual Studio.NET as their development platform.

Students who successfully complete the course are able to use the Systems Development Life Cycle methodology to build custom GIS solutions. They are able to package and deploy their customizations through dynamic link libraries (DLLs) and register them with ArcGIS, a more robust deployment solution than those covered in GEOG 485. Students are also able to explain the fundamental differences between COM and .NET software development. Lastly, they are able to consume web services and integrate them into custom Web applications. The course is ten weeks in length and requires approximately 100 hours of student activity. It is offered quarterly (starting in January, April, July, and October).

**GEOG 493** Service Learning (3-12) Classroom instruction with supervised student activity on a group community service project.

GEOG 493

**GEOG 493 Service Learning (3-12)**

GEOG 493, Service Learning, provides students with activities that integrate community service with academic study. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 493 has five objectives: (1) to develop understanding of a set of issues; (2) to learn and apply skills associated with those issues; (3) to learn to interpret science issues for dissemination to the public; (4) to develop and apply communication skills by speaking, writing, and/or desktop publishing; and (5) to reflect on personal and career interests in science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a community and engage in a project in that community.

The specific service-learning projects will change each semester, although some projects will be ongoing. In addition, more than one GEOG 493 project will be available to students in most semesters and will have alphabetical designations (e.g., 493A or 493B). Students can take GEOG in more than one semester, to a maximum of 12 credits.

Depending on the topic of the service-learning project, GEOG 493 can complement courses in most colleges and their majors. The course is available to all Geography majors as elective credits; it is also available to all Geography Minors for credit toward the minor. It counts for credit as an Advanced Physical/Environmental Geography course in the Physical/Environmental Geography Option, and counts for credit as an Advanced Geography course in the General Geography Option.

Students will be evaluated on four of the five course objectives: (1) understanding of the issues, (2) learning and application of skills, (3) interpretation of issues for public dissemination, and (4) application of communication skills. Although exact procedures for determining grades will vary with the instructor and service-learning project, the basis for grades will include a combination of written work, oral presentations, in-class participation, and outside-class participation.

**GEOG 495B** Geography Teaching Internship (1-10) Supervised undergraduate teaching experience in which students serve as peer tutors, laboratory assistants, or course material developers.

GEOG 495b

**GEOG 495B Geography Teaching Internship (1-10)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Teaching Internship provides undergraduate students with formal, supervised teaching experience. Instructors recruit students who excel in a particular course to serve as teaching interns (TIs) in subsequent offerings of the same course. TIs may assist their peers as tutors or as laboratory assistants. They may be assigned to assist faculty members by developing and evaluating new course activities and materials. Although TIs may not evaluate their peers' class work, they can play important roles in the formative course assessment by providing feedback in regular meetings with instructors. In the process of developing the knowledge, skills and dispositions needed to be effective in helping fellow students learn, TIs gain experience that prepares them for leadership roles in their professional careers. TIs also gain respect for the effort and imagination involved in designing and conducting college classes.

**GEOG 495C** Internship Supervision and Mentoring (1) Candidates for the Master of GIS degree sponsor a GIS-related internship for students in Penn State's resident undergraduate program.

GEOG 495c

**GEOG 495C Internship Supervision and Mentoring (1)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GEOG 495C enables MGIS students who participate at a distance through the University's World Campus to earn credit through contributions to the Department's resident programs. Qualified MGIS students will be encouraged to earn one credit (up to a maximum of three) for every semester that they supervise a resident Penn State Geography student in GIS-related internship conducted in the MGIS student's place of work. Qualifications will be judged by MGIS students' academic advisors. Advisors will help MGIS students recruit qualified internship candidates. Advisors will also evaluate the quality of supervision on the basis of the documentation provided by both the MGIS student and the student intern he or she supervised. MGIS students unable to provide internships may still contribute by serving as mentors to students enrolled in the resident course EM SC 300: Professional e-Portfolio Development, through the University's LionLink program.

**GEOG 501A** Research Perspectives in Physical Geography (1) This course presents contemporary perspectives on Physical Geography, emphasizing the major issues and integrative themes of the sub-discipline.

#### **GEOG 501A Research Perspectives in Physical Geography (1)**

The contemporary study of Physical Geography unites all sub areas of Earth's physical environment--biogeography and ecology, climatology, and geomorphology--according to the following cross-cutting themes: water and mass in the environment; energy; scale and scale interactions; systems approach; and historical perspective. These themes are emphasized in each of the seven lectures comprising 501A, through discussion of theory (e.g., feedback processes) and application (e.g., vegetation-soil-cloud-precipitation interactions). Beyond the topical treatment of Physical Geography, the course covers the role of instrumentation and measurement as well as numerical modeling (statistical, dynamical) in the systems approach to studying landscape processes. The role of cross-scale spatial interactions (micro-meso-macro) in the flows of mass and energy at and near the Earth's surface are presented, along with the statistical techniques for extracting those scale interactions (e.g., Artificial Neural Networks, Self-Organizing Maps). The temporal perspective on landscape processes involves particularly the role of humans in rapidly modifying--both intentionally and inadvertently--the transfers of energy and mass through land-cover modifications (e.g., deforestation/afforestation, urbanization) and atmospheric impacts.

The course aims are achieved through lectures, and by student readings of two or three seminal papers per week and a half-term paper. Although GEOG 501A is a stand-alone course, it dovetails with the three other new graduate-level courses proposed in Geography (Nature-Society, Human Geography, Geographic Information Science).

**GEOG 501B** Research Perspectives in Human Geography (1) This course presents contemporary perspectives on Human Geography, emphasizing the major issues and integrative themes of the sub-discipline.

GEOG 501B

#### **GEOG 501B Research Perspectives in Human Geography (1)**

The contemporary study of Human Geography reflects the heritage of place-based analysis that was typically regional geography and the space-based (yet often placed-grounded) work of those that seek to explore spatial patterns associated with various economic, political, social and cultural processes. These patterns and processes are explored at a variety of scales, from the local through regional and global, and each sub-discipline has its own ways of operationalizing the emphases on place and space. The extent to which practitioners draw on theories from cognate disciplines in the social sciences and humanities often colors recent research in the subfields and confirms the ongoing subdivisions rather than point towards a singular integrated field of human geography.

The course aims are achieved through lectures, and by student readings of two or three seminal papers per week and a half-term paper. Although GEOG 501B is a stand-alone course, it dovetails with the three other new graduate-level courses proposed in Geography (Nature-Society, Physical Geography, and Geographic Information Science).

**GEOG 501D Research Perspectives in GIScience (1)** This course presents contemporary perspectives on Geographic Information Science, emphasizing the major issues and integrative themes of the sub- discipline.

**GEOG 501D Research Perspectives in GIScience (1)**

The field of GIScience concerns the investigation of the properties of data and information relating to Earth, the creation of information from observational facts, how information is transferred from one person to another, and optimal means for making that transfer, in both natural and artificial systems. GIScience is also concerned with the individual, organizational and societal effects of generating and providing this information.

GIScience has its own body of theory focused on geographic scale, geographic representation, spatial information, and systems for the capture and use of spatial data. This theory draws heavily from a variety of other disciplines beyond Geography, including: computer science, information science and technology, cognitive science, graphic design, statistics, geodesy, and geometry. This course introduces these various underpinnings, with a focus on current research themes and directions within an integrative framework. The objective is to help graduate students become familiar with GIScience research, specifically: the major intellectual foundations of GIScience, the current state of the field, and the ongoing researcher agenda.

The course aims are achieved through a combination of lectures, discussion of 2-3 seminal papers per week, and a half-term paper. Although GEOG 501D is a stand-alone course, it dovetails with the 3 other graduate-level courses proposed in Geography (Physical, Nature-Society, and Human).

**GEOG 502 Research Scholarship in Geography (3)** Learning the craft of scholarly research in geography.

**GEOG 502 Research Scholarship in Geography (3)**

Graduate students are expected to make a significant research contribution as part of the requirements for a MS or Doctoral degree in Geography. The Research Scholarship in Geography course provides students with a basic understanding of the craft of scholarly geographic research. It does so by setting research into a tradition of commonalities that shape expectations (e.g., disciplinary and federal IRB ethics standards; ideas of academic freedom and responsibility) and by focusing on the mechanics of key steps in the research process (identifying problems, developing questions and proposals, designing programs of research, executing a systematic program of research, responding to criticism and to opportunities, preparing and delivering oral presentations, and writing and publishing research reports). The course emphasizes important skills in developing research proposals, seeking research funding, writing manuscripts, giving presentations, and publishing research results.

**GEOG 565** Selected Topics in Geographic Information Science (3) Examination of geographic information science topics: GIS, cartography, remote sensing, spatial analysis, modeling, spatial cognition, geospatial semantics, geovisualization.

**Selected Topics in Geographic Information Science (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2012

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 571** Intelligence Analysis, Cultural Geography, and Homeland Security (3) The application of cultural geography in the intelligence analysis and synthesis process by identifying prominent threats to civil security.

**GEOG 571 Intelligence Analysis, Cultural Geography, and Homeland Security (3)**

This course examines and illuminates the relationships between cultural geography, civil security and the stability of the existing world order. It rests firmly upon the application of the tools of spatial analysis that are at the heart of the discipline of geography, and is designed to help students develop the analytical processes that will lead to enlightened syntheses (intelligence products) about the connections associated with cultural differences and current internal and external threats to the security of the American homeland. It also is designed to encourage students to examine the impacts of cultural differences on the stability of the existing world order. The overarching objective of this course is to help successful students develop the knowledge, comprehension, and skills needed to effectively analyze current

geospatial realities and, through the prism of cultural geography, create a rational predictive synthesis (intelligence summary) about potential human threats to the security of the nation.

Bachelor of Arts: None  
Effective: Summer 2014

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 583** Geospatial System Analysis and Design (3) Systematic approach to requirements acquisition, specification, design and implementation of geospatial information systems.

GEOG 583

### **GEOG 583 Geospatial System Analysis and Design (3)**

GEOG 583 is a required course in the Master of Geographic Information Systems degree program offered through the World Campus. The course is organized around four projects and a capstone assignment. Each project includes associated readings and discussions about concepts and tools of system design and analysis. Throughout the course, students have "mile marker" assignments that are designed to maintain progress toward the capstone assignment. The course demonstrates uniqueness of geospatial system design in a succession of related projects. The projects require students to confront realistic problem scenarios that cultivate the skills and understanding required to effectively complete a geospatial system specification, design, and implementation. Particular attention is given to the use of an established system develop process and modeling language. Those who successfully complete the course are able to model a system with UML as part of a design process utilizing RUP. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2004  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 584** Geospatial Technology Project Management (3) Principles of effective project management applied to the design and implementation of geospatial information systems.

GEOG 584

### **GEOG 584 Geospatial Technology Project Management (3)**

GEOG 584 is a required course in the Master of Geographic Information Systems degree program offered through the World Campus. The course is organized around four projects and a capstone assignment. Each project includes associated readings and discussions about concepts and tools in project management. Throughout the course, students will also be given "mile marker" assignments that are designed to help them progress toward the capstone assignment. Through the course projects, students confront a realistic problem scenario that incorporates such skills and concepts of managing a GIS project. Those who successfully complete the course are able to effectively conceptualize and manage a GIS project. The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week.

General Education: None  
Diversity: None  
Bachelor of Arts: None

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 585** Open Web Mapping (3) Design, development, and implementation of web mapping applications using OGC standards and open source software.

### **GEOG 585 Open Web Mapping (3)**

The geospatial industry has developed a culture of open standards and specifications by which both data and mapping tools can be made interoperable. Web Mapping requires the detailed application of a thorough theoretical understanding of these standards, as well as a working knowledge of how these standards are realized through recent information technology advances in web services and middleware. The course gives students the theoretical base from which they can go on to design, develop, and implement custom web mapping applications using open standards and open source software. On completion of the course, students will be able to build and deploy a complete web mapping solution including selecting the spatial data, the server and client software. Students will be able to determine which type of mapping server is required for their needs and to explain why choosing an open standard based solution is better than a proprietary solution. The course will cover a variety of open source software packages for web mapping and will provide

pointers to commercial solutions where appropriate.

Open Web Mapping is designed specifically for adult professionals. The course will be broken down into ten lessons. Each lesson will take one week to complete and requires a minimum of 8-12 hours of student activity each week, totaling approximately 120 hours of activity. Topics to be covered in each lesson include:

Lesson 1

Open Web Mapping Framework  
International Methods

Lesson 2

Web Map Servers (WMS) basics  
Understanding the structure of a WMS request  
Understanding the structure of a WMS response

Lesson 3

Web Feature Server (WFS) basics  
Understanding the structure of a WFS request  
Understanding the structure of a WFS response

Lesson 4

Introduction to XML  
XML and web mapping  
XML schemas

Lesson 5

Styling maps with WMS and Styled Layer Description (SLD)  
Cascading Web Map Servers

Lesson 6

Geographic Markup Language (GML)  
Application Schemas and Profiles

Lesson 7

Advanced WFS  
Gazetteers  
Other specialist applications of WFS

Lesson 8

Building a web mapping applications  
Deploying a WMS  
Deploying a WFS

Lesson 9

Building a thin web mapping client  
Client/Server techniques  
Web mapping libraries and customizing them

Lesson 10

The future of web mapping

**GEOG 586** Geographical Information Analysis (3) Choosing and applying analytical methods for geospatial data, including point pattern analysis, interpolation, surface analysis, overlay analysis, and spatial autocorrelation.

GEOG 586

**GEOG 586 Geographical Information Analysis (3)**

GEOG 586 is an elective course for students in the Master of Geographic Information Systems degree program offered through the World Campus. The course is organized around eight short weekly projects and a more substantial project pursued through the all ten weeks of the course, with milestones through the quarter. Weekly projects include associated readings, quizzes, and discussions about the analysis of spatial data.

This is a course in analytical methods for handling specifically spatial data, that is, data where the arrangement of observations in space is through to be of significance. The techniques introduced are often mathematically complex, but while these aspects are covered in the course, the emphasis is on the choice and application of appropriate methods for the analysis of the spatial data often encountered in applied geography. Weekly projects are hands-on using geographic information systems or other appropriate computational tools, so that students appreciate the practical complexities involved, and the relative limitations of these methods in contemporary desktop GIS.

Through the weekly projects, students acquire familiarity with use of a single method or family of methods in standard desktop tools, so that they can focus on aspects of that method and develop a thorough understanding of its potential

and of its limitations. Problem scenarios range across demographic, planning, crime analysis, landscape analysis, and other application areas. The course-long project is intended to allow students to formulate a research problem in a topic area of their own choosing, to gather and organize appropriate available datasets, and to understand how a variety of methods among those covered in the course can be applied in combination to thoroughly explore real questions. Students will be asked to engage with their peers; work during the project planning stage. They will also be encouraged to consider developing customized tools to automate repetitive analysis tasks, if they have previous programming experience.

A text that closely corresponds with much of the course content (while also covering further topics in this broad field) has been published by the course developer: O'Sullivan, D. and Unwin, D.J., 2003, *Geographic Information Analysis*, (Wiley, Hoboken, NJ).

The course is ten weeks in length and requires a minimum of 8-12 hours of student activity each week. It is offered once a year through Penn State's World Campus.

**GEOG 588 Planning GIS for Emergency Management (3)** Requirements analysis and proposal writing to plan and implement GIS solutions supporting emergency management activities of government agencies and contractors.

### **GEOG 588 Planning GIS for Emergency Management (3)**

Planning GIS for Emergency Management is designed specifically for adult professionals and is offered exclusively through the World Campus as an elective course in Master of GIS degree program. This course introduces the potential of GIS to support all stages of emergency (crisis or disaster) management activities, the latest R&D advances that are helping to achieve this potential now, and some challenges for the future. The course focus is on requirements analysis and proposal writing targeted toward planning and implementing GIS solutions for government agencies and contractors.

As a basis from which to pursue these objectives, Planning GIS for Emergency Management introduces the current and potential future roles of GIS in support of crisis (emergency) management activities at all geographic scales (local to international). These roles are considered at each of the four stages of crisis management, including planning and mitigation, preparation, response, and recovery. Then, selected focus topics (e.g., GIS for evacuation planning and support, real time data integration, and international crisis response) are considered in detail.

The course provides a framework for understanding use of GIS in crisis management situations and for addressing the applied research needed to enable more effective GIS application in this context. It provides the background and perspective needed by project managers, consultants, and other professionals who are engaged in activities that range from initial requirements analysis (to determine whether and how to implement or extend GIS capabilities for emergency management), through design of training exercises (to develop requisite staff expertise in application of GIS to different kinds of emergency situations), to development of technological enhancements intended to improve the effectiveness of GIS in specific emergency management activities.

This course will challenge students to exercise the analytical and writing skills needed to develop successful proposals. Assignments focus on helping students to improve their ability to write and critique proposals to agencies that provide funding to support state and local implementation and application of GIS for Emergency Management and/or to support industry development of new technologies (e.g., the U.S. Department of Homeland Security or State Departments of Emergency Management). A term project involves proposal writing in response to real or hypothetical solicitations for a project that targets GIS tool development, implementation, and/or training to support emergency management activities in local, regional, state, national, or international contexts. Writing skills are honed through instructor critiques and peer reviews.

Weekly lessons focus on: (a) critical appraisal of relevant literature about development of GIS for and application to emergency management and (b) application of knowledge gained to representative challenges faced by IT managers who implement or upgrade GIS to support emergency management and by IT researchers/developers who attempt to develop advanced GIS capabilities to better meet the needs of emergency managers. Students will be required to post weekly statements relating readings to their individual professional and community contexts and to their own in-progress proposals.

**GEOG 589** Emerging Trends in Remote Sensing (3) Highlights emerging theoretical and methodological trends in high-performance remote sensing for geospatial analysis through discussion and laboratory experiences.

### **GEOG 589 Emerging Trends in Remote Sensing (3)**

Geog 589 is a graduate seminar focusing on the theory and technology associated with emerging remote sensing platforms in geospatial analysis. The focus for a given semester will be adapted based on emerging methods, technologies, and high-impact real world contexts, but will include topics such as synthetic aperture radar for image analysis and DEM generation, high-resolution hyperspectral remote sensing data collection and analysis, thermal imaging and data analysis, bathymetric lidar data acquisition and analysis, and oblique aerial imaging for 3D modeling and analysis. These technologies will be evaluated for their use in applications such as emergency and disaster response, coastal resource management, forest resource management, agricultural resource management, and geospatial intelligence. Students will review current research and operational implementation of these high-performance remote sensing technologies, including project planning, data acquisition and processing, data fusion and analysis, product generation, and information sharing. Students will use state-of-the-art commercial software packages for data analysis and product generation. They will interact by reviewing current research and literature, developing shared knowledge in online discussion forums throughout the course. An individual research project will allow them to explore the impacts of emerging remote sensing methods in a real-world scenario of their choosing.

**GEOG 594B Geospatial Intelligence Capstone Experience (2)**

GEOG 594B is the culminating experience for the Geospatial Intelligence Option of the Intercollege Master of Professional Studies in Homeland Security (iMPS-HLS) program; as such, the course expects the student to explore and critically analyze a topical area of interest in appropriate depth. To successfully complete the GEOG 594B, students in the Geospatial Intelligence Option of the iMPS-HLS must communicate a high-level of knowledge of the subject based upon their thinking, organization, and technical analysis of the evidence. This course provides the iMPS-HLS Geospatial Intelligence Option student an opportunity to apply the technical tools, concepts, and theories learned in previous coursework while investigating a current analytic problem. GEOG 594B is designed specifically for current and aspiring geospatial intelligence professionals who are able to study only on a part-time basis, online, and is offered exclusively through the World Campus.

**GEOG 861** Map Projections for Geospatial Professionals (1) Cultivates a working knowledge of map projections that professionals need to process geospatial data effectively for mapping and analysis.

**GEOG 861 Map Projections for Geospatial Professionals (1)**

Topic: Map projections are mathematical formulae by which geographical coordinates that represent positions on the Earth (i.e., latitude and longitude) are transformed to plane coordinates that represent positions on two-dimensional representations. Map projection formulae are implemented as algorithms in geographic information systems (GIS), image processing and other kinds of mapping and analysis software. Although many types of map projections are available, only certain types are well suited to any given mapping or analysis task. Furthermore, since GIS often involves merging multiple datasets, each of which is likely to be the product of a different projection, GIS professionals need to be knowledgeable about this advanced topic.

Course Objectives: GEOG 861 cultivates a working knowledge of map projections that professionals need to process geospatial data effectively by daily discussions with instructors and peers.

Student Activities: To fulfill course and educational objectives, students will participate in weekly lessons and project assignments, supported by daily discussions with instructors and peers.

1. Weekly Lessons: Text, graphics, and software-based exercises and quizzes will help students master the vocabulary of map projections, the variety of projections commonly implemented in GIS and related software environments, how to choose an appropriate map projection for a given task, how to specify the parameters required to generate a selected projection (and what the parameters mean), and what to do when merged datasets fail to align correctly.
2. Projects: Students will demonstrate their mastery of lesson topics in realistic project assignments that involve use of authentic GIS software and data.
3. Discussions: The course instructor will answer questions about lesson topics, and provide individual feedback to student assignments, via course email and discussions forums within the ANGEL learning management system. Synchronous communications, including telephone and chat, may also be used as needed.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 862** GPS and GNSS for Geospatial Professionals (3) Cultivates a working knowledge of current and future capabilities of GPS and the emerging Global Navigation Satellite System.

**GEOG 862 GPS Modernization for Geospatial Professionals (1)**

Topic: The Global Positioning System (GPS) includes a constellation of earth-orbiting satellites that broadcast their locations in space and time, a network of ground control stations, and military and civilian receivers that calculate ground positions by trilaterating satellite positions. Geospatial professionals need to possess a working knowledge of current and future GPS capabilities because GPS positioning is so prevalent in geographic information systems (GIS) applications in government, industry, and academia.

GPS has always been a dual use system, military and civilian. From the beginning, GPS signals have been available with no direct user fees. GPS is used now in all of transportation-aviation, maritime, railroad, highway and mass transit. Satellite positions also plays critical roles in telecommunications, land surveying, law enforcement, emergency response, precision agriculture, mining, finance, and scientific research. It controls computer networks, air traffic, power grids, and so on. As the scope of GPS has expanded, the system continues to evolve.

Course Objectives: GEOG 862 provides students with an opportunity to develop an in-depth understanding of the Global Positioning System that exceeds the basic awareness that is cultivated in prerequisite courses. For example, while it is useful to know that a minimum of 24 GPS satellites ensure 24-hour worldwide GPS coverage, it is equally important to understand why there are more than the minimum on orbit. Students in GEOG 862 learn that redundancy is necessary in a system upon which much of the U.S. economy now depends. Society's reliance on satellite positioning mandates GPS modernization.

Student Activities: The course consists of four weekly lessons. Each lesson will require a minimum of 8-12 hours of activity. Lessons will include weekly lectures (via synchronous Web conference and/or streaming video), threaded

discussion, readings, two quizzes and two writing assignments about concepts and tools in GPS Modernization. These assignments are designed to help students progress towards successfully completing the objectives for this course.

\* Class Participation: Individual participation via online discussion. Students will be encouraged to post and respond to questions and comments in online discussions forums.

\*Quizzes: There will be a mid-course quiz at the end of Week 2 and a final quiz at the end of Week 4 to test the students' comprehension of class materials and other reading as required.

\*Papers: There are two writing assignments in this course. The first falls after Week 1 and asks students to prepare a 1200 word paper on one topic covered in "Basic GPS," The first lesson. The second falls after Week 3 and asks the students to prepare a 1200 word paper on one topic covered in either Week 2 or Week 3.

**GEOG 863** GIS Mashups for Geospatial Professionals (3) Cultivates a working knowledge of how and why geospatial professionals develop web mapping applications that combine data from multiple sources.

### **GEOG 863 GIS Mashups for Geospatial Professionals (1)**

Topic: In the context of information technology, the term "mashup" refers to a web application that combines content from multiple sources into a whole that is greater than its parts. A GIS mashup is one in which at least a portion of the content is geographic in nature and in which information is typically conveyed through a map. For example, tabular crime data published on a city's web site can be combined with base data layers such as municipal boundaries and roads to produce a map that is valuable for both the city's policies department and its citizens. GIS vendors have offered web mapping software products for many years. However, companies like Goggle and Yahoo now offer free application programming interfaces (APIs) which make it easier and more affordable to publish online maps. These APIs provide a set of base layers upon which the map developer can overlay his/her own geocoded data. These data may be stored in files on the developer's own server or they may be obtained dynamically through public web services or by parsing data embedded within other web pages. This course prepares students to use the Google Maps API to design and develop mashups that meet the needs of their particular organizations and clients.

Developing mashups requires considerable conceptual and technical knowledge. Practitioners need to understand geospatial databases, open standards for interoperability, web content authoring, computer programming, and the business need to view and analyze geospatial information in many ways, including as tables and as maps. Successful completion of Penn State's four-course Postbaccalaureate Certificate Program in GIS, including GEOG 485: GIS Programming and Customization, is required for enrollment.

Course Objectives: GEOG 863 provides students with an understanding of the technology that makes building mashups possible and teaches them how to build their own mashups.

Student Activities: To fulfill course and educational objectives, students will participate in weekly lessons and project assignments, supported by daily discussions with instructors and peers.

1. Weekly Lessons: Text, graphics, software-based exercises and quizzes will help students master the concepts that underpin GIS mashup development and will provide examples of techniques involved in the development of GIS mashups.
2. Projects: Students will demonstrate their mastery of lesson topics in three realistic project assignments that involve the development of GIS mashups. In the first project, students are asked to plot their hometown on a map. In the second, they are required to develop a more interactive map that displays the locations of numerous cities along with selected attributes. In the third and final project, the students demonstrate that they can apply what they've learned to develop a mashup that incorporates data from their workplace.
3. Discussions: The course instructor will answer questions about lesson topics, and provide individual feedback to student assignments, via course email and discussion forums within the ANGEL learning management system. Prescribed discussions will be held on well-known mashup examples, the commercial prospects of mashups, and issues surrounding data ownership. Synchronous communications, including telephone and chat, may also be used as needed.

Bachelor of Arts: None  
Effective: Summer 2009

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 865** Cloud and Server GIS (3) Theory and practical applications of using cloud computing and server resources to solve geospatial problems.

### **GEOG 865 Cloud and Server GIS (3)**

This course teaches students to use cloud and server GIS resources to solve problems for which geospatial data is an integral element. Students will evaluate and implement systems using three cloud service models; infrastructure services, platform services, and software services. The course involves both lab exercises and critical reading and writing for infrastructure, platform, and software service models.

This course presents common methodologies for setting up cloud services for creating maps, to customize cloud services for managing spatial data, and to invoke cloud services for processing spatial data. This course challenges students to apply critical thinking and technical skills to evaluate and develop successful cloud GIS projects. Written assignments focus on helping students improve their ability to explain and execute cloud GIS projects. A semester-long project involves creating a working cloud GIS project, including public presentation of results.

**GEOG 882** Geographic Foundations of Geospatial Intelligence (3) Orientation to the geographic foundations of geospatial intelligence and its applications in national security, international relief work, and disaster management.

### **GEOG 882 Geographic Foundations of Geospatial Intelligence (3)**

Topic: Geospatial intelligence (GEOINT) leverages geographic information science and technology (including cartography, geographic information systems, remote sensing, and global positioning systems) with intelligence tradecraft to develop intelligence products that support national security, disaster response, and international relief efforts.

Course Objectives: GEOG 882 is designed to challenge current and aspiring GEOINT professionals to be more than technicians. Students who successfully complete GEOG 882 will appreciate that while geospatial technologies are useful in revealing what, who, and where, and to some extent how events are taking place, they are less useful in explaining why events occur, or what response is most appropriate. Students will learn that the political, cultural, historical, and economic perspectives of human geography are needed to put GEOINT analyses in context. The course will also challenge students to approach analyses critically, to consider alternative viewpoints and explanations, and to question their own assumptions.

Student Activities: The course consists of 12 lessons that will span either the 15-week semester or the combined 12-week summer sessions. Each lesson will require approximately 10 hours of student activity. Student activity will include viewing and responding to recorded instructor lectures (delivered by digital video and audio), readings from textbooks or selected library resources, five quizzes on readings, four asynchronous online discussion forums, three reflection papers, and a collaborative role-playing simulation that provides a capstone experience.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOG 883** Remote Sensing Analysis and Applications (3) Understanding remote sensing systems' operation, data products, and processing techniques to address typical problem scenarios faced by the GEOINT professional.

### **GEOG 883 Remote Sensing Analysis and Applications (3)**

Topic: Geospatial intelligence (GEOINT) leverages geographic information science and technology (including cartography, geographic information systems, remote sensing, and global positioning systems) with intelligence tradecraft to develop intelligence products that support national security, disaster response, and international relief efforts.

Course Objectives: GEOG 883 cultivates students' knowledge of the capabilities and limitations of digital remote sensing instruments, processing systems, and derived data products. It helps students master basic skills needed to leverage these

data sources and information products in the context of geospatial intelligence tradecraft.

**Student Activities:** The course consists of eight lessons and one capstone group project that will span either the 15-week semester or the combined 12-week summer sessions. Each lesson will require approximately 10 hours of student activity. Student activities will include reading lesson text, online quizzes, and discussions about the ways in which remote sensing sciences is applied to geospatial intelligence analysis.

### **GEOG 884 Geographic Information Systems for the Geospatial Intelligence Professional (3)**

**Topic:** Geospatial intelligence (GEOINT) leverages geographic information science and technology (including cartography), geographic information systems, remote sensing, and global positioning systems) with intelligence tradecraft to develop intelligence products that support national security, disaster response, and international relief efforts. The objectives and concepts are drawn from the University Consortium for Geographic Information Sciences's GIS&T Body of Knowledge (2006).

**Course Objectives:** GEOG 884 cultivates in students the knowledge of the capabilities and limitations of geographic information systems (GIS) and the skills needed to realize their potential in the context of the geospatial intelligence tradecraft.

**Student Activities:** The course consists of seven project assignments that will span either the 15 week semester or the combined 12-week summer sessions. Each assignment will require 16-24 hours of student activity. Assignments will include readings, online quizzes about the readings, projects involving the GIS workflow development and implementation in the context of realistic scenarios, discussions about the benefits and limitations of GIS for geospatial intelligence analysis, and reflections about the relevance of course activities to students' professional experiences.

### **GEOG 889 Virtual Field Exercise for the GEOINT Professional (2)**

GEOG 889 is a comprehensive examination for the Geospatial Intelligence (GEOINT) professionals who have completed four required prerequisite courses leading to the Postbaccalaureate Certificate in Geospatial Intelligence. The comprehensive examination evaluates the student's ability to integrate knowledge of geospatial technology, show critical and independent analytical skills, and demonstrate mastery of the knowledge and skills that characterize the geospatial intelligence tradecraft. To successfully complete the GEOG 889, students must demonstrate independent thinking, appropriate organization, high-level writing competency, critical analysis, ethical reasoning ability, and accuracy of documentation. GEOG 889 will challenge students to reflect upon what they have learned in the Certificate Program, and to become more familiar with the professional aspects of the field. The course will enable faculty to identifying students who need additional course work or independent study before being granted the certificate.

GEOG 889 is a required course in the Postbaccalaureate Certificate Program in Geospatial Intelligence. It is designed specifically for current and aspiring geospatial intelligence (GEOINT) professionals who are able to study only on a

part-time basis and at a distance.

## **Geosciences (GEOSC)**

**GEOSC 402Y** (IL) Natural Disasters (3) Case studies of the causes and consequences of natural disasters; analysis of disaster impact in different economic, cultural, and social conditions.

GEOSC 402Y

### **GEOSC 402Y Natural Disasters (3) (IL)**

Is anywhere safe from natural disasters? Can we hide, or should we learn to live with the hazards around us? This course will explore the causes, effects, and societal response to disasters. By learning from previous disasters, we can develop

strategies to avert the disasters or at a minimum mitigate their affects. We will look at a variety of natural hazards and related disasters including flooding, volcanoes, landslides, earthquakes, hurricanes, and tsunamis. By the sue of case studies of recent occurrences of natural disasters, we will determine how damaging disasters can be, and what we can do to minimize their impact on society. This course will provide an in-depth, hands-on study of natural hazards, their geography, and their impact on societies worldwide. We will focus on both the physical processes (e.g. underlying geology or geophysics) of selected natural hazards and the humn systems that have developed to minimize the impact of natural disasters.

The course will place emphasis on active learning exercises to investigate processes and responses to natural hazards. We will meet for two periods each week which will include both lecture and group research activities (approximately 30% of time is in lectures, 70% time is in group research activities). Grading will be based on reports for each topic, a disaster diary, and a term report. The term report is an independent project which focuses on a selected city facing significant natural hazards. Cities will be selected from both the developed and developing world to allow comparsions of the impacts of natural disasters under different socio-economic and cultural conditions.

The course is offered once each year with a target enrollment of 25-30 students.

Prerequisites for the course are at least 6 credits in science courses (inluding GN courses).

**GEOSC 405 (SOILS 405) Hydropedology (3)** Soil and water interactions across scales, integrated studies of landscape-soil-water relationships, fundamental processes of water flow and chemical transport.

GEOSC 405

### **GEOSC (SOILS) 405 Hydropedology (3)**

Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes *in situ* soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system. The course will be offered every fall semester with an anticipated enrollment of 20 students per class.

GEOSC 420

**GEOSC (BIOL) 420 Paleobotany (3)**

Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands.

This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

**GEOSC 428** Micropaleontology (4) Biology and ecology of microfaunas and microfloras (e.g., foraminifera, coccolithophores, radiolaria, diatoms, dinoflagellates) and applications in biostratigraphy and paleoenvironmental reconstruction.

GEOSC 428

**GEOSC 428 Micropaleontology (4)**

Micropaleontology is the study of the fossilized remains of microscopic plants and animals, most of which are single-celled and belong to the Protista. Although nearly invisible, the organisms at the base of the food chain make up most of the biomass in oceans and lakes. Only a few kinds of microplankton and microbenthos groups have shells that readily fossilize, but these can be so abundant that in places they form mountains of pure fossil remains. The abyssal floor of the ocean is made up of layers of microfossil-rich "ooze" that slowly accumulates from microscopic shells settling to the seafloor. Changes in the abundance and types of microfossils in these layers provide a detailed record of the geological past, in response to climate change and biological evolution. In addition, each time a new species of micro-organism evolves, it quickly spreads throughout the oceans, forming a worldwide time marker in the fossil record. Such marker horizons allow geological events in different parts of the world to be related in a global earth history.

The course has four main objectives: (1) to provide a broad overview of the biology and ecology of living microplankton and microbenthos with a focus on foraminifera and radiolaria (predatory, non-vegetative protists), coccolithophores and diatoms (vegetative, photosynthesizing protists), and dinoflagellates (both predatory and photosynthesizing); (2) to learn about the evolutionary record of these groups; (3) to understand their applications in biostratigraphy and paleoenvironmental reconstruction; and (4) identification of microfossil groups in the light microscope and scanning electron microscope. Group projects will be a key element of laboratory sessions. Assessment will be based on mid-term and final exams, a term paper, and a laboratory exercises.

**GEOSC 450** Risk Analysis in the Earth Sciences (3) An introduction to concepts and methods of quantitative risk analysis with focus on water, climate, and energy related risks.

#### **GEOSC 450 Risk Analysis in the Earth Sciences (3)**

Geosc 450 is an introduction to concepts and methods of quantitative risk analysis in the Earth system. Key concepts include probability, impacts, risk, uncertainty, statistical estimation, and decision-making under uncertainty. Important methods to be covered are sensitivity studies, probabilistic prediction, and uncertainty analysis. Examples of risks to be analyzed include: drought, flooding, nuclear waste storage, and anthropogenic climate change. Students will also use simple risk analysis software (provided by the instructor and accessible without prior programming experience) to actively apply these concepts to example problems. The course is designed for advanced undergraduate students with a prior exposure to basic statistics and calculus.

**GEOSC 451** Natural Resources: Origins, Economics and Environmental Impact (3) Geologic, economic and environmental issues related to exploitation of non-renewable natural resources (metals, minerals, rocks, and fossil fuels).

GEOSC 451

#### **GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3)**

All the materials needed for health and prosperity in our complex society come from the earth, such as water, iron and other metals to make steel, silica to make glass, limestone to make concrete, potash and phosphate to make fertilizers, and oil, natural gas, coal and uranium to generate heat and electricity. Most of these natural resources are non-renewable, and easily recoverable quantities are limited. The main purpose of this course is to increase understanding and appreciation of geological, economical and environmental aspects of exploitation of mineral and energy resources. Approximately two-thirds of the lectures/discussions will focus on geological, geochemical and biological processes that have governed the concentration and dispersion of economically important elements and natural materials on Earth, including water, heavy metals (aluminum, iron, copper, zinc, lead, etc.), precious metals (gold, silver, platinum, etc.), industrial minerals and rocks (clays, limestone, gypsum, salts, etc.), nuclear-energy sources (uranium and thorium) and fossil fuels (petroleum, natural gas and coal). The remaining one-third of the lectures/discussions will focus on: (i) exploration methods to discover new mineral (and fossil fuel) deposits; (ii) economic aspect of mineral commodities (usages, production statistics, economic of mining and concentration); and (iii) environmental issues related to mining, nuclear waste disposal, and constructions. There will be two half-day field trips to study the nature of sulfide mineralization and acid-water pollution.

**GEOSC 452 Hydrogeology (3)** Hydrologic cycle: occurrence, movement, quality, and quantity of groundwater; solute transport; quantitative hydrogeologic methods; role of water in geologic processes. This course has one or more required field trips for which a fee may be charged to the student.

GEOSC 452

**GEOSC 452 Hydrogeology (3)**

GEOSC 452 is the study of the relation between geological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of natural flow systems, emphasizing the occurrence, movement, quality, and quantity of groundwater and its relations to contaminate fate and transport. The primary objective is to provide students with the fundamental knowledge and tools that are necessary to understand the hydrologic cycle. Students will gain an in-depth understanding of fluid flow across scales from point observations to watershed phenomena, and will gain skills in using mathematics to describe water fluxes. The course format consists of two lectures each week, and includes two field trips. Grading is based on weekly homework assignments, exams, and participation on the field trips. Because hydrogeology is linked to a wide array of environmental, ecological, engineering, and natural resource issues of societal importance, GEOSC 452 will support interdisciplinary training of students in the natural sciences and engineering. Students will find this course useful when undertaking research about fluids in geologic processes.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOSC 474 (BIOL 474)** Astrobiology (3) In depth treatment of principles/concepts of biochemical evolution, the origin/evolution of life; evaluation of distribution of life in the universe.

**GEOSC 474 GEOSC (BIOL) 474 Astrobiology (3)**

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOSC 487 Analysis of Time Series (3)** Nonstatistical approach to data analysis; spectral and correlation analysis; filter theory; signal-to-noise improvement applied to geoscience data.

### **Analysis of Time Series (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2010  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GEOSC 488 An Introduction to Seismology (4)** An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

GEOSC 488

### **GEOSC 488 An Introduction to Seismology (4)**

This course is an overview of the observations, methods, and frameworks used in seismogram-based investigation of earthquake and earth-structure. The main goals of the course are to prepare students of seismology for further study of earthquakes and earth structure using seismograms; to provide an overview of earthquake seismology for nonseismologists, to introduce undergraduate geophysics students to quantitative geoscience. Topics covered include stress and strain, faulting and tectonics, seismic body and surface wave propagation including ray methods, dispersion, and attenuation. Students perform fundamental seismological analyses using a computer-based, experiential laboratory exercises exploring the signals contained in research-quality data from recent earthquakes recorded on the international global seismic network.

**GEOSC 500** Issues in Geosciences (3) Introduction of first year graduate students to issues in geosciences.

GEOSC 500

**GEOSC 500 Issues in Geosciences (3)**

This course is designed for graduate students joining the Geosciences Department and is limited to them. The objectives of the course include the developing of a sense of community among the new students, teaching them to cooperate and work in teams, emphasizing to them the importance of communications skills, giving them practice in them, and doing so in the context of an introduction to some broader issues of current interest in the geosciences. The course emphasizes student participation and faculty-student interaction in all sections of the course. This is accomplished via class discussions, specially set up and prepared debates between student teams promoting opposite points of view, and field studies, designed to collect pertinent information to support opposing arguments on an issue. Part of the course is dedicated to develop the intellectual tools necessary to pursue successful graduate student careers. These include the critical analysis of publications, communication and presentation skills, as well as the preparation of research proposals for funding. While the overall objectives of the course remain the same from year to year, the details of how they are pursued in the course is left to the individual instructors. This is necessary to maintain a dynamic course, which can only be achieved if the teaching faculty becomes personally involved. The course involves, each time that it is offered, two principal instructors who draw on the expertise of other faculty members for different areas of expertise. The commitment to teach the course is for two years. The instructorships are staggered so that each year one the participants rotates off while a new one is introduced. This provides for continuity in the pursuit of the course objectives while continuing to introduce new ideas. The Graduate Program Committee of the Department of Geosciences makes the selection of the instructors for this course. Student evaluations are typically based on: A short paper, field trip participation, debate, proposal, oral presentation and class participation.

**GEOSC 508** Mechanics of Earthquakes and Faulting (3) An in-depth treatment of fundamental concepts in brittle faulting and earthquake mechanics with emphasis on physical processes.

GEOSC 508

**GEOSC 508 Mechanics of Earthquakes and Faulting (3)**

This is a core course in the geophysics sub discipline. The course will cover material that is fundamental to all students who will carry out thesis research in seismology, tectonics, and other areas of solid Earth geosciences. The course will cover brittle fracture, macroscopic failure criteria, effective stress laws, rheology, and friction constitutive laws. Continuum mechanics and elasticity will be introduced and developed in the context of crustal faulting. The state of stress in Earth's crust will be discussed. Detailed development of the theory and observations of fault nucleation and growth. Discussion of fault rocks and structures, the strength and rheology of faults, and seismotectonics. Processes of earthquake rupture and instability conditions will be developed in the context of an energy balance for faulting. The course is designed to provide an introduction to the quantification of earthquakes, including earthquake source parameters and scaling laws. The seismic cycle will be explored in terms of its relation to faulting, earthquake prediction, and earthquake physics.

**GEOSC 587** Preparing for an Academic Career in the Geosciences (3) The course focuses on successful strategies for the academic job market and for launching an academic career.

#### **GEOSC 587 Preparing for an Academic Career in the Geosciences (3)**

This seminar is designed for advanced doctoral students who are ready to launch their own search for an academic position. We will explore important elements of the transition into an academic career, including the application and interview process and strategies to establish teaching and research programs. During the semester students will: (a) learn about roles and responsibilities of faculty members in different educational settings (e.g., community colleges, four-year colleges, universities); (b) Design a teaching and research plan suitable for the next career stage and write teaching and research statements to summarize these plans; (c) Learn strategies for documenting their strengths and accomplishments in teaching and research; (d) Learn "the inside scope" about job searches including how to navigate the application process, interviews, and negotiation; (e) Learn how to give an effective job talk; (f) Discuss strategies for balancing the many demands and expectations they will face in an academic career. Finally, students will develop a self-inventory of

preferred options for the next career stage and a personal action plan.

**German (GER)**

**GER 401Y (IL)** Advanced Composition (3) Intensive practice in writing different text types in German.

**GER 401Y Advanced Composition (3)  
(IL)**

GER 401Y is the writing across the curriculum component of the German language sequence. After thorough discussion of various text types, students will read and practice writing in different genres. GER 401Y concentrates on building other language skills as well. We will do so by reading and discussing short German texts from a variety of sources and watching film and television. In addition, we will review aspects of German grammar that present difficulties to many English speakers. Evaluation will be based on five writing assignments, a writing portfolio, quizzes, and class participation.

The course will be offered twice a year with an enrollment of up to twenty students.

GER 401Y is required for all German B.A. and B.S. major options as well as for the German minor.

General Education: None

**GER 430 (IL)** History of the German Language (3) Development of German from its earliest stages, including historical and cultural aspects.

**GER 430 History of the German Language (3)  
(IL)**

This course provides an overview of the history of the German language from its origins to the present. Historical changes and dialectal variation in phonology (sound system), morphology (word structure), syntax (sentence structure), lexicon (vocabulary), and semantics (word meaning) will be examined. Particular emphasis is placed on the impact of cultural and historical changes on the development of German, including its standardization. Students will be evaluated on the basis of homework, classroom participation, tests, and an in-class presentation with a written abstract. No prior knowledge of linguistics is required. The class is conducted in German.

**GER 489** Introduction to German Film History and Theory in Context (3) Introduces films in German since the 1960s and addresses issues relevant to German and European cultures and politics.

**GER 489 Introduction to German Film History and Theory in Context (3)**

This course focuses on German cinema's development since the 1960s. The course situates the "Young" and then "New German Cinema" within contemporaneous European and U.S. film cultures. Thus the course will address the difference between the European cinematic culture of *auteurs* versus the school of "genres" in the U.S.

The preceding traditions of Italian Neo-realism and of the French *nouvelle vague* are also engaged alongside a few Hungarian, Czech and/or Polish films. The students will have the opportunity to consider how these other national cinematic productions impacted the German filmmakers who were involved in the creation of a national German cinema that would critically engage Hollywood on the one hand, and distance itself from the Nazi past on the other.

The course will be structured around questions about the grounds for a national cinema and its cultural and critical relevance both at the time these films were produced and today. Yet, the national question will not be the only focus of this class, in the course of which students will be able to discuss the historical, political and ethical questions raised by the directors selected. In addition, students in this course will learn about the specificity of cinematic language and will be exposed to some film theory. In conclusion, the course provides upper level undergraduate students with a basic knowledge of the most important New German films, with a confrontation with issues specifically relevant to a study of German culture, and with some familiarity with film theory.

The evaluation methods for this course will be based on 1) participation [attendance; reports/worksheets, after each film and in class discussion]: 30%; 2) presentation 20%; 3) take-home mid term essay 20%; and 4) final paper 30%. The course is part of the German Program, in particular of the German Studies curriculum. It teaches students of German culture about German and European contemporary cinema, while situating the cinema within broader historical-political debates concerning Europe. It functions as an excellent complementary course to our GER LIT classes at the 400 level and offers an additional choice to pursue cultural studies to those who are more reticent about reading texts. Enrollment: 25. The course will be offered every other year.

**GER 510** Literary Theory: An Introduction (3) Introduction to the major theoretical approaches to the contemporary study of culture (literature, film, art and politics).

**GER 510 Literary Theory: An Introduction (3)**

This seminar will introduce students to contemporary literary and cultural theory in an effort to provide them with the methodological tools they need to undertake cutting-edge literary and cultural analysis themselves. German Studies in the U.S. has at least two defining characteristics. First, though, at least for those of us in German Departments, its emphasis is mainly on culture, it is genuinely interdisciplinary, attempting to explore how cultural products and practices (defined as extending far beyond the traditional canon of German literature) are constituted by and help to constitute history and politics. And, secondly, it advances its interdisciplinary analyses by drawing increasingly on new methodologies elaborated by Anglo-American and foreign cultural theorists. Among the theoretical approaches we may focus on will be formalism and structuralism, psychoanalysis, Marxism, cultural studies, feminism, gender studies, and queer theory, and post-colonial theory. These new theories have profoundly transformed disciplines such as Anglo-American literary studies, comparative literature, women's studies, history, and anthropology, since the Seventies. In this course we shall find out if/how such theories could transform German Studies, too. The course is reading-intensive and students are expected to invest most of their time in reading and preparing for class discussions. Regular attendance and informed participation in class discussion will be required. This involves reading all assigned articles on a regular basis (20%); oral presentation of one weekly section (30%); second oral presentation that includes a sample analysis of the assigned texts (20%); and one 12-15 page paper due at the end of the semester (30%). German 510 will be the second unit in a three-course package intended to provide beginning graduate students with a set of correlated introductory courses. German 510 is the only wide-ranging course in theory offered by the Department for incoming students. This course will be offered once a year with 5 to 10 students (15 max) per offering.

**GER 511** The Teaching of College German (3) Theory, methods, techniques, materials, bibliography contributions of linguistics and psychology to language learning; methods of teaching post- secondary German.

### **GER 511 The Teaching of College German (3)**

German 511 introduces students to the theory and methods of teaching German at the college level. It deals not only with techniques, materials, and bibliography of the field but also evaluates the contributions of linguistics and psychology to college-level language pedagogy. German 511 familiarizes students with current theories of foreign language education as they relate to post-secondary language acquisition. This course further includes the practical aspects of college-level teaching with special reference to problems related specifically to the teaching and learning of German. Evaluation procedures include examinations, research papers, and the preparation of sample teaching materials. German 511 is a required course for all German graduate students both at the M.A. and Ph.D. level. It is offered every year.

**GER 513** German Phonetics and Phonology (3) This course examines German speech sounds and their organization into a linguistic system.

### **GER 513 German Phonetics and Phonology (3)**

This course provides an overview of the major subfields of phonology as they apply to the German language. No prior knowledge of linguistics or phonology is assumed. Topics discussed include articulatory phonetics, the phoneme, distinctive features, and common phonological processes in German such as final devoicing, prosody, prosodic morphology and dialectal variation. The class will practice phonetic transcription of German and English. We will discuss common phonetic and phonological difficulties presented by German for native speakers of English. In addition to practical applications of phonetics, the class will investigate theoretical concepts such as the phoneme, distinctive features, lexical stress, the syllable and the prosodic foot. Reading assignments include scholarly articles employing different theoretical frameworks and excerpts from seminal works in the field. Frameworks to be discussed include derivational approaches and Optimality Theory. The class will also examine dialectal variation with a particular emphasis on differences between Low, Middle and Upper German dialects. Each students will make a presentation investigating the phonological system of a German dialect. Evaluation is based on problems, class presentations and a final research paper.

**GER 514** German Syntax (3) This course provides an overview of morphosyntactic processes in German.

### **GER 514 German Syntax (3)**

This course provides an overview of the major components of morphology and syntax as they apply to the German language. No prior knowledge of linguistics or morphosyntax is assumed. Topics discussed include the basic syntactic constituents in German, the verbal bracket and movement rules, German argument structure, the tense/mood/aspect system for German verbs, the connection between pragmatics and word order in German, and dialectal variation as it relates to German syntax. Emphasis will also be placed on how these different areas of German syntax are related to descriptive grammar rules as presented in many German language classes. Reading assignments include scholarly articles employing different theoretical frameworks, including minimalism, and excerpts from seminal works in the field. Evaluation is based on problem sets, two take-home exams and a research paper.

**GER 515** Introduction to German Applied Linguistics (3) Introduction to the major areas of the broad field of Applied Linguistics as relevant to the study of German.

### **GER 515 Introduction to German Applied Linguistics (3)**

This course provides an introduction to some of the major areas of Applied Linguistics as they apply to users of the German language. No prior knowledge of linguistics is assumed. Topics discussed include the acquisition of German by people who do not speak it natively, the teaching of German to people who do not speak it natively, the use of technology in the instruction of German, the relationships between users of German and German (Pragmatics) in both oral and written discourse, and the inter-relationships of society and culture, users of the German language, and the use of the German language in global and local contexts (Sociolinguistics). This is not a language course that focuses on the speaking and writing of German. The course will be conducted in either German or English. Reading assignments will include scholarly articles and excerpts from seminal work in the field. Students will work extensively on published and self-collected data, e.g. recordings of German classroom discourse, German conversations, German advertising. Evaluation is based on problem sets, seminar presentations, assigned readings, classroom participation, and written assignments. The course is required for students pursuing the German PhD Option in Applied Linguistics and may be selected to satisfy the core requirements for the M.A. in German. This course will be offered once each year with 15 seats per offering.

**GER 516** The Acquisition of German and Dutch (3) This course examines how children and adult learners acquire German and Dutch in naturalistic settings (i.e. non-classroom situations).

### **GER 516 The Acquisition of German and Dutch (3)**

This course is designed to provide students with an overview of the current literature on the acquisition of German and Dutch by children, with a comparative examination of selected research on the acquisition of German as a second language (L2). Though we will deal mainly with German and Dutch data, these will be evaluated within the larger context of general theories of both first- and second-language acquisition. Over the course of the semester we will consider questions surrounding the acquisition of phonology, morphology (especially grammatical gender and noun plurals) and syntax (specifically verbal inflection and word order). Students do not need to have background or previous coursework in linguistics or psycholinguistics. Although the class will be conducted in English, reading knowledge of German is desirable, in order to better understand the data we will be examining.

The goals of this course are as follows: 1) familiarize students with general theories of child language acquisition, and aspects of German and Dutch L1 acquisition in particular, 2) draw connections between theories of L1 acquisition and phenomena in L2 acquisition (both of German/Dutch and in general), 3) familiarize students with how researchers analyze child language data.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**GOVMT 985 Aviation Law (2)** This course seeks to give the students a firm grounding in the law governing the domestic use of airspace for transportation and recreation. The licensing requirements of pilots, the struggle of the aviation industry to adapt to the market, the safety and security of passengers and the problems involved in building airports are just a few of the topics covered. The course provides an opportunity for those students who are interested in aviation to apply many of the subject they have studied in law school to a particular area of human activity. The cases studied in the course involve, inter alia: Administrative Law, Antitrust, Bankruptcy, Conflicts of Law, Contracts, Local Government Law, Environmental Law, Labor Law, Property Sales, Taxation and Torts.

**GREEK 425** Greek Historians (3-6) Translation and study of one or more of the ancient Greek historians.

**GREEK 425 Greek Historians (3-6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GREEK 425 is a reading course in ancient Greek focusing on one or more of the major ancient Greek historians (usually Herodotus, Thucydides, or Xenophon, or Polybius). The course is designed to advance the student's fluency in reading Greek prose, while at the same time enriching their understanding of Greek civilization and history by a thematic choice of historical readings. The course may concentrate on one author or may address a thematic issue with readings from a variety of Greek historians. For example, readings may be selected from Herodotus' accounts of ancient Egypt. Or readings may focus on a comparative study of Thucydides' and Polybius' reasons for writing history. The major portion of class time will be devoted to translating prepared passages. These passages will also be the basis for discussing grammatical forms, as well as stylistic issues in prose writing. The class will also include discussions of historical themes relevant to the readings. Students' work in the course will be evaluated based on class participation, three in-class tests, a final examination, and a term research paper or oral presentation.

GREEK 425 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. This course requires a mastery of basic Greek grammar and vocabulary acquired in GREEK 003, 102, or their equivalent. GREEK 425 may be used to fulfill several requirements for the CAMS major including the requirement of courses in Greek and Roman language, literature, and archaeology, and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin.

**GREEK 430** Greek Poetry (3-6) Translation and analysis of selected readings in Greek poetry.

**GREEK 430 Greek Poetry (3-6)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

GREEK 430 is an advanced Greek literature course in which students will read 1200-1500 verses of a non-dramatic genre of ancient Greek poetry (in different years the course is offered, this might be epic, lyric, bucolic, or didactic poetry). Students also will read in English the entire output of the author they are studying. The overall goals of the course are as follows: (1) to increase the ease and fluency of advanced-level students with ancient Greek in general and poetic idiom in particular; and (2) to expose students to a limited amount of scholarly literature and give practice in understanding and evaluating a scholarly argument in relation to a primary text with which they are familiar. Students will be expected to enter the class with a comfortable level of reading skill (as acquired in GREEK 003, 102 or their equivalent); the course will not cover grammar, nor will all the assigned readings in Greek be translated in class. Emphasis is on reading a generous amount of poetry in the original Greek and on literary interpretation.

The approach in the classroom will change as the term progresses. Initially, classes will be more lecture-driven in order to explain the background and characteristics of the poetry being read. Translation assignments early in the semester will be relatively short (30-50 verses per class). As students gain in ease and familiarity with the Greek they are reading, assignments will become longer (with a goal of approximately 100 verses per class by the end of the term) and students will assume an increasing proportion of the responsibility for conducting individual class sessions, culminating in student presentations at the end of the semester. GREEK 430 is one of a series of advanced Greek poetry and prose courses that allows students to gain skill and knowledge about a range of ancient Greek literature. GREEK 430 may be used to fulfill several requirements for the Classics and Ancient Mediterranean Studies major including the requirement of courses in Greek or Roman language, literature, or archaeology and a 400-level course in a related area. The course is particularly designed for students who select the Language Option of the major, which requires four courses at the 400-level in Greek or Latin. Students will be evaluated through class participation, quizzes, tests, an oral presentation, and a final exam. The course will be offered once every other year and will offer 20 seats per offering.

**GREEK 520** Greek Mythography (3) This graduate seminar focuses on ancient Greek mythographic authors from the beginnings of the genre (6th C.B.C.E.) to the Roman period.

**GREEK 520 Greek Mythography (3)**

This graduate seminar focuses on the ancient Greek mythographic authors from the beginnings of the genre in the sixth century B.C.E. to the Roman period. We shall define "mythography" simply as the prose exposition of mythic narratives (the most well-known Greek mythographer is Apollodorus, whose first-century C.E. "Bibliotheca" is consulted regularly by students of myth; some of the earlier practitioners include Hellanicus and Pherecydes). The seminar will consider selected readings in the theory of myth, alongside which we will examine in detail and evaluate the content of sources of the mythographers' writings. Some of these provide quite outlandish variants on known myths or bizarre stories otherwise unknown. Through a series of case studies of particular mythic stories, we shall place these texts in literary and cultural relief by seeking to understand how they interact with the more well-known mythic genres of Greece such as epic, lyric,

and tragedy. We will also probe the borders of what we call "mythography" by examining other prose texts not normally associated with the genre, such as Herodotus' Histories or even philosophical texts such as Plato or Aristotle. In addition, since much of the material we will treat is in a fragmentary state, we will try our hands at reconstructing both texts and myths that survive in only incomplete form. Some attention will also be given to the Latin mythographic tradition (e.g. Hyginus and others) which is mostly, or perhaps wholly, dependent upon earlier or contemporary Greek mythography.

**H ADM 552 Health Delivery Systems (3)**

This course covers the design and implementation of health care delivery systems. Beginning with policy and environmental pressures, the course considers the interests of diverse stakeholders such as regulators, purchasers, providers and consumers. The content of the course is organized in four areas: (1) traditional delivery systems; (2) managed care concepts and practices; (3) healthy communities approaches; and (4) reform and futures issues.

The objective of the course is to increase students' knowledge of the evolving health care delivery systems. This course functions as an elective course in the MHA program. It builds on core courses that have presented the basics of health systems. Students will be required to take a mid-term and final exam and write a term paper (grade 1/3 each). The course will be offered every third semester with an expected enrollment of 20 students.

### **HLHED 553 Multicultural Health Issues (3)**

This course is designed to explore ethnic and cultural factors influencing the health status among racial/ethnic groups in the U.S. Through lecture, discussion, simulations, and case studies, the students will be able to develop an appreciation for the cultural traditions and practices of different groups. The importance and implications of these traditions on health outcomes and health status will be examined. The students will also learn skills of cultural competence that are essential for public health practitioners.

### **HLHED (EDUC) 582 Spirituality and Culture in Health and Education Professions (3)**

This course will focus on the examination of the place of the cultural aspects of spirituality and its place in the education and health professions and its implications for culturally responsive education and/or health care in a multicultural society. In particular the goals of the course are as follows:

- 1) To clarify the difference between spirituality and religion and to understand how spirituality is currently being examined in the fields of adult education, medical education and the health professions.
- 2) To examine how culture informs spirituality generally, and more specifically, to examine how culture relates to one's own spiritual development and overall health in the world.
- 3) To develop a sense of how people construct knowledge through image and symbol, which for many people, maps to their spirituality and culture, as they make new and deeper meaning of their own lives.
- 4) To begin to consider WHEN and HOW one might appropriately draw on one's own spirituality and that of participants in adult and higher educational practices and health care settings to increase cultural understanding and/or responsiveness

to patient needs and when such discussion might seem to impose a spiritual or religious agenda.

5) To examine the connections among spirituality, culture, some complementary and alternative medicine modalities and overall holistic health and education.

**HLHED 597A** (ADTED 597A) Meditation, Embodied Learning, and Health (3) This graduate-level course will initially focus on the examination of the conceptual and research based literature on different types of meditation and embodied learning and their effects on health. But it will also focus on the applied practice of a form of meditation (of the learner's choosing) and its relationship to embodied learning, and perceived effects on stress reduction and increased well-being. As such the course is both theoretical and experiential. Participants will be expected to represent their learning in two primary ways: (1) by writing a paper that connects their experience of meditation to the research and conceptual literature on the effects of meditation and embodied learning on health, and its implications for education; and (2) by presenting their knowing by creating either a digital story (of pictures, music, and story), or other applied project documenting their learning.

**H P A 410** Principles of Public Health Administration (3) The rationale for, and the patterns of, public health service at all levels of government in the United States.

**H P A 410 Principles of Public Health Administration (3)**

This course is open to all Penn State undergraduate students who have completed HPA 301W and others with permission of the instructor. The course presents selected information, concepts, and methods from the field of public health. Topics concerning the history, organization, financing, and services of the public health system are discussed as well as issues, challenges, and controversies. Guest lecturers with expertise and experience in public health at the local and national level are integrated into the curriculum. Goals for the Course are 1) Introduce students to fundamental concepts, issues, and strategies related to the public health system in the United States. 2) Enhance students' abilities to discuss and analyze policies and population-based interventions related to public health. 3) Instill in students a willingness to think creatively about the organization and functioning of public health services. 4) Develop problem framing and critical thinking skills. 5) Utilize scientific knowledge base and public policy skills to approach solutions to public health problems.

**H P A 420** Principles of Managed Care (3) Survey of managed health care, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations.

**H P A 420 Principles of Managed Care (3)**

H P A 420 is designed to introduce students to managed health care in the United States, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. Participants must have a basic knowledge of the US healthcare system, including key stakeholders, national trends in health delivery, financing, and health policy. Most assignments encourage students to select a focus on the impact of managed care on either the private sector or public sector, allowing them to examine concepts in detail that is relevant to their career path. This course is designed as a seminar and employs team-based learning and other projects to achieve the learning

objectives. Students will demonstrate mastery of skills through tests, written assignments, and oral presentations. All students are expected to actively participate in class discussions. Much of the work for this course will be conducted in project teams. All students are expected to participate as full and equal members of their team and are responsible for all research and content developed by the team.

**H P A 430 Health Care Leadership (3)** This course provides an opportunity to students to learn about the challenges of leadership in health care.

### **H P A 430 Health Care Leadership (3)**

Leadership has been identified as one of the core competencies needed to improve the U.S. health care system and one of the challenges to solving the problems of cost, quality and access. This course provides an opportunity for students to learn about the challenges of leadership in health care. Through experience, reflective reading and writing, and discussion, students will explore their own leadership capabilities.

The course content covers three main areas. First, after reviewing academic research and the history of leadership development in health care, the course examines current models of leadership competency used for leadership development in both university programs and health care organizations. The knowledge, skills, and attitudes contained in these competency models and needed to become a leader in health care are each reviewed in detail. Second, current challenges for health care leaders are presented and discussed, emphasizing how different dimensions of leadership come into application in trying to meet these challenges and solve the problems they create. Third, through exercises and assignments, students explore their strengths and weaknesses in these leadership competencies, gaining additional understanding of the competencies through this application.

**H P A 440 (US;IL) (BB H 440) Principles of Epidemiology (3)** Theory of epidemiology and significant case studies. Potential application to health care.

### **H P A (BB H) 440 Principles of Epidemiology (3) (US;IL)**

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations.

The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful

interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world.

This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

**H P A 470** Health Care Information Management (3) This course introduces information systems terminology, data structures, software applications, and their management functions in health services organizations.

**H P A 470 Health Care Information Management (3)**

This course introduces the student to information systems terminology, structures, specific applications, and their relationships to management functions in health services organizations. Health providers and health systems are continuing to make multi-million dollar investments in information systems in order to meet new market and regulatory requirements. All health services managers will play a role in the analysis, design, acquisition, installation, operation and ultimate success of information systems necessary to meet organizational goals and objectives. This course exposes students to the IS/IT applications used to support management functions. Further, applications and management issues unique to industry segments (e.g., long-term care, home care, hospital administration, physician practice management) will also be explored.

The goal of the course is to ensure that students are schooled in the terminology, conceptual models, applications and opportunities and limitations of information systems in health services to the point that they can ask appropriate questions, recognize and state significant issues, and participate in the discussion and analysis of information systems development and application.

The course is one of several elective courses in the Health Policy Administration major that students can complete and is also a required part of the Information Sciences and Technology/Health Policy Administration Minor providing students with an understanding of the basic structures of information systems in health administration; the relationship of these systems to managerial functions such as communications, coordination, control strategic and process planning and decision making, and the important policy and ethical issues associated with privacy, confidentiality, and security in information systems. Since the course represents the capstone of the Information Sciences and Technology/Health Policy Administration minor, it is important for students to have the pre-requisites for the course (H P A 332, IST 210, and IST 220), including an understanding of major issues in the health care system, health care management and information systems.

Student's attainment of educational objectives will be assessed through a variety of evaluation methods. Understanding and appropriate application of terminology, management issues, and ethical/privacy concerns will be assessed through examination. Concept integration will be assessed through case-study analysis and project papers. Data presentation and training communication issues will be assessed through individual application projects and presentations.

A technology classroom with access to the World Wide Web and Penn State servers is required for effective instruction. We will use these facilities to demonstrate software applications, provide technical support for guestspeaker presentations, and facilitate student presentations. The course will be offered once per academic year with an expected enrollment of 20-40 students.

**H P A 490** Physician Practice Management (3) Development of skills needed to effectively manage physician practices.

**H P A 490 Physician Practice Management (3)**

This course is designed to provide undergraduate and graduate level students the basic knowledge necessary to effectively manage a physician practice in today's health care environment.

With the ever changing delivery of health care services in the U.S., it is critical for young professionals entering the field to understand the importance of working with physicians.

It is also critical, that students understand the differences that exist between managing physician practices as compared to other health care environments. That includes; physicians as employees, physician practice revenue cycle management, outpatient vs inpatient services, and other factors that are unique to managing doctors of all specialties.

The course will also discuss the role of mid-level providers such as physician's assistants, nurse practitioners, nurse midwives, and nurse anesthetists play in the delivery of health care services.

Students will also gain a better understanding of how to effectively communicate with physicians and use their knowledge to become partners with the administration of complex issues such as access, quality, and cost containment.

**H P A 510** Health Services Financing and Policy (3) Introduction to health policy focusing on health services financing, insurance and other current health policy topics.

**H P A 510 Health Services Financing and Policy (3)**

The second in a two-course sequence that introduces graduate students to the organization, financing, and delivery of health services in the US. This course focuses on health services financing and policy. This course will cover policy issues in the federal Medicare program, state Medicaid programs and private health insurance markets, and other important current health care policy issues. The course will also introduce students to the discipline of policy analysis, primarily the economic perspective, but will also include discussions on the political perspective and the policy-making process. The objectives of this course are to help students: 1) Understand the mechanisms by which Americans pay for their health care and become familiar with current health policy issues. The topics covered in this course will serve as a context for key policy issues that will be intensively discussed in a paired research seminar course; 2) Appreciate the policy-making process and the role of political perspectives in the formation and implementation of policy proposals; 3) Understand approaches of policy analysis, which will provide them with an analytic framework for critiquing health policy issues as well as health services research; 4) Develop policy analysis skills.

**H P A 511 Research Seminar on Health Services Financing and Policy (3)** An examination of seminal and current research on health services financing, insurance and health policy.

**H P A 511 Research Seminar on Health Services Financing and Policy (3)**

H P A 511 is one of two seminars designed to complement introductory courses in the graduate H P A curriculum. This course allows graduate students seeking careers in health services research to engage in deeper study and discussion of the classic and current research on the issues of payment, insurance, regulation and policy related to health care delivery in the U.S. health care system and to begin to explore their research interests for a thesis.

The primary objectives of the course are:

- (a) to help students become familiar with a selection of "classic" and "cutting edge" papers in the field of health services research
- (b) to develop students' ability to critically read and analyze the health services research literature with an emphasis on the conceptual and methodological approaches used by researchers
- (c) to assist students in developing their ability to organize, synthesize and integrate research drawn from a variety of disciplinary approaches into a coherent foundation for further study in health services research
- (d) to improve students' oral and written communication skills, emphasizing organization, clarity, and the ability to give and respond to constructive professional criticism

The readings for this class are all drawn from important journals in the field of health services research. Class will generally include 2 or 3 different activities designed to meet the objectives above. During each class, we will spend some time discussing the assigned articles to review the key points, analyze strengths and weaknesses of the research design, and consider how they provide a framework for studying the issues. In some classes, students will be asked to provide a short oral presentation of a topic, complemented by a written summary of the presentation topic. The class will discuss the paper and presentation, giving students constructive critical feedback on the presentation and paper. Finally, in some classes, the entire class will collaborate in developing a research question into a basic research proposal.

Students will be responsible for writing papers, giving presentations, preparing written critiques of articles as a seminar class, the full participation of every student is necessary. Students must not only come prepared to class, they must be active participants in all aspects of the class each week. Grades in the class are based on oral presentations, written papers, article critiques and student participation.

**H P A 523 Managerial Epidemiology (3)** Introduction to the principles and methods of managerial epidemiology and its application to health care.

### **HPA 523 Managerial Epidemiology (3)**

This course is intended to familiarize students with the methods and principles of managerial epidemiology. Changes in the structure of the health delivery and financing systems are making managers more responsible for the health of enrolled and constituent populations. The tools of epidemiology are important for purposes of planning, monitoring, and evaluation of population health. Managing the health of populations requires both an understanding of the factors that influence population health and how those factors can be influenced by health care organizations and systems. In addition to the management of population health, the methods of managerial epidemiology can be applied to organizational evaluation and clinical practice improvement. Epidemiology, interaction between health behavior and health management, health interventions, quality improvement, outcomes management, and program implementation and evaluation methods are examined. Particular emphasis is given to health management applications aimed at vulnerable populations, such as racial/ethnic minorities and the elderly.

**H P A 526 (SOC 526) Health Disparities (3)** This course provides an overview of social factors that lead to demographic disparities in health.

**H P A(SOC) 526 Health Disparities (3)**

This course provides a broad exploration of U.S. health disparities. In particular, it examines several types of U.S. health disparities that emerge as a result of individuals' race/ethnicity, socioeconomic status, nativity status and gender. The course focuses on theoretical and methodological strategies for studying health disparities as well as empirical evidence supporting the existence of different health disparities and explanations for understanding and ameliorating them. Students will summarize and discuss weekly readings and apply course materials to understand the state of the field and to carry out an original research project on a particular health disparity that interests them. This course fulfills basic seminar requirements in the Sociology graduate curriculum and serves as a process course for the interdisciplinary Demography dual-title graduate curriculum.

**H P A 527 Managing Healthcare Operations (3)** This course is focused on understanding and overcoming the challenges associated with nurturing and managing effective health care operations.

**H P A 527 Managing Healthcare Operations (3)**

This course is focused on understanding and overcoming the challenges associated with nurturing and managing efficient and effective health care operations. It exposes students to the frameworks, theory, and skills commonly employed by managers in an effort to deliver excellence in health care services. The course begins by considering process management and improvement, including the fundamentals of process analysis, queuing theory and staffing applications. The course concludes by taking a step back from specific processes to consider operating systems as a whole. Specifically, the concluding module of the course focuses on how the design of an operating system can impede or enhance the effectiveness of the organization's processes, including the role of complexity and tradeoffs healthcare organizations face between focus and flexibility.

**H P A 528 Health Data Analysis for Research (3)** Introduction to data sources and use of software for data management and analysis in health services research.

**H P A 528 Health Data Analysis for Research (3)**

The statistical analysis of quantitative data is a major tool for health services researchers. This course provides students with an overview of practical, concrete information about identifying, acquiring, processing, and analyzing data in typical health service research settings. The course covers three main content areas: Data issues in health services research, including legal and ethical information on human subjects and private health information; manipulating primary and secondary health services research data to create files amenable to research analysis; and basics of descriptive and exploratory analysis of health services research data. The objectives of the course are: (1) to give students a solid foundation of knowledge about health services data issues for their thesis and related research projects in the future; (2) to give them practical experience manipulating commonly used data sets in health services research; and, (3) to allow them to begin to explore potential research hypotheses for thesis and other research. Its primary role is to guide students in the master's of science and doctoral programs in Health Policy and Administration as they begin to explore research. It is also appropriate for other graduate students who intend to do research in or related to health services research.

**H P A 540 Epidemiological Applications in Health Services Research (3)** The course emphasizes theoretical as well as practical issues relating to applying advanced methods of epidemiology in health services research.

**H P A 540 Epidemiological Applications in Health Services Research (3)**

Advanced methods of epidemiology are presented with examples and exercises. The course emphasizes theoretical as well as practical issues. Students will identify opportunities for implementing the epidemiological principles in health services research. Students will also have the chance to explore the existing secondary data resources and/or to collect primary data and prepare them for epidemiological analysis. The course examines various applications of epidemiological methods in health services research. It focuses on the design and implementation of research projects utilizing epidemiological techniques to study the health of an identified population (Pennsylvanians), using data that is part of a national program, Behavioral Risk Factors Surveillance System (BRFSS) run by the Centers for Disease Control and Prevention in all states.

**H P A 541 Poverty, Race, Ethnicity and Child Health (3)** Seminar focusing on disparities in infant, child, and adolescent health, and policies and programs impacting these disparities.

**H P A 541 Poverty, Race, Ethnicity and Child Health (3)**

This course is designed to 1) strengthen students' understanding of the multidimensional nature of health and well-being at each stage of childhood and adolescence, and the magnitude of health disparities that exist among children of differing socioeconomic position and race/ethnicity; 2) encourage critical evaluation of existing governmental policies and programs impacting children's health and health disparities, and exploration of other potentially effective approaches; and 3) enhance students' expertise in the synthesis, critical analysis, and presentation of material in class and in written form. The content of this course is relevant not only to students in the Health Policy and Administration program, but also for students in other disciplines including but not limited to Demography, Human Development and Family Studies, Biobehavioral Health, Nutrition, and Nursing who are interested in learning about children's health and health disparities. Students are expected to participate actively in all class discussions and homework assignments, lead the class in the discussion of a specific government program impacting children's health, write a short reaction paper on the class text, write a final term paper on socioeconomic and racial/ethnic disparities in an aspect of children's physical or mental health including evaluation of current and potential policy approaches for addressing these disparities, and present the major points made in the term paper to the class for discussion. This course will be offered once a year, with enrollment limited to 20 students.

**H P A 551 Quality Improvement in Healthcare (3)** Examination of major approaches to performance improvement in contemporary healthcare systems.

**H P A 551 Quality Improvement in Healthcare (3)**

The goal of this course is to provide students with requisite knowledge and skills for managing quality improvement and patient safety efforts in health care organizations. The various perspectives on the challenges of providing safe and reliable health services are covered. Operational approaches to quality improvement adapted from industry are examined and practiced in cases and exercises. Students learn to identify key aspects of systems and work flows. They employ currently used analytic tools to analyze quality-related systems problems and identify potential solutions. Finally, the course will assist students in improving management skills in the affective realm. Specifically, excellent performance in this competency realm will be demonstrated through: (a) persuasive written and verbal communication skills; (b) the ability to facilitate group problem solving in a situation that includes conflict; and (c) the ability to effectively navigate difficult conversations. The teaching and learning methods used in the course will include lectures by the instructor (usually brief), briefings by students, discussion, role play and other structured active learning exercises. Weekly class process reflections will be used for improvement purposes. The class serves as part of the culmination of the professional master's degree program. It is also appropriate as an elective course for students in master's and doctoral programs who are interested in research and applications in quality improvement in health care.

**H P A 564** Research Methods in Health Services Research (3) Introduction to regression models in health services research, including violations and tests of model assumptions and solutions for those violations.

**H P A 564 Research Methods in Health Services Research (3)**

This course is the initial course on health services research methods for master's of science and doctoral students in the Department of Health Policy and Administration. In the context of the typical types of data used by health services researchers, students are introduced to the basic linear regression models that are fundamental for understanding more complex modeling of health care data. The course also reviews common data problems in health services research, including heteroskedasticity, serial and auto-correlation, and limited dependent variables. The objectives of the course are:

to help students understand the theoretical and practical aspects of applying linear regression models to health care data;

to help students understand the typical ways in which health care data often lead to violations of the assumptions of linear regression

to develop students' knowledge and skills in being able to use statistical models to test for and correct health data for heteroskedasticity, serial and autocorrelation

to introduce students to binary response models that are ubiquitous in health services research

**H P A 566** Advanced Methods in Health Services Research I (3) Advanced topics course focusing on extensions of the ordinary least squares regression model and nonlinear methods in health services research.

**H P A 566 Advanced Methods in Health Services Research I**

The objectives of this course are to help students identify problems that may arise in health services research data, understand methods designed to address such problems, and apply those methods to problems that they encounter in their empirical work. This course is part of the methods core in the HPA doctoral curriculum, and builds from students' introduction to research methods which is a pre-requisite course. Students should have a strong foundation in statistical and research methods prior to taking H P A 566. After completing the course, students should be prepared for the beginning stages of data analysis for a thesis and for further advanced level study in health services research methods. Evaluation is based on homework and examinations.

**H P A 567** Advanced Methods in Health Services Research II (3) Application of advanced methods to health services research topics focused on empirical approaches to causal inference in nonexperimental data.

### **H P A 567 Advanced Methods in Health Services Research II (3)**

The main theme of the course will be estimating causal effects using non-experimental data in health services research. These general topics, and the associated estimation methods, often go by other names; in economics they are referred to as "identification strategies," while in other disciplines they are sometimes labeled "quasi-experimental research designs." Causal inference is one of the main issues to confront in conducting health services research. Devising empirical strategies that increase the likelihood that estimates have a causal interpretation is one of the primary objectives of health services researchers. The course will have a distinctively applied bent. The goal will be to survey as many estimation strategies as possible, with particular emphasis placed on those most commonly used by empirical researchers. The objectives will be to understand the strengths and weaknesses of the various approaches, the assumptions they require, and how they have been used in practice.

**H P A 822 Clinical Issues for Health Services Management (3)** Introduction to current clinical issues in health services organizations focusing on the role of managers.

### **H P A 822 Clinical Issues for Health Services Management (3)**

This course is designed to provide the clinical aspect to the HPA graduate students' education, an important component of understanding population health and status assessment. It will allow students to gain exposure and utilize important clinical technologies which are used to formulate patient diagnoses. Students will also apply their knowledge in designing treatment plans for patients through hypothetical case studies. All students will learn basic medical vocabulary and terminology that is used in the field of medicine and will gain an understanding of the pathophysiology, diagnosis, prevention and treatment of common diseases. Students will gain an awareness of methods of health promotion and apply that knowledge to real life and hypothetical cases. This class will focus on the clinical aspects of medicine.

By the end of this course, students will have the necessary skills and knowledge to:

1. Describe and identify technologies used to diagnose and treat diseases.
2. Demonstrate in written and oral work an understanding of the basic pathophysiology, diagnosis and treatment of common diseases.
3. Compose written and oral work displaying a basic knowledge of commonly used medical terminology.
4. Recognize the clinical approach that health care providers take in diagnosing and treating common disorders, including tools and analytical thought process used in providing quality care.
5. Demonstrate a working understanding of the importance of computers and information technologies used in patient care.
6. Utilize health care resources such as the internet to analyze and examine health care topics.

This course will contribute to the student's development in:

1. Information seeking. Students will be responsible for acquiring knowledge from lectures, text books, medical journals, the internet, presentations, question and answer time with medical professionals and other resources needed to understand disease processes involving many organ systems.
2. Analytical thinking. Discussions will focus on decision-making skills used in clinical care and transferable to non-clinical settings. Students will need to use the knowledge gained in class and apply learned analytical skills comprehensively to evaluate and analyze the health care delivered to a specific healthcare consumer.
3. Communication skills. Students will be expected to use accurate and complete information in preparing for and participating in classroom discussions and presentations.

Bachelor of Arts: None  
Effective: Summer 2008

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**H P A 897D** Leadership Ethics in Healthcare (3) This course is designed to examine the building-blocks that support the ethical framework that drives decisions as leaders, and to challenge students to examine their own paradigms. Using case studies and interactive discussions, this course will examine the ethical decision-making process and confront the ethical challenges that healthcare leaders will face. At the end of this course, students should be able to demonstrate the following: 1. Discuss the ethical framework that drives decisions as leaders. 2. Describe the ethical decision-making process. 3. Summarize the common ethical issues facing leaders. 4. Develop a personal ethical mission statement.

#### **Leadership Ethics in Healthcare (3)**

**HEBR 451** Advanced Biblical Hebrew (3) Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details.

### **HEBR 451 Advanced Biblical Hebrew (3)**

HEBR 451 is a Biblical Hebrew literature course in which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of advanced-level students with Biblical Hebrew. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 152 or its equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read a Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), several in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 451 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HEBR 452** Readings in Biblical Hebrew (3) Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details.

### **HEBR 452 Readings in Biblical Hebrew (3)**

HEBR 452 is a Biblical Hebrew literature course which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of with which advanced students are able to read all types of Biblical texts. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 451 or its equivalent, the course will continue to emphasize grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read any Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), short in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 452 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of

Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

## **Higher Education (HI ED)**

**HI ED 490** Exploration of Careers in Higher Education (3) Foundation of graduate study in the field of higher education.

**HI ED 490 Master's Professional Seminar (3)**

This course is an introduction to higher education as a field, and as an orientation to graduate study. Early sessions will provide a brief review of the history of higher education, an introduction to the Carnegie Classification scheme of colleges and universities, and an overview of the structure of public and private higher education. Students will participate in an orientation to the services of the library including internet sources and tools needed to develop research skills. Technical writing skills will be developed through direct instruction, practice writing assignments, and peer review workshops in service of completing a literature review on a topic of the student's choosing. Students will explore a variety of career options through guest lectures and individual projects in areas of potential interest. A final career exploration portfolio will demonstrate what the student has learned regarding career areas. Professional, interpersonal, and ethical skills will be developed through role playing and interviews with actual higher education practitioners. Written work will include an annotated bibliography, a literature review, and integrative analysis essays. In addition, students will explore various options appropriate for a capstone project for their master's degree: internships, academic papers, portfolios, etc. Readings will reflect current topics and issues.

### **HI ED 553. (SOC 553, EDTHP 553, CI ED 553) Educational Mobility in Comparative Perspective (3)**

Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

**HI ED 560** Legal Issues in Higher Education and Student Affairs (3) Analyzing case law issues of access, student rights, employment, collective bargaining, church/state, etc., relevant to higher education and student affairs.

**HI ED 560 Legal Issues in Higher Education and Student Affairs (3)**

This course is designed to teach a process of legal analysis with a focus on issues related to higher education and student affairs. The course exposes the student to a range of administrative problems at the post-secondary level which entail legal implications. The course will help current and prospective administrators in higher education and student affairs to envision the legal dimensions of collegiate-level decision processes. No attempt will be made to provide definitive legal outlines at any stage; that is a task for the institutional attorney, the state attorney general, and the courts. Explicit recognition is made of the importance of law to higher education and student affairs training, but the overall effort will be illustrative rather than comprehensive.

**HI ED 586** (EDLDR 586, EDTHP 586) Qualitative Methods in Educational Research (3) Exploration of the theoretical framework undergirding qualitative research and its attendant practices and techniques.

**HI ED (EDLDR, EDTHP) 586 Qualitative Methods in Educational Research (3)**

This course is the introductory course in the EPS qualitative research methods sequence. This is the first course in a three-course sequence departmental sequence intended to take students from basic knowledge of qualitative methods through mastery of advanced topics. This course was designed specifically to 1) orient students to the various types of qualitative methods most widely used in educational policy research and their theoretical underpinnings; 2) provide training in basic qualitative research techniques; 3) introduce students to basic research design; 4) provide systematic practice (and feedback) in evaluating qualitative research that would allow students to become sophisticated consumers of qualitative studies; 5) prepare students for the Level II course. The course will begin with a brief review the development of qualitative methods in related fields (anthropology, sociology, linguistics) and quickly move on to an overview of qualitative methods in education. Students must have read the material prior to class in order to take part in in-class exercises and discussions. We will focus on key issues such as validity, interpretation and representation. Students will be asked to read studies, assess the general quality of the work, and provide a critical evaluation. Students will study specific methods of qualitative field research, and most weeks we will practice and discuss a particular research technique (e.g. participant observation, focus group interviews). These practice sessions will be informed by relevant readings. Students will practice developing coding schemas as well as get a quick overview of qualitative data analysis (QDA) packages. Finally, in small groups, students will design a basic qualitative study to be presented as a final product in the course.

### **HI ED (EDLDR, EDTHP) 588 Qualitative Methods in Educational Research II (3)**

The course will provide practical experience with methods of qualitative data collection, data management, and preliminary data analysis that extends and deepens students' understanding of qualitative research in education. The class, limited to 15 students, will take as the focus with inquiry a common "site" around which projects of individual and group interest will be designed. Sessions will take place in "workshop" blocks during which students will present and critique the work of the project. Readings will be interspersed with the practicing of methods. The final project for the course will be the compilation of a synthesized data set that could serve as the basis of further analysis.

**HI ED 801** Foundations of Institutional Research (3) Survey course explores fundamental methods and research on campus decisions, enrollment management, faculty work analysis, institutional effectiveness, accreditation, student outcomes.

**HI ED 801 Foundations of Institutional Research (3)**

This is a graduate level course that provides students with an overview of the institutional research profession and the most common functions that institutional research offices carry out. HI ED 801 is a core course in the IR Certificate Program and is designed for higher education professionals who seek to gain a fuller understanding of campus decision support activities and processes such as strategic planning, compliance reporting, enrollment management, resource management, institutional effectiveness, student outcomes assessment, and program evaluation. The course is designed:

- 1) To give students a foundation in the concepts, methodologies, research practices, and information systems that support campus decision making.
- 2) To examine the diversity of the institutional research profession, including office organization and staffing, and functions/activities.
- 3) To acquaint students with the major IR topics including overview of National Data sets, Planning and Budgeting, Enrollment Management and enrollment forecasting, Faculty Studies and Instructional Analysis, Institutional Effectiveness and accreditation, Educational Effectiveness and Student Outcomes Assessment.
- 4) To give students experience in using SPSS software, making Power Point presentations, and effective reporting on selected IR topics.

During this course, the classroom and work experiences are aimed at understanding the readings, obtaining hands-on experience in analyzing data, and developing reporting skills for the purposes of institutional research. The course serves as a bridge to the other courses that will be offered subsequently in the Institutional Research Certificate program. This course introduces main topics, concepts and processes that are central to the practice of institutional research. It gives an overview of sources used in institutional research and the methods employed. Most importantly, this course aims at introducing students to a variety of reporting strategies and developing report writing skills. Pre-requisite: Working knowledge of basic statistics.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2010

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HI ED 807** Foundations of Academic Advising (3) An overview of the academic advising profession and the role of academic advising in the collegiate setting.

**HI ED 807 Foundations of Academic Advising (3)**

This course will provide students with an overview of the academic advising profession and the role of academic advising in the collegiate setting. Topics include the history of academic advising; philosophical and theoretical perspectives; models of academic advising; ethical and legal foundations; emerging issues; scholarship; assessment and evaluation; the advising of diverse and unique populations of students; the use of technology in academic advising; the role of academic advising in retention, graduation rates, and student success; the professional development of academic advisers; the

future of academic advising nationally and internationally; and the professional preparation necessary to enter the field of academic advising.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2014

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HI ED 810 Planning and Resource Management in Higher Education (3)** Strategic planning and resource management in higher education through institutional research.

### **HI ED 810 Planning and Resource Management in Higher Education (3)**

This course provides students with a working knowledge of strategic planning models and budgeting structures and processes. Planning and budgeting skills are important components in institutional decision support, and this course provides students with tools and skills in environmental scanning, revenue forecasting, expenditure controls, and benchmarking.

Curricular goals: Upon completion, students will be able to:

- 1) discuss, in an informed way, the history, evolution, theory and practice of strategic planning in higher education;
- 2) appreciate contextual influences (such as organizational politics and culture, leadership, environmental constraints, and the like) on planning;
- 3) apply data and decision-support tools that can support strategic planning and resource management;
- 4) apply group process tools to enhance communication, consensus, and action;
- 5) demonstrate a pragmatic ability to help integrate strategic planning with institutional research and organizational improvement in a college or university setting.

HI ED 810 is designed for institutional research professionals, and the on-line learning experiences are aimed at applying the readings, obtaining hands-on experience in analyzing data, and developing reporting skills. Each Unit lists supplementary readings and weblinks where you can find additional information to explore the topic in greater depth. The methods of teaching and learning include Readings and Supplemental Resources, Professor's Notes, Discussion Forums, Drop Boxes, Collaborative Learning Opportunities in small groups, Individual Learning Opportunities or a personal project, and Essays or Papers. This course has an established start and end date and includes interaction with other students throughout the course. Pre-requisite: a working knowledge of basic applied statistics.

General Education: None

**HI ED 820 Studying Students & Student Affairs Program (3)** Studying the relationship of college activities to academic success by students.

### **HI ED 820 Studying Students & Student Affairs Programs (3)**

This course examines the characteristics of post secondary education students, both traditional and non-traditional. It draws upon the voluminous research documenting the changes that take place in various populations of students during college. The course equips institutional researchers and student affairs administrators to engage in research on student growth, campus climate, and evaluation of student services.

Curricular goals for students in HI ED 820:

- To examine changing student demographics and how these influence student outcomes and institutional operation
- To understand how different populations of student change while in college and what factors contribute to the change
- To become familiar with theories and research on student development
- To gain a general knowledge of the functional areas of student affairs and their intended purposes for the students they serve
- To learn about the tools available to assess student/student affairs program outcomes
- To learn how to plan assessment in the area of student affairs

HI ED 820 is designed for higher education professionals who seek a fuller understanding of Students and Student Affairs Programs. During this particular institutional research course, the on-line experiences are aimed at applying the readings, obtaining hands-on experience in analyzing data, and developing reporting skills. Each Unit lists supplementary readings and weblinks where students can find additional information to explore the topic in greater depth.

The methods of teaching and learning include Readings and Supplemental Resources, Professor's Notes, Discussion Forums, Drop Boxes, Collaborative Learning Opportunities in small groups, Individual Learning Opportunities on a personal project, and Essays or Papers. This course has established start and end dates and includes interaction with other students throughout the course. Pre-requisite: Working knowledge of basic statistics.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HI ED 830** Designing Institutional Research Studies (3) Develop skills to design and execute IR studies using quantitative and qualitative research methods.

### **HI ED 830 Designing Institutional Research Studies (3)**

This course acquaints students with best practices and necessary skills in quantitative and qualitative research design including sampling and basic measurement issues, research methods, survey research, interviews, focus groups, and selecting appropriate statistical tools. Upon completion of this course, students will be able to:

1. Define and explain the following concepts/tools of social science research:

The scientific method  
 Theory and its role  
 Constructs and variables  
 Experimental designs  
 Hypotheses and relations  
 Ethical Principles and practices  
 Survey designs and methods  
 Sampling theory and designs  
 Approaches to data collection  
 Quasi-experimental designs  
 Measurement reliability and validity  
 Ex post facto designs  
 Quantitative analytical designs  
 Focus Groups & Interviews  
 Qualitative analytical designs

2. Apply these concepts/tools in designing a study relating to education research or policy analysis;

3. Effectively critique and evaluate both the theoretical bases (if any) and methods of a journal article or report of a piece of research or policy analysis.

This course has established start and end dates and includes interaction with other students throughout the course. Use of the course Web site is required (the central area for accessing class notes and postings, e-mail communication, ANGEL, downloading files). The course is structured around learning units, each roughly corresponding to one week of a Penn State semester. Learning units are self-contained and built around a single theme or topic. Each contains an introduction, objectives, reading assignments, professor's content, and learning activities. While it is possible to accelerate or vary the reading and research schedule, the discussion components among peers should adhere roughly to the time frame (the week) within which each Unit is presented.

As a pre-requisite for this course, students are expected to:

\* Know the definition of a "variable" and the distinctions among dependent, independent, and control variables.

Know basic descriptive statistics (e.g., mean, median, variance, standard deviation, percentage distributions), basic inferential statistics (chi-square test of association and goodness-of-fit test, t-tests, one-way analysis of variance, correlations); the concepts underlying ordinary least-squares (OLS) multiple regression and the basic multiple regression statistics ( $R^2$ ,  $R^2$ -change, b-weights, and beta weights).

General Education: None

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HI ED 840** Assessing Student Outcomes & Evaluating Academic Programs (3) Academic program assessment/student outcomes in accountability and accreditation processes.

### **HI ED 840 Assessing Student Outcomes & Evaluating Academic Programs (3)**

This course pulls together the many threads that add up to educational effectiveness: evaluating academic programs and curricula, assessing student learning outcomes, coping with accountability and performance reporting requirements, responding to the demands of both regional and disciplinary/vocational accreditation bodies. The course acquaints students with strategies and instruments for conducting outcomes studies of programs, students, and alumni alike. Assessment topics include studies of students' basic skills, general education, knowledge in the major, personal growth, and alumni outcomes.

Thus, the course is designed for higher education professionals who seek to a fuller understanding of Student Outcomes

Assessment, Program Evaluation, and Institutional Effectiveness. The on-line experiences are aimed at applying the readings, obtaining hands-on experience in analyzing data, and developing reporting skills. Each Unit lists supplementary readings and weblinks where you can find additional information to explore the topic in greater depth. The course has linkages to the other courses in the Institutional Research Certificate program. For example, the opening weeks of HI ED 840 expand upon some of the assessment and evaluation readings and materials covered in selected units of the Foundations course (HI ED 801). Both this assessment course and the course on Studying Students and Student Affairs (HI ED 802) draw upon and discuss relevant literature and theories of student outcomes. Persistence models and theories referred to in these courses are relevant also to Enrollment Management and Forecasting (HI ED 860). The Research Design course (HI ED 830), with its emphasis on measurement issues and survey research, provides an analytical foundation for all these other IR courses.

HI ED 840 summarizes the best of what we know about assessing student outcomes. Few topics are more complicated than outcomes assessment. The needs of students and the areas of their learning vary highly among institutions and degree programs. Students are diverse and the dimensions of the learning processes in American Higher Education are extremely complex. Likewise, assessing student performance is complex and hence difficult to summarize. Moreover, before we travel into the real content of assessment, we need to place our journey within a context, and within an environment that is heavily shaping what we do. Thus, before we focus on evaluation academic programs and assessing student outcomes, we will examine accountability, accreditation, and performance reporting. In recent years, evidence of student outcomes has become one of the key indicators of institutional effectiveness, especially as it is viewed by accrediting associations and many state higher education governing boards.

**HI ED 850 Analyzing Faculty Workload, Performance, and Compensation (3)** Develop research skills to analyze faculty workload and performance in teaching, research, outreach, and compensation.

### **HI ED 850 Analyzing Faculty Workload, Performance, and Compensation (3)**

This course provides researchers with an overview of faculty issues with the analytical skills and tools associated with analyzing faculty workload and performance in teaching, scholarship, and outreach. The course is designed for those entering careers in institutional research and planning, particularly those whose work supports the Provost, as well as for those whose work is related to faculty analysis and reporting in other higher education settings. Topics include an overview of needed local and existing national databases, measuring faculty workload, evaluating faculty research productivity, using student ratings of instruction, providing support for academic program reviews, conducting salary studies, addressing issues of equity/diversity, and assessing faculty satisfaction, turnover, and flow.

Curricular goals: Upon completion of this course, students will be able to:

- Understand concepts, methodologies, research practices, and information systems that support academic decision making in the Provost's Office.
- Use NSOPF, NSF, IPEDS, HERI, and other national databases that collect faculty information.
- Develop appropriate metrics to gauge faculty work in instruction, research, and service.
- Understand the diversity of academic work-life and labor market issues at national and institutional levels.
- Carryout at a basic level the major Institutional Research faculty-related analyses, including instructional analysis, research productivity, benchmarking, salary equity, and turnover projections.
- Utilize SPSS software, make power-point presentations, and produce effective reports related to faculty issues.

This course has established start and end dates and includes interaction with others throughout the course. The course is structured around learning units, each roughly corresponding to one week of a Penn State semester. Learning units are self-contained and built around a single theme or topic. Each contains an introduction, objectives, reading assignments, professor's content, and learning activities. While it is possible to accelerate or vary the reading and research schedule, the discussion components among peers should adhere roughly to the time frame (the week) within which each Unit is presented. Pre-requisite: Working knowledge of intermediate statistics such as OLS regression.

**HI ED 860 Conducting Enrollment Management Studies (3)** Studies three stages of enrollment management: Pre-admission, initial student experience, and student success and completion.

### **HI ED 860 Conducting Enrollment Management Studies (3)**

This on-line asynchronous course summarizes the best of what we know about conducting enrollment management studies, and is designed for higher education students and professionals who seek a fuller understanding of enrollment management (EM) processes and skills. The learning experiences in this course are designed to apply the academic

readings and scholarly theories to hands-on analysis of real datasets. Each lesson lists supplemental readings and weblinks for exploring each topic in greater depth.

EM has evolved into a proactive and important campus planning component. Admitting and retaining too few students can threaten the organization's financial health, while enrolling too many students can stretch the institution's resources beyond capacity. Thus, the most basic EM includes attracting, admitting, and enrolling students. Necessary basic tools include admissions marketing, predicting admissions yield, and modeling the impact of financial aid on student experience - orientation, advisement, curricular access, student support services, and remedial work where needed. These activities are designed to ensure the student's successful introduction and integration into the institution, as well as retention through the first year. At the third level, EM focuses on student success (persistence, academic achievement, graduation, and employment). At this third level, analytical studies of student retention, time to degree, graduation rates, and enrollment forecasting are central IR and EM tasks.

The course is divided into 4 clusters. Units 1-5 provide an overview of EM processes and skills. This is not a statistics course; however, every enrollment manager eventually needs a working knowledge of logistic regression and/or discriminant analysis. Thus, Unit 5 provides a primer on statistical techniques commonly used in EM studies. Units 6-8 concentrate on the first stage of the enrollment process (Admissions and Financial Aid). Units 9-10 examine the students' social and academic integration within the institution. The third EM theme of student success, retention, persistence and graduate is covered in units 11-12.

The course assumes that everyone enrolled will arrive at the end of the course in Unit 13 with a concrete EM plan, or at least with an outline of what such a plan should contain. Thus, the course also provides an ongoing multi-week interactive Discussion Forum so that all can share thoughts, experiences, and assessments of various plans.

### **HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case--is there a single universal, eternal antisemitism? Or are there rather "anti-Semitisms", each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

General Education: None  
Diversity: IL  
Bachelor of Arts: Humanities  
Effective: Fall 2015

**HIST 410 (US;IL) (J ST 410, RL ST 410) Jews in the Medieval World (3)** Trends in medieval Jewish society under Islam and Western Christendom.

**HIST 410 Jews in the Medieval World (3)  
(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

**HIST (RL ST) 422 Religion and American Culture (3 per semester/maximum of 6)**  
**(GH;US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines various aspects of U.S. cultures and religious experiences. Different faculty who offer the course select specific topics or avenues of approach to reflect the multicultural reality of the American experience. In this instance, the course examines one of the main issues that determine American Religion and Culture is the American

Constitution's First Amendment that has traditionally been understood both to prevent an "establishment" of religion in the United States while protecting religious liberty. More recently, however, the history of the tension between these two "rights" principles has changed. With the rise of the 20th century civil rights movement and the interest in "human rights" in general, historians, legal scholars, and others increasingly point to potential conflict between the right of full citizenship and equal legal standing of citizens on the one hand, and the accommodation of religious conscience when a group or individual claims a right to be exempt from contemporary understandings of equal rights that conflict with religious conviction. This course traces the history of religion's move from establishment to toleration, to religious liberty, and now, religion accommodation in an age of civil rights.

**HIST 424H (J ST 424H, RL ST 424H) Monotheism and the Birth of the West (3)** The birth of monotheism and its relation to social organization, the idea of individuality, and science.

**HIST (J ST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Learn about the formation of Western culture while learning to analyze the texts and other evidence about its formation from a critical rather than naive viewpoint. The idea of monotheism probably arose very early, and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why then did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon and Ionia almost simultaneously? To answer this question, the course focuses on several developments through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to re-invent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in ANTH/CAMS 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, CAMS 480; HIST 402; J ST 411; PHIL 437; PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies.

**HIST 426 (IL) (HIST 426) Holocaust (3)** This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources.

**HIST (J ST) 426 Holocaust (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The

course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation.

After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the "Final Solution." The class will touch on the function of the "Ghettos," the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources.

Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources:

- documents created by the perpetrators, bystanders, and victims;
- files relating to postwar trials of perpetrators;
- photographs;
- representations of objects relating to the Holocaust;
- memoirs by survivors;
- interviews with survivors and bystanders.

**HIST 431 (US;IL) (AF AM 431) Black Liberation and American Foreign Policy (3)** This course deals with American foreign policy and Black liberation in Africa since 1945.

**HIST 431 Black Liberation and American Foreign Policy (3)  
(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society.

The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy.

The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

**HIST (AAA S) 432 Between Nation and Empire: The Caribbean in the 20th Century (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

**HIST 439** (J ST 439, WMNST 439) Women and the Holocaust (3) Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies.

**HIST (J ST/WMNST) 439 Women and the Holocaust (3)**

Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust.

The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events?

Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

In addition to working intensively on secondary sources from a variety of disciplines in our weekly discussions, students will have the opportunity to apply their insights and methods to the study of primary texts in three papers.

**HIST 447 (AM ST) Recent American History (3)**

This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women's Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period –art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.

**HIST 451 (US)** The Consumer Revolution (3) The origins and impact of American consumer society since 1870.

**HIST 451 The Consumer Revolution (3)  
(US)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This lecture course shows how the United States became a nation of consumers from 1870 to the present. It is designed both for the business and communications student as well as the liberal arts major. The origins of department stores, name-brand goods, fast-food chains, modern advertising, and mass entertainment show us how American business and culture was transformed by the consumer revolution. We will explore how the automobile became the leading consumer good of the 20th century and analyze its impact on how Americans shopped. The rise of advertising and its linkage to home-based mass entertainment through the radio and TV will interest us. We will also consider how events like the Great Depression, World War II, the counter-cultural movement of the 1960s, the energy crisis of the 1970s, and the economic deregulation of the 1980s and 90s shaped consumer attitudes and advertising. "The Consumer Revolution" also briefly explains how American consumer culture has been globalized (with companies like Coca Cola, Disney, and Ford).

The course also explores how new consumer goods shaped the experience of childhood, youth, family and home life, and retirement. In particular, we will consider how youth-oriented goods in fashion, foods, and entertainment created a unique youth consumer culture. Also important are the intellectual debates about the meaning and value of consumer society: Is mass consumption the real meaning of American democracy or is it a perversion of it? Are consumer needs unlimited and where does the desire for goods come from? Because consumer society seemed to threaten so many traditional values, we will also analyze movements for restricting consumption. We will consider the origins and impact of Prohibition, dieting and health food crazes, and movements to restrict advertising and sale of goods like cigarettes.

In addition to lectures and visual presentations in class, students will read chapters from major studies of the above topics, some of which will be discussed in class. Grades will be based on performance in discussion and essay exams.

(US)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

To offer such a course without some treatment of race, class, and gender diversity would be undesirable indeed, irresponsible. The movements for the abolition of slavery, for women's rights, and for the rights of workers will receive prominent and necessary attention. The history department does not, however, seek to invade the territories of programs and/or departments that are primarily concerned with women and racial or ethnic minorities. This course will cover such material in ways specifically appropriate to the contacts with American-Indian, Asian-American, African-American and Spanish-speaking populations.

This course will focus on documents produced by men and women of various class and ethnic backgrounds who are assumed to have participated actively in the American intellectual tradition. Discussions of the ideas and publications of well-educated individuals will to some extent dominate the content of the proposed course. Thus, for obvious reasons, it must address the historical importance of documents such as Thomas Jefferson's Notes on the State of Virginia, and Harriet Beecher Stowe's Uncle Tom's Cabin. These documents are of unquestionable importance to American intellectual history, but due to constraints of time, it is not always possible to discuss their historical importance as cultural documents in the existing American history courses. A highly literate African-American essayist like Francis Ellen Watkins Harper is also an obvious candidate for inclusion in this course. A less educated person like Anna Murray Douglass, although she was an important and interesting figure, whose life and values merit serious reflection, could hardly have left behind a body of writings. Francis Harper, on the other hand, commented significantly on the ideological movements of her times. The course is admittedly biased in favor of highly literate historical figures, who interacted with the traditions of American thought and writing.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

**HIST 464 (US)** American Thought from 1865 (3) Introduction to, scholarly commentary on, major documents of American Intellectual history from end of the Civil War to the present.

**HIST 464 American Thought from 1865  
(US)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

HIST 464 is intended to fill several needs. First, to introduce advanced undergraduates and beginning graduate students to documents of American thought of the sort collected by David A. Hollinger and Charles Capper in the American Intellectual Tradition (New York: Oxford University Press, 1989). Second, to offer a systematic survey of a standard area of American history that students might wish to approach as a coherent field. Third, to provide students with exposure to the bibliography and the historiography of American intellectual history as an established sub-field of American history. It is intended that either semester of the course may be elected independently of the other.

An example of evaluation methods would be: Students will be expected to write a mid-semester and a final examination, and to prepare a written paper outside of class. Graduate students will be expected to draft a potentially publishable article, which may be archival, historiographical, or interpretive.

**HIST 465 (US) (AF AM 465) The Post-World War II Civil Rights Movement (3)** The civil rights struggle and its impact upon American politics.

**HIST (AF AM) 465 The Post-World War II Civil Rights Movement (3)  
 (US)**

This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

**HIST 466 (US;IL) (WMNST 466) Lesbian and Gay History (3)** Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities.

**HIST (WMNST) 466 Lesbian and Gay History (3)  
 (US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the "homosexual" helped establish not simply difference but "normalcy" in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States.

An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper. This course will fulfill a requirement for 400-level courses in both History and Women's Studies majors.

**HIST 469 (CRIMJ 469)** Drugs and Drug Policy in the United States (3) Examines the history and dimensions of drug use and analyzes the impact of drug policy.

**HIST (CRIMJ) 469 Drugs and Drug Policy in the United States (3)**

For nearly a century, the United States has been waging its version of a hundred years' war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans' lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade.

**HIST 474 (JAPNS 426, ASIA 474)** Early Modern Japan (3) Japanese history from 1580-1880.

**HIST 474 (ASIA 474, JAPNS 426) Early Modern Japan (3)**

Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms.

Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

**HIST 475Y (IL) (ASIA 475Y)** The Making and Emergence of Modern India (3) India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle.

**HIST (ASIA) 475Y The Making and Emergence of Modern India (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course covers India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh,

Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

**HIST 476 (IL) (ASIA 476) Technology & Society in Modern Asia (3)** Role of technology in modernization, national identity, and foreign relations of an Asian country from 19th century to present day.

**HIST (ASIA) 476 Technology & Society in Modern Asia (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The countries of Asia are often seen (or imagined) in the West today in terms of their technological capabilities. This course will examine the role of technology in the modernization, national identities, and foreign relations of one or more countries of East, South, or Southeast Asia from the mid-19th century to the present day. Specific content will vary according to individual instructor, but topics may include the relationship between technological development and international relations, national power, leisure, domestic political and aesthetic movements, war, empire, and trade, as well as the impact of technology on interconnected images of self and other on the part of the peoples of Western and Asian countries.

The objectives of the course are not only to learn about the role of technology in modern East Asia, but also to encourage us to rethink the way we view other countries and the factors that go into those perceptions (as well as developing a new way of understanding of what contributes to the views other peoples hold of their own countries). Students will also consider the changing role that technology has played (and continues to play) in all modern societies.

**HIST 480 (IL)** (ASIA 480) Japan in the Age of Warriors (3) An overview of Japan the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change.

**HIST (ASIA) 480 Japan in the Age of Warriors (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor's court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself "emperor" of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado's rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion.

This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society.

HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

**HIST 481 (IL)** (ASIA 481) Modern Japan Since 1800 (3) The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power.

**HIST (ASIA) 481 Modern Japan Since 1800 (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In the late 19th century, Japan emerged from relative seclusion and grew, within the period of a few decades, into one of the world's major powers. Japan's remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan's development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government's program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945-1952), Japan's resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making

their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

**HIST 482 (CHNS 424, ASIA 482) Confucius and the Great Books of Early China (3)** This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China.

**HIST 482 (ASIA 482, CHNS 424) Confucius and the Great Books of Early China (3)**

This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period. As the first part of a two-seminar series of courses (HIST 484), it provides an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

**HIST 484Y (IL) (ASIA 484Y) History of Chinese Thought (3)** A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present.

**HIST (ASIA) 484Y History of Chinese Thought (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular "Orientalist" myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

**HIST 485Y (IL) (ASIA 485Y) China's Last Empire: The Qing Dynasty, 1644-1911 (3)** China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity.

**HIST (ASIA) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3)**  
**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

**HIST 489** (IL) (PL SC 486, ASIA 489) International Culture in East Asia (3) Study of the role of culture in East Asian regional and East-West international relations.

**HIST 489 (PL SC 486/ASIA 489) International Culture in East Asia (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history; historical events, problems, and issues will be at the center of our weekly discussions. But it also seeks to explore aspects of international relations.

This course is intended to examine the role of cultural exchange in international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

This course is designed to respond to strong student interest in East Asian international history. This course will complement and extend popular survey and upper-level courses such as HIST 172/174/175/480/481/483/484/485/486.

**HIST (ASIA) 493 Japan in the World (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will examine Japan's foreign relations and changing position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance. Class work may include some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations.

**HIST 514** The Early Modern World: Empires, Trade, and Religion (3) This course provides an overview of early modern history, with an emphasis on cultural encounters between the different global regions.

**HIST 514 The Early Modern World: Emphasis, Trade, and Religion (3)**

This course introduces the global history of the Early Modern Period – between the Late Middle Ages and the 18th century. In particular it provides a broad exploration of early modern global history, with an emphasis on the broad currents of political, economic, and cultural encounters between the different global regions. Students will recognize, identify and apply theoretical dimensions of world history in a global context. Students will learn a general history of the political, economic, and cultural encounters between the different global regions between the collapse of the Mongol Empire in the 14th century and the rising global domination of western Europe in the 18th century.

In weekly readings and discussion, this course takes the global history in the aftermath of the collapse of the Mongol Empire as its starting point. After examining the Mongol Empire, the first global political entity in world history, it will investigate the rise of the maritime empires of Spain and Portugal as a means to build an awareness and transition to the dynamic early modern trends in South Asia especially in relation to the interlocking trading entities of the Indian Ocean world. Exploring the concepts of 'World System' and 'Global History', the class will investigate the rise and decline of maritime expansion during the Ming dynasty before turning to an investigation of the rise of Portugal as the first European maritime power. While examining the reasons for the rise of Western Europe (the decline of the Mediterranean, the rise of the Atlantic), this course will also examine the history of trade and cultural contact in South and Southeast Asia before moving on to an examination of the history of the Eurasian steppes between the 17th and 18th centuries. The course concludes with the rising domination of Western Europe.

This is a foundational course in global history for graduate students, not only in the history department, but for all students in the College of the Liberal Arts and the College of Arts and Architecture (primarily Art History), who want a firm grounding in late medieval and early modern history.

**HIST 524 Deviance, Crime and Madness in Modern Europe (3)** Historiography of deviance, crime, and madness in Europe from the late-18th century to the present.

**HIST 524 Deviance, Crime and Madness in Modern Europe (3)**

Historians and social scientists have shown that societies have persistently established certain standards and ideals for human conduct and being. At the same time, the natural variation in human phenotypes has meant that individual, groups, and institutions within these societies have been faced with those deviating from these norms. The deviations may sometimes present themselves physically (e.g., in the form of a somatic lesion or disability), intrapersonally (e.g., in eccentric thinking or affect), or interpersonally (e.g., in criminal or anti-social conduct). As historians, anthropologists, and other have demonstrated, while there are noteworthy continuities in how these deviations have often been manifested (e.g., seizures accompanying epilepsy), there have been considerable differences across time and place in how deviance has been expressed, perceived, understood, and handled.

This seminar examines this constellation of problems as they have emerged in Europe since the 18th century. Posing, as they do, complex human problems, the historical study of deviance, crime, and madness requires paying attention to the scholarly contributions of multiple disciplines beyond the field of history. Thus, the course will attend to both social theory and historiography. Each week, readings from social theory will be paired with a historical work, in order to bring broad theoretical analysis and empirical disciplinary research more deliberately into conversation with one another. Some examples of the course readings include Emile Durkheim's *On Suicide*, Erving Goffman's *Stigma: Notes on the Management of a Spoiled Identity*, Janet Oppenheim's "Shattered Nerves: Doctors, Patients, and Depression in Victorian England," Norbert Elias' *The Civilizing Process*, Reviel Netz's *Barbed Wire: An Ecology of Modernity*, and Jan Gross' *Neighbors: The Destruction of the Jewish Community in Jedwabne, Poland*. Weekly topics will center on key social processes and prominent conceptual frameworks: social control, self-control, marginalization, pathologization, criminalization and de-criminalization, representation, punishment, extermination, and enhancement. Students will be required to write an interdisciplinary research paper (i.e., a paper accessible to multiple scholarly audiences), calling on both theoretical and empirical scholarship from various disciplines. The course will culminate in a seminar conference in which students will present their research and field questions and comments.

**HIST 525 Imperial Borderlands in Modern Europe (3)** This course provides students with an overview of the processes of constructing borders in a variety of forms, ethnic, religious, trade, and linguistic, in a European imperial context.

**HIST 525 Imperial Borderlands in Modern Europe (3)**

This course exposes students to the latest developments in colonial studies and new paradigms for considering European imperial history in terms of its borderlands.

Using the methodological tools applied in recent years to the history of Western colonial empires, this course expands the scope of European history to encompass the complex interaction between the conquered peoples and their rulers by broadening imperial history to include the study of ethnic and religious differences that emerged from the European encounter with peoples whose cultures differed profoundly from their own. In particular, the material covered in this course will build an awareness among students of the role of states, and especially imperial states, in confronting the polyethnic/multinational character of populations they sought to rule. The theoretical and historiographical works assigned will focus on how imperial European states crafted or erased cultural differences and how borderlands posed particular challenges in these endeavors.

Building on these insights, students will gain an awareness of imperial policies and conceptions of colonial rule and of the impact of imperial domination on colonial peoples. Students will learn to recognize and identify the means by which Imperial rule brought irreversible changes to the way of life of the borderlands peoples, who adapted to and resisted imperial rule by a variety of means that they had at hand.

Such an approach will yield an awareness of the methods by which historians formulate questions, choose sources, use theory to interpret the material they collect, and the variety of rhetorical and other means available to historians to present findings. Students will conduct their own analyses of scholarship by reflecting on the assigned readings and presenting their thoughts and evaluations in the form of weekly critiques and a final paper. This will be invaluable in helping students to acquire the necessary methodological and theoretical tools to formulate questions for their own research projects.

This course fulfills the requirement of a topical graduate course in History. It is open to students within and outside of the History Department.

**HIST 531 Religion and State-Making in the Early Modern World, 1400-1800 (3)** This course provides students with an overview of the process of state-making in relationship to religious convictions in the Early Modern era, ca. 1400- 1800.

**HIST 531 Religion and State-Making in the Early Modern World, 1400-1800 (3)**

This seminar exposes students to the current state of scholarship from the standpoint of historical, legal, sociological and literary analyses of the state and religious authority. The inadequacy of long-accepted notions of "secularization" and "modernization" to describe the challenges to both state and religion in the Early Modern era require students to assess the specific value given to notions of the state and religion in specific cultural and historical contexts and what precipitated a crisis of authority in both. The exchanges between European and non-European centers of authority during the Early Modern period helped to shape many of these disputes and scholars' interpretive frameworks. The seminar is intended for graduate students in history and related fields who are preparing for the field in Early Modern studies.

**HIST 534** The Catholic World 1540-1770 (3) This course examines the relationship between world history and Catholicism.

**HIST 534 The Catholic World 1540-1770 (3)**

One of the prominent themes ignored in the traditional historiography of early modern Catholicism, is the history of non-European Catholicism that is the focus of this course. There is little doubt that the history of Catholic missions constitutes a venerable subject in ecclesiastical history, but this course seeks to shift the focus on the encounter between Christianity and non-European civilizations beyond the perspective of European missionaries. This seminar focuses on the relationship between world history and Catholicism. It will examine the following themes: the responses of Rome to the Protestant challenge, the linkages between early modern state formation and Counter-Reformation, cultural production and confessional conflict, and finally, the relationship between the Iberian maritime empires and Catholic missions beyond Europe. Students will acquire a firm foundation in the history of early modern Europe and a perspective into early modern global history by focusing on one of the major themes (religion) in the history of global history. This course takes as its starting point the contention that any history of Christianization in Europe is enriched by investigations into the encounter between European and non-European civilizations during the expansion of Catholic Europe. This course will be a foundational course for graduate students in the field of early modern global history, colonial Latin American history, history of China, and history of the Atlantic world. It will also provide historical background for students in the history of art and the departments of English, German, and Italian.

**HIST 535** History of the Body (3) This course provides students with an overview of the contribution of intellectual and cultural historians to the field of "body history."

**HIST 535 History of the Body (3)**

This course exposes students to the contribution of intellectual and cultural historians to the field of "body history." Ranging from the late medieval to early twentieth century, the course will focus attention on the early modern period. Inspired by the writings of Ernst Kantorowicz, Norbert Elias, Michel Foucault, Pierre Bourdieu, and Judith Butler, among others, historians have demonstrated that bodies are not exempt from social, cultural, or ideological regimes of power. As a metaphor for the body politic or an instrument of power, the corporeal order is shown to have physical, social, symbolic, and political effects. As historians continue to demonstrate, the body has a history: which involves health, sickness and food, gestures and movement, sartorial codes and sumptuary regulations, gender taboos and sexual prohibitions. Studies of the body demand a multidisciplinary perspective. Thus, this course explores how historians have drawn upon visual as well as textual sources, and crossed disciplinary boundaries in order to better appreciate the entire range of bodily representations in the past.

**HIST 541 War in the Early Modern and Modern World (3)** The study of the causes, conduct, and political, social, diplomatic, cultural, and economic consequences of war from 1500 to the present.

**HIST 541 War in the Early Modern and Modern World (3)**

This course offers an introduction to the complexity of war in the early modern (1400-1850) and modern world (1850 to the present). Since war has been experienced across the entire world, the course will draw readings and examples from North and South America, Europe, Asia, and Africa. It brings together the two major approaches to the study of war, both the traditional emphasis on the battlefield and the more recent consideration of both the battlefield and the political, social, economic, and cultural homefronts. Specifically, this course considers the various methodologies that have shaped the ways in which historians have asked and answered such fundamental questions as how and why wars start, have been averted, and ended. The study of military theory provides the intellectual framework that shaped the study and conduct of war at specific periods of history and in specific cultural context. The evolution of a nation's military theory over time reflects the impact of changes in technology, the changing social composition of its armed forces, the strength of the economic support the national government will supply, and much more. Thus, this course considers issues relevant to armies (technology, soldier experience in battle), to the government (laws of war, revolutions in military affairs, military doctrine, war and national identity), and to the people (issues relating to race, class, and gender; antiwar activism, popular literature) for a fuller understanding of the overarching impact of war in the modern and early modern world.

**HIST 547** Slavery in the Americas (3) Slavery in South America, the Caribbean, and North America from 16th century European colonization through the 19th century abolition movement.

**HIST 547 Slavery in the Americas (3)**

This course provides a broad exploration of slavery in the Americas from the beginning of European colonization to abolition. From the sixteenth century to the nineteenth century, Spanish, Portuguese, British, and French colonists in the Americas created the largest slave societies the world has ever known. Slaves in the New World produced tropical commodities such as sugar, tobacco, cotton, and coffee that, in turn, contributed to the foundation of capitalist and consumer societies in the Atlantic world. The staple crops produced by slaves were among the first goods to transform elite luxuries into common necessities.

The Age of Revolution was a watershed in the history of slavery in the Americas, transforming the terms of struggle between slaves and slaveholders, of debate about slavery, of the ideology of slavery. While the Age of Revolution catalyzed a century-long process of abolition, it also began a new period in the expansion of slavery. Slaveholders developed new policies, practices, and doctrines to reconcile slavery and liberalism.

The adoption of modern technology and industrial techniques of production resulted in dramatic increases in the productivity and exploitation of slaves, as well as the wealth and power of slaveholders. The simultaneous growth of slavery and antislavery heightened political divisions over slavery and made its destruction a protracted struggle marked by slave rebellion and civil war as well as landmark acts of state. This course investigates the origins of slavery, race, and abolitionism; transformations in plantation production, the culture of Africans in the Americas, and the ideologies of slavery; and the relationships among slavery, liberalism, capitalism, and modernity. Students will apply a range of concepts from the human sciences, such as creolization, ideology, and human geography, to major problems in the history of slavery.

**HIST 551** The African American Freedom Struggle in the Twentieth Century (3) Theory and history of African American freedom movements for social and political change in the 20th century US.

**HIST 551 The African American Freedom Struggle in the Twentieth Century (3)**

This course focuses on the historiography of the African American Freedom Struggle in the Twentieth Century US. It examines the various debates over the origins of the post-World War II Civil Rights Movement. For years historians studied the civil rights movement in terms of organizations like the National Association for the Advancement of Colored People and the Southern Christian Leadership Conference and its largely male leadership. Historians have looked at the ways that federal court decisions, congressional legislation, and presidential actions shaped the struggle. However, by the 1980s, scholars shifted their focus to the grassroots origins of the movement, to the local people who courageously challenged segregation and disfranchisement in the South, and discrimination and racism in the North. Scholars also recognized that the movement had much earlier roots, that it did not begin with the 1954 Brown Decision. This course therefore takes the long view in terms of understanding the African American freedom struggle. It begins with the 1890s and the creation of white supremacy in the South, with the creation of legal disfranchisement and segregation and the violence and terror that underwrote it. It then covers the various ways that African Americans challenged white supremacy throughout the country. It looks at the role that boycotts, labor unions, civil rights organizations, and the Communist Party played in the fight for equality. It also examines the impact of WWI and WWII, the Cold War, and Vietnam on the struggle for civil rights, as well as the impact of the New Deal and Great Society. It also covers the creation of the Student Non Violent Coordinating Committee and its impact on other social movements. It concludes with a discussion of the post-Civil Rights years, the rise of the New Conservatism and the creation of the post-racial myth, the attacks on Affirmative Action, and the dismantling of the welfare state and growing imprisonment of people of color.

**HIST 552** Late Modern America Society, Culture, and Politics 1975-2008 (3) This course considers the political, cultural and social history of the United States from 1975 to the present.

**HIST 552 Late Modern America Society, Culture and Politics 1975-2008 (3)**

This course provides a broad exploration of the political, cultural and social history of the United States from the mid-1970s through 2008. In particular, it investigates the cultural and political counter-revolution of the 1980s, the social movement that is closely associated with the presidency of Ronald Reagan, and how those trends continued through the subsequent decades. The course will consider the role of terrorism as a factor driving policy-making in US government, and the background and impact of the September 11 attacks. The course culminates with the economic and political crises of 2008, and the historic election of that year.

Other major topics include the origins of modern gender attitudes and assumptions; the importance of changing gender roles in the making of mainstream political life; the changing role of religion in American life and politics; and the continuing power of conspiracy and paranoia in the nation's political culture. The course will also seek to understand the origins of current party political structures and ideologies. A major aspect will be the observation of the critical transition in American politics from the historic emphasis on class and economics to the politics of morality and gender: in short, the end of New Deal alignments. In the process, readings will address whether the old politics were in fact as class-oriented as they are commonly represented; and at the same time, how far social class underlies modern alignments. Finally, the course will stress a fundamental but little noticed rhetorical shift in modern America, namely the shift from moral relativism to absolute moralism, and the emphasis on moral absolutes - in short, the return of evil to political discourse.

Among other sub-topics, the course will explore how popular culture can be used to illuminate themes in social and political history; and at the same time, to understand the interrelationship between popular culture and mainstream politics. The course will use an understanding of political and social realities to illuminate the study of culture, high and low, from film and fiction to the visual arts. Building on these insights, students will explore these diverse themes in detail with specific reference to issues, problems or debates relevant to their own interests.

**HIST 556** Social Movements in the Twentieth Century US (3) Students study the theory and history of movements for social and political change in the 20th century US.

**HIST 556 Social Movements in the Twentieth Century US (3)**

This seminar examines movements for change in the United States over the course of the twentieth century. It uses the historical and social science literature to explore the attempts of various groups, especially those of less powerful Americans, to press demands on the state, and on economic powers, social institutions, and cultural authorities as well. The course considers the strategic use of mass movement challenges from the disadvantaged employing traditional and innovative weapons of the weak. It also takes up the tactical use of movements by established interests. It focuses on groups whose race, ethnicity, class, or gender generally places them outside the conventional decision-making processes of the polity and society. The course deals with movement initiatives across the ideological spectrum, including conservative efforts to resist change.

The seminar will address numerous major parameters of social movements. These will include interest identification and agenda formulation, social composition, the role of timing and contextual factors in opening opportunities for change, creation and manipulation of legitimating ideas and symbols, formation of collective identities, communication and mobilization processes and their concomitant rhetorical strategies, leadership development, engagement with adversaries in confrontation and negotiation, tactical repertoire of action, organizational evolution, building of relationships with allies and sympathizers, and other dimensions of movement activity.

Students in this course will gain knowledge of major social movements of the twentieth century, such as feminism, environmentalism, the African-American freedom struggle, and the working-class movement. They will have the opportunity to develop analytical skills in understanding the processes of social and political change and the sources of resistance to change. Students will have the option of pursuing original historical research into twentieth-century movements. They will gain command of concepts and theories potentially useful for comprehending political, social, economic, and cultural forces beyond the realm of movements.

**HIST 567** Latin American Social History, 1500-1900 (3) This course provides students with an overview of the social history of Latin America, 1500-1900.

**HIST 567 Latin American Social History, 1500-1900 (3)**

This is a graduate seminar in the field of colonial and nineteenth-century Latin American social and cultural history. It is designed to be accessible and useful not only to Latin Americanists but also to Early Modernists, to students of the early United States, and to Mesoamericanists. The seminar's scope is all of Latin America, but with an emphasis on Spanish America and especially Mesoamerica, in the centuries from the sixteenth through the nineteenth. The seminar is divided into four parts. Part I introduces the field's historiography and explores its newest "school"-the New Conquest History. Part II focuses on the ethnohistory of colonial Mesoamerica and the Andes; "ethnohistory" is used by colonial Latin Americanists to refer to the study of native peoples in the Americas. Part III turns to "Afrohistory," the study of people of African descent in colonial Latin America, which evokes the term "ethnohistory" and thus prompts a comparison of the relative experiences of the two socioracial groups, the nature of their interaction, and the methodologies required and employed to study them. Such methodologies include the recent revolution in ethnohistory centered on the use of native-language sources to study and write about native peoples and the creolization debate in African diaspora studies. Part IV is a brief foray into the nineteenth century, designed to provide a bridge between colonial history and the issues of modern Latin America explored in other seminars within the History Department.

**HIST 568** Early Modern Iberia and the Americas (3) This course studies the creation of Portugal, Spain, and their empires in the Americas in the fifteenth to seventeenth centuries.

**HIST 568 Early Modern Iberia and the Americas (3)**

This is a graduate seminar in European and Latin American history, designed to fulfill requirements in the fields of Early Modern European & Global History and Latin American History. Students will master both the history and the historiography of Iberia and Latin America during the period when Spain and Portugal came into being as nation-states and carved out empires in the Americas (fifteenth to seventeenth centuries). The first part of the course explores late-medieval Iberian history, investigating themes of urbanism, religious conflict, regional and community identity, disease and demography; how these led to the formation of Spain and Portugal; and how they have been interpreted in the historiography. The second part covers the history and historical literature on the Spanish explorations, invasions, conquests, and earliest settlements in the Americas, paying particular attention to how traditional narratives of conquest have been challenged in recent decades by revisionist interpretations. The third part looks at the role played by the Portuguese in Iberian expansion, including their activities in Africa, Brazil, South Asia, and East Asia. Emphasis is placed on the contrasts between Spanish and Portuguese imperial development, and on the differences in their historiographies. The fourth and final part of the seminar returns to Iberia to analyze the impact on the peninsula of imperial expansion, transatlantic slavery, and overseas colonization; this part includes attention given to the role played by Spain and Portugal in the larger development of early modern (primarily sixteenth and seventeenth century) Europe and the Mediterranean.

**HIST 570 Modern Latin American and Caribbean History (3)** This course provides students with an overview of the historiography of modern Latin America and the Caribbean.

**HIST 570 Modern Latin American and Caribbean History (3)**

This course provides a broad exploration of the history of modern Latin America and the Caribbean. It examines the shared histories, as well as alternative experiences, of national case studies, such as Brazil, Mexico, and Cuba. The course surveys the historical cycles of the nineteenth and twentieth centuries, including independence in Latin America and the Atlantic world, nineteenth-century nation-building, turn-of-the-century neocolonial challenges, and twentieth-century nationalist and revolutionary movements. In addition to political and economic histories, the course highlights the social and cultural negotiations on behalf of women and people of color of all classes with the nation and state. While it acknowledges the traditional narratives that shape modern Latin American history, it offers competing perspectives and engages students in critical analysis of historical theories, methods, and sources. For example, the course considers the contribution of non-elite actors to national independence movements, examines how women and people of color challenged traditional social hierarchies and definitions of citizenship in the nineteenth century, and assesses the development of twentieth-century national narratives, such as racial democracy. In particular, the seminar will engage how historians have engaged theories, methods, and sources in the production of historiography.

**HIST 571 History of the US-Mexico Borderlands (3)** This course examines the history and historiography of the US-Mexico Borderlands from the mid-nineteenth century to the mid-twentieth century.

**HIST 571 History of the US-Mexico Borderlands (3)**

The U.S.-Mexico borderlands is the among the most often discussed region in North America and yet one of the least understood areas in the Americas. While popular images of the U.S. southern borderlands often imbue stark division between the United States and Mexico, the region's deep history suggests otherwise. This seminar explores the complicated political and cultural evolution of the U.S. southern border through the lens of colonialism, nationalism, sovereignty, global migration, trans-border crossings, and race, gender, and ethnicity. Selected readings address the

origins of the modern U.S.-Mexico borderlands as a place wrought from overlapping indigenous and imperial forces and myriad visions of national belonging.

Approaches and arguments in this seminar challenge the intellectual underpinnings of U.S.-Mexico borderlands history from nation-state centered narratives to global and transnational history. In exploring the borderlands as a place of several social and cultural worlds, graduate students will grapple with new theoretical ideas. For example, "borderlands" applied in this seminar designates the boundary between Mexico and the United States as a place that was critically influenced by pressures originating from indigenous peoples and nations and European and Qing empires. By expanding the concept of borderlands in this manner, students will understand that indigenous political and cultural structures and Old World patterns from Britain, Spain, and dynastic China were not easily toppled by the new configuration of the nation-state. This seminar is organized so that students may better understand state makers' and borderlanders' vision of the region, their imperialistic and nationalistic hopes, and responses to these projects on the ground.

**HIST 572 Race and Empire in the Americas, Caribbean & Pacific (3)** An overview of the US as an empire in Latin America, the Caribbean and Pacific in the modern era.

### **HIST 572 Race and Empire in the Americas, Caribbean & Pacific (3)**

This course exposes students to history and historiography of the US empire in the Caribbean and the Pacific in the nineteenth and twentieth centuries. It examines imperial transitions including the US emergence as an empire in the mid-nineteenth-century in the face of Spanish contraction and British expansion. In addition, the seminar will examine the practices of empire in the colonies from the perspectives of colonial peoples. It privileges the lens of Caribbean and Pacific peoples through the historical literature that examines the intentions and limits of US colonial practices. It covers how colonial responses to US imperialism were varied, ranging from radical nationalism, colonial autonomism, and annexation. It frames the expansion of US empire within a broader conversation about racial ideologies and practices.

The course provides a broad exploration of the history of colonialism, imperialism, and nationalism in the Caribbean and the Pacific. In particular, it investigates the emergence of the US as an empire in the regions. Modern US empire was efficient and malleable. It adjusted colonial policies (legislation) according to the particular value of each colony. The course specifically examines the emergence and practices of US empire from the perspective of the colonies. Therefore, it focuses on the historiography that examines the limitations of empire and the negotiations of colonial peoples from Caribbean and Pacific histories. In particular, the course investigates US empire and colonial engagement through these major topics: imperial transitions; police, prisons, and law enforcement; education; race and imperial identities; imperial medicine and public health; polity, law, and constitution; U.S. military; and environmental management. Students will recognize, identify, and apply the theories of imperialism and nation-building to Caribbean and Pacific examples. More broadly these theories will engage comparatively with other European imperial histories. This course fulfills the requirements of a topical seminar for the Latin American history and Nineteenth-Century US history programs of study.

**HIST 580 Pre-modern China (3)** This course provides students with an overview of the literature and themes in pre-modern Chinese history.

### **HIST 580 Pre-modern China (3)**

This course is part of the curriculum for graduate students seeking a reading and research emphasis in Chinese history. The course offers a foundation in premodern China, which covers the period from the unification of China under the Qin dynasty through the rise of the Qing dynasty in 1644.

Few societies in the world can match China's two thousand yearlong history; however, few pause to consider the structural elements that led to such political, religious and cultural continuity. Students will consider writings on the imperial state and its various apparatuses, as a means to better understand the genesis and nature of empires and imperialist methods of rule in China. By pursuing the overarching roles of the scholar-elite and examination system, students will work to recognize and investigate the central forces embedded within Chinese society and culture. As part of this process, the course will explore the ideological movements and practices associated with Confucianism, Daoism, and Buddhism and learn to demonstrate the ways in which these movements helped create a syncretic cultural sphere of action. In this way, students will emerge with the tools to identify Chinese societal norms and be able to apply these tools in order to form a more gendered, ethnic, religious and intellectual interpretation of China's past.

The course is equally interested in China's role in a global context. The over arching question is how the Silk Road and

China's maritime networks helped embed China in a global network of thought, commerce and exchange. Central to this analysis is how such contact with overland and maritime cultures deeply affected mainstream Chinese society. By tracing such interactions, students will be encouraged to recognize, identify, and apply the roles of frontier and borderlands in the creation and reification of Chinese identity and culture.

Through this multifaceted approach to Chinese history, students will come to recognize the strategic role of China within the pan-Eurasian sphere of interactions while also achieve a better understanding of the diverse characteristics of Chinese peoples, societies, and institutions in history.

**HIST 581 Late Imperial and Modern China (3)** This course provides students with an overview of the literature and themes in late imperial and modern Chinese history.

### **HIST 581 Late Imperial and Modern China (3)**

This course surveys the historical scholarship on late imperial and modern China, providing students with an overview of the themes, theories, and debates within the field of late imperial and modern Chinese history. Students will become aware of key historical events of the past 250 years, such as the Opium Wars, the Taiping Rebellion, the fall of the Qing, the rise of the Chinese Communist Party, and the establishment of a socialist state. They will also think critically about the social and cultural shifts that accompanied or caused these well known events, from the changing role of women in Chinese society to the changing relationship of humans to environment, as well as exploring the multiple approaches Chinese historians have taken to reading and presenting historical work, including economic, political, social, and cultural history.

The course will emphasize a set of themes that will be revisited throughout the semester. Students will, for instance, investigate the role that Manchu identity played in the shape and governance of the Qing dynasty and contrast this later in the course to the role of ethnic identities in the People's Republic of China. Governance is another theme of the course, and students will begin by considering the structure of Qing bureaucracy and its relationship to local society; in the middle of the course, students will read about the changes to government administration under the Republic of China that brought local society and central government into increasing conflict, before turning to thinking about the compelling vision of state-society relations that swept the Chinese Communists into power. Other recurring themes include interactions between China and the West, changing gender and family relationships, and rebellion and revolution.

Discussion and analysis of the assigned readings are at the core of this seminar's work. In addition to reading important works in the field of late imperial and modern Chinese history, students will be asked both in class discussions and in written work to analyze and synthesize the contributions these works make to the study of Chinese history; regular additional readings such as book reviews, review essays, and short scholarly articles will help students to place the works in broader context.

**HIST 582 Women and Gender in Modern Chinese History (3)** Examines the historical literature on women and gender in late imperial and twentieth century China.

### **HIST 582 Women and Gender in Modern Chinese History (3)**

The roles of women and men have undergone major shifts in late imperial and modern China, affecting all aspects of daily life. Just the titles used to describe feminine ideals give an indication of these shifts—from the “talented women” of the late imperial period to the “new women” and “modern girls” of the early twentieth century to the “iron ladies” of the Communist period to the “factory girls” of the new millennia. Masculine ideals, too, have shifted, from the literary scholar-official of late imperial China to the patriotic worker of the Mao years to the entrepreneurial party member of the late twentieth century. But beyond the ideals, the day-to-day lives of Chinese people have been fundamentally altered as well, changing the way people relate to family and to society.

This course examines the historical literature on these shifts from the late imperial period to the present. Misperceptions and stereotypes about Chinese gender roles and, in particular, the status of women are widespread. In the past several decades, historians of China have sought to place our understanding of these topics on firmer historical ground by exploring topics from homosexuality and law in imperial China to widowhood and the imperial cult of female chastity to new marriage practices in post-economic reform village China and, in doing so, to undermine the “orientalism” that informed, for instance, investigations of footbinding and the “women’s quarters.” Through a wide range of readings, this course will introduce students to the major works and topics in the field of Chinese women’s and gender history,

including: women and family, women's legal history, gender and nationalism, "new women" (xin funü), gender and revolution, gender and demographics, gender and labor, women's liberation, and love and sexuality.

Students will be expected to demonstrate their familiarity with the major themes and topics for Chinese women's and gender history through discussion and written work.

**HIST 586 Modern Japan (3)** This course provides students with an overview of the literature and themes in modern Japanese history.

**HIST 586 Modern Japan (3)**

This course explores multiple themes in Japanese history, with a focus on the politics of culture and changing perceptions of Japan's role in the world. There is a close focus on the interplay between domestic politics, foreign relations, and ideas. Through critical reading of major monographs and articles, students will hone their skills in argumentation and the use of evidence. Ideally, this course will stimulate ideas for research projects in other seminars, and it will present students with a variety of approaches to historical problems. Given the close relationship between China and Japan this course is strongly encouraged for those students studying Chinese history at the graduate level. Finally, this course will prepare students to teach a course in modern Japan at the undergraduate level.

**HIST 588 Ethnicity and Borderlands in Late Imperial China (3)** An examination and overview of literature and themes related to ethnicity, borderlands, and governance in late imperial China.

**HIST 588 Ethnicity and Borderlands in Late Imperial China (3)**

This course will provide students with a thematic and theoretical foundation for the study and teaching of Qing history. This course seeks to equip students to teach Chinese history with a multi-ethnic dimension while also examining the ethnically diverse borderland regions of Tibet, Chinese Central Asia, Mongolia and Manchuria.

Students will explore administrative policies, imperial rituals, political structures and legal codes related to the non-Han Chinese peoples to shift away from a 'palace view' of the imperial court. In this way, the more traditional notions of Qing diplomacy that highlights tributary states and static notions of center-periphery relations will be infused with a much more nuanced ethnic dimension.

Major topics to be covered will include the expansion of frontier and borderlands policies; how ethnicity was perceived in the borderlands vis-à-vis the imperial court; what recent theoretical concepts have been employed to recast the traditional understanding of Qing borderlands; the evolution of China's governance and indigenous rule within the borderlands; and finally how gender, marriage, and the eroticization of China's borderlands influences China's characterization of the non-Chinese border populations.

The overarching theme will be one that seeks to throw into relief the strong ethnic diversity of late imperial China thus contrasting the notion of China as ethnically monolithic with the reality of an ethnically diverse empire. Students will be asked to explore the power of acculturation, weigh the impact of government-sponsored in-migration of Han Chinese, and develop an awareness of indigenous resistance and autonomy. On a methodological level, the study of China's ethno-history combines several disciplines such as anthropology, political science, and religious studies with different subfields of history, ranging from economic to political, social, and cultural history. The merits and pitfalls of interdisciplinary approaches and the use of theory will be explored. The research papers will take the transnational dimension of late imperial China history into account and will rely on primary material and secondary studies from at least one other discipline.

Students will have the option to use this course as a research seminar, conducting primary document research alongside their historiographic readings. Students who select to do so will produce a research paper during the course.

**HIST 589 World History: Themes and Approaches (3)** This course provides students with the thematic and theoretical foundation for the study and teaching of world history.

#### **HIST 589 World History: Themes and Approaches (3)**

This course will provide students with the thematic and theoretical foundation for the study and teaching of world history. Because world history is a crucial secondary field for historians, with increasing emphasis on it as a necessary "teaching field," this course seeks to equip students to teach world history at the undergraduate level. The course will be divided into five primary units, each of which will address a major theme in world history, such as the rise of civilizations, great land empires (particularly the Han Dynasty and the Roman Empire), the Silk Road, the spread of world religions, the Mongol invasions, European exploration, the Industrial Revolution, the rise of the nation-state, and globalization (specific units will be determined by the instructor). Within each of these units, students will be exposed to both substantive historical literature on the topic as well as major theoretical works that have influenced historical scholarship. In this way, students will be encouraged to think about the ways historians use theory to frame and inform their scholarship and teaching. By the conclusion of the course, students will be expected to demonstrate the integration of content, theory, and pedagogy.

**HIST 593 Research Seminar (3)** Seminar in research methods of the discipline.

#### **HIST 593 Research Seminar (3)**

HIST 593 is a required course for all MA and PhD students in the graduate program in History. HIST 593 sections are paired with sections of HIST 592 and are a prerequisite to taking 593s. CAMS 592 and 593 meet the same requirements.

Each student will produce for every 593 they take a paper of the length appropriate for submission to a scholarly journal

(25-45 pages). The use of original sources for the paper is essential, and early class sessions will emphasize the diligent use of intelligent interpretation of such sources (as available and field-appropriate) as manuscripts (such as presidential papers), the government serial set or non-US equivalents, legal records, notarial documents, parish records, diplomatic correspondence, newspapers, census records, and popular prints and photographs. Students (and the instructor, of course) will read and criticize preliminary drafts of the papers. While each 593 will have a single instructor, other faculty will participate as discussants and mentors, according to the needs of the seminar students.

**HLS 540** Comparative Homeland Security and Related Methods (3) The course will address international cooperation in Homeland Security and compare select national approaches as well as teach related practical methods of analysis.

**HLS 540 Comparative Homeland Security and Related Methods (3)**

The need for a coordinated, international response to security threats to citizens and societies since 9/11 has never been greater. Homeland security in the U.S. is a specific subset of national security that focuses on a risk-informed mission space, addressing it by law-enforcement – as opposed to defense – concepts and capabilities, and working across the country and around the world to keep the American nation safe and secure. Homeland security and civil security policies and strategies to make nations secure and resilient against terrorist as well as all-hazards threats were established not only in the U.S. but also in many other countries in the world, based on the need to work with international partners. This course provides students with information and skills to undertake international comparative analysis of civil security threats and ways to address those threats. Crucial aspects of this course will include a comparative examination of select topics, such as: critical infrastructure protection; cybersecurity; use of armies in homeland security; public-private partnerships; security governance; as well as the creation of “security” as public good and its “delivery” to the citizens in different countries, along with U.S. collaboration with other nations. The course is rooted in the research focus of civil security. This refers to an all-hazards approach to identifying and closing security gaps based on a mission-centered, comprehensive approach (prevention, preparedness, mitigation, response, recovery – plus transversal aspects such as resilience) that is tuned to end-user requirements, and speaks to technological and societal aspects (including ethical and legal issues). Civil security focuses on both “all of government” and “whole of community.” It includes dual-use aspects and civil-military interaction in crisis management, but excludes military-only aspects. The course places an emphasis on U.S.-European Union (EU) comparisons based on a related U.S.-EU implementing arrangement, and covers other world regions also. It will further scrutinize comparative analysis of emergent threats and challenges by focusing on risk cultures and security cultures in different countries. Moreover, the course will critically assess – across different countries – citizens’ perceptions of homeland security and public acceptance of the use of security technology for surveillance and other purposes, across different countries. The comparative perspective cannot be taught without investigating methods and analytical approaches. Lessons will therefore include comparative examination of research-related methods as well as practical methods – such as risk and vulnerability assessment – used in the policy sector, and how and why those differ across countries.

**HLS 595A** Internship Experience in the Homeland Security Enterprise (3-6 per semester/maximum of 6) Provides real-world experience in the Homeland Security Enterprise. Supervision/support is provided by site personnel and Penn State Graduate Faculty.

**HLS 595A Internship Experience in the Homeland Security Enterprise (3 per semester/maximum of 6)**

This one-semester internship is offered in falls, spring, and summer. This one-semester internship is designed to provide real world experience in the Homeland Security Enterprise. The course is an elective for students in the Intercollege Master of Professional Studies in Homeland Security (iMPS-HLS) program.

Internships can be part-time or full-time and paid or unpaid. Interns may earn 3-6 credits. The number of credits a student can earn will be based on the character of the actual work performed in the internship, in particular the site-specific research project. Interns must complete at least 300 hours on the internship. This is equivalent to working 20 hours per week, although internship schedules are flexible and may be determined on an individual basis.

The course includes both an internship and accompanying academic supervision and discussion. It is available to students enrolled in all options related to the program. The course is an additional offering to specialized internship programs that are in place in some iMPS-HLS options. It focuses on a comprehensive real-world experience of the Homeland Security Enterprise:

The internship provides real-world experience to enhance the educational experience and application of knowledge and skills acquired in the program.

The accompanying academic supervision and discussion contribute to reaching the overall purpose of the course: to integrate academic and real world learning through an internship opportunity in a workplace setting.

Internship activities and assignments are designed to: understand how research and studies are conducted, used, or interpreted in the Homeland Security Enterprise to inform real-world decision-making; to enhance professional development; gain career-related experiences and to provide the opportunity for real-world application of knowledge in a workplace setting; and to prepare for potential job placements.

The course places students in numerous workplace and/or research settings that will allow students the opportunity to apply and integrate academic coursework within a professional setting to prepare for further job placement in the Homeland Security Enterprise. Additionally, internship activities and assignments are designed to meet individualized goals and skills, and to evaluate progress toward those competencies. Internship work will be evaluated on an on-going basis with the student intern, site supervisor, and faculty member involved in the process.

**HLS 805 (PL SC 805)** Violence, Threats, Terror, and Insurgency (3) This course examines political violence committed by non-state groups as it applies to homeland security from both a domestic and global perspective.

**HLS (PL SC) 805 Violence, Threats, Terror, and Insurgency (3)**

This course examines political violence committed by non-state groups as it applies to homeland security from both a domestic and global perspective. It differentiates between the various forms of insurgency employed by sub-state groups (e.g., some forms of violence target citizens while others only target the military or political figures) and examines the reasons underlying groups' decisions to use violence. Students will investigate the different methods of political violence used by groups, and the means used by violent organizations to maintain support. The course also examines the nature and reasoning that underlies individuals' involvement in terrorism; whether post-9/11 terrorism is unique; and the strategies and procedures of countering different forms of political violence. Students will approach the course content by exploring several case studies. As students learn to differentiate between these various forms of insurgency, the case content unfolds to reveal more detail and complexity to foster critical thinking skills. Course activities will require students to apply what is being learned to assess real world case examples and to consider the short and long term ramifications of policy decisions in homeland security. Students will be evaluated based on a series of short writing assignments, their participation in class discussions, their completion of a policy research paper, six quizzes, and a final exam. Along with HLS 801 and HLS 803, HLS/PL SC 805 builds the core curriculum for the Intercollege Master of Professional Studies in Homeland Security program. The core is common to all options offered by the program.

**HLS 832 U.S. Military's Domestic Imperative: Homeland Defense and Defense Support of Civil Authorities (3)** Provides an overview of the homeland defense mission and domestic support of civil authorities during disasters, and the distinctions between the two.

**HLS 832 U.S. Military's Domestic Imperative: Homeland Defense and Defense Support of Civil Authorities (3)**

"The U.S. Military's Domestic Imperative: Homeland Defense (HD) and Defense Support of Civil Authorities (DSCA)," will explain the military's HD mission and DSCA during disasters, and the distinctions between the two. Any prospective homeland security practitioner should understand the basics of the Department of Defense's (DOD) roles, missions, and functions in protecting the homeland, as well as how DOD provides support to civil authorities. This is especially true if Penn State graduates will be the future leaders of the homeland security enterprise.

The course will provide students with the generally accepted body of knowledge in HD and DSCA required of the homeland security professional. The course focuses on: policies and procedures; roles, missions, and functions of DOD in a HD or DSCA environment; key players at the federal, state, and local levels; and critical legal issues. In addition to gaining a broad, general understanding of this wide range of subjects, students will also gain some experience in critical thinking in the disciplines of HD and DSCA.

## Horticulture (HORT)

**HORT 402W Plant Nutrition (3)** Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications.

**HORT 402W Plant Nutrition (3)**

The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a "hands-on" involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.

**HORT 407 Plant Breeding (3)** The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes.

**HORT 407 Plant Breeding (3)**

Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination, qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of

statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids.

Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

**HORT 499H** (IL) Walking in the Footsteps of the Irish During the Irish Potato Famine: Examinations of New World (1) HORT 499H (IL) Walking in the Footsteps of the Irish During the Irish Potato Famine: Examinations of New World Crops in Old World Societies (2) Partnering with the Schreyer Global Honors Program (HORT 499H) is offered during Spring 2016. This will be a two credit interdisciplinary course introducing students to New World crops (i.e., species that were native to North and South America before 1492) including corn, beans, squash, cassava, sweet potatoes, tomatoes, peppers, cocoa (chocolate), vanilla, blueberries, cranberries, and pawpaw, along with coca (cocaine), quinine, and rubber. Students will learn about the environmental and cultural histories of each plant, along with current production methods. In addition, the course will explore how these crops 'migrated' to the Old World (i.e., Europe, Asia, Africa, and other places known to Europeans prior to 1942) and will discuss the impact of these migrations on global ecology, biodiversity, and human demographics.

**HM 415 International Cuisine (3)** Cooking and eating practices of cultures around the world, including historical, religious, cultural, geographic, and political influences on each cuisine.

### **HM 415 International Cuisine (3)**

The objective of this course is to expose students to managerial and cultural issues of cuisine and how they influence the development of commercial food and beverage operations. The text and lectures lay the foundation for the understanding of culture and cuisine. Main topics typically include: understanding how cuisine has developed over time; exploring a variety of foods grown in distant regions and dissemination as adventures contacted (and often conquered) other people and learned of their cultures; evolution of trade that brought exotic foods from distant locales; geography's role in defining the types of foods and quantities of crops that can be produced around the globe; and critical components of the major world cuisines.

The course is an elective for Hospitality Management students. Prior to taking this professional elective, students must complete the introductory course in food production and management.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2014

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HM 430 Advanced Food Production and Service Management (3)** Simulation and application of technical, conceptual, interpersonal skills. Emphasis on group dynamics; improvement in managerial skills; management team functions.

### **HM 430 Advanced Food Production and Service Management (3)**

This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution and evaluation of full-service, theme oriented ala carte dining. Students are expected to form a marketable theme and then develop, produce and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals. Main topics typically include:

- \* Research, describe and produce an authentic restaurant environment from a selected theme
- \* Demonstration of technical responsibilities involved in the development, production and evaluation of a wide range of food service systems including: sales, menu planning, recipe development and evaluation, pricing, purchasing, facilities management, personnel management and financial management
- \* Operational needs and potential problems in a food and beverage operation during production and service
- \* Timely and effective managerial problem identification and decision-making abilities
- \* Interpersonal and teamwork skills both within a management team and with classmates as employees

\* Interaction with guests and evaluation of guests' dining experiences

The course is a capstone management class in the foods sequence and is required of all Hospitality Management majors. Students must first complete the introductory food production course.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2014  
Prerequisite:

**HM 432 Contemporary Issues in Restaurant Management (3)** A focus on special topics and current events in the restaurant industry.

### **HM 432 Contemporary Issues in Restaurant Management (3)**

The purpose of this course is to focus on contemporary issues and current events in the restaurant and food service management. The course will attempt to keep the students as updated as possible regarding the industry by covering these topics and including a discussion of current events from headline news services and other electronic references. Students gain knowledge that is applicable specifically to the restaurant and foodservice industry. This course explores the global food and drink market in today's challenging climate with analysis of trends and conditions expected to influence sales value and volume growth over the next five years. Discussion will include the impact economic shifts have on the restaurant and food service industry and the subsequent influence on consumer purchasing habits and food and drink sales over several years. This course considers food and drink New Product Development (NPD) and other vital branding, marketing and sales strategies in the context of the following challenges, issues and trends expected to influence restaurants and food service management over the years.

**HM 443 Sales Planning and Advertising for Hospitality Operations (3)** Elements of sales management, advertising, promotion, and public relations as applied to hospitality organizations.

**HM 443 Sales Planning and Advertising for Hospitality Operations (3)**

The hospitality industry is entering an era in which operational and product parity between organizations and their properties is increasingly likely. This is so because of their shared access to technology, design and training devices. Consequently, it becomes evident that increases in sales will be reliant on the competitive advantages that professionals achieve in marketing strategies, sales management, and especially in marketing communications (MARCOM) tactics and execution. This course exposes students to a wide range of hospitality marketing communications issues. Students gather information from electronic media, trade and travel media, and consumer media. Students explore hospitality MARCOM issues through semester-long individual projects. Main topics typically include:

- \* Marketing versus selling strategies
- \* Industry trends that affect advertising and sales especially Internet activities
- \* Types of advertising media
- \* Print advertising principles
- \* Broadcast advertising principles
- \* Foundations of direct marketing
- \* Elementals of public relations
- \* Travel agency relations
- \* Personal sales

This is an elective course. Students must first take the hospitality marketing course in Hospitality Management.

**HM 467 Management of Hotel and Restaurant Employee Relations (3)** Survey and analysis of managerial strategies for employee relations in hospitality operations.

**HM 467 Management of Hotel and Restaurant Employee Relations (3)**

The objective of this course is to provide students with an understanding of labor relations in the hospitality industry. Students need to know about labor laws as they affect the industry and specifically about collective bargaining. Primary emphasis is given to private-sector labor relations, but some consideration is given to the public sector. Main topics typically include:

- \* Introduction to employee relations in hotels and restaurants
- \* Economic influences on the hotel and restaurant labor market

- \* Labor law as applied to the hospitality industry
- \* Management strategies in collective bargaining
- \* Administration of labor contracts
- \* Management and supervisory strategies in labor disputes

The course is an elective in the hospitality program. Students must first complete the course in hospitality human resources.

**HM 484 Hospitality Entrepreneurship (3)** The course focuses on successfully launching new business ventures in the hospitality industry.

**HM 484 Hospitality Entrepreneurship (3)**

The purpose of this course is to commence the learning process regarding Entrepreneurship in the Hospitality Industry. The course provides the student with a solid foundation of how an idea is generated and taken to market for implementation. The students will examine the characteristics of the entrepreneur and the process followed from generating an idea, to building a business model, preparing a competitive analysis, completing a feasibility study, reviewing intellectual property, developing a business plan, seeking funding and presenting their idea to potential investors. Topics include idea recognition, feasibility studies, business plans, developing a business model, intellectual property, marketing, financing, organizational growth, and franchising. The course is oriented to the student who would like to own a business.

**HM 486 Casino Marketing (3)** Students will learn marketing techniques for casinos which take into account the external environment, individual consumer choices, and ethical considerations.

**HM 486 Casino Marketing (3)**

The primary objective of this course is to introduce the advanced standing student to the factors affecting the effective marketing of a modern casino. General marketing principles and concepts build the foundation for the study of marketing techniques unique to the casino industry. Consumer behavior and external environments create the context in which all marketing decisions and activities occur. Their study ensures the student has the basics to approach any marketing problem. Before the strategic use of marketing to build brand awareness and to ensure profitability is learned, the impact of social and ethical responsibility is studied including disordered gambling and smoking bans. The need to advertise and promote without exacerbating the incidence of disordered gambling is an increasingly necessary ability required of casinos today. A thorough knowledge of segmentation and positioning are required as well. Extra time is allotted to both social responsibility and segmentation/positioning. Strategic marketing entails identifying the components of a marketing

plan, their purpose, and the method of execution. Various concepts such as profit-service chain and revenue management are covered to round out the student's knowledge of marketing. The course spends time on promotions which are unique to the casino industry including, but not limited to professional boxing matches and other special events, slot and players' clubs, special entertainment venues, on-floor promotions, and so on. The student learns the importance of location and transportation issues and how they impact the revenue and profitability of a casino. Meetings and conventions generate revenue during off-peak periods and are significant factors in the revenue stream of a casino.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2014

Concurrent: HM 487

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HM 487 Casino Operations and Societal Impact of Gaming (3)** Students will learn the structure, culture, and ethical responsibility toward disordered gambling and other lifestyle issues of modern casinos.

### **HM 487 Casino Operations and Societal Impact of Gaming (3)**

The primary objective of this course is to introduce the advanced standing student to the organization structure, the organizational culture, and the ethical responsibility toward disordered gambling and other lifestyle issues of modern casinos. The student will study leaders in the casino industry to gain insight into how they contributed to the growth of their companies and the industry as a whole. Emphasis will be placed on their approach to the ethical issues of their day. The modern day casino is complex and its organizational structure reflects that complexity. The student will study the different structures and reporting relationships of actual casinos to ascertain the factors that impact the level of effectiveness of different organizational charts. The job titles and descriptions of all departments will be examined. The job titles and descriptions of the gaming departments will be studied in greater depth than in Gaming Operations (HM 388). The lifestyle of customers and employees alike will be examined particularly those issues that impact health and social services. Specific topics include disordered gambling and smoking. Disordered gambling will be studied in greater depth than in Introduction to Casino Management (HM 386) and will be examined simultaneously with Casino Marketing (HM 486). The human resources function will be scrutinized as a filtering process for selecting the right employees and for training and reinforcing the organization's commitment to ethical and responsible behavior. The casino design project will take the student's ability to design a slot floor layout, a table games floor layout, to create a list of hotel room amenities, to write a positioning statement for a range of restaurants in a hypothetical casino, to develop a list of multiple entertainment venues and so on to a higher level than previous coursework so that the final product demonstrates the student's knowledge and expertise in casino management.

**HM 490W Strategic Hospitality Management (3)** This capstone writing-intensive class integrates content from throughout the previous curriculum, focusing on strategic application to current industry issues.

### **HM 490W Strategic Hospitality Management (3)**

This capstone course integrates previous courses in the curriculum and introduces students to new strategic management concepts. This course adopts a macro perspective by focusing on the total hospitality enterprise and the external competitive environment in which hospitality firms operate. The goal of the course is to develop students' analytical skills to formulate, implement, and evaluate business strategies. Using a case-based approach, the course emphasizes critical thinking and evidence-based decision making.

**HRER 523 (WMNST 523)** Seminar in Work-Life Dilemmas, Practices, and Policies (3) The course will provide students with an analytic framework for understanding how social inequalities in race, class, and gender shape experiences in families and the workplace.

**HRER (WMNST) 523 Seminar in Work-Life Dilemmas, Practices, and Policies (3)**

This course investigates many of the invisible challenges people face in the 21st century labor market including: what happens when a worker's child is sick; whether mothers are discriminated against in the labor market; what happens to men at work when they have children; whether a person's health is influenced by their work; and if the division of labor at home benefits some people more than others. This course will provide answers to these questions and more through an in-depth investigation of the institutions that structure work-family life in 21st century America. First, the class will consider how work and families have changed in the last 50 years. Second, the students will investigate how inequalities based on gender, race, class, and family structure manifest at work. Third, the course will investigate how work responsibilities impact home life and how this differs according to race, gender, class and family structure. Finally, the course will ask what solutions may fix some of today's most pressing work-life dilemmas.

**HRER 801** Comparative and International Employment and Labor Law (3) Survey of employment and labor laws around the world that shape the practice of international human resource management (IHRM).

**HRER 801 Comparative and International Employment and Labor Law (3)**

This course surveys how the employment and labor laws of countries around the world help to shape the practice of international human resource management (IHRM). It examines such laws and regulations as they affect a representative spectrum of HR concerns, ranging from hiring and contract formation, to anti-discrimination laws and union relations, to personal privacy.

The course first examines the role of culture and employment and labor law in the field of international human resources management (IHRM). Students will be asked to address how different national legal regimes affect important HR policies and practices involving the formation of compensation, firing or layoff of employees, anti-discrimination measures, works councils, and mergers and acquisitions.

In addition to comparative (national) law, a growing body of “supra-national” regulation – much of it issued and supervised by the International Labor Organization – sets the stage for the latter weeks of the course. These lessons examine how international labor standards are created and can then adopted as part of unilaterally issued corporate codes of conduct or incorporated into bargained-for international framework agreements (between multinational companies and global union federations).

Upon completion of the course, students should have a solid foundation for navigating through national and international law in their formation and implementation of HR policies and practices.

**HRER 802** Human Behavior and Organizational Performance (3) This course helps students understand individual and team behavior in organizations and its impact on individual, team, and organizational effectiveness.

**HRER 802 Organizations in the Workplace (3)**

Through the case method, students will be challenged to think critically about real-world problems faced by employees,

managers, and organizational leaders. Incorporating basic theoretical principles, we will brainstorm and explore possible approaches to diagnosing those problems and implementing solutions. The approach to learning is purposefully interactive and open-ended, although each module will include some readings summarizing relevant current academic research that provide a framework for thinking about the case. Team exercises and a term paper also provide opportunities for more in-depth exploration of one or more issues introduced during the course of the semester. Students should leave the class with (a) practice in critical thinking; (b) tools for analyzing and managing their own careers in organizations; (c) exposure to some basic concepts from organizational and management science; (d) knowledge about several real-world managers, companies and industries. Evaluation will be based on participation in online case discussions (40%) and written case memos (20%), an individual career and network assignment (20%), and an individual or team option final project involving a paper (10%) and presentation (10%). All letter grades will be assigned in accordance with the University's grading policy.

**HRER 816 Labor Market Analysis (3)** Neoclassical economic and institutional theoretical perspectives on labor supply, demand for labor, internal labor markets, wage determination and labor policies.

### **HRER 816 Labor Market Analysis (3)**

Virtually everyone will eventually develop an intimate acquaintance with the domain of labor markets--the job market, workplace, labor force and household. This course is intended to help students better analyze general issues surrounding work, the market for labor and the employment relationship. It will reveal the interdependence of the economy, workplace structures, labor organizations, household and family structure and public institutions and policies. It will prepare students to more deeply analyze the determination of earnings and employment, and the influence of organizational and individual behavior, government policies and labor relations. The course will examine the structures and processes that comprise the labor market and the range of theoretical perspectives that can be used to understand its operation. It will rely heavily on applying, and critically appraising, the various perspectives from the field of economics, integrated with other approaches. Its scope will include analyzing the level and types of employee compensation, employment opportunities, labor force participation, work and non-work time, earnings inequality, work-life conflict, etc. It also examines how labor markets, employers and workers are affected by interventions such as government regulatory policy, labor unions, discrimination, and technological advancement. Each unit will focus on an issue within labor markets, and how it may be analyzed in a rigorous way,

- *the individual's decision to participate in the labor force and how much time to devote toward paid work as opposed to leisure, studying and family;*
- *the individual and employer decision to invest in their own "human capital" (employees' skills) via payment of training and higher education;*
- *the employer's demand for labor resources in both the short-run and long-run and its determinants such as output demand;*
- *the determination of wages in perfectly competitive or internal labor markets;*
- *the effect of working conditions, such as hazardous or insecure jobs, on pay;*
- *the influence of employee compensation schemes on productivity and turnover;*
- *the effect of labor unions and collective bargaining on levels of pay, productivity, profitability and employment;*
- *the effect of government subsidies, taxes, minimum wage, maximum hours and family leave regulations on labor supply*

*and demand, worker earnings and well-being;  
 - the effect of various types of discrimination present in the labor market on gender, race and age earnings differentials;  
 - the influence of the "new economy" (technology, networking) on unemployment and quality of employment (e.g., temporary jobs, work schedules) and income inequality.*

**HRER 825 Strategic Business Tools for HRER Professionals (3)** This course connects Business Strategy, Financial Tools, and HR to an organization's strategic business objectives.

### **HRER 825 Strategic Business Tools for HRER Professionals (3)**

Students will learn critical concepts associated with business strategy initiatives, including the application of the experience curve, the growth-share matrix and blue ocean strategies. Students will particularly focus on an analysis that supports the creation of a sustained competitive advantage.

This process will expose students to the basic accounting processes from which the statements are built, personalize the understanding of the purpose and use of each of the statements, and address many of the financial concepts which will help students gain credibility with other organizational decision makers. Also, students will address such issues as calculating Return on Investment (ROI), other cost/benefit tools, as well as the conceptual framework around which risk management issues affect financial calculations.

HR students will develop a comprehensive understanding of tools that link HR policies and practices to the support of business strategy. In this context the critical concept is the use of metrics designed to provide continuous feedback concerning the efficiency and effectiveness of HR efforts. Students will learn how to identify appropriate metrics based on specific initiatives (e.g., talent management), create metrics that are valid and reliable measures of success, and create dashboard (i.e., balanced score cards) designed to provide comprehensive data to all corporate stakeholders.

**HRER 836 Diversity in the Workplace (3)** This course examines workplace diversity, gender and race challenges facing employers and employees, and the skills for managing diversity.

### **HRER 836 Diversity in the Workplace (3)**

This course will examine gender and race issues challenging employers and employees in an age when demographic changes and globalization are significantly increasing the diversity of the U.S. workforce. This course will provide an opportunity for students to explore the various ways in which ethnicity, race and gender, sexual orientation, national origin, and disability impact the workplace. Specific issues to be examined include employment and discrimination laws, work and family policies, human resource practices (such as recruitment and selection), and sexual harassment. The course will also explore various workplace accommodations and strategies for managing diversity in the workplace; sex roles; occupational choices made by women and minorities; and career development. This course is one core requirement for the Masters Degree Program in Human Resources and Employment Relations. It provides graduate course level coverage of topics addressed in L I R 536: Labor Diversity in the Workplace. Mastery of course material will be evaluated through both informal and formal assignments which include case studies, exercises and group activities, participating in on-line discussion, and short essay exams.

**HRER 860 Ethical Decision Making for HR Practitioners (3)** Use of normative elements associated with ethical decision making, as well as the emerging interest in descriptive ethics, to address important problems human resource managers confront.

**HRER 860 Ethical Decision Making for HR Practitioners (3)**

Increasingly board members, CEOs, Managers (including Human Resource practitioners) and employees are expected not only to understand and apply core organizational values, but also be capable of engaging in ethical decision making at those moments where they are confronted by competing moral demands.

HR practitioners find such dilemmas in a wide variety of contexts. Students will study the application of the decision-making model to interpersonal, HR policy making and application, as well as situations involving business strategy.

Students will also engage in a detailed examination about how stakeholders actually behave when confronted with moral dilemmas. The need for this insight emerges in related lessons that help prepare students to manage ethical programs. They will learn how to construct a code of ethics and what helps to make codes effective in promoting ethical awareness and eventually ethical action. They will also learn specific techniques that can help create valuable training initiatives that, again, promote ethical awareness and eventually ethical action.

One of the themes that will constantly emerge in this course is the unique and important role HR practitioners play in helping groom the ability of all stakeholders to avoid careless decision making when confronting moral choices that are critical to the organization's ability to sustain itself and the communities in which it seeks to thrive.

## **Human Development and Family Studies (HD FS)**

**HD FS 401** Project Planning, Implementation, and Evaluation in the Human Services (3) Exercises and activities related to the design, planning, implementation and management, and evaluation of projects and programs in the human services.

**HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3)**

HD FS 401 is part of a sequence of courses that develop skills and competencies of the human services student. The course emphasizes the further development of communication skills, diversity skills, team-building skills, critical thinking skills, and technology and leadership skills. Intended to be completed prior to the internship experience, the course will initially focus students' efforts on the identification of a field-based human services project or program, and a setting within which it could be carried out. Subsequently, students will design and plan the project or program, examine and propose effective implementation and management procedures, and incorporate state-of-the art evaluation procedures into the design.

**HD FS 416 (US) (SOC 411)** Racial and Ethnic Diversity and the American Family (3) This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States.

**HD FS 416 (SOC 411) Racial and Ethnic Diversity and the American Family (3)**

During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At end

of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. While these trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments.

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

**HD FS 427 (KINES 427)** Developmental Sport & Exercise Psychology (3) Developmental changes in the antecedents and consequences of physical activity across the lifespan.

### **HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3)**

Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

**HD FS 440 (SOC 440) Family Policy (3)** An in-depth examination of family policy.

**HD FS (SOC) 440 Family Policy (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

**HD FS 465** (CMAS 465) Child Maltreatment: Prevention and Treatment (3) Advanced examination in approaches for preventing child maltreatment and treating its consequences.

**HD FS (CMAS) 465 Child Maltreatment: Prevention and Treatment (3)**

Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical

levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

**HD FS 495A** Internship: Advanced Experience (9) Full-time, one semester experiential training in human service settings. Open to HD FS majors only.

#### **HD FS 495A Internship: Advanced Experience (8)**

HD FS 495A represents a full-time, one-semester internship experience. Its focus is experiential learning accompanied by intensive supervision, provided by one-site personnel, as well as University-based mentoring. Taken within a year of the pre-internship course (HD FS 490), which helps the student with the details of making arrangements for their internship, HD FS 495A, taken during the same semester as HD FS 495B, is considered the capstone of the HD FS undergraduate program. The internship can be taken during the fall, spring, or summer semester. It is one full semester spent working as a human service professional in a setting of your choice. Generally interns will work as a full-time professional (35-40 hours a week) for the semester.

**HD FS 495B** Internship: Advanced Project (3) Implementation of internship projects or scholarly paper. Open to HD FS majors only.

#### **HD FS 495B Internship: Advanced Project (4)**

HD FS 495B is taken at the same time as HD FS 495A, and within a year of the pre-internship course (HD FS 490), which helps you with the details of making arrangements for the HD FS internship, HD FS 495B focuses on the academic aspects of the internship experience. This course can be taken during the fall, spring, or summer semester. Currently, HD FS 495B consists of writing three papers; The Organizational Analysis, The Policy Analysis, and The Personal Development Paper. The purpose of the organizational analysis paper is to give the intern an opportunity to learn about his or her internship setting or organization in greater depth than might be possible otherwise. This will necessitate the intern taking an active approach to systematically securing information about the internship organization through the review of relevant documents, conducting formal or informal interviews, and observation. This paper will then be saved at the internship office, without identifying information or grade, to be viewed as a source of information about potential internship sites by future students who are seeking internships.

**HD FS 506 (H P A 506)** Design and Evaluation of Prevention and Health Promotion Programs Across the Life Span (3) Addresses theory and application of program evaluation, emphasizing process and outcome evaluation strategies for programs involving individuals, organizations and populations.

**HD FS (H P A) 506 Design and Evaluation of Prevention and Health Promotion Programs Across the Life Span (3)**

This course is designed for graduate students interested in the design and evaluation of programs in a wide range of human services (e.g., health care, social services, education). The course provides a foundation in the theory and application of program evaluation, with focused attention to the details of how such work can be proposed and conducted. The majority of the semester will focus on issues related to developing scientifically sound and viable studies of interventions in line with students' interests. The goals for this course are to help students build the knowledge and confidence to evaluate human service programs and/or policies that are implemented in research settings (academic or government) and communities or community settings (e.g., schools, health care facilities, community agencies).

**HD FS 521** Child Maltreatment: Theory, Research, and Impact (3) Theory and research pertaining to the causes, bio-psycho-social consequences, and the public health impact of childhood maltreatment.

HD FS 521

**HD FS 521 Child Maltreatment: Theory, Research, and Impact (3)**

The purpose of this course is for students to learn to think critically about child maltreatment concepts, research, and treatment. Students will be thinking about child maltreatment at multiple levels, including individual, family, and prevention. Therefore, this course will review the breadth of literature on the biological, psychological, and public health impact of child maltreatment including sexual abuse, physical abuse, and neglect. The course will cover the prevalence and history of child maltreatment, long-term outcomes of maltreatment, research methods, and evidence-based treatment and prevention approaches. State-of-the-art research in the areas of prevention, treatment, biological sequelae, developmental consequences, and intergenerational transmission will be covered. Building on existing research, students will learn to apply critical thinking skills in order to recognize, articulate, and apply the concept of scientific impact to the field of child maltreatment.

**HD FS 530** Longitudinal Structural Equation Modeling (3) Exposure to a wide variety of statistical models as special cases of the General Linear Mixed Model with latent variables.

**HD FS 530 Longitudinal Structural Equation Modeling (3)**

This course provides a broad overview of structural equations modeling as a method for studying developmental processes in Human Development and Family Studies. In this course, students gain a thorough hands-on understanding of a wide variety of statistical model types as special cases of the General Linear Mixed Model (GLMM) with latent variables. Specific statistical model types covered include: exploratory and confirmatory factor analysis; linear, nonlinear and multivariate latent growth curve modeling; quasi-simplex modeling; longitudinal factor modeling; multi-group factor analysis, including a concise introduction to behavior genetic modeling; mediation analysis; testing for measurement equivalence; MANCOVA with nonstandard within-subject covariance structures; outlines of statistical selection theory and principal component analysis. The presentation of these diverse model types as special instances of the same GLMM is helpful to understanding their relationships and differences and considerably streamlines applied statistical modeling. Each of these statistical model types are commonly used to analyze data from studies in the field of Human Development and Family Studies and illustrative examples are provided.

Each model type is explained at 4 levels: 1) in terms of a set of simultaneous model equations; 2) as a set of matrix equations; 3) as a graphical model; and 4) as a Lisrel input code. All model assumptions are made explicit and the interrelationships between the 4 levels of model representation are emphasized. Then the model is applied to simulated and real data. The obtained model fits are assessed in terms of various statistical criteria and conclusions are explicitly drawn based on standard statistical decision theory. Selected models from studies of Human Development and other social sciences are interpreted in terms of content and possible pitfalls in their interpretation are discussed. For each modeling technique appropriate background publications, lecture notes and advanced reading material on nonstandard topics are provided.

**HD FS 532** (NUTR 532) Childhood Obesity (3) This course addresses how genetic predispositions, behavioral and environmental factors affect children's obesity risk and examines strategies for obesity prevention.

**HD FS (NUTR) 532 Childhood Obesity (3)**

This course will examine the epidemic of obesity, particularly childhood obesity, and how various behavioral and environmental factors place children at risk of becoming overweight. Sources of influence that will be examined include: children's nutrition and physical activity behaviors, the family environment, the school environment and community characteristics. Media, social policy and economic factors will also be addressed. In addition, the health and psychosocial consequences of obesity, ethnic and socioeconomic disparities in the prevalence and predictors of obesity among children and adolescents will be addressed. At its conclusion, this course will examine policy initiatives and obesity prevention programs.

**HD FS 533 (NUTR 533) Adult Obesity (3)** Important current and emerging topics in obesity research relevant to government policy and general public education; emphasis on adult obesity.

**HD FS (NUTR) 533 Adult Obesity (3)**

This course will examine the epidemic of obesity, particularly adult obesity. Obesity: Causes, Consequences and Treatment will provide a forum to introduce and discuss current and emerging topics in adult obesity research, with emphasis on policy, prevention and treatment. Focus will be given to determinants of adult obesity and translation into government policy and efforts to educate the general public on the most effective strategies for body weight regulation, obesity prevention and treatment. Sources of influence that will be examined include: environment, genetics, neural, peripheral and sensory mechanisms, food properties and food supply, and therapies and treatment of adult obesity.

**HD FS 537 (SOC 537) Biosocial Perspectives on the Family (3)** The implications of knowledge from behavioral endocrinology, behavior genetics, and evolutionary psychology for understanding family relationships and child development.

**HD FS 537. (SOC 537) Biosocial Perspectives on the Family (3)**

Breakthroughs in the way biological variables are measured and modeled have generated new findings that greatly increase

our understanding of the reciprocal influences between family relationships, child development, and biological factors. Specifically, advances in the study of hormones, genetics, evolution, pharmacology, and immunology have led to important advances in our knowledge of gender, becoming a parent, early child development, middle child, and adolescent development, parent-child relations, courtship and mate selection, quality of intimate relations, separation and divorce, incest, and dominance and family violence.

Students are required to keep a journal of researchable ideas during the first five weeks of class. The purpose is to give students practice in identifying research needs and opportunities. The journal should include 4-6 research problems, each developed in 2-3 typed pages. The majority of each entry should be a clear statement of what knowledge gains would be realized by conducting the study and why they are important. The remainder of the statement should include consideration of the data you would use, measures of major variables, and analytic strategies. Think of it as a brief portfolio of thesis, dissertation, or research publication ideas.

Entries on research projects in which you are already involved are not eligible for inclusion in the journal. On the last page of the journal, indicate which problem you would like to develop into a more detailed proposal during the remainder of the semester and why. Turn in the journal during week 5. I will evaluate your entries and comment on your selection idea. The rest of the semester will be spent on developing one of the ideas to a full-blown proposal (about 20 pages). You should turn in as many drafts as needed to receive a good grade for this segment of the course. I expect you to turn in three or more before the end of the semester. We will meet about each draft and go over my comments. Proposal drafts should be spaced out over the semester.

The last week of the semester will be devoted to presentations of research proposals after which class members will offer comments and suggestions. Your grade will be based on the proposal draft you turn in the last week of the class. Twenty-one percent of the course grade is based on the research proposal.

**HD FS 540 Parenting: Theory, Research and Intervention (3)** Review of current theory, research, and intervention in the study of parenting.

#### **HD FS 540 Parenting: Theory, Research and Intervention (3)**

This course is designed to have students think critically about parenting and parenting competence by reviewing theoretical, ideological, and empirical literature. Competent parenting is a key factor in producing desirable child outcomes. Therefore, in this course, parenting competence reflects the behaviors and practices parents use that contribute to the child's ability to function in society. In particular, the course will examine how parenting behaviors, such as warmth/responsiveness, and forms of discipline promote desired child outcomes in attachment relationships, conscience development, internalization of values, and other socio-emotional outcomes.

**HD FS 597A** Development and Aging in a Welfare State (3) This two week intensive course will be taught at the Institute of Gerontology, Jnkping University, in Jnkping, Sweden and in Stockholm. The course will begin on Monday, May 9 (travel day) and end Tuesday, May 24 (departure day). The course examines Swedish programs and policies for children, parents, work and old age in Sweden, with a focus on the unique social and health policies and programs that have been created to help children, families and older people. Each day of the course is divided into two parts. In the mornings, there will be discussions of Swedish culture, history, social policies and programs. Students will also learn about ongoing research at the Institute of Gerontology and other departments at Jnkping University and about opportunities for involvement in that research. Students will go on site visits to innovative programs.

**Development and Aging in a Welfare State (3)**

General Education: None

## Humanities (HUM)

**HUM 400** Expressions in the Humanities (3) Capstone course for School of Humanities majors: students synthesize and apply approaches to a topic in creative expression and knowledge.

**Expressions in the Humanities (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2016  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 410** (IL) Religion and Culture (3) A comparative examination of several world religions in their social and cultural contexts.

**Religion and Culture (3)**

General Education: None  
Diversity: IL  
Bachelor of Arts: None  
Effective: Fall 2015  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 430** Philosophy and Literature (3) The study of philosophical viewpoints in literature.

**Philosophy and Literature (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 453** Texts and Culture (3) Study of art, literature, film, and other creative genres to illustrate the interrelationships

between creative expression and cultural practices.

**Texts and Culture (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 460** Thematic Studies (3) Analysis of a group of related ideas in art, music, literature, and/or philosophy. (May be repeated for credit.)

**Thematic Studies (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2016  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 461** (IL) Selected Periods in the Humanities (3) Interdisciplinary studies dealing with selected periods of world culture. (May be repeated for credit.)

**Selected Periods in the Humanities (3)**

General Education: None  
Diversity: IL  
Bachelor of Arts: None  
Effective: Fall 2016 Future: Fall 2016  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 491** Seminar in Interdisciplinary Humanities (3 per semester/maximum of 9) Interdisciplinary studies dealing with selected periods of world culture. (May be repeated for credit.)

**Seminar in Interdisciplinary Humanities (3 per semester/maximum of 9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 494** Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

**Research Project (1-12)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 495** Internship (1-6) Supervised internship for undergraduate or graduate Humanities majors in state offices, educational institutions, arts agencies, community organizations, or humanities councils.

**Internship (1-6)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details

check the specific course syllabus.

**HUM 496** Independent Studies (1-18) Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**Independent Studies (1-18)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 497** Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Special Topics (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2015

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 499** (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

**Foreign Studies (1-12)**

General Education: None  
Diversity: IL  
Bachelor of Arts: None  
Effective: Fall 2015

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 500** Research Methods and Scholarly Inquiry in the Humanities (3) Study of the methods and materials of scholarship, use of reference tools, evaluation of evidence, and writing of research papers.

**Research Methods and Scholarly Inquiry in the Humanities (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1989

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 515** Seminar (3 per semester/maximum of 9) A seminar focusing on typical methods and approaches of a single discipline within the humanities.

**Seminar (3 per semester/maximum of 9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1988

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**Studies in Aesthetics (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1989

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 530 Seminar in Comparative Arts (3 per semester/maximum of 9)** A seminar focusing on selected periods or artists in two or more disciplines within the humanities.

**Seminar in Comparative Arts (3 per semester/maximum of 9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1988

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 535 Topics in Cultural and Intellectual History (3 per semester/maximum of 9)** Study of methods, issues, and selected topics in the history of thought, social values, and creative expression.

**Topics in Cultural and Intellectual History (3 per semester/maximum of 9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1988

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 550 Junior College Teaching Internship (3)** Teaching humanities courses in a two-year college under a faculty supervisor, who will direct, criticize, and evaluate the intern.

**Junior College Teaching Internship (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1988  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 560 Interrelations in the Humanities (3)** The study and practice of conducting interdisciplinary research and of investigating and supporting inter-art analogies.

**Interrelations in the Humanities (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1989  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 580 Master's Production (1-6)** An original scholarly master's paper or creative production initiated by the student, supervised by an appropriate professor, and judged by a committee.

**Master's Production (1-6)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1981

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 590 Colloquium (1-3)** Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

**Colloquium (1-3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None

Effective: Spring 1987

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 596** Individual Studies (1-9) Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**Individual Studies (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1987

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUM 597** Special Topics (1-9) Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**Special Topics (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1987

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Humanities (HUMAN)

**HUMAN 600** Thesis Research (1-15) No description.

**Thesis Research (1-15)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HUMAN 610** Thesis Research Off Campus (1-15) No description.

**Thesis Research Off Campus (1-15)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Humanities-Hy (HMN)

**HMN 713** Medical Humanities (5) Medical Humanities introduces the first-year student of medicine to topics which explore questions of value and meaning in and around medicine.

**Medical Humanities (5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details

check the specific course syllabus.

**HMN 740** Folk and Alternative Health Systems (2.5) Critical examination of alternative/folk health systems and some of the ways in which they influence current health care delivery.

**Folk and Alternative Health Systems (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1999

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 741** Education for Physicians on End of Life Care (EPEC) (2.5) This course introduces the essential clinical competencies required to provide quality end-of-life care.

**Education for Physicians on End of Life Care (EPEC) (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2009  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 742** Putting It Into Words: A Right-Brain Retrospective of Formative Moments in Medical School (PIW) (2.5) This creative writing workshop requires MS IVs to convey their reflections as medical students in a variety of genres which, collectively, result in a portfolio and publication.

**Putting It Into Words: A Right-Brain Retrospective of Formative Moments in Medical School (PIW) (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2009  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 743** Graphic Storytelling and Medical Narratives (2.5) In this course, students will explore the use of graphic storytelling (or Comics) as a medium for communicating medical narratives.

**Graphic Storytelling and Medical Narratives (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2009

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 744** Humanities: Patients as Teachers, Students as Filmmakers Video Project: TheVideo Slam (2.5) This course teaches medical students about the full impact of illness and serious procedures on patients and their families.

**Humanities: Patients as Teachers, Students as Filmmakers Video Project: TheVideo Slam (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2009  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 745** Medicine and Ethics Under Pressure (2.5) This course explores situational and systemic challenges to ethical behavior in biomedical research and the practice of medicine.

**Medicine and Ethics Under Pressure (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None

Effective: Fall 2009

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 746** CAM and Integrative Holisitc Medicine (2.5) This course presents current topics in Integrative Holistic Medicine and discusses the trsition from Complementary and Alternative Medicine.

**CAM and Integrative Holisitc Medicine (2.5)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2009

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 747** Contemporary Issues in Bioethics (2.5) In this course, students will conduct in-depth examinations of current issues in bioethics. Topics will include. Organ transplantation; PVS & the Value of a Human Being; Childhood Immunizations; Mistakes; What Counts as Medically Necessary?; Child Abuse; Physician-Assisted Death; Genetics.

**Contemporary Issues in Bioethics (2.5)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2009

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 748** Controlling Human Heredity: Lessons From History (2.5) This course reviews the key steps in the development of our thoughts and practices relating to childbirth and medical genetics over the past 400 years.

**Controlling Human Heredity: Lessons From History (2.5)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2010

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 749** Sufferers and Healers: Lessons From History (2.5) This course reviews the key steps in the development of medicine from its supernatural beginnings steeped in magic and religion through the creation of medical science.

**Sufferers and Healers: Lessons From History (2.5)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2009

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 750** Creativity, Art, and Healing (CAH) (2.5) This course introduces students to the core components of the creative arts and healing.

**Creativity, Art, and Healing (CAH) (2.5)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2009

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 751** The Narratives of Aging: Exploring Creative Approaches to Dementia Care (2.5) This course invites students to examine brain aging in an historical and cultural context, and contrast dominant reductionist understandings of dementia with a more humanistic, biopsychosocial model of care resurgent in recent years that places greater relative emphasis on the remaining strengths, capacities, and creativity of persons with dementia rather than focusing on deficits and losses.

**The Narratives of Aging: Exploring Creative Approaches to Dementia Care (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2012  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 752** Chronic Disease and the Self (2.5) Utilizes published autobiographical patient narratives and live patient interviews to explore the impact of illness.

**Chronic Disease and the Self (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2011  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 753** Finding 'Right' Answers: Solving Ethical Dilemmas in Medical Practice (2.5) At the end of the four weeks students will be equipped with four cognitive frameworks for thinking about and solving ethical issues in their clinical practice.

**Finding 'Right' Answers: Solving Ethical Dilemmas in Medical Practice (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2012  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 754** The Practice of Virtue in Medicine (2.5) This course requires the student to study and recognize the great human virtues and to learn to practice virtue in medicine.

**The Practice of Virtue in Medicine (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2012  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 755** The Compassionate Surgeon (2.5) This course, intended for students pursuing residency in surgically-based specialties, seeks to explore the interactions that occur between patient and surgeon, from both perspectives, through group discussions, simulated patient scenarios, real patient encounters, and assigned reading.

**The Compassionate Surgeon (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2016

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 756** Jazz and the Art of Medicine (2.5) This is a course that focuses on improving learners' patient-physician communication through building skill in improvisation.

**Jazz and the Art of Medicine (2.5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2014  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 757 "Are You Listening?" Developing Effective Communication With Our Patients (5)** Effective communication with patients is a vital skill for every physician. This course will delve into the interpersonal space between physician and patient.

**"Are You Listening?" Developing Effective Communication With Our Patients (5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2012  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 758 Documentary Filmmaking About Innovations in Patient Centered Care (5)** Students make short documentary films about innovations that make care more patient centered.

**Documentary Filmmaking About Innovations in Patient Centered Care (5)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2012  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 796 Individual Studies (1-15)** Studies outside the scope of formal courses, supervised on an individual basis.

**Individual Studies (1-15)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1988  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**HMN 797 Special Topics (1-6)** Formal courses given on a topical or special interest subject which may be offered infrequently.

**Special Topics (1-6)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1988

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## **Ihc - Appellate (IHAPP)**

**IHAPP 995 Civil Rights Appellate Clinic (4 per semester/maximum of 8)** This clinical offering will provide intensive training in appellate advocacy by involving students in non criminal civil rights cases before the state appellate courts, federal courts of appeal and the United States Supreme Court. Students will assist in case selection, the development of substantive legal positions, provide research, assist in appellate strategy development and draft briefs. As this is a new clinical offering an initial focus will be on amicus briefs, however the driving decision for case selection will be which cases, during any particular clinic session, offer the best pedagogical value. In working on these cases students will have exposure to top civil rights and appellate litigators in the country.

**Civil Rights Appellate Clinic (4 per semester/maximum of 8)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Ihc - Immigration (IHIMM)

**IHIMM 995** Center for Immigrants' Rights - Course Component (3) Students will acquire the skills necessary to be an effective immigration advocate and attorney. Students will work on innovative projects relating to U.S. immigration policy and immigrants' rights.

### Center for Immigrants' Rights - Course Component (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2011  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IHIMM 995A** Center for Immigrants' Rights: Course Component (5) The course component of the Center teaches students the skills necessary to be an effective immigration advocate and attorney.

### Center for Immigrants' Rights: Course Component (5)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2011  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IHIMM 995B** Advanced Immigration Clinic This two-credit clinical experience will be open to students who have previously enrolled in the 5 credit Center for Immigrants' Rights Course and will build upon the skills they have learned. The course will involve a senior role in pending cases at the center; involvement in new initiatives undertaken by the Clinic; and possible writing and editing of a publishable material in the area of immigrants' rights.

### Advanced Immigration Clinic

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2014  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Ihc - Refugee Law (IHREF)

**IHREF 995A** In-House Clinic - Refugee Law Clinic (3) Representation of foreign nationals seeking political asylum or related forms of relief in US Courts.

### In-House Clinic - Refugee Law Clinic (3)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2008  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Ihc-Art,Sprt,Ent Law (IHASE)

**IHASE 995A** In-House Clinic--Art, Sports, and Entertainment Law (1-2 per semester/maximum of 4) This clinic is designed to acquaint students with the unique yet pragmatic knowledge and skills incident to rendering quality legal service in the art, sports, and entertainment professions.

### In-House Clinic--Art, Sports, and Entertainment Law (1-2 per semester/maximum of 4)

General Education: None  
Diversity: None

Bachelor of Arts: None  
Effective: Spring 2016  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Ihc-Children'S Advoc (IHCAD)

**IHCAD 995A** In-House Clinic-Children's Advocacy (4 per semester/maximum of 8) The course will provide instruction to students in the legal representation of children in various civil matters, including dependency, adoption and custody actions. Students will be managing a caseload of clients. Students will meet directly with their clients, and correspond with agencies and opposing counsel. Students will appear at all court appearances with a supervising attorney. The supervising attorney will meet with students individually on a regular basis for case reviews. The classroom component of the course will focus on various substantive and skills issues, including lectures on child interviewing skills and lectures from physicians on the medical aspects of child abuse. etc.

### In-House Clinic-Children's Advocacy (4 per semester/maximum of 8)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Ihc-Disability Law (IHDIS)

**IHDIS 995A** In-House Clinic--Disability Law (4 per semester/maximum of 8) Up to four students per semester represent indigent persons with disabilities who have legal concerns related to those disabilities. The bulk of the work consists of administrative hearings before the Social Security Administration and judicial review in federal court. Matters handled include Social Security and Supplemental Security Income, special education, disability discrimination, and Medicare and Medicaid claims. Students are obligated to work 12 hours per week in the Clinic, and there are weekly meetings with the supervisor, either individually or as a group. This course is graded.

### In-House Clinic--Disability Law (4 per semester/maximum of 8)

## Ihc-Family Law (IHFAM)

**IHFAM 995A** In-House Clinic--Family Law (4 per semester/maximum of 8) In this clinic, up to twelve students per semester represent indigent clients, primarily before the Court of Common Pleas of Cumberland County, in domestic matters. Cases include divorce, child support, spousal support, custody and visitation, dependency (neglect), domestic violence, and related matters. Students are required to work 16 hours a week at the Clinic, and there are weekly clinic meetings, either as a group or individually with supervisors.

### In-House Clinic--Family Law (4 per semester/maximum of 8)

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IHFAM 995B** Family Law Clinic (5 per semester/maximum of 10) In this clinic, up to seven students per semester represent indigent clients and domestic abuse victims in family law cases. All cases are in the Court of Common Pleas of Centre County. The work includes divorce, child support, spousal support, custody/visitation, domestic violence, and related matters. Students should expect to work as much time as is necessary to represent their clients successfully, which will be an average of twenty hours per week. Students also participate in a weekly clinic seminar which includes skills training, theoretical examination of clinical work, and case rounds. Each student also meets individually with the clinic

supervisor to discuss their case work and their progress in the clinic. Only third-year law students are admitted in the Fall Semester. Students earn 5 graded credits.

## **Industrial Engineering (I E)**

**I E 402** Advanced Engineering Economy (3) Concepts and techniques of analyses useful in evaluating engineering projects under deterministic and uncertain conditions.

### **Advanced Engineering Economy (3)**

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Summer 1995  
 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 405** Deterministic Models in Operations Research (3) Deterministic models in operation research including linear programming, flows in networks, project management, transportation and assignment models and integer programming.

### **I E 405 Deterministic Models in Operations Research (3)**

This course will be an introduction to deterministic modeling. In particular, the student will learn to formulate linear programs, network models, and integer programs. The student will also learn solution strategies such as the simplex method and branch and bound. Duality and sensitivity analysis will be covered along with their economic interpretation. Optimization software will be used for solving the formulations. Practical examples along with a detailed case study will be presented to help the student to synthesize the topic. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

General Education: None

 Bachelor of Arts: None  
 Effective: Spring 2014  
 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 408** Cognitive Work Design (3) Design and evaluation of cognitive work, including the human/computer interface, visual displays, software design, and automated system monitoring, with emphasis on human performance.

### **I E 408 Cognitive Work Design (3)**

*Cognitive Work Design* is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is

one of two courses which follow I E 327, Introduction to Work Design. This course focuses on the cognitive part of human factors and work design. It will be offered in fall and spring semesters. This course will enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer.

Students taking this course should be familiar with computer programming and introduction to work design.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 418 Human/Computer Interface Design (3)** Design and evaluation of the human/computer interface, including human performance, visual displays, software design, and automated system monitoring.

### **I E 418 Human/Computer Interface Design (3)**

The objective of this course is to enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer as well as on the Palm computing platform. A major component of the course is the capstone design project for which student teams will communicate with users to design, implement, and assess interfaces to improve existing work processes in an actual work domain (e.g., safety office, power plant).

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2014  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 419 Work Design - Productivity and Safety (3)** Methods improvement, physical work design, productivity, work measurement; principles and practice of safety.

### **I E 419 Work Design - Productivity and Safety (3)**

*Work Design - Productivity and Safety* is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow I E 327, Introduction to Work Design. This course focuses on the methods improvement physical work design, productivity, work measurement; principles and practice of safety. It will be offered in fall and spring semesters. This course will enable students to perform work measurement: develop an MTM analysis, and carry out a work sampling study.

Students taking this course are expected to understand basic concepts of work design.

General Education: None

**I E 424 Process Quality Engineering (3)** Statistical methods for engineering process characterization and improvement. For non-Industrial Engineering majors.

### **I E 424 Process Quality Engineering (3)**

This course will provide students with probabilistic and statistical methods required to improve the quality of products and processes. It will start with the introduction to quality culture and the key elements of quality improvement. Then the methods for data presentation and interpretation are discussed. Next, the basic probability concepts and commonly used probability distributions are taught followed by statistical concepts, such as sampling distributions, point and interval estimation, and hypotheses testing. The concepts and methods of statistical tools required for process selection and improvement such as process capability indexes and control charts are discussed next. The course ends with the coverage of simple and multiple regression models.

General Education: None

Bachelor of Arts: None  
Effective: Spring 2016  
Prerequisite:  
Concurrent: MATH 220 or B E 301

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 425 Stochastic Models in Operations Research (3)** Stochastic models in operations research with real world applications including dynamic programming, Markov chains, queueing models and inventory models.

### **I E 425 Stochastic Models in Operations Research (3)**

This course will be an introduction to the modeling of stochastic systems. The student will learn about Poisson processes, Markov Chains, Dynamic Programming, and Queueing systems; both model formulations and solutions strategies. The students will learn several applications of these models in manufacturing and service systems, so that they can synthesize the lecture material. The student will study the topic of inventory theory, including fundamental tradeoffs, EOQ modeling, and stochastic models. Grading will be based on exams and homework. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

General Education: None

**I E 428 Metal Casting (3)** Application of engineering principles to the design of castings; casting of ferrous and nonferrous alloys; laboratory and simulation projects.

### **Metal Casting (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1995  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 433 Regression Analysis and Design of Experiments (3)** Theory and Application of Regression Analysis and Design of Experiments to build models and optimize process and product parameters.

### **I E 433 Regression Analysis and Design of Experiments (3)**

*Regression Analysis and Design of Experiments* is an elective course for the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It will be offered in the spring semester. It exposes students to the two important statistical tools which are regression analysis and design of experiments. The specific topics include simple and multiple regression analysis, 2k full and fractional designs and analysis and Taguchi's orthogonal arrays.

Students taking this course should be familiar with the following topics taught in the second course in probability and statistics offered in the department.

Properties of point estimators, sampling distributions, testing of hypotheses, and introduction to linear regression and design of experiments.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2005  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 434 Statistical Quality Control (3)** Statistical techniques for univariate and multivariate monitoring of independent and autocorrelated processes; foundations of quality control and improvement.

**I E 434 Statistical Quality Control (3)**

This course is about the use of modern statistical methods for process and product improvement. The goal is to impart a sound understanding of the principles and basis for applying them in a variety of practical situations in manufacturing and service fields. The course will give an overview of the basic statistical methods and then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, analyzing process capability, and improving process quality in short-run environments. The course objectives are to: (1) understand the assumptions and theoretical foundations of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; and (3) understand the basic business and economic principles of process monitoring.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 436 Six Sigma Methodology (3)** Techniques for structured problem-solving to improve the quality and cost of products and processes.

**I E 436 Six Sigma Methodology (3)**

Six Sigma is a structured, quantitative approach to improving the quality and cost of products and processes. It provides a framework for quality improvement that builds upon statistical tools to achieve business results. Although statistical techniques are emphasized throughout, the course has a strong engineering and management orientation that will prepare students for synthesizing the material that comprises the Six Sigma body of knowledge. Important aspects of the Six Sigma approach include a strong focus on the customer, proactive management, fact-based decision-making, and interdisciplinary collaborations. The course objectives are: (1) to give students a fundamental understanding of and experience with solving a problem using the structured problem-solving approach of Define-Measure-Analyze-Improve-Control (DMAIC); (2) to provide an opportunity for students to solve or be involved with solving business problems with statistical tools; and (3) to help students build confidence in their business sense and statistical skills.

**I E 453 Simulation Modeling for Decision Support (3)** Introduction of concepts of simulation modeling and analysis, with application to manufacturing and production systems.

**I E 453 Simulation Modeling for Decision Support (3)**

*Simulation Modeling for Decision Support* is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is the third course in operations research offered to the undergraduate students. The objective of this course is for students to learn to appropriately apply discrete event simulation modeling for decision support in IE problems through developing skills in model building, simulation output analysis, and communication of technical information and conclusions drawn from data analysis.

Students taking this course should be familiar with computer programming and operations research techniques.

General Education: None

**I E 456 (M E 456) Industrial Robot Applications (3)** Introduction to robotics, with emphasis on robot selection, programming, and economic justification for manufacturing applications.

**I E (M E) 456 Industrial Robot Applications (3)**

This course is a technical elective, and is normally taken by students in their Senior years. In this course, students learn about present and future status of robot applications, and are required to apply fundamental knowledge of physics and mathematics to develop software to analyze and control robots.

The course deals with mechanics and control of robot manipulators and wheeled mobile robots. First, students are taught to analyze 3-D kinematics, statics and dynamics of robot manipulators. Then, control algorithms for robot manipulators are presented. Sensors, actuators and softwares used in industrial robots are discussed. In the end, kinematics and control of wheeled mobile robots are presented. During this course, application of computer, particularly Matlab, is emphasized as much as possible.

**I E 463 Computer Aided Design and Manufacturing (3)** Three dimensional modeling and manufacture of parts and assemblies using Computer Aided Design and manufacturing software, and numerically controlled machines.

**I E 463 Computer Aided Design and Manufacturing (3)**

The objective of this course is to teach the students the fundamentals underlying computer aided design(CAD) and computer aided manufacturing (CAM). The students will learn the drawing elements for CAD, including the coordinate systems, the fundamentals of 3 D modeling techniques and basics such as wireframe models, surface and solid models and parametric modeling. The course will include application of CAM techniques to CNC machines, which consists of programming basics, machine setup and tooling systems. The data issues such as representation formats, data exchange and translation for integration of CAD/CAM will also be addressed.

**I E 467** Facility Layout and Location (3) Analytical and computational methods for facility layout designs, material handling systems and equipment, and location.

I E 467

### **I E 467 Facility Layout and Material Handling (3)**

Facilities planning and design is the process of locating and laying out the of industrial and service facilities to best support the purpose of the facility while respecting constraints on resources such as space and budget. The facility planning function involves strategic, tactical and operational decisions depending on the nature of the facility. In this course, we address both the layout and the location of facilities. The layout problem involves a discussion of the arrangement of departments within a plant, the design of material handling systems and the design of storage and warehousing systems. Structural and architectural design questions are NOT addressed in this course. We shall also consider simplifications to the manufacturing process that result in a simplification of the layout problem. Finally, we will investigate a range of facility location problems, including median and center location problems as well as some advanced variants. One of the objectives of this course is also to familiarize the student with the analytical and computer tools that can be used for facility planning and other production and operations management problems.

**I E 468 Optimization Modeling and Methods (3)** Mathematical modeling of linear, integer, and nonlinear programming problems and computational methods for solving these classes of problems.

#### **I E 468 Optimization Modeling and Methods (3)**

This course provides an analytic treatment of optimization models in linear, integer, and nonlinear programming. In particular, the course is concerned with the development of mathematical optimization models and computational solution techniques for solving these problems. The mathematical modeling of real-world applications is complemented with the use of modeling software such as LINGO or GAMS (General Algebraic Modeling System), which allows the user to readily develop large-scale mathematical models. The course also considers solution techniques for solving these optimization problems. Students will develop a basic understanding of the solution techniques through actual implementation of simple algorithms, as well as the use of commercial software such as those provided by LINDO, LINGO, and GAMS.

**I E 469 Global Industrial Engineering Experience (1)** Students will learn how to prepare for a short term, professional exchange in a foreign nation. Students will then travel to a designated university within a foreign nation for the purpose of a five day cultural and professional exchange.

#### **I E 469 Global Industrial Engineering Experience (1)**

This course will teach industrial engineering students how to prepare for a short term, professional exchange in a foreign nation and how Industrial & Manufacturing Engineering education and practice is carried out in a foreign nation. Students will be required to research and report on one or more industries in a designated foreign nation. Their report will focus on the products and/or services produced by these industries, the processes employed, known use of industrial and manufacturing engineers and/or practice, and their domestic and global standing.

Students will travel to a designated university within that nation for the purpose of a one week cultural exchange. The designated university will have an Industrial Engineering, Production Engineering, and/or Manufacturing Engineering program. Information about the international destination and the dates of travel will be provided on the course syllabus each semester.

During this period, students will:

1. tour the department and engineering laboratories to learn about the education and research facilities at their host university
2. attend engineering classes within the host university to learn about the engineering topic matter as well as how foreign engineering classes are conducted
3. give and receive engineering presentations with their host university students
4. tour the local community to learn about their culture
5. tour local manufacturing industries and interact with local Industrial/Manufacturing engineers to learn about the companies as well as how industrial & manufacturing engineering is specifically practiced

**I E 470 Manufacturing System Design and Analysis (3)** Contemporary design and analysis methodologies used to organize systems for economic manufacture of products.

#### **I E 470 Manufacturing System Design and Analysis (3)**

*Manufacturing System Design and Analysis* is a senior level course in manufacturing, required for all the baccalaureate

students in the Department of Industrial and Manufacturing Engineering. Students will be exposed to the contemporary techniques used to design and analyze manufacturing systems for economic manufacture of products. Students will learn to design manufacturing systems (human and automated) to satisfy differing types of product demand.

Students taking this course should be familiar with introduction to manufacturing and product specifications and introduction to manufacturing process design and analysis.

**I E 477 Computer Control of Manufacturing Machines and Processes (3)** Elements of computer control and discrete-time modeling. Design and analysis of digital controls for manufacturing machines and processes.

### **I E 477 Computer Control of Manufacturing Machines and Processes (3)**

Objective of this course is to gain physical insight and hands-on experience with modern control engineering. Lectures and laboratory topics will include modeling and simulation of digital control systems, control computers, interfacing, analog-to-digital converters, digital-to-analog converters, programmable logic controllers, sensors and actuators. Lectures will be devoted to case studies in instrumentation for computer control of manufacturing machines and processes. Course includes a significant group project in which students will design and construct a computer controlled machine or process. This course is a senior undergraduate level technical elective course in the manufacturing system engineering track in the Industrial & Manufacturing Engineering Department. This course is also allowed for graduate credit in the Industrial & Manufacturing Engineering Department.

**I E 478 Retail Services Engineering (3)** Introduction to retail services operations, process models, and application of information technologies to enhance productivity and profitability.

### **I E 478 Retail Services Engineering (3)**

Objective of this course is to understand modern retail industry with focus on their operations and information technologies that are used in such systems. The course starts with an overview of the basics of types of retailing, their channels, and economics of their operations. Much of the emphasis in the course is on processes and information technologies used in retail industry such as point of sale systems, barcode, RFID/EPC, global data synchronization, EDI, XML, data warehouse, analytics for decision support and supply chain management. Several case studies will be used to draw out the application of tools and techniques covered in the course. Course includes a group project focused on retail industry. Specific topics will include:

- Global retail industry
- Multi-channel retailing
- Performance and metrics
- Pricing
- Layout and workforce
- Information Systems and SCM
- Barcode and RFID
- Data warehouse and analytics
- Case studies

This course is a senior undergraduate level technical elective course in the IT and Service Engineering track in the Industrial & Manufacturing Engineering Department.

**I E 479 (EDSGN 479) Human Centered Product Design and Innovation (3)** Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective.

### **I E (EDSGN) 479 Human Centered Product Design and Innovation (3)**

This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will be placed on user centered design, incorporating user characteristics, user needs and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposites of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

**I E 480W** Capstone Design Project (3) Industry-based senior capstone design project emphasizing manufacturing systems, service systems, and information systems in an interdisciplinary setting.

### **I E 480W Capstone Design Project (3)**

Students will develop "real world" engineering project experience through an industry-based project. Projects will focus on manufacturing systems, service systems, and/or information systems. Students will work in teams to complete the projects, where the teams will be interdisciplinary and composed of students from within the major with different areas of expertise and students from other majors as needed. Students interested in taking this course should have senior standing and be familiar with basic principles in manufacturing, operations research, and human factors engineering. Students will be evaluated through in-class participation, and a group project that consists of weekly communication with the project sponsor along with three design reviews, interim written reports and a final report, presentation and poster.

This is a Writing-Intensive course in the department and hence students will be given opportunities to practice writing throughout the semester in multiple writing assignments.

**I E 516** (SC&IS 516) Applied Stochastic Processes (3) Study of stochastic processes and their applications to engineering and supply chain and information systems.

### **I E (SC&IS) 516 Applied Stochastic Processes (3)**

This course covers the mathematical fundamentals and tools for analyzing stochastic systems evolving over time, including concepts and techniques related to Poisson Processes, renewal processes, and discrete and continuous time Markov chains. Students will also learn to build probabilistic intuition and insights when thinking about random processes. Additionally, students will learn to apply the essential techniques of stochastic processes to real world problems in the supply chain and information systems area.

This is a prescribed research foundation course for Ph.D. students in SC&IS. Student evaluations are based on class participation, individual and group assignments, and exams. This course will be offered during Spring semester to approximately 5-10 students.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2006  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 519** (SC&IS 519) Dynamic Programming (3) Theory and application of dynamic programming; Markov decision processes with emphasis on applications in engineering systems, supply chain and information systems.

**I E (SC&IS) 519 Dynamic Programming (3)**

This course presents the basic theory and applications of dynamic programming. The focus of the course will be on the theory of Markov decision processes (MDP), which provides an analytical tool to optimally control the behavior of a Markov Chain. The students will learn fundamental MDP models, computational methods and applications in supply chain and information systems, including production and inventory control, quality control, logistics, scheduling, queueing network, and economic problems.

Student evaluations are based on class participation, individual and group assignments, and projects. This course will be offered during Spring semester for approximately 5-10 students.

**I E 530 Financial Engineering (3)** Financial option pricing and portfolio design relevant to investment decision making.

**I E 530 Financial Engineering (3)**

The objective of this course is to provide students with the basic terminology, concepts, and issues relevant to financial engineering. It serves as an introduction to the investment, financial instruments, and valuation of projects via portfolio theory and option pricing and is primarily for students who have had exposure to multi-variable calculus and probability theory. Students will learn the core concepts and advanced techniques for decision making of capital investment and for managing and valuing risky projects. This course also aims to enable students to effectively use tools in finance and mathematics in order to conduct rigorous research on topics involving the analysis of managing and valuing flexibility and uncertainty. A requisite course in applied stochastic processes will provide the necessary background on probability models needed for this course.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2010  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 532 Reliability Engineering (3)** Mathematical definition of concepts in reliability engineering; methods of system reliability calculation; reliability modeling, estimation, and acceptance testing procedures.

**Reliability Engineering (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1992

**I E 533 Workforce Engineering (3)** Methods and applications for selecting, assigning, scheduling, and planning for workforce operations in the manufacturing and service industries.

**I E 533 Workforce Engineering (3)**

This course studies the field of workforce engineering, and bridges the areas of human factors engineering, production planning, and optimization. The objective of the course is to examine state-of-the-art practices, models, solution techniques, and opportunities for graduate research. The course studies quantitative applications related to determining workforce size, skill sets, and multifunctionality in service and manufacturing systems based on measurable quality and productivity performance. Students will develop the skills necessary to model and solve problems considering the tradeoffs between speed and accuracy.

General Education: None

**I E 546 (M E 546) Designing Product Families (3)** Product families, product platforms, mass customization, product variety, modularity, commonality, robust design, product architectures.

**I E (M E) 546 Designing Products Families (3)**

Designing Product Families is a graduate-level course generally offered in the spring. It is designed for students interested in product realization, engineering design, and manufacturing to gain an understanding of mass customization and methods for designing families of products based on modular and scalable product platforms. The transition from craft production to mass production to mass customization will be covered in this course along with methods and tools for designing robust, modular, and scalable product platforms. Platform leveraging strategies and commonality metrics will be investigated through product dissection activities, which will also be integrated with lectures on evaluating manufacturing and assembly. Several industry case studies will also be discussed in the course to examine the implications of producing a variety of products and strategies for effective mass customization and product postponement.

Students interested in taking this course should be familiar with product design and manufacturing.

Students are evaluated through individual and group homework assignments, in-class participation and activities, and a group project report and presentation.

General Education: None  
Diversity: None  
Bachelor of Arts: None

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**I E 549 (EDSGN 549) Design Decision Making (3)** Complexity of design decision-making; state-of-the-art methods and tools.

**I E (EDSGN) 549 Design Decision Making (3)**

Students in this course will internalize the importance of information and decision-making in design; understand the complexities due to uncertain information, multi-person decision making, technology obsolescence, competitive priorities; become familiar with state-of-the-art methods and tools for design decision-making; and, demonstrate the application of this knowledge in the context of a collaborative design project. Learning in this course will be facilitated in an "apply what you have learned" fashion with ample opportunities for students to demonstrate their learning through in-class participation, discussion of solved problems, hands-on design projects. Strategies, methods, and means of the design process will be discussed and practiced to include such things as understanding client needs, generating design concepts, and evaluating design ideas.

**I E 552 (BIOE 552) Mechanics of the Musculoskeletal System (3)** Structure and biomechanics of bone, cartilage, and skeletal muscle; dynamics and control of musculoskeletal system models.

**I E (BIOE) 552 Mechanics of the Musculoskeletal System (3)**

The course focuses on the upper limbs and its musculoskeletal components, including mechanical properties and models; work-related musculoskeletal injuries, techniques, models, and instruments to measure and quantify the risks for developing such injuries. Specific topics covered in the first third of the course include an introduction to basic biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill's 3-element model and continuing on to Hatze's multi-element model, frequency analysis, control theory approaches. More complex models include static and dynamic aspects of tendon-pulley models and multiple muscle-tendon systems. The final third covers basic epidemiology as applied to musculoskeletal disorders and risk factors including instrumentation to measure them and various analysis tools (e.g., the PSU CTD Risk Index) to assess the not only the overall risk for injury but the reliability and validity of such assessments. Time permitting applications to hand tools and office environment with computer work stations are examined. Two exams and a modeling project are given. The course is typically offered Spring Semester.

**I E 555 Statistical Process Monitoring and Analysis (3)** Statistical techniques for univariate and multivariate monitoring of dependent and autocorrelated processes; theoretical and numerical approaches for analyzing performance.

**I E 555 Statistical Process Monitoring and Analysis (3)**

This is an advanced course in Statistical Process Control (SPC) techniques for process monitoring, one of the main areas of

Quality Engineering (QE) methodology. The aim of QE methods is to improve the quality of products used by our society. The widespread and successful use of basic SPC methods have led to the development of many new techniques and procedures over the past 20 years that contribute to that high purpose.

Students should have a background in basic statistical concepts including sampling and sampling distributions, hypothesis testing, confidence intervals, and analysis of variance (ANOVA). This course will give an overview of the traditional SPC methods and time series modeling background, then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, detect special causes or out-of-control conditions, and identify process changepoint models. A number of practical applications in manufacturing and service fields including polymer processing, nanotechnology, health care, and global sustainability will be considered.

The course objectives are to: (1) understand the basic business and economic principles of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; (3) understand the assumptions and theoretical foundations of process monitoring; and (4) understand and execute methods for comparing different monitoring strategies based on run length distributions. More broadly, students will also know how to research and critique the relevant literature and understand the needs for future research in the area.

Students will be evaluated based on their performance on homework (25%), a mid-semester examination (25%), presentations (25%), a final course project (25%).

**I E 557 Human-in-the-Loop Simulation (3)** Design and programming of simulations that facilitate human control, real-time discrete-event simulation, supervisory control of dynamic system.

#### **I E 557 Human-in-the-Loop Simulation (3)**

This course is designed to provide graduate students with the capability to develop an interactive, real-life simulation and to create interfaces for an interactive simulation. The course will cover key phases in the life cycle of interactive systems development including design, implementation, and evaluation. Course topics will be explored through application in supervisory control of complex, dynamic systems. Java will be the programming language used for software development in this course.

Students will understand the fundamental concepts in interactive simulation; learn how to implement random variant generation and event handling in a simulation; understand the uses of human-in-the-loop simulation to investigate human performance within the simulated system; and demonstrate the application of knowledge gained in the course in a project.

Human-in-the-Loop Simulation is designed for students interested in human interaction with simulations of dynamic, supervisory control systems. The design and implementation of real-time interactive simulations will be covered. The construction of simulations from basic object-oriented programming concepts will be discussed. The role of the human within a dynamic, supervisory control system and methods of evaluating human performance within the simulated system will be examined.

Students will be evaluated via laboratory assignments, two mid-semester examinations, and a semester project.

**I E 560** Manufacturing Processes and Materials (3) Materials processing and manufacturing methods for engineering materials; manufacturing process modeling and control; manufacturability of engineering materials.

**I E 560 Manufacturing Processes and Materials (3)**

The course provides a broad exploration of the manufacturability of engineering materials. In particular it investigates the fundamentals of material performance during processing, manufacturability requirements for primary material processing methods, and the processing limitations of widely used material systems. It considers formability, machinability, castability, weldability and, particulate consolidation of metallic systems with emphasis on widely used ferrous and non-ferrous alloys and widely used polymer, composite and ceramic systems. Building upon these insights, students will develop an integrated understanding of material processing science and control, and microstructure/property/processing relationships. They will be able to select appropriate material and manufacturing processes for engineering components and identify critical material and manufacturability issues that limit manufacturing success. Students will be able to apply these principles to develop an understanding of manufacturability constraints for newly developed engineering materials and processing methods. The course is an elective course for all Industrial Engineering MS, MENG and PhD degrees and is part of the required core of courses for the MS and MENG Manufacturing Option.

**I E 561** (EDSGN 561, CSE 561, IST 561) Data Mining Driven Design (3) The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design.

**I E (EDSGN/CSE/IST) 561 Data Mining Driven Design (3)**

This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases.

The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course.

This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains.

Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

**I E 567** Distributed Systems and Control (3) Advances in distributed control and decision-making in enterprises and supply chains with emphasis on computing, algorithms, and dynamics.

**I E 567 Distributed Systems and Control (3)**

Recently several new open architecture standards have emerged for control and information systems in industrial enterprises. These standards have been largely driven by industry to reduce the cost of integrating and configuring manufacturing systems, allowing a new breed of distributed enterprises to be engineered. This course deals with the multidisciplinary aspects of controls, computing, and communication in this rapidly evolving area. The objective of this course is to study current research and engineering challenges in distributed systems and control in the context of manufacturing and service enterprises, and supply chains. Emphasis will be placed on understanding the dynamics and computational aspects of decision making and control algorithms in integrated enterprises. Assignments and projects in this course will include designing, programming, and integrating distributed control systems.

Evaluation will be based on programming and lab assignments, literature review and class presentation, a semester project, and class participation.

This course will be offered every third semester with a maximum enrollment of 18.

**I E 570 (SC&IS 570) Supply Chain Engineering (3)** Use of operations research models and methods for solving problems in supply chain systems.

**I E (SC&IS) 570 Supply Chain Engineering (3)**

The course provides state-of-the-art mathematical models, concepts and solution methods important in the design, control, operation and management of global supply chains. It provides an understanding of how companies plan, source, make and deliver their products to create/or maintain a global competitive advantage. It emphasizes the application of operations research models and methods to optimize the various components of an integrated supply chain. The course is appropriate for graduate students interested in working in the supply chain area in industry as well as those planning to pursue research in supply chain optimization.

**I E 575 Foundations of Predictive Analytics (3)** Survey course on the key topics in predictive analytics.

**I E 575 Foundations of Predictive Analytics (3)**

This will be a survey course on the various aspects of predictive data analytics. Students will learn methods associated with data analytics techniques and apply them to real examples using the R statistical system. The key survey topics will include linear regression models, classification methods, tree-based methods, dimensionality reduction, and clustering. The focus will be on providing a basic understanding of the fundamentals of these techniques with realistic applications in marketing, healthcare, engineering and web-based data. An introduction to predictive models based on text and network data will be provided.

**I E 582 Engineering Analytics (3)** Students will learn advanced information technology, network science, big data, descriptive and predictive analytics, for manufacturing and service systems.

**I E 582 Information Technology for Industrial and Manufacturing Engineering (3)**

This course provides an in-depth understanding of the state-of-the-art IT concepts and techniques which can be used in manufacturing and Service organizations. Students will acquire a thorough understanding of IT implementation aspects as related to both these sectors. The three major course objects are: (1) to give students an in-depth understanding of fundamental IT/Computing concepts as related to manufacturing and service functions, (2) to provide students with a thorough understanding of the implementations aspects of IT concepts as related to manufacturing and service functions, and (3) to foster students collaborative learning and real life implementation experiences through an industry based project.

All the course modules will be introduced through cases. This course will consist of five to six programming homework assignments, two examinations and one industry based project. Java will be used as the implementative vehicle for all homework assignments. The industry based project will be implemented as per the needs of the industry working with the students.

**I E 583 Response Surface Methodology and Process Optimization (3)** Response Surface Methodologies used for sequential experimentation and optimization of production processes. Statistical design and analysis of such experiments.

**I E 583 Response Surface Methodology & Process Optimization (3)**

This course considers Response Surface Methodology (RSM), a collection of statistical and optimization techniques aimed at improving the quality characteristics of a manufacturing process through the sequential application of statistically-designed experiments and model-building techniques. Optimization techniques for response surfaces, functions that can exhibit large sample variability, are highlighted. Multiple response optimization problems, which occur frequently in practice, are considered, and their relation to Taguchi's Robust Parameter Design problem is emphasized. The course also includes an introduction to the design, analysis, and optimization of mixture problems, which occur frequently in food manufacturing, metallurgy, and semiconductor manufacturing. The practical aspects of RSM are considered through a final project in which the students optimize a (simulated) manufacturing process. For this purpose, a Web-based process simulator has been designed. The Software packages Design Expert, SAS, and Minitab will be used by the students in the class. MATLAB and MAPLE programs will support some of the topics in the class. Recent papers from the technical literature will be covered. The prerequisites of this course are either I E 511, which is an introductory course in Design of Experiments, or STAT 501, an introductory course to linear regression.

**I E 584 Time Series Control and Process Adjustment (3)** Design of Time Series-based process controllers for Quality Engineering. Study of the effect of autocorrelation on control chart performance.

### **I E 584 Time Series Control & Process Adjustment (3)**

With modern sensor technology, quality control data frequently exhibits dynamics due to the short time between observations. Quality specifications keep "shrinking", and process drift is less tolerated than before. Under these circumstances, Statistical Process Control (SPC) techniques cannot be applied, and the emphasis in quality control moves from monitoring a process to actively adjusting it. Time Series techniques are ideal tools for developing such process adjustment strategies. This course covers topics of recent interest both in academia and in industry, including: integration of feedback adjustment techniques with traditional SPC methods; the "run-to-run" control problem as it occurs in discrete-part manufacturing (e.g., semiconductors); and optimal design of proportional-integral and EWMA controllers. In addition, a detailed treatment of statistical identification and estimation of ARIMA and discrete-time transfer function processes is presented. The effect of data autocorrelation on the performance of SPC control charts is discussed, and process adjustment strategies are presented as an alternative. For this reason, ABIMA modeling is discussed in detail as a means to represent data autocorrelation. Use of the MATLAB and SAS software packages are encouraged. A book on the course subject matter is under preparation and has been accepted by John Wiley & Sons who will publish it in its Probability & Statistics Series. Given the heterogeneity of the students taking the course, the prerequisites are rather modest, and the course is almost self-contained. The prerequisite is I E 423, or a similar introductory course in statistical process control.

**I E 588 Nonlinear Networks (3)** Foundation in congestion games, including elements of non-cooperative game theory, equilibrium network flows, Braess paradox, and the price of anarchy.

### **I E 588 Nonlinear Networks (3)**

This course examines the theory of congestion games, developed originally to describe flows on congested transport networks but recently embraced to model data networks. Students will learn how to formulate descriptive models of traffic and data network flows in the presence of congestion as Nash games expressed as variational inequalities (VIs). These models will be used to derive theoretical bounds on the price of anarchy (the social costs of not achieving a truly cooperative or system optimal flow). Students will also learn how to formulate normative network design problems and Stackelberg games or so-called mathematical programs with equilibrium constraints (MPECs) to avoid the Braess paradox. Numerical techniques for solving VIs and MPECs will be discussed and illustrated.

The course begins with an introduction to so-called system optimal network flow models that explicitly incorporate network congestion. The study of system optimal flows contains an introduction to nonlinear network optimization algorithms, including feasible direction, gradient projection, simplicial decomposition and affine scaling algorithms.

Following the consideration of system optimal flows, both atomic and non-atomic network equilibrium models in the form of non-cooperative Nash games are discussed in-depth. The price of anarchy is presented as the ratio of the cost of Nash equilibrium flows to the cost of system optimal flows within the network of interest. Various theoretical bounds on the price of anarchy are derived. Numerical experiments to determine the price of anarchy are also described.

The Braess paradox, wherein global congestion can increase when local capacity is added to a nonlinear network, is introduced and its relationship to the price of anarchy demonstrated. Discrete and continuous equilibrium network design models that eliminate any possibility for the Braess paradox to arise are articulated. Each such design model is shown to be equivalent to a Stackelberg game, which is a type of mathematical program with equilibrium constraints (MPEC).

Mechanism design in the form of network congestion pricing to alleviate the effects of congestion is also considered and shown to have an MPEC structure as well. Algorithms for solving MPECs to ascertain efficient network topology/efficient tolling will be discussed in detail, including simulated annealing and other types of computational intelligence on the one hand; and duality, penalty, decomposition and other types of nonlinear programming algorithms on the other.

Students interested in taking this course should have completed a course in linear programming (I E 505); a course in nonlinear programming is also recommended.

**I E 589** Dynamic Optimization and Differential Games (3) Dynamic optimization and dynamic non-cooperative games emphasizing industrial applications.

### **I E 589 Dynamic Optimization and Differential Games (3)**

This course provides an introduction to dynamic optimization and dynamic noncooperative games from the perspective of infinite dimensional mathematical programming and differential variational inequalities in topological vector spaces. The objective of this course is to give a working knowledge of computational methods for and applications of dynamic games. It builds on two prerequisite courses - introduction to operations research and linear programming - and also on co-requisite course in non linear programming. Coverage includes descent, projection and penalty algorithms for infinite dimensional mathematical programming and their extension to differential variational inequalities and dynamic games. Cournot-Nash-Bertrand and Stackelberg dynamic games are then studied from the point of view of differential variational inequalities and optimal control problems constrained by differential variational inequalities. Manufacturing and service engineering applications are employed to illustrate the tools developed in the course.

Students will be evaluated on the basis of a set of assigned problems (30%), a semester paper (30%), and a final examination (40%).

**I H S (ENNEC) 590 Colloquium (1-3)**

The objective of the course is to expose students through a seminar format to a wide range of topics on energy and mineral engineering. The lectures would be presented by faculty, students and guest speakers. Students would be required to write a short summary of each presentation and provide a critique of the presentation. Seminar topics will cover aspects of energy production, processing, utilization, and conservation, and the associated environmental, health and safety, and policy, economics, and management issues. Students are expected to keep up with current developments on each topic and to actively participate in the discussions. Students will be evaluated based on their class participation, and written summary and critique of each presentation. This is a required course in the energy and mineral engineering graduate program.

## **Information Sciences And Technology (IST)**

**IST 402** Emerging Issues and Technologies (3 per semester/maximum of 9) Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society.

### **IST 402 Emerging Issues and Technologies (3 per semester/maximum of 9)**

Information Sciences and Technology (IST) is a rapidly changing discipline. New issues, methods, tools, applications and terminology appear on a continual basis. A key skill is the ability to analyze new issues and assess new technologies within the context of the information age. This course prepares students to understand the difference between potential technological failures and success, fads and revolutionary technology. It also helps students to view emerging issues as an opportunity rather than a threat. Intellectual tools are provided to assist in understanding issues, assessing and forecasting technological changes for feasibility and planning in real world situations. The course provides students with:

- a.) A process framework for analyzing new issues and a theoretical framework to study technological and social impacts of such issues.
- b.) A process framework for recognizing and understanding new technologies and a theoretical framework to take advantage of such technologies.
- c.) Exposure to new issues and technologies.
- d.) Hands-on experience in studying recent technological advances in detail.

The course will also provide students with the ability to:

- a.) Understand the concept of issue analysis and technology forecasting.
- b.) Recognize the important of new issues and technologies in information sciences.
- c.) Incorporate these new issues and technologies into an existing information systems framework.
- d.) Develop and implement new technology solutions, or discuss policies for addressing emerging issues.
- e.) Predict impacts of issues and technology on information management, users, policies, and the environment.

Each time the course is offered; new issues and/or information technology areas will be explored. Examples of issues and technologies addressed include: wireless communications, security and intrusion detection, intelligent agents, web search, languages, intelligent systems, bio-informatics, advanced visualization and human-computer interactions, ubiquitous-pervasive computing, groupware, computer aided cognition, system design by global IT teams, IT outsourcing, and digital divide.

**IST 412 The Engineering of Complex Software Systems (3)** Introduction to the engineering of complex software systems including software system specification, design and implementation, integration and test, and evolution.

### **IST 412 The Engineering of Complex Software Systems (3)**

This course presents the fundamental concepts of the engineering of complex software systems, including iterative and agile development strategies. The course gives students insight into the full software development cycle, including design, implementation, test and quality assurance, deployment, maintenance, and project estimation and management. IST 412 is an elective course for the Baccalaureate degree program in Information Sciences and Technology. Students completing the Systems Development Option may take this course to fulfill option requirements.

Upon completion of this course, students will have a broad understanding of the fundamental concepts of complex system software engineering and be able to apply these concepts to managing and developing a complex software project over the full software development cycle.

**IST 420 Fundamentals of Systems and Enterprise Integration (3)** Introductory course on integration of information technology into different venues, including the planning, development, and implementation of the integration.

### **IST 420 Fundamentals of Systems and Enterprise Integration (3)**

IST 420 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 420 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their baccalaureate degree. It is the prerequisite for IST 421 which is also required for the Option. Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the "business processes and information value chain" within a system, and be able to foster an understanding of the role of IT in system integration. Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

**IST 422 Enterprise Architecture Foundations (3)** Theoretical foundations and practice of enterprise architecture.

**IST 422 Enterprise Architecture Foundations (3)**

Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the business model, applications and technology. Its primary goal is to facilitate improvement and deliver business-aligned information systems. This course presents the key components and processes involved in the effective creation and governance of enterprise architectures. Students will acquire knowledge about the key foundational aspects of enterprise architecture, learn what decisions need to be made and how to make them, and be able to explain and justify their recommendations.

General Education: None

**IST 423 Enterprise Information Management and Storage Architecture (3)** Provide in-depth study of the concepts, issues, and technologies associated with the complex world of enterprise information and storage architecture.

**IST 423 Enterprise Information Management and Storage Architecture (3)**

This course is designed to introduce students to enterprise information storage and management concepts, issues, trends, and technologies. As a junior/senior level course, the focus will center on applying design concepts and associated technologies to real-world problems in the area of enterprise information storage and management . Existing partnerships with leading information management firms will be leveraged to provide real-world exposure to the complex enterprise information storage and management issues facing all organizations today. This course also focuses increasingly on the critical areas of information security and the emerging field of information storage virtualization. The course will mix technical details, applied value, and organizational insights of enterprise information storage and management through the use of labs, case studies, real-life problems, and team projects. This is a unique course that has generated great industry interest.

**IST 424 Architectural Modeling of Organizations (3)** Theoretical foundations and practice of enterprise modeling.

**IST 424 Architectural Modeling of Organizations (3)**

Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the organization model, applications and technology. Its primary goal is to facilitate improvement and deliver organization-aligned information systems. Effective modeling is crucial for successful EA. This course provides an exposure to the foundational concepts and practices of effective enterprise modeling for EA.

Students will acquire knowledge about the key foundational knowledge in modeling different layers of the enterprise, learn what decisions need to be made and how to make them, and be able to explain and justify their models and recommendations. This course explores the use and effectiveness of architectural modeling to describe an organization and to integrate and manage IT resources strategically from an enterprise perspective. Hands-on exercises and cases studies are used to illustrate the role and effect of enterprise architecture concepts and methodologies. Emphasis is placed on understanding different architectural approaches, standards, and styles. Students will use enterprise architectural tools to develop descriptive models and understand how to integrate and manage IT within and between organizations.

For each general topic area, core readings are used to define standard vocabulary, concepts and relations, methods and criteria for evaluation, and implications for enterprise architecture. Students participate in class discussions as well as complete written assignments that focus on solidifying the understanding of the course content. Students also complete a team modeling project that is motivated by, and whose outcomes are discussed with respect to, one or more theoretical frameworks covered in the course.

**IST 425** (MGMT 425, ENGR 425) New Venture Creation (3) Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors.

### **IST (MGMT/ENGR) 425 Introduction to Entrepreneurship (3)**

The goal of IST (MGMT/ENGR/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find IST (MGMT/ENGR/ENTR) 425 a valuable course.

This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors.

This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). IST (MGMT/ENGR/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major.

**IST 426** (ENGR 426, MGMT 426) Invention Commercialization (3) Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology.

### **IST (MGMT/ENGR) 426 Invention Commercialization (3)**

The goal of IST (MGMT/ENGR/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - "not invented here".

Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome.

This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at <http://guru.psu.edu/policies/RAG13.html>

**IST 431** The Information Environment (3) Survey of social environment of information technology themes: Community, sovereignty, privacy, ethics, economics, and knowledge management.

### **IST 431 The Information Environment (3)**

The ways that people communicate and utilize information is being changed dramatically by new information technologies. Information and the technologies that are employed by create, organize, transfer, and utilize that information in a networked environment, using such global networks as the internet or internal networks such as intranets, have become a key component of the global economy. This global environment can change the way we interact, communicate, and function on the job and in our daily lives. The new technologies also raise new economic, legal, ethical, and social issues that are of grave importance to society. IST 431 examines the overall context of the new information environment and new technical issues relating to knowledge management in the global networked environment. IST 431 is a required course in the Information, Society and Public Policy Option.

There may be some overlap of material with COMM 405, COMM 483, COMM 485, PHIL 407, PHIL 423, PHIL 433 and PL SC 460m but none of these courses cover the same material, or approach it in the same manner.

Upon completion of this course, the student will gain an appreciation of the differences between "cyberspace" and the "real" world. The student will also understand that the implementation and modern information technologies has significant social and policy implications that demand appropriate policy issues in several different contexts (global, national, local). The student will also be able to discuss the major themes in information policy studies (e.g., community, privacy, access, economic participation, security) and be able to relate these themes to the applications of particular technologies. They will be able to describe policy frameworks and issues, as well as the ethical and social implications of these choices.

Homework assignments; Socratic dialogue; analysis and write-up of case studies; assessment of group research projects and presentations; participation in on-line discussion groups; two mid-term and one final examination (objective and essay). The precise mix of evaluation components will be determined by individual instructors; a typical weighting might be exams (60%), written assignments and papers (20%), and collaborative projects (20%).

IST 431 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

**IST 432** Legal and Regulatory Environment of Information Science and Technology (3) Legal environment of information technology, constitutional/political issues, intellectual property, management, e-commerce, privacy, access, computer contracting, cyberspace regulation.

### **IST 432 Legal and Regulatory Environment of Information Science and Technology (3)**

The new information technologies are creating a global economy heavily dependent upon networked information, hardware, software, and electronic commerce, which calls for adaptation of existing legal and business practices. In many cases, the new technologies pose problems that existing laws or legislation are inadequate to cope with; but the complexity of the environment makes new solutions elusive. This course examines the legal, regulatory, and political environment within which intellectual property rights and examination of contracting issues, licensing of information and products, data protection, patents, cyberspace regulation, and implications for personal privacy. It also focuses on where technology is making regulation difficult by challenging previous concepts upon which our legal and regulatory systems depend.

**IST 437** Digital Design & Innovation (3) This course introduces students to design thinking, user-driven innovation and user experience, and business model implementation issues for IT-driven innovation.

**IST 437 Digital Design & Innovation (3)**

IT-driven innovation requires a deep understanding of the user, the context of the compute environment, and a systems approach to identifying critical system features. In addition, the IT-driven innovation must meet user needs in a commercially feasible manner. Students taking this class will work in teams to create a design concept and refine it through user analysis and prototyping. To get to a commercially feasible concept, students will analyze the competitive landscape and the ecosystem in which their concept will reside. Each team will express their concepts using the Business Model Canvas— a tool used in both educational and professional settings – to identify the value proposition and potential monetization strategies. Throughout the class, students will be introduced to tools in the IT design space through hands-on problem solving, role playing, and improvisation, among other techniques. A critical part of this course is the in-class coaching that teams will receive from the instructor, as well as guest speakers who can demonstrate the real world challenges of entrepreneurship and innovation. Frequent communication practice using techniques such as idea pitches will help students refine their ability to express their ideas more effectively.

**IST 440W** Information Sciences and Technology Integration and Problem Solving (3) Problem-based approach to technology integration by focusing on real-life problems faced by an organization.

**IST 440W Information Sciences and Technology Integration and Problem Solving (3)**

This course is the undergraduate capstone for Information Sciences and Technology majors in the Baccalaureate degree. It requires students to work collaboratively in teams of 4-6 students, with each team comprised of students from more than one option and, if possible, more than one campus. Each team is given a significant real-world problem or issue in which information technology is part of the solution. Teams will be expected to manage the project effectively and to communicate its results clearly to a variety of audiences within an organization. Major topics include: review of problem-based and case-based learning; overview of project management practices; assessment of organizational and technical issues posed by the scenario; development and testing of work plans and analysis of options; communication within the group; communication within a management environment; and presentation of results to a variety of audiences inside and outside the organization.

IST students need to understand the organizational and social contexts in which technology functions. Indeed, many technology problems are multi-dimensional--they have an economic dimension, a legal dimension, a human resources dimension, and so on. This course will require students to analyze, evaluate, and test alternative solutions and to weigh their advantages and disadvantages for the organization.

Students will be evaluated in three ways: by the effectiveness of their team's solution of the technical or organizational problem; by the quality of the students' written and oral presentations; and by the quality of their project management and internal communication. A substantial written paper will be required of each student and each time; in addition, each team will also construct a Web-site for sharing results. Other technologies will be used as required by the project.

It is expected that membership on teams of students will be drawn from the various options in the Information Sciences and Technology major. At least nine credits (including at least one IST 300-level and one IST 400-level course) in the student's option must be completed before enrollment in IST 440W. This course should be offered every fall and spring semester beginning in the fall semester 2002. It will be taught in sections of 25 and have a total enrollment of approximately 100 per semester.

**IST 443 IT Professional Services Theory and Practice (3)** Explores and applies the basic concepts, methodologies, tools, and techniques of consulting and professional service organizations in information sciences and technology.

### **IST 443 IT Professional Services Theory and Practice (3)**

This course is designed to introduce students to basic IT professional services theories and practices, including an examination of the professional services industry. A consulting-oriented systems life cycle framework is used as the outline of the course. The phases of this framework include: problem/system analysis and evaluation, requirements definition, solution design, solution development, solution implementation, and on-going evaluation and maintenance. Students will learn how to identify and define client problems, map workflows, develop recommendations, and prototype solutions. They will be given opportunities to practice the concepts and methodologies they learn by working on real-world problems in teams for corporate clients.

This course is designed around real-world problems and projects involving IT systems development, integration and implementation. In this course, the student will be part of a consulting team that is assigned to work with a real corporate client. The student works with the other team members to define their client's problem, map out appropriate workflows, and make recommendations for a solution. Depending on the project, the recommended solution may be prototyped or fully developed during the course.

### **IST 444 Advanced IT Professional Services (3)**

This course is designed to allow students to explore in-depth IT professional services issues and strategies. The advanced topics to be covered during the semester include IT strategy consulting, consulting leadership issues, complex and/or strategic consulting methodologies, IT governance consulting, and an in-depth analysis of professional service firm operations and strategies, and the management of multiple, simultaneous projects and initiatives. This course is designed around real-world issues and projects involving problem identification, advanced research methods, IT solution development, integration, and implementation, primarily from a strategic and/or program management perspective. Furthermore, students will explore the culture, operations, and strategies of large, medium and small IT services organizations. The student will understand leadership and managerial issues associated with strategic alignment of IT and business strategies, executive-level stakeholder management, program management, IT strategic planning, and managing the political landscapes of large-scale IT consulting projects.

**IST 446** An Introduction to Building Computer/Video Games (3) An interdisciplinary course that introduces students to process and techniques involved in developing a video or computer game.

**IST 446 An Introduction to Building Computer/Video Games (3)**

The course is project driven. Students will form teams and collaborate with one another to develop an interactive immersive experience. During the course, students will be exposed to several techniques for building graphical 3D worlds, animating characters, moving the camera and lights in real-time, and building intelligent characters (using state machine-based architectures). They will also learn different techniques of interactive storytelling, such as linear narrative, branching narrative, and adaptive narrative. Furthermore, they will be introduced to several tools that will aid in realizing their own projects and ideas, such as graphic engines (e.g. Wildtangent), and game engines (e.g. Unreal Tournament).

The course is heavily project driven. Students will, in the first half of the course, learn the tools used in the development of interactive 3D environments. They will submit 2 individual assignments using these tools to develop a simple interactive environment. These individual assignments will be graded and critiqued.

In the second half of the course, students will work on a game idea from generation to actual implementation. Students will be grouped in teams of three to develop a project, integrating concepts they learned through the class. They will use one or more of the tools they learned to build this project. Projects will be continuously evaluated and critiqued during game tuning sessions. In addition, projects will be formally evaluated through two prototypes that are critiqued by the class and the instructor. The students will continuously revise their designs and projects through the semester. The final version of the system is due by the end of the semester.

**IST 450A** (COMM 450A) Search Engine Marketing (3) This project-oriented course provides students with the knowledge and skills necessary to conduct a sponsored research and keyword advertising-based marketing campaign.

**IST 450A****IST 450A Search Engine Marketing (3)**

This course offers the students an opportunity to gain knowledge and hands on experience on sponsored search and keyword advertising. In this course, students will gain knowledge and skills to advertise products and services using keyword advertising. Strategies for developing successful advertising campaigns will be discussed, including targeting potential customers based on the geo-location, applying A/B testing to identify the feasible advertising set-up, and organizing keywords with various products and services for effective management. In addition, various tools will be introduced to students for facilitating efficient and effective performance. By participating in a firm-based project, the students will acquire the experience of business consulting for advertising using current web-based techniques.

**IST 450B (COMM 450B) Digital Advertising (3)** This course will explore the digital advertising "ecosystem," identify key players and trends, and review programmatic media buying.

**IST (COMM) 450B Digital Advertising (3)**

Beyond keyword advertising, digital has transformed many industry activities related to buying and delivering advertising. Information technology and big data have revolutionized the way media and content providers interact and negotiate with advertisers, agencies and third parties. This course will explore the digital advertising and media "ecosystem," identify key players and trends, lay out the basics of digital advertising campaign management, and review performance analysis and evaluation. Students passing this class will be able to take the Interactive Advertising Bureau Digital Media Sales certification exam. Students can opt to take the exam any point in time, it's not required.

**IST 451 Network Security (3)** Fundamental issues and concepts of network security, network security technologies and protocols, and emerging technologies in network security.

**IST 451 Network Security (3)**

Information technology has become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information/network security a major concern for organizations.

IST 451 focuses on network security. The course will provide the students with a comprehensive understanding of the fundamental issues and concepts of network security, and the mainstream network security technologies and protocols that are widely used in the real world. The course will also address emerging technologies in network security.

A major component of the course will be several team-based hands-on attack-defense projects. Each project has two phases: the attack phase and the defense phase. A group may be asked to defend against the attacks enforced by another group. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

**IST 452 Legal and Regulatory Environment of Privacy and Security (3)** Exploration of legal, regulatory, public policy, and ethical issues related to security and privacy for information technology professionals in public institutions, private enterprise, and IT services.

**IST 452 Legal and Regulatory Environment of Privacy and Security (3)**

Institutional constraints on security historically focused on traditional criminal enforcement and a slow but steady increase in civil remedies through the twentieth century. Professional security protection could satisfy reasonable assurance criteria by managing legal and regulatory risks based on commonly-held understandings of burglary, theft, conversion and widely-understood but related institutional constraints in the protection of physical property. This focus retained effectiveness so long as physical security over tangible property appeared successful, even extending to the maintenance of control over mainframe computers and their peripherals. However, the proliferation of networked computers has made access and storage ubiquitous, vastly increasing the vulnerability of confidential data, private information and critical national security infrastructure. Security and privacy regulation compliance responsibility now falls much more harshly on both organizations and most of their individual personnel. These complex new duties constrain organizations in the data management industry as well as suppliers and users of data and all participants in the information supply chain, including consultants, software suppliers, applications service providers, maintenance, outsourcing and communications providers.

Other factors exacerbate these liability risk management difficulties. Advances in network computer storage and use, the broadening perception of heightened value of information and the pervasive availability of rich data warehousing increase the vulnerability of data management. Risks of information theft and integrity losses as well as the explosion of privacy rights and national security concerns now require pervasive and fuller understanding of liability risk management principles/techniques among all managers and subordinates in the data management industry and in government. Information suppliers, handlers, owners and network service providers are increasingly exposed to civil litigation, regulatory oversight/compliance and criminal prosecution for various information-related wrongs. For example, confidentiality is compulsory for corporate trade secrets, privacy is required for personally identifiable information about individuals and secrecy is mandatory over matters of national security; all of which create complex legal duties that are fundamentally driving the design of information handling processes. This course surveys legal and regulatory constraints on information security and privacy practices.

**IST 453 Legal, Regulatory, Policy Environment of Cyber Forensics (3)** Legal, regulatory and public policy environment of computer and network forensics that constrain investigatory and monitoring activities in computer and network environments.

**IST 453 Legal, Regulatory, Policy Environment of Cyber Forensics (3)**

This course covers the major legal, regulatory and policy issues in cyber-forensics including, pre-trail discovery, production of electronic documents (electronic data discovery or EDD), custody, EDD cost balancing, admissibility of electronic evidence, "business records," expert witness roles and qualification, constitutional rights to privacy and confidentiality, privilege, litigation support, forensic service providers, document retention standards, legal constraints on

electronic records management, EDD employment policies, key EDD laws, civil, criminal and regulatory procedure and evidence, litigation holds, spoliation, obstruction of justice, interaction with inside and outside service providers and counsel, EDD strategy, audit trails, and multi-disciplinary relations with computer and network forensic experts. Students are exposed to the failure and successes of particular cyber forensic techniques in the dominant legal and regulatory forums.

**IST 454 Computer and Cyber Forensics (3)** Fundamental issues and concepts of computer forensics; aspects of computer and cyber crime; methods to uncover, protect, exploit, and document digital evidence; tools, techniques, and procedure to perform computer and cyber crime investigation.

### **IST 454 Computer and Cyber Forensics (3)**

Computer and communication technologies have become the key components to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information and network security a major concern for organizations.

IST 454 focuses on computer and cyber forensics. Students will learn different aspects of computer and cyber crime and ways in which to uncover, protect, exploit, and document digital evidence. Students will be exposed to different types of tools (both software and hardware), techniques and procedure, and be able to use them to perform rudimentary forensic investigations.

A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Integrated throughout are perspectives of computer and related legal process, including computer crimes from state and federal law, methods of interaction with law enforcement and prosecutors, admissibility of expert witness testimony and the use of forensic reports in civil, regulatory and internal investigations.

**IST 461 Database Management and Administration (3)** Introduces advanced topics in database management systems that are fundamental to effective administration of enterprise information systems.

### **IST 461 Database Management and Administration (3)**

The objective of the course is to enable a student to comprehend principles of database management and administration. The students will learn how data are stored (indexing), accessed (query processing), shared (currency and transactions), and controlled (security). Students will be creating and using these features in a database in the laboratory. They can then develop, use, and tune database systems and applications, utilizing advanced database management features. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). It builds the foundation on more advanced concepts of database systems that are fundamental to a career in database administration.

**IST 489H Research Methods for the Information Sciences and Technology (3)** Seminar course focused on approaches to studying information and communication technologies and writing theses and other research reports.

### **IST 489H Research Methods for the Information Sciences and Technology (3)**

IST 489H provides students the opportunity to learn and experience:

- 1) Conceptualizing what are information and communications technologies.
- 2) Approaches to conducting research on, and reporting results of studies, of ICT.
- 3) The research process and its academic context.

The course is designed around a series of ill-structured, contemporary, problems that require students to develop responses by applying research approaches to ICT. At the end of the course, students will be able to:

- 1) Apply different conceptualizations of ICT to common problems.
- 2) Select and initiate research on ICT.
- 3) Begin writing research-oriented work such as theses and papers.

**IST 501** Interdisciplinary Research Design for Information Sciences and Technology (3) An interdisciplinary introduction to graduate research design for investigating how data and information technologies are created, analyzed, and evaluated.

**IST 501 Interdisciplinary Research Methods for Information Sciences and Technology (6)**

IST 501 serves as the central foundational course for graduate students who intend to conduct research in IST. Although each student may eventually focus on one or several methods discussed in the course, the College is committed to providing all of its research students an interdisciplinary mindset regarding their own and their peers' research activities. This mindset is a defining feature of IST research training. As a result it is critical to convey this to new students.

The course provides foundational information regarding three contrasting research perspectives of IST: Social Informatics, Human-Centered Design and Computational Informatics. The three perspectives are presented in an interleaved fashion, one week at a time, with gradually increasing complexity and sophistication in the methods used. The methods address requirements for, design of, and impacts of information technologies used to meet people's information needs at multiple levels of analysis, including individuals, groups, organizations and national and global cultures. The technologies investigated are of various types, including algorithms, structured data, user interfaces, and distributed systems. Each one-week methods topic is practiced through an individual homework activity and a team project is used to provide an integrated application activity that cumulates throughout the semester.

Through reading of contemporary and classic literature, demonstrations and practice with specific research techniques, and sharing and reflection on individual and team research activities, students will explore fundamental assumptions, theories and directions in contemporary research methods useful to researchers in IST. The emphasis of this course is on defining and developing conceptual linkages between human behavior, the social, organizational and cultural context of information and technology use, human experience when learning or using information and computing technologies, and the construction of information and computing technologies. The interdisciplinary research methods will operate at individual, group and other units of human, social and organizational analysis, and across a range of information technologies.

**IST 503** Foundations for IST Research (3) Study of major methodological, normative, and theoretical issues in philosophy of science related to research in information sciences and technology.

### **IST 503 Foundations for IST Research (3)**

This course is a study of major methodological, normative, and theoretical issues in the philosophy of science related to research in information science and technology. A significant part of this course will involve coordinating issues and problems customarily associated with the philosophy of science in general with current research in information science

and technology (IST) in particular. In order to achieve this coordination, the study of classical texts in the philosophy of science will be interspersed at appropriate places with lectures and topics that exhibit relevant faculty research in various IST related disciplines.

The course focuses on the main arguments that have been advanced in Anglo-American philosophy of the science for the period beginning about seventy years ago up to the present. The course contradicts the view of a single unitary "philosophy of science." It shows a series of positions and arguments that continue to lead on to still deeper questions. Usually the student will have adopted one of the classical positions without having examined it or defended it rigorously.

Readings will progress in a historical fashion through arguments that attempt to provide a justification for the truth claims of science. The course will begin with a consideration of logical positivism in its early forms, i.e. the ideas of the Vienna Circle, and the early Wittgenstein's theory of meaning. The course will go on to the writings of Karl Popper especially as found in his *Logic of Scientific Discovery*. Continuing the historical development, Kuhn's "The Structure of Scientific Revolutions" will be considered. The discussion will then progress to the Popper-Kuhn debates involving the sophisticated falsificationists (Lakatos) and eclectic approaches like Feyerabend's. Finally, Richard Bernstein's book, *Beyond Objectivism and Relativism* is reviewed summarizing the debate. This final view strives to uncover the strong points in the opposing positions reviewed early in the course. Then it sets a hermeneutical position which he derives principally from the philosophy of Hans Georg Gadamer. This position amounts to a new and interesting view on how knowledge is attained in science and in life in general.

The course relates the debates in the arguments in the philosophy of science to research issues in IST.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 504 Foundations of Theories and Methods of Information Sciences and Technology Research (3)** Provides the foundation to the research and theories of how technologies are used to meet society's, groups' and individuals' information needs.

### **IST 504 Foundations of Theories and Methods of Information Sciences and Technology Research (3)**

This course provides an overview of the diverse fields that comprise the information sciences. The course has three broad objectives. First, the course serves as an overview to the theories, models, findings, research methods and research-related issues that frame the multiple fields of the information sciences. Second, the course provides students with skills of critical evaluation of literature. Finally, the course provides students a means to begin formulating researchable topics and questions.

The course is designed as a fundamental course for research-oriented graduate students in the information sciences. The specific focus is a critical treatment of the research relative to the questions asked, views of a technology's affordances and potential uses, the implementation of the research, and conclusions drawn.

Through reading of contemporary and classic literature, ongoing debate, reflection and synthesis, and active analyses, students will explore fundamental assumptions, theories and directions in the contemporary research in the various fields of the information sciences. The emphasis of this course is on defining and developing conceptual linkages between human and social behavior, information and the use of computing technologies.

Assessments will be based on a number of short summary papers and an extensive synthesis of literature organized around a conceptual framework. Because this is an interdisciplinary subject, students should be prepared to read outside their primary research/interest area and be ready to embrace and integrate new knowledge from related fields into their primary field.

Effective: Summer 2015

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**IST 505 Foundations of Research Design in Information Sciences and Technology (3)** Provides the foundations on research design and methods used in information sciences and technology.

### **IST 505 Foundations of Research Design in Information Sciences and Technology (3)**

This course develops students' abilities to conduct academic research, formulate a relevant thesis proposal, present and discuss the progress of their work, and conduct a small-scale research project in an information sciences and technology-related area. It provides an overview of the major research methods used in the area of information sciences

and technology, including quantitative, qualitative, computational, and design approaches. The course emphasizes developing and practicing research design, execution, evaluation, and writing skills through application of the concepts that define the course.

**IST 511 Information Management: Information and Technology (3)** Introduction to theoretical, computational, and practical issues involved in managing textual, spatial, temporal, and multimedia information in a computerized system.

### **IST 511 Information Management: Information and Technology (3)**

The objective of IST 511 is to provide an introduction to the theoretical and computational issues involved in managing textual, spatial, temporal, and multimedia information. The course will survey the nature of information in various application contexts (digital libraries, digital government, healthcare information, environmental information, etc) and seek to understand their generic and specific requirements for information management. Students will be exposed to major principles and technologies for information management that are drawn from database systems, and information retrieval (IR) and spatial/geographical information systems literature. Special emphasis will be given to the problems of managing heterogeneous information sources with different ontology, representation, scales, and error characteristics.

This course is required of all Information Sciences and Technology (IST) graduate students under both research Master and Ph.D. degrees. It is a foundation course that should be taken in the first or second year of graduate study. IST 501 is the prerequisite for this course.

For hands-on practice and demonstration purposes, this course requires student access and use of a database management system (such as ORACLE or SQL server), a geographical information systems (Arc View or MapInfo), a information retrieval system, and/or a ERP (Enterprise Resource Planning) system.

General Education: None

**IST 512 Information Processing Architecture and Technology (3)** This course introduces the core theories, concepts, and methods regarding information and technology from an information processing point of view.

### **IST 512 Information Processing Architecture and Technology (3)**

IST 512 provides an introduction to the core theories, concepts, and methods regarding Information & Technology from an information processing point of view, with emphases on information processing architecture and technology at the infrastructure layer and the middleware layer. The course consists of five major components: (1) core theories and concepts about technologies from the perspective of information-centric uses, (2) overview of three layer architecture for information processing systems, (3) infrastructure layer core technologies, (4) middleware layer core technology, and (5) technologies to guarantee the quality of information-centric uses. The detailed content of each component is described in the previous section.

**IST 521** Human-Computer Interaction: The User and Technology (3) Users, models of users, developing the models, technology for creating interfaces; examples of good research and implications for Human-Computer Interface (HCI) design.

**IST 521 Human-Computer Interaction: The User and Technology (3)**

This course introduces students to the broad area of human-computer interaction and the idea of a theory driven interface, an underlying concept in HCI. To do this, the course starts by outlining relevant aspects of human behavior with respect to technology and how interfaces are developed, the two raw components. Students are then exposed to a tool for creating interfaces and a variety of theories of how users interact with technology on a variety of levels. These theories are validated and supplemented by usability studies. The course completes with a group project based on the readings and theories introduced in the first 12 weeks.

**IST 525** Computer-Supported Cooperative Work (3) IST 525 introduces theories, empirical findings, evaluation methods, and design frameworks in computer-supported cooperative work.

**IST 525 Computer-Supported Cooperative Work (3)**

Students in the course will investigate CSCW challenges and opportunities from the dual perspectives of human-computer interaction and socio-technical systems analysis. They will analyze group interactions and concerns in collaborative activities such as written and spoken communication, design, meetings, education, decision-making, and everyday work activities. They will review and critique state-of-the-art CSCW technologies, including text-based and video communication tools, immersive meeting environments, group decision-making, workflow, and knowledge management. These technologies will provide a context for investigating and synthesizing issues related to individual use (e.g., perceptions of cost-benefit), the context of collaboration (e.g., social and cultural norms embodied in systems), and software architecture (e.g., coupling and consistency management). Students will apply their understanding of these issues in evaluation and design projects.

**IST 541** Qualitative Research in Information Sciences and Technology (3) Assists IST researchers in their efforts to learn about and employ appropriate qualitative methods in their research.

### **IST 541 Qualitative Research in Information Sciences and Technology (3)**

As information and communication technologies (ICTs) have evolved, so too has our understanding of the role of the human contexts within which information technologies are situated. This has led to the need for appropriate methods of studying information systems and technologies in their context of use. There is a growing consensus that qualitative methods offer important research opportunities for this type of study. Therefore, researchers in such fields as the information sciences and technologies, communication technologies and information systems should have an understanding of the various types of qualitative methods so that they can determine ones that are most appropriate for addressing their particular research problems. The course is complementary to quantitative methods courses, in that it addresses problems that are not amenable to those approaches. For example, studies involving very small groups, individuals, societal level concepts and others often lend themselves to qualitative research techniques.

This course begins by considering research topics that lend themselves to the choice of qualitative research methods. It then proceeds to examine the steps involved in conducting qualitative research. These include: developing the research question(s); choosing a particular research method (such as ethnography, case study or action research); making decisions about approaches to data collection (such as interview or focus group) and analysis (such as coding technique); and producing and publishing the results.

This course explores concrete issues that researchers have encountered in their use of qualitative methods. It does this by drawing upon the collective expertise of distinguished scholars who employ qualitative methods in their own research. The course will examine published work that focuses on research findings as well as that which discusses methodological issues.

**IST 557 Data Mining: Techniques and Applications (3)** This course will introduce data mining techniques, including frequent pattern and association rule mining, some basic background on classification and clustering, and applications of data mining techniques in specific domains. The emphasis will be on applications in specific domains rather than fundamental methodologies.

### **IST 557 Data Mining: Techniques and Applications (3)**

The course will begin with an introduction of data mining field, including why data mining, what is data mining, what kinds of data can be mined, what kinds of patterns can be mined, an overview of technologies, the major issues in data mining, and a brief history of data mining community.

The three key lecture topics are: (1) mining frequent patterns and association rules; (2) classification: basic concepts and techniques, and (3) cluster analysis: basic concepts.

- For topic (1), we will introduce frequent itemset mining methods including Apriori and FPGrowth. We will also teach advanced frequent pattern mining methods such as pattern mining in multi-dimensional space, constraint-based frequent pattern mining, mining high-dimensional data, sequential pattern mining, and graph pattern mining.
- For topic (2), we will teach how to formulate a real-world problem into a classification problem, how to apply classification models on real data and how to analyze the results. The classification models covered in our class include decision tree, random forest, boosting, support vector machine and kernels, naïve bayes classifier, and KNN. Students will

learn how to evaluate classification methods using different measures. We will be brief on the fundamental classification methods and will focus more on the applications of such methods on various kinds of data.

- For topic (3), we will cover the clustering topics including partitioning methods, hierarchical methods, density-based methods, grid-based methods and evaluation of clustering results. We will be brief on the fundamental clustering methods and will focus more on the applications of such methods on various kinds of data.

Four weeks will be used for lectures on special topics such as text mining, time series mining, spatial data mining, graph mining, image mining, and emerging subjects in data mining. The purpose of the special topics is to help students learn about real-world data mining problems and applying state-of-the-art solutions to them. Instructor will select a few topics based on students' project proposals. Instructor and students will work together on the literature survey and prepare for the presentation.

Potential key special topics include:

- Mining text data. We will introduce basic preprocessing methods such as tokenization, stemming, and stopwords filtering and basic textual features such as tf-idf. We will teach text mining topics including sentiment analysis, topic modeling, and entity extraction.
- Mining temporal data. We will introduce basic techniques in mining temporal data, such as measuring time series similarity, periodicity analysis, and trend prediction.
- Mining spatial data. We will introduce basic spatial models, clustering of spatial locations, spatial outliers, co-location patterns, and location prediction.

There will be five discussion classes. Instructor will use these classes to talk with individual students and teams, help them with the problems they encounter in assignments and projects, and better personalize the learning experience.

**IST 558 (STAT 558) Data Mining II (3)** Advanced data mining techniques: temporal pattern mining, network mining, boosting, discriminative models, generative models, data warehouse, and choosing mining algorithms.

### **IST (STAT) 558 Data Mining II (3)**

This course is the second course in a two-course sequence on data mining. It emphasizes advanced concepts and techniques for data mining and their application to large-scale data warehouse. Building on the statistical foundations and underpinnings of data mining introduced in Data Mining I , this course covers advanced topics on data mining; mining association rules from large-scale data warehouse, hierarchical clustering, mining patterns from temporal data, semi-supervised learning, active learning and boosting. In addition, to computational aspects of algorithm implementation, the course will also cover architecture and implementation of data warehouse, data preprocessing (including data cleansing), and the choice of mining algorithms for applications. In addition to discriminative models such as CRF and SVM models, the course will also introduce generative models such as Bayesian Net and LDA.

A term project will be developed by each student to apply an advanced data mining algorithm to a multi-dimensional data set. Classes will include lectures, paper discussions, and project presentations. Paper discussions will allow students to discuss state-of-the-art literature related to data mining. Project presentations will enable students to share and compare project ideas with each other and to receive feedback from the instructor.

**IST 561 (EDSGN 561, I E 561, CSE 561) Data Mining Driven Design (3)** The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design.

### **IST (EDSGN/CSE/I E) 561 Data Mining Driven Design (3)**

This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases.

The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn

essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course.

This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains.

Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

**IST 868 Topics in Visual Analytics for Security Intelligence (3)** Introduce visual analytic techniques for security informatics and intelligence. Survey technical approaches for data analysis, threats and vulnerability, communicating risk.

### **IST 868 Topics in Visual Analytics for Security Intelligence (3)**

This course surveys techniques for visualizing and analyzing security and risk information and for communicating threats, risk and vulnerability to decision-makers. Students will be motivated by the needs for better intelligence in a broad range of applications such as homeland security, crisis management, and public safety. Through case studies and problem-based learning, students will develop understanding of important concepts and issues, such as data source and data quality, visual thinking associations and integration of incidence, hazards, and risk factors, and the difficulties of analyzing and communicating knowledge. Various visual analytical methods for homeland security intelligence will be discussed, such as: (1) mapping and visualizing patterns of crime and incidence, (2) identifying targets and agents of terrorist attacks, (3) spatial analysis of social, economic and environmental risk indicators, and (4) prediction of threat and risk. It also pays special attention to the interpretation of analytical results for actions. Geographical information systems and associated spatial analytical tools will be used to exemplify the kinds of information environment available to intelligence community. The course will prepare students to become immediate workforce for security-related industries and government agencies.

**IST 885 Introduction to Multisensor Data Fusion (3)** Understanding the concepts, techniques, and issues surrounding the fusion of information from multiple sensors and sources of data.

### **IST 885 Introduction to Multisensor Data Fusion (3)**

Rapid advances in nano and micro-scale sensors, ubiquitous wide-band wireless communications and improvements in

computing provide the opportunity to collect and disseminate huge amounts of data and information from sensors, humans acting as observers, and emerging data available on the web. Applications for this data are widespread and include areas such as geospatial intelligence, emergency management, environmental monitoring, epidemiology, and others. This course introduces methods and process models for fusion of the information from diverse sources to achieve inferences that cannot be obtained by using a single source or sensor.

**Course Objectives:**

IST 885 provides an introduction to multisensor information fusion. Multisensor information fusion seeks to combine information from multiple sensors and sources to achieve inferences that are not feasible from a single sensor or source. the proliferation of micro and nano-scale sensors, wireless communication, and ubiquitous computing enables the assembly of information from sensors, models, and human input for a wide variety of applications such as environmental monitoring, crisis management, medical diagnosis, monitoring and control of manufacturing processes. Techniques for fusing multisensor and multi-source information are drawn from a variety of disciplines including statistics, data mining, artificial intelligence, estimation and control theory, pattern recognition, and signal and image processing. While this course is non-mathematical it will help students understand the concepts, techniques and issues associated with developing and using multisensor data fusion systems.

At the end of this course students should be able to:

- \* Explain different models of multisensor data fusion and describe the advantages and limitations of data fusion
- \* Explain the five levels of data fusion in the Joint Directors of Laboratories (JDL) data fusion process model
- \* Assess and characterize a sample information fusion application
- \* Identify various techniques used in multisensor data fusion and indicate the applicability and limitations of the techniques for a selected application
- \* Design a data fusion system including specifying the required functions, applicable techniques, selection/assessment of sensors and information sources, and design of a sample user interface
- \* Discuss current technology trends that affect the implementation of a fusion system.

**Student activities:**

The course consists of ten lessons and one capstone group project that will span either the 15-week semester or the combined 12-week summer session. Each lesson will require approximately 8 hours of student activity. Student activities will include reading lesson text, online quizzes, and discussions about the way in which multisensor information fusion is applied to selected applications such as geospatial intelligence, environmental monitoring, monitoring of complex systems, crisis management or related areas.

## **Information Systems (INFSY)**

**INFSY 535** Object-Oriented Design and Programming in Business (3) Overview of key concepts in object design and the application of these concepts in business software development.

### **INFSY 535 Object-Oriented Design and Program Development in Business (3)**

INFSY 535 will be among the courses making up those prescribed in the MS&IS program and would normally be taken early in the Program. It is a prerequisite to several additional courses that are listed as part of the program. The course is intended to provide students with backgrounds in object-oriented design and to understand the application of these concepts to business problems. Students will learn basic object concepts and develop skills to implement programs utilizing object tools.

As managers in the technology environment, students need to have an understanding of how projects are implemented. To be successful they also need to learn how to work together to design, implement, and manage technology projects.

The goals of INFSY 535 are to:

- 1) Expose students to principles and concepts within the object oriented programming environment,
- 2) Teach students basic principles of project management and to manage a collaborative environment,
- 3) Teach students how to apply an object-oriented language in a business environment,
- 4) Show students how these techniques increase productivity of complex systems,
- 5) Develop team skills when programming complex systems and
- 6) Prepare students to continue in the program.

**INFSY 540** Information Technology and Knowledge Management (3) Information systems management, enterprise models of information technology, information technology and knowledge management.

### **INFSY 540 Information Technology and Knowledge Management (3)**

INFSY 540, Information Technology and Knowledge Management, is a required course for MBA and MSIS students. Students will be provided an understanding of enterprise resource planning and how it relates to information technology architecture and its impact on modern organizations. Students learn Information Technology and Knowledge Management concepts that may be applied to leverage the benefits, avoid the pitfalls, and overcome the limitations of using information technology in an organization.

Although individual assignments and examinations will occur, INFSY 540 includes project- and team-based assignments where students will actively examine Information Technology and Knowledge Management and its effects on industries and specific organizations. Student performance will be evaluated using both individual and team assignments, individual examinations, case study analyses, and research papers.

**INFSY 543** Electronic Commerce (3) Overview of key aspects of E-Commerce within an organizational context including coverage of managerial issues and supporting technology.

### **INFSY 543 Introduction to E-Commerce (3)**

INFSY 543 provides a survey of E-Commerce topics, and serves as a foundation for further courses on E-commerce. The course is designed to appeal to both MBA and MSIS students. Upon successful completion of this course, the student will have an understanding of the various types of e-commerce, systems used to support e-commerce, applications of e-commerce, and associated managerial issues. INF SY 543 is an elective in the MBA and MSIS programs. INFSY 540, Information Resources in Management, is a required course for MBA and MSIS students and is a prerequisite for INFSY 543. In INFSY 543, students will continue to explore the interrelationship between technology and organizational performance. Although individual assignments and examinations will occur, INFSY 543 includes project- and team-based assignments where students will actively examine e-commerce and its effects on industries and specific organizations. Student performance will be evaluated using both individual and team assignments, individual examinations, case study analyses, and c-commerce project(s). INFSY 543 will be offered once per academic year or more frequently, based on student enrollment and demand.

**INFSY 547** WEB Enabled Technologies (3) Integrating design principles and applying technologies that support business related, web-based applications.

**INFSY 547 WEB Enabled Technologies (3)**The objectives of this course are to:

- a) teach students how to manage large WEB projects
- b) teach students a programming language that is used to create complex business projects
- c) make students aware of research issues that apply to WEB development
- d) strengthen collaborative skills related to project development

To accomplish these goals, students will study project management as applied to WEB applications, participate collaboratively in a business project where they apply management and design skills over the course of the semester. Additionally, the latest research will be explored as it relates to the above.

**INFSY 563 Network Security (3)** This is a study of network security concepts, technology and issues. Authentication, privacy and integrity of messages are analyzed.

**INFSY 563 Network Security (3)**

INFSY 563 is a follow-up course to INFSY 560, Data Communications and Networking. The objective of the course is that students gain an understanding of network security beyond what can be taught in an introductory course. Although the course is designed to appeal primarily to MSIS students, it is expected that the more technically minded MBA will find the course valuable. Upon successful completion of this course, the student will have an in depth understanding of encryption techniques and the use of keys for encryption. Each student will study the appropriate applications to public keys, secret keys, and session keys. They will gain an understanding of the role of certificate authorities and the public key infrastructure. In addition, students will learn about the various architectures available to transmit information securely across the Internet through virtual private networks. Students will be required to complete a research project that

synthesizes their knowledge of encryption, keys, and virtual private networks.

**INFSY 565** Intelligent Systems in Business (3) This course will emphasize the analysis, design, and application of intelligent systems within organizational settings.

**INFSY 565 Intelligent Systems in Business (3)**

This course emphasizes the analysis, design and application of intelligent systems within organizational settings. Students will study the underlying concepts of intelligent systems such as expert systems and neural networks and learn how these systems support the business environment. A goal of the course is that students learn when and where intelligent systems will benefit an organization.

Students will analyze cases related to intelligent system development, study the issues of knowledge acquisition, and learn about uncertainty in intelligent systems. Actual system applications will be integrated into the course.

**INFSY 566** Data Mining and Knowledge Discovery (3) The study and application of data mining techniques used to mine patterns in large transactional databases.

**INFSY 566 Data Mining and Knowledge Discovery (3)**

This course deals with the advanced study of intelligent data mining tools that are used to mine patterns in very large databases. The focus is on theoretical, mathematical and statistical foundations of data mining as well as the applications of data mining to various business applications. Students taking this course will learn different data mining techniques that can be used to mine patterns in large corporate and transactional databases, will be capable of developing and applying data mining tools, and will be able to do independent research in data mining area.

Specific topics include the process of and statistical perspectives on knowledge discovery in databases, graphical models for discovering knowledge, inductive logic programming and data mining, discovering informative patterns and data cleaning, fast mining of association rules, inductive and deductive reasoning for data mining, and mathematical foundations of data mining. Data mining applications in finance, direct marketing and medicine will be emphasized.

Several projects and a research paper required.

**INFSY 897A** Business Strategies for Big Data (3) The course will examine the entire life cycle of a data analytics project, from data origination through collection, filtering, tool selection, calculation, and communication. Particular emphasis will be placed on problem formulation: what is the business issue at hand, what data might be useful in understanding that issue, and what tools can be most usefully applied in a particular context. In addition, communication skills will be emphasized: how does data inform the decision-making process, when the audience likely lacks the specialized quantitative literacy of the project team? Other important considerations include many facets of information privacy: students will consider the ethical and legal implications of de-anonymization, of deep insight into individual behavior, and of opt-in versus opt-out models of participation.

**IMBA 516** Organizational Behavior and Performance (2) Analysis of conceptual models, systems, and decision processes consistent with high levels of individual, group, and organizational performance.

#### **IMBA 516 Organizational Performance Management (2)**

The primary objective of this course is to provide an introduction to the research and case study findings relating to the performance of people and groups in organizations. These findings, when taken in the context of contemporary social, ethical, and legal contextual factors, are employed by managers at all levels of high performing organizations to establish, direct, enhance, and deploy desired behavior of individuals, groups, and the organization itself. Course topics will also focus upon mechanisms for continuous system improvement methods such as employee involvement, training, satisfaction, and well-being. Information regarding work system effectiveness, as well as effectiveness of measurement, control, and support systems is also considered.

**IMBA 517** Corporate Governance (2) Study of interrelationships among shareholders, boards of directors, and managers (owner agents) and other stakeholders in a modern public corporation.

#### **IMBA 517 Corporate Governance (2)**

The subject matter of corporate governance deals with the nature of the interrelationships among shareholders (owners), boards of directors (representatives of the owners), and managers (agents of the owners). These interrelationships form the basis for the modern corporation. As their agents, managers are supposed to run a company in the interest of its shareholders; the board of directors is expected to monitor the performance of managers and to ensure that they do not stray from their primary obligation to the owners. The subject of corporate governance also encompasses the study of corporations' relationships with its employees, creditors, suppliers, and customers. Finally, as corporations are expected to be good citizens of their communities, corporate governance also extends to the study of corporations' relationships with their communities.

Periodic scandals involving major, publicly held companies have underscored the fundamental importance of these relationships. The larger interests of society and of its citizens required that various stakeholders perform their roles in an ethical manner. This course reviews major theories of ethical and moral development, provides cases and exercises to heighten students' awareness of these areas, and reviews heuristics and decisions-models for ethical conduct. This course thus also addresses the emerging area of ethical corporate governance, specifically exploring the how ethical conduct and the ethical underpinnings of corporate governance function to safeguard the interests of all stakeholders.

**IMBA 523** Organizational Development, Intervention and Change (2) Analysis and assessment of conceptual models, systems, and decision processes for organizational development, intervention and change; transformation and reengineering processes.

**IMBA 523 Organizational Development, Intervention and Change (2)**

This course will analyze organizational models using current theory and case study application to discuss the topics surrounding organizational development, intervention and change. The course focuses on the human and social aspects of the organization as a way to improve the "fit" between individuals and the organization and between the organization and the environment. This analysis and assessment helps to improve the organization's overall performance and stakeholder satisfaction. The course emphasizes the use of Organization Development (OD) as one of the most effective approaches to introduce changes to organizations and to facilitate intervention. The course elaborates on knowledge and techniques from the behavioral sciences to create a learning environment through increased trust, open confrontation of problems, employee empowerment and participation, knowledge and information sharing, the design of meaningful work, cooperation and collaboration between groups and the full use of human potential.

**IMBA 531 Project Management (2)** A problem-based, interdisciplinary course in project management skills and techniques needed to manage projects in a modern business environment.

**IMBA 531 Project Management (2)**

Project management has been labeled by Fortune Magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, to respond to rapid time-to-market demands. This course would give business majors a competitive advantage in the job market, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential.

The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep to timetables and schedules.

The course will involve semester-long projects, either developed by the instructor or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

**INTAF 504 Political Economy of Development and Growth (3)** Theories of economic growth and established empirical evidence are used to explain differential levels of economic development across the world.

**INTAF 504 Political Economy of Development and Growth (3)**

This course examines the reasons why different nations realize diverse long-run levels of welfare. Possible determinants of the differential outcomes include different rates of accumulation in physical capital, rates of technological innovation, the impact of human and financial capital, and the impact of demographic changes with increasing levels of economic development. Further extensions include a consideration of the impact of the openness of economies, geographical location, and exposure to disease vectors. In addition, the course considers the impact of institutions, including domestic institutions, international institutions, as well as multilateral forms of cooperation between economies. Types of institutions to be considered will include micro-level institutions (those that function most obviously at the individual agent level), as well as institutions that govern societies at more aggregate levels. The course also examines evidence on whether there are interaction effects between the determinants of growth (for instance, whether the impact of openness is different under democratic or autocratic political governance). The course will consider relevant theory, but will place an emphasis on examining available data sources in order to test alternative explanations. Given the International Affairs context, particularly strong emphasis is placed on drawing from literatures that reflect the strong interdisciplinary nature of International Affairs programs. This includes perspectives from economics, law, political science and sociology.

**INTAF 505 Strategy, Conflict, Peace (3)** The course teaches the principal solution concepts to the analysis of strategic interaction in static and dynamic contexts, and under incomplete information.

**INTAF 505 Strategy, Conflict, Peace (3)**

The purpose of this course is to provide the analytical tools required to deal with international affairs situations that involve strategic actions - that is, actions whose outcome depends on the interaction with other decision makers. While the approach of the course is applied, with recourse to many illustrations by real examples, the primary concern of the course is with the development of the appropriate analytical tool kit to be able to deal with choice in the presence of strategic interaction with other agents. The core tool kit is provided by game theory, and this is the focus of the course. Coverage will be of the representation of games, solution concepts in static as well as dynamic games, and the role of information in games. While primary attention will be on non-cooperative strategic interaction, some results from cooperative game theory are also considered. Presentation of core analytical techniques will be in the form of lectures. Many applications will be presented by course participants. Applications are drawn from concrete examples encountered in the literature. Strong emphasis is placed on applications that are encountered by agents in international contexts. Since such international agents span the range from nations, political parties, firms, multinationals, households and firms, applications are multidisciplinary. Applications are drawn from (but not limited to): voting and agendas; reciprocity; surprise attack and disarmament; nuclear deterrence; randomization of promises and threats; sequential bargaining; time consistency; reputation; location games; partnership games; tariffs; Median Voter Theorem; political participation; contracts; guarantees; reputation and incomplete information; signaling; cheap talk; tournaments; coalition formation and the importance of stable preference-driven cooperation in an anarchic world.

**INTAF 508 Domestic Influences on Foreign Policy (3)** This course will examine how domestic politics influences the formulation and implementation of foreign policy in the United States and other major powers.

### **INTAF 508 Domestic Influences on Foreign Policy (3)**

This course will examine how domestic politics influences the formulation and implementation of foreign policy in the United States and other countries. Among the factors considered will be the role of lobbyists, special interests and bureaucratic politics. Among the major topics covered will be national identity, the politics of national security since World War II, foreign policy formulation in China, the domestic sources of American foreign policy, case studies in buying influence, the influence of think tanks, public opinion and ethnic groups, how other countries attempt to influence American foreign policy and how domestic groups in other countries try to influence their own foreign policy. This course will be extremely useful to any student wishing to understand how governments formulate and implement foreign policy and how that has been affected by domestic politics in the past and today. Students will learn about the history of political influences on foreign policy and how that had changed over time, especially since the end of the Cold War. Students will also develop their ability to think critically and to apply that thinking to historical and present-day examples of interest groups influencing foreign policy. The course will also emphasize professional skills including the development of the student's ability to write and to make in-class presentations.

**INTAF 810** Energy, International Security, and the Global Economy (3) This course explores the economic, political, and strategic implications of ongoing trends in global energy markets, particularly oil and gas markets.

**INTAF 810 Energy, International Security, and The Global Economy (3)**

This course explores the economic, political, and strategic implications of ongoing trends and structural shifts in global energy markets. It focuses especially on international markets for crude oil and natural gas; attention is also devoted to nuclear energy, the international nuclear industry, and nonproliferation challenges. Students will develop a deep appreciation of the role of energy, and especially hydrocarbon-based energy, in contemporary international affairs. They will learn about the historical development and evolution of hydrocarbon-based energy and the international oil and gas industry; about the various types of contractual arrangements for cross-border investment in upstream oil and gas development and what the differences among these types of agreements reflect regarding the shifting balance of power between resource-owning national governments and foreign investors; and about why and how major energy market players shape their interactions on the basis of political and strategic calculations, along with commercial and economic considerations. They will also learn about the economic and political factors affecting the contribution of nuclear energy to the global energy balance; about the major proliferation risks associated with civil nuclear technology; and about the international regime that has been developed to mitigate these risks and the most pressing challenges to this regime.

**INTAF 814** U.S. Policy in the Middle East (3) This course focuses on the strategic challenges facing U.S. policymakers in one of the world's economically, politically, and strategically most important regions.

### **INTAF 814 U.S. Policy in the Middle East (3)**

This course explores the strategic challenges facing U.S. policymakers in the Middle East, one of the world's economically, politically, and strategically most important regions. It draws on readings and class discussion to help students develop both a sense of the historical evolution of U.S. policy toward the Middle East and an analytic framework for understanding current policy debates.

Students will develop a deep appreciation of the impact of U.S. engagement in the Middle East on modern international history and contemporary international affairs. They will learn about the Middle East's place in the United States' post-World War II and post-Cold War grand strategy, about America's decades-long quest for strategic primacy in the region, and about competing visions among American elites for the exercise of that primacy. They will examine the key bilateral relationships (with Saudi Arabia, Israel, and—since 1979—Egypt) that have shaped U.S. foreign policy toward the Middle East. They will also explore America's long struggle with Saddam Hussein's Iraq and evaluate the U.S. project to build a post-Saddam Iraq that would help consolidate America's post-Cold War dominance in the region. Against this backdrop, students will also learn about major indigenous challenges to American hegemony in the Middle East—e.g., the Islamic Republic of Iran, Islamist resistance movements, and rising demand for participatory Islamist governance among regional publics—and assess U.S. approaches to dealing with these challenges. Students will consider alternative perspectives on jihadi extremism and whether America's self-declared “war on terror” has been self-defeating. Likewise, they will examine America's response to the Arab Awakening, with a particular focus on U.S. military interventions in Libya and (indirectly) in Syria, and Turkey's evolving role in the region. Finally, they will look at Russia's resurgence in Middle East affairs and at the impact of China's deepening engagement in the Middle East and the prospects for Sino-American competition for influence there.

**INTAF 815** Dynamics of International Economic Order: Law, Politics, and Power (3) This course examines the cross-cutting relationship between political power and global economic governance.

### **INTAF 815 Dynamics of International Economic Order: Law, Politics, and Power (3)**

This course explores the cross-cutting relationship between political power and global economic governance. It considers how nation-states define international economic order through the creation of legal frameworks and rules-based regimes; how shifts in the international distribution of power impact these frameworks and regimes; and how, in contemporary context, the United States and China approach global economic governance as part of their grand strategies.

To ground their engagement, students will appraise philosophical and analytical perspectives on international economic exchange and economic order—mercantilism, liberalism, realism, and institutionalism. They will examine the concept of hegemonic hegemony and debates over whether economic openness requires a hegemon.

Against this backdrop, students will investigate the relationship between American primacy and international economic order. They will consider how U.S. primacy and America's strategic aspirations coming out of World War II shaped the postwar economic order with regard to multilateral trade liberalization (the General Agreement on Trade and Tariffs) and monetary relations (the Bretton Woods gold exchange standard). They will evaluate challenges to America's vision of postwar economic order posed by Asian developmentalism and "mercantile realism." Likewise, they will assess the OPEC revolution, the American/Western response thereto, and the impact of these developments on the international economic order.

Students will continue examining the relationship between American primacy and international economic order by reviewing interpretations of economic globalization as a recasting of the original, post-World War II pax Americana. They will look at how reconstituting American primacy through globalization affected multilateral trade liberalization (the World Trade Organization), monetary relations (the post-Bretton Woods dollar standard), and financial liberalization. They will also evaluate competing visions of post-9/11 American primacy—liberalism, neoconservatism, and realism.

Students will then turn to the impact of China's rise on international economic order. They will assay the historical backdrop of China's rise, ongoing processes of economic reform and modernization, Chinese grand strategy, and the challenges China's rise poses to international frameworks for trade and investment, finance and monetary relations, and energy. They will also consider the implications of China's rise for Asian regionalism, the BRICS (Brazil, Russia, India, China, South Africa), and the "global South."

Finally, through case studies on nuclear energy and nonproliferation and on Iran sanctions, students will look at how contestation between alternative views of international order affects global governance in specific arenas. They will also reflect on the ramifications of these cases for the future of international economic order.

**INTAF 816 War and Peace (3)** This course examines how wars begin, how they end and the responsibility of the international community in bringing an end to the fighting and dealing with the effects of the conflict.

### **INTAF 816 War and Peace (3)**

The course will examine the types and causes of war and how they are brought to an end. It will consider the role of the international community and international organizations in mediating the conflict and helping to bring about peace both through formal negotiations by governments (track I diplomacy) and through the efforts of third parties and nongovernmental entities (track II diplomacy.) It will also address the evolving role of the international community, the concept of responsibility to protect, and how and when outside interventions are undertaken. It will look at war and the origins of humanitarian intervention, conflict analysis, methods and techniques of peacemaking in international conflict including mediation, the role of the UN in conflict peacekeeping and peace-building, and democracy and the economics of war.

**I B 404** Contemporary Issues in International Business (3) Investigation of issues in international business practice interpreted from the foundations of the social sciences. Topics will be chosen from contemporary issues in global business and economics.

### **I B 404 Contemporary Issues in International Business (3)**

I B 404 enables students to study the most current topics in international and global business from the framework of the social science issues that form the framework for understanding, business decisions. The course provides structured experiences in library research and data gathering, techniques, and builds the habit of reading the international business press daily and analyzing it weekly. The class is typically organized around 3 integrative business topics that represent a spectrum of questions important to business. These include questions about finance and economics in international business, questions about people and organizations in an international environment, and questions about products (development, production, distribution of goods and services) in international business contexts. This is not an introductory course, and as such, the topics chosen should be substantive and nuanced. For example, one topic might be how the structure of franchises must be modified to reflect the property rights in a particular country, and how those property rights laws impact the value of the franchise. The second topic might be how the internationalization of the structure and role of Boards of Directors in multinational firms contribute to globalization, and challenge the cultural norms in those organizations The third topic might be how North American firms have been forced to adjust their product packaging, in response to environmental impact laws in Germany, and how this shifts the locus of the product message from point-of-purchase to alternative media.

**I B 440 (US;IL) (PL SC 440, AFR 440) Globalization and Its Implications (3)** This course explores the socioeconomic implications of globalization.

**I B (AAA S/PL SC) 440 Globalization and Its Implications (3)**  
**(US;IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course explores the socioeconomic implications of globalization and some fundamental changes that have taken place in the global socioeconomic system. The bipolar configuration of global power has been radically altered, market-state relations have been reformulated, and global systems of production and finance have been reorganized. Given these recent changes in the world's structure, globalization as a socioeconomic force is examined with a special emphasis on its implications on social issues, capital-labor relations, the roles of unions and trans-nationals, unemployment issues, poverty and inequality, gender and ethnicity issues, race relations, and democratization around the world. This course also allows students to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. The implications of globalization on African communities is given special attention.

The course is organized into three parts: A) The first part of the course attempts to define globalization and identify its essential characteristics in light of social and economic change. This part attempts to answer questions such as what constitutes globalization, how do we know if globalization is taking place, and what aspects of it are new. B) The second part of the course attempts to assess the implications of the different aspects of globalization (identified in the first part) on many critical social issues, including capital-labor relations, the roles of unions and transnational corporations, problems of unemployment, poverty and inequality, gender, ethnic, and race relations, and democratization. C) The third part of the course examines the implications of globalization to African communities.

This course exposes students to the economic, social, political, and cultural implications of the unfolding global order. It allows them to explore how different countries, communities, social classes, business firms and even institutions are affected differently by globalization. Evaluation will be based on daily attendance, along with a class presentation of a design of a research paper; an actual research paper, a mid-term exam and a final exam.

**I B 450 The Business Environment of Europe (3)** This course provides an overview of the economic, institutional, and regulatory environment in Europe at the EU and national levels.

**I B 450 The Business Environment of Europe (3)**

This course provides an overview of the business, economic, and regulatory environment in Europe at the European Union (EU) and national levels. The course examines how regional integration, through the EU, has shaped industrial, competition, monetary, and related economic policies, and how Europe's international trade and finance capabilities affect the global economy. As a result, a significant part of the course focuses on the evolution of the EU, its institutional structure, and its impact on business (both European and foreign). The course also compares business-government relations, models of capitalism, and corporate governance in individual European countries, using the United States as a basis of comparison. Particular attention is given to France, Germany, Ireland, and the United Kingdom, and how their business environments differ from each other.

While the primary focus of this seminar will be on these themes, we will use articles from the *Financial Times* and similar publications as the basis of discussion in each class for a range of topics related to Europe. The approach taken in this course is a multidisciplinary one, with the assumption that business executives must understand the political, cultural, institutional, historical, and geographic aspects of Europe if they are to be successful in the business environment of Europe.

Students are expected to be active participants in class discussion. Readings usually will include a textbook, readings packet, and a subscription to the *Financial Times*. Evaluation will be based on a combination of participation and attendance, exams, quizzes, a group project, and essay assignments.

**INTER 952** Law of the Sea (2) Address all central aspects of the law of the sea as a branch of public international law.

### **INTER 952 Law of the Sea (2)**

This course addresses the public law of the sea (as distinct from admiralty law), covering the principal aspects of that subject as follows: historical overview; freedom of the high seas; nationality of vessels; flag State jurisdiction; baselines; boundaries; boundaries of maritime jurisdiction between adjacent and opposite States; internal waters and ports; territorial sea, contiguous zone, straits, and archipelagic waters; continental shelf; exclusive economic zone; deep seabed; marine pollution, living resources of the high seas, and the settlement of disputes, with particular referent to the Law of the Sea Tribunal (Hamburg). From time to time, as appropriate, the instructor may choose individual areas of the world or individual issues of the law of the sea to analyze in special detail within the main subject areas of the course.

The course aims to offer thorough instruction on the foundations and sources of the law of the sea, the principal types of maritime jurisdiction, the principles of resource management, and approaches to the settlement of maritime disputes.

The general historical introduction and subsequent sections are designed to accentuate problems and issues which enable students to master the foundations of the law of the sea.

Accordingly, students of this course should:

- (1) develop a more profound understanding of alternative approaches to legal reasoning and of legal concepts and institutions within the framework of international law;
- (2) enhance their skills of legal analysis
- (3) develop a greater awareness of concepts of legal science and legal system;
- (4) read in some depth on the contemporary relevant principal documents on the law of the sea and appropriate doctrinal writings.

At the end of the course students should"

- (1) have a sound grounding in how the law of the sea has developed;
- (2) be more demanding of rigorous in formulating and evaluating ideas and propositions;
- (3) have a sense of the virtues and limitations of comparison as a method of scientific inquiry in law through the analysis of relevant national legislation;
- (4) have a thorough command of the main principles and rules of the law of the sea;
- (5) give evidence of an ability to understand the other side of an argument, and better appreciate the strengths of an opposing view;
- (6) develop a willingness to question, to prove, to seek further information, and to display initiative in expanding one's knowledge.

**INTER 953 Law of Treaties (2)** Treaties are the foundation of public and private international law and national foreign affairs law. This course examines: historical development of law of treaties; concept of treaty; treaty as source of international and national law; stages of concluding treaty; reservations; accession to treaties, functions of depositary; publication of treaties; breach of treaty obligations; invalidity, termination, and suspension of treaties; denunciation and other withdrawal from treaties; treaties and *jus cogens*; treaties and customary rules of international law; treaties and third States; treaties and municipal law; interpretation of treaties; languages and authentic texts of treaties.

### **INTER 953 Law of Treaties (2)**

Treaties are the foundation of public and private international law and national foreign affairs law. This course examines: historical development of law of treaties; concept of treaty; treaty as source of international and national law; stages of concluding treaty; reservations; accession to treaties; functions of depositary; publication of treaties; breach of treaty obligations; invalidity, termination, and suspension of treaties; denunciation and other withdrawal from treaties; treaties and *jus cogens*; treaties and customary rules of international law; treaties and third States; treaties and municipal law; interpretation of treaties; languages and authentic texts of treaties. Texts: A. Aust, *Modern Treaty Law and Practice* (Cambridge University Press, 2000); W. E. Butler, *The Law of Treaties in Russia and the Commonwealth of Independent States* (Cambridge University Press, 2002).

The course aims to offer thorough instruction on the foundations and sources of the law of treaties, the role of treaties as a source of international law, the procedures of treaty-making, the relationship between treaties and customary international law and rules *jus cogens*, and the role of language in treaty-formation.

The general historical introduction and subsequent sections are designed to accentuate problems and issues which enable students to master the foundations of the law of treaties.

Accordingly, students of this course should:

- (1) develop a more profound understanding of alternative approaches to legal reasoning and of legal concepts and institutions within the framework of international law;
- (2) enhance their skills of legal analysis
- (3) develop a greater awareness of concepts of legal science and legal systems;
- (4) read in some depth on the contemporary relevant principal documents on the law of treaties and appropriate doctrinal writings.

At the end of the course students should:

- (1) have a sound grounding in how the law of treaties has developed;
- (2) be more demanding and rigorous in formulating and evaluating ideas and propositions;
- (3) have a sense of the virtues and limitations of comparison as a method of scientific inquiry in law through the analysis

of relevant national legislation;

(4) have a thorough command of the main principles and rules of the law of treaties;

(5) give evidence of an ability to understand the other side of an argument, and better appreciate the strengths of an opposing view;

**INTER 954 Foreign Investment in Russia and the CIS (2)** Addresses principal aspects of the legal framework for foreign investment in Russia and other CIS countries.

### **INTER 954 Foreign Investment in Russia and the CIS (2)**

This is a "hands-on" subject which requires students to analyze and negotiate the essential elements of a foreign investment transaction in the Russian Federation, having regard to those elements of Russian law and legal institutions that any foreign investor will have to be familiar with. The course commences with an introduction to the legal foundations of the Soviet State monopoly of foreign trade, an overview of foreign investment laws in the CIS countries, investment guarantees, the investment vehicles of choice in Russia, elements of private international law, the role of legal opinions, and the settlement of commercial disputes, with special emphasis on arbitration. Most of the course is devoted to "negotiating" a draft charter of a joint-stock or limited responsibility society against the background of relevant Russian legislation.

The course aims to offer thorough instruction on the role of the State in foreign investment guarantees, the transaction aspects of foreign corporate vehicles, and the role of arbitration in settling foreign investment disputes.

The general historical introduction and subsequent sections are designed to accentuate problems and issues which enable students to master the framework of foreign investment in Russia and the CIS.

Accordingly, students of this course should:

(1) develop a more profound understanding of alternative approaches to legal reasoning and of legal concepts and institutions within the framework of investment transactions;

(2) enhance their skills of legal analysis

(3) develop a greater awareness of concepts of legal science and legal system;

(4) read in some depth on the contemporary relevant principal legislation and treaties regulating investment in Russia and the CIS and appropriate doctrinal writings.

At the end of the course students should:

(1) have a sound grounding in how the law of regulating the framework of foreign investment in Russia and the CIS has developed;

(2) be more demanding and rigorous in formulating and evaluating ideas and propositions;

(3) have a sense of the virtues and limitations of comparison as a method of scientific inquiry in law through the analysis of relevant national legislation;

(4) have a thorough command of the main principles and rules of law regulating foreign investment transactions;

(5) give evidence of an ability to understand the other side of an argument, and better appreciate the strengths of an opposing view;

(6) develop a willingness to question, to probe, to seek further information, and to display initiative in expanding one's knowledge.

**INTER 971** International Law (3) This course introduces students to key concepts and doctrines of international law. It examines the sources of international law such as custom and treaty, the bases of international jurisdiction, issues of statehood, recognition and succession, nationality, international agreements, and United States participation in the international legal system. The course provides students with the basics needed for both public and private international law practice.

**INTER 973** Comparative Corporate Law (2) This course attempts a comparative analysis of American and European approaches to the regulation of business enterprises operating in corporate form. The goal is to provide the student with a basic understanding of the fundamental, and perhaps fundamentally different, approaches taken by governments in the United States and in the European communities to the regulation of the corporation. The course materials concentrate on the formal sources of law and thereafter highlight some ways in which the difference in approach is manifested in actual regulation.

Effective: Summer 2000  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**INTER 974** Civil Law From Empire to Union (3) The most important issue of Civil Law today is its Worldview and its perspectives on Citizenship as well as on International Justice. In other words, particularities of the Civil Law sustain a

worldview that stems from Roman Law-traditions and practices of the Roman Empire. These pertain to more recent legal developments taking place in a unifying Europe. The profiles of the major functionaries in today's Civil Law domain: judges, attorneys, EU civil servants and administrators mirror such traditions. This course is not restricted to a traditional comparative perspective. Means are provided for a correct and effective transnational communication between legal professionals. To study Civil Law and EU Law implies an approach, understanding and management of the electronic means to communicate with its citizens, institutions and courts. The EU website is an outstanding instrument to understand the structures within lawyers must operate.

**IT 475 Modern Italian Literature and Cinema (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course will explore the literary, cultural, and historical backdrops behind a variety of films from Fellini's *The Road*, to one of the greatest spaghetti westerns ever made (Leone's *Once Upon a Time in the West*), to the Oscar winner for Best Foreign Film (Benigni's *Life is Beautiful*). Selected 19th and 20th-century prose texts also trace such issues as the individual's role in society and the use of the imagination in the representation of history. This course aims to provide students with the fundamental tools to read texts and watch films critically and intelligently while presenting an overview of some major themes of Italian culture. Students will be evaluated on three in-class exams, paper outline, final paper, and participation in class discussions/activities/debates. IT 475 is the first interdisciplinary course taught in English at the IT 400 level. The course helps satisfy the Italian minor requirement. It is also good for students who have taken IT 130 and want to know more about 20th-century Italian lit/film/culture without having to do course work in Italian. IT 475 may also be of particular interest to students of film and media studies, English or comparative literature, religious studies, and history. This course satisfies the Italian minor or bachelor of arts humanities requirements. IT 475 will be offered once a year with 40 seats per offering.

**IT 480 (WMNST 480) Italian Women Writers Through the Centuries (3)** Analysis of the works of women authors in their historical and literary contexts.

**IT 480 Italian Women Writers Through the Centuries (3)**

Italian women have been stereotyped as the "mamma" or grandmother who cooks, prays, and idolizes her sons. Such an image does not accommodate the wide variety of experiences, perspectives, and contributions of Italian women throughout history. This seminar will explore the writings of female authors from delimited historical periods (alternating

among Renaissance, 19th and 20th Centuries). Depending on time period, genres will include autobiography, poetry, historical novel, drama, film, nonfiction. Throughout the course we will consider the political and social developments in Italy with an emphasis on issues of special relevance to women. As we approach each text, we will examine such questions as: the significance of its form; the author's use of language; the ways in which masculinity and femininity are constructed; intersections with the text's historical moment; the political, philosophical and/or theological questions posed by the text; the ways in which the text inserts or distances itself from the Italian literary canon; and the text's depictions, re-evaluations and uses of history. Through their journal assignments in class discussion, students will be encouraged to reflect upon the implications of course concepts in their own culture and historical moment. Evaluation methods include participation in class discussion, journal entries, short analysis papers, and a longer (8-10 page) research paper. In Italian. Prerequisite: any 300-level Italian course. This course is conducted in Italian and counts for the Italian major and minor. The ability to screen VHS and DVD videos is necessary. Enrollment is limited to 20, and the course will be offered at least once every four semesters.

**IT 485 Italian-American Cultural Studies (3)** In-depth exploration of Italian-American cultural contributions.

### **IT 485 Italian-American Cultural Studies (3)**

Italian-American Cultural Studies explores the representation of self-representation of Italian-Americans that have been produced over the past century in a variety of aesthetic forms. Through analysis of literary and cinematic works, informed by readings in history and sociology, students will refine their critical reading and writing skills, come to a deeper understanding of important currents in 20th-century American history, gain a more informed appreciation of the contributions of Italian-Americans to the arts, engage critically with concepts such as "identity," "ethnicity," "gender," and "heritage." This course fulfills requirements for the major and minor in Italian, and allows students interested in Italian-American culture to undertake more in-depth and specialized study than is possible in the 100-level General Education survey offered by the department in English. Evaluation methods include participation in class discussion, short analysis papers, and a longer (8-10 page) research paper. The ability to screen VHS and DVD videos is necessary.

**JAPNS 403Y** (IL) Level Four Japanese A (4) Continuation of JAPNS 402. Aims to improve students' proficiency in all four language skills, with a special emphasis on writing.

### **JAPNS 403Y Level Four Japanese A (4) (IL)**

This is a four credit course designed for those who have completed Level Three Japanese B or the equivalent. The course

aims to further develop students' proficiency in all four language skills, with a special emphasis on writing. Students will study several topics such as Japanese society and Japanese literature for content-based language learning throughout the semester. For each topic variety of media will be used—newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs. Class time will be used mainly for discussions of content, feedback on writing, and presentations by students. All class activities will be conducted in Japanese.

Writing exercises include short response papers on topics and summaries of literary pieces or audio visual materials. In the response papers students will reflect more deeply on certain topics, synthesize information from course materials, express their opinions, and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. Discussion on the summaries will cultivate sensitivity toward words and expressions.

The course will help students start building their career in Japanese. Students will familiarize themselves with and if they wish study for the Japanese Language Proficiency Test (Level N2). They will also write a resume and formal letters that could be used in job applications and practice formal spoken communication in business settings.

**JAPNS 404 Level Four Japanese B (3)  
(IL)**

This is a four credit course designed for those who have completed Level Four Japanese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics such as Japanese popular culture and issues in contemporary Japan for content-based language learning throughout the semester. For each topic variety of media will be used—newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs.

**JAPNS 410 (IL) Japanese Through Manga (3)** The course aims to expand students' knowledge and application of Japanese language beyond elementary and intermediate textbooks through the use of manga (graphic novels).

**JAPNS 410 Japanese Through Manga (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is a three credit course designed for those who wish to expand their knowledge in Japanese and application of it beyond typical elementary and intermediate textbooks. The course will use manga, the format of which helps students understand the story line, the setting, and the thoughts and emotions of the main characters. Given quick interactions between manga characters and onomatopoeia that accompany pictures, students will learn natural daily communications of Japanese. Class discussions will also cover relevant customs, manners, cultural values, socio-historical context, and social perspectives along with language use. The exact texts will vary from instructor to instructor, and may include film and new media in addition to a primary focus on manga.

The course will serve as a gateway to the further exploration of Japanese authentic texts and audio visual materials.

The prerequisite is JAPNS 110. Students who have successfully completed JAPNS 110, JAPNS 401, or JAPNS 402 are encouraged to take the course. Students who have finished JAPNS 403Y or JAPNS 404 may also take the course.

**JAPNS 421 (IL)** Courtly Japan (3) Focused study of aristocratic society and culture of Heian period Japan.

**JAPNS 421 Courtly Japan (3)**  
**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court's political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governances, gender, and the gradual rise of samurai power in the shadows of the court.

This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen student's appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The details of evaluation will vary depending on the instructor. In general, the emphasis will be on student performance on a day-to-day basis and as expressed in a final research project.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study. This course is recommended, but not required, of the Japanese major. It is designed to count as a B.A. "Other Cultures" course, and as an IL "International Cultures" course.

General Education: None  
Diversity: IL  
Bachelor of Arts: Other Cultures

**JAPNS 422 (IL)** War and the Warrior in Japan (3) Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English.

**JAPNS 422 War and the Warrior in Japan (3)**  
**(IL)**

This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history, documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramatics began to idealize warriors as moral exemplars in the late medieval period, and then as historical realities made the position of the warrior itself redundant in the early modern era.

Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in premodern and modern Japan. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion.

The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study.

General Education: None

**JAPNS 423 (IL) Men, Women, and Animals (3)** Japanese history and culture through the lens of relations between men and women and between humans and animals.

**JAPNS 423 Men, Women, and Animals (3)**  
**(IL)**

Through readings in primary and secondary sources, and to a lesser extent through the evaluation of visual images, this seminar-style course will examine relations between men and women in changing social contexts over time in Japan. We will also investigate human-animal interactions, in the realms of literature and symbolism, religion, and food production and other aspects of economic production. The course will address issues fundamental to every society past and present. Therefore, it will not only deepen students' knowledge of Japan but it will also provide a solid basis for comparative study of other societies.

**JAPNS 424 (IL) Traveling Voices (3)** Transnational Writings of Japan: from Modern to Contemporary Eras .

**JAPNS 424 Traveling Voices (3)**  
**(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Through literary and visual texts from modern to contemporary eras, this seminar-style course will explore a wide range of narrative voices of Japan, created by writers who are physically or figuratively dispersed in many directions within, towards, and away from Japan, and who therefore problematize "Japanese-ness" by dealing with cultural situations (e.g. identities, marginality) in their writings. Some Prior Study of Japan (JAPNS 120, JAPNS 121, or HIST 172) is required.

Students will explore the rich cultural diversity in Japan and the Japan diaspora, and develop a further understanding of historical border crossers between Japan/East Asia and Americas/the West. They will become more aware of the reciprocal and transformative cross-cultural interactions in languages, literature, religions, economics, ideas, or political formations. They will learn how to think critically, in speech and writing, and develop writing analytic skills appropriate to their final paper project.

Evaluation will depend on specific instructor practice, but will certainly emphasize guided discussions, some student presentations (alone or/and group), and writing exercises (especially final research project). A sample guideline might look like this:

Class Participation/discussion  
 Response papers  
 Informal Presentation (pair or group up to three)  
 Mid-term exam  
 Final paper presentation  
 Final Project

**JAPNS 426 (HIST 474, ASIA 474) Early Modern Japan (3)** Japanese history from 1580 to 1880.

### **JAPNS 426 (HIST, ASIA 474) Early Modern Japan (3)**

Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms.

Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

**JAPNS 450 (IL)** Introduction to Classical Japanese (3) Basic patterns and structures of Classical Japanese from its development in the 6th century through usage in the 20th century.

### **JAPNS 450 Introduction to Classical Japanese (3) (IL)**

**(BA)** This course meets the Bachelor of Arts degree requirements.

This course is an introduction to the basic grammar and stylistic idiosyncrasies of classical Japanese (bungo). Students will be guided through an examination of key syntactical structures and will be asked to apply their knowledge in order to read, translate, and discuss various texts from the classical, medieval, and early modern periods. In addition to gaining familiarity with standard reference materials (such as dictionaries of classical Japanese), students will also gain a working knowledge of the styles and themes of major works of pre-modern Japanese literature. Successful completion of this course will give students the fundamental skills necessary to read texts composed prior to the 1900's and to engage in research in the field of pre-modern Japanese studies. With this training and knowledge concerning the development of the Japanese language, students will increase their proficiency in modern Japanese and their overall knowledge of Japanese culture and literature.

Prior study of modern Japanese is required (with proficiency equivalent to successful performance in JAPNS 402).

The purpose of the course is to make bungo ("literary Japanese") accessible to as many students as possible. Classical Japanese first appeared in the 6th and 7th centuries and was used to write a wide variety of texts up until the mid-20th century. Knowledge of it is very useful to anyone interested in studying Japanese history, literature, philosophy, politics, art, or culture. The course offers a systematic introduction to the grammar of Classical Japanese, while also presenting Classical Japanese and Modern Japanese as part of a linguistic and cultural continuum.

**JAPNS 452 (IL)** Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) Survey of aspects of modern Japanese society; includes readings from Japanese newspapers, magazines, and fiction; topics may vary each

semester.

**JAPNS 452 Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) (IL)****(BA) This course meets the Bachelor of Arts degree requirements.**

This course orients students to cultural issues and trends in contemporary Japan, and the way that those issues and trends are explored in literature, film, newspapers and magazines. The course examines a selection of Japanese-language materials from an array of genres, modes of representation, and historical settings. Focusing on the postwar era to present (1945-), this course introduces various aspects of contemporary Japanese culture, from literary works of the postwar experience to recent popular culture, including anime (animated movies) and manga (graphic novels). Each work is discussed in terms of its own literary or artistic merit, the social context that produced it, its position within the larger trends of literary development in Japan, and its relevance for the modern reader. This course is designed for (prospective) Japanese major or minor students interested in broadening their knowledge of Japanese culture and society as well as for students who wish to compare other cultures and literatures they have studied with those of Japan.

**JAPNS 453 (IL) Japanese Film (3 per semester/maximum of 6)** Selected films and directors representing various aspects of Japanese culture and cinema; topics may vary each semester.

**JAPNS 453 Japanese Film (3 per semester/maximum of 6) (IL)****(BA) This course meets the Bachelor of Arts degree requirements.**

This class will be a seminar-style study of Japanese culture, texts, and language as seen through the lens of Japanese cinema. The goal is to deepen the students' understanding of diverse aspects of Japanese life, history, and culture while developing language skills. Typical class sessions may involve watching sections of film (with or without English subtitles); working with listening comprehension; engaging with student presentations (in Japanese) on studios, directors, or actors; discussing Japanese film history; and analyzing film stills for aesthetic qualities.

Participants will be required to view and discuss films in Japanese (with or without English subtitles). Viewing's will be accompanied by secondary readings (at least some of which may be in Japanese). We will also be discussing the films and readings in the context of nation, identity, history, sociology and culture. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays and film analysis. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese.

This course satisfies the International Cultures requirement.

**JAPNS 454 (IL) Japanese Literature (3 per semester/maximum of 6)** Selected works from important Japanese texts representing genres such as autobiography, poetry, fiction, and drama; topics may vary each semester.

**JAPNS 454 Japanese Literature (3 per semester/maximum of 6) (IL)****(BA) This course meets the Bachelor of Arts degree requirements.**

This class will be a seminar-style study of contemporary Japanese literature. The goal of the course is to help students move from grammar-assisted reading assignments (which may provide vocabulary lists, grammar notes, and cultural notes) to reading 'raw' materials in Japanese, where students are responsible for knowing how to use the appropriate reference materials so that they can compile vocabulary lists, grammar notes, and cultural notes on their own. Students will be reading selected works from an array of genres such as autobiography, poetry, fiction, drama and essays, with topics and thematic focuses varying from semester to semester.

Typical class sessions may involve reading aloud from a literary work; engaging with student presentations (in Japanese) on authors, genres, thematic elements, and relevant historical or cultural events; discussing Japanese literary history; analyzing short passages for their aesthetic qualities; and working with specific items of grammar or vocabulary. Participants will be required to read and discuss Japanese literature in Japanese. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays, quizzes and tests. Students must prepare

for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

**J ST 405** (IL) (RL ST 405) Jews and Food (3) Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times.

### **J ST (RL ST) 405 Jews and Food (3) (IL)**

This course examines Jewish laws, customs and attitudes with regard to food production, agricultural policy and eating from biblical to modern times. These tenets of the Jewish tradition presently underwrite modern movements concerned with land use and food sustainability, as well as ethical behaviors in food production. The goal of the course is to understand how Jewish tradition can inform and contribute to improvements in the modern food system.

The starting point is the ancient world of the Israelites,. Students will study agrarian interpretations of the Hebrew Bible as well as extra-biblical sources and archaeological data. The biblical attitudes toward food, eating, and agricultural practices are then traced into the post-biblical period and rabbinic periods. The course then jumps ahead to the present day, to shed light on a number of modern Jewish agricultural and food initiatives concerned with issues such as healthy land use, sustainability, and justice in food production and distribution. These movements proceed from various interpretations of Jewish law and custom, and illustrate how some modern Jewish attitudes toward food and eating are

responsible for reimagining, and in some cases reinvigorating, biblical ideas and practices.

At the conclusion of this course, students will be able to identify and understand the historical and theological significance of diet and eating practices of ancient Israelites and will understand the development of Jewish food laws and practices in the post-exilic and early rabbinic eras. Students will be able to evaluate the extent to which ancient Jewish thought has influenced modern Jewish attitudes and actions regarding food and social responsibility, and will be able to envision the ways in which Jewish tradition, both ancient and modern, can contribute to current progress and future improvement in our systems of food production, distribution and consumption. While a wide variety of derivative topics will be discussed, this course is particularly appropriate for students pursuing programs of study dealing with the biblical world, the development of early Judaism, Jewish ethics, and/or modern Jewish thought, as well as those studying agriculture and food systems who are interested in how Jewish tradition addresses these universal concerns.

**J ST 409Y (IL) (HIST 409Y, RL ST 407Y) Antisemitisms (3)** Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present.

**J ST (HIST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course analyzes major episodes in the history of anti-Semitism and tries to clarify the Motives and dynamics involved. It seeks to understand what these episodes have in common, and what is unique in each case. Is there a single universal, eternal anti-Semitism? Or are there rather anti-Semitisms", each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates?

We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher.

The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category. This course is offered once every other year with 25 seats per offering.

**J ST 410 (US;IL) (HIST 410, RL ST 410) Jews in the Medieval World (3)** Trends in medieval Jewish society under Islam and Western Christendom.

**J ST 410 Jews in the Medieval World (3) (US;IL)**

The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression.

Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second

after the examination of the Franco-German region) and a comprehensive final exam.

The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258).

The course will count for 3 credits toward:

- a) the 22 credits required for the minor in Jewish Studies
- b) the 33 credits required for the major in Jewish Studies
- c) the 30 credits required for the major in Religious Studies
- d) the 36 credits required for the History major

It will be offered once a year with an enrollment of approximately 60 students.

**J ST 424H** (HIST 424H, RL ST 424H) **Monotheism and the Birth of the West (3)** The birth of monotheism and its relation to social organization, the idea of individuality, and science.

**J ST (HIST/RL ST) 424H (PHIL 434H) Monotheism and the Birth of the West (3)**

Learn about the formation of Western culture, while learning to analyze the texts and other evidence about its formation from a critical, rather than naive, viewpoint. The idea of monotheism probably arose very early and was even briefly implemented as a state cultic policy in Egypt in the 14th century BCE. Why, then, did it take another seven centuries to become widespread--appearing in ancient Judah, Babylon, and Ionia almost simultaneously? To answer this question, the course focuses on several developments, through the medium of primary texts and archaeology: the shift from a state hinterland based in extensive agriculture and household processing to one organized for intensive agriculture and industrial processing the rise of recognizably modern science; the promotion of individuation and an international elite culture in the context of Assyrian and Babylonian imperial ambitions; the development of the historical and archaeological arts in the context of archaizing in order to reinvent local traditions; and the socialization of monotheism and of democracy. Students will be evaluated on their discussion of the textual evidence as well as on reports in class and a final paper. This is the sole honors course treating the birth of the West. It expands on knowledge acquired in courses listed as prerequisites and in CAMS/J ST/RL ST 012; CAMS 044; ANTH/CAMS 133; CAMS/PHIL 200; HIST 100; HIST/J ST 102; and PHIL 200 and enriches the student experience in CAMS 400, CAMS 440, and CAMS 480; HIST 402; J ST 411; PHIL 437, PHIL 453, and PHIL 461. This course counts toward the major in Jewish Studies, History, and Religious Studies and toward the minor in Jewish Studies and Religious Studies. This course will be offered once every other year with 35 seats per offering.

**J ST 425W** (CAMS 425W, RL ST 425W) **Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12)** Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship.

**J ST (CAMS/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12)**

The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

**J ST 426** (IL) (HIST 426) **Holocaust (3)** This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources.

**J ST (HIST) 426 Holocaust (3)  
(IL)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation.

After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the "Final Solution." The class will touch on the function of the "Ghettos," the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources.

Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources:

- documents created by the perpetrators, bystanders, and victims;
- files relating to postwar trials of perpetrators;
- photographs;
- representations of objects relating to the Holocaust;
- memoirs by survivors;
- interviews with survivors and bystanders.

**J ST 427 (ENGL 427) Topics in Jewish American Literature (3 per semester/maximum of 9)** An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States.

### **J ST (ENGL) 427 Topics in Jewish American Literature (3)**

This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America's wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and -literature.

**J ST 433 Introduction to Jewish Music and Art (3)** Introduction to the study of Jewish music and art from antiquity to the present.

### **J ST 433 Introduction to Jewish Music and Art (3)**

The course will provide an introduction to the importance of art (including architecture) and music to Jewish civilization from the ancient world to the present. The course stresses the way in which Jews have adapted techniques from the peoples around them, and how their art and music have developed under circumstances ranging from almost complete toleration to extreme persecution. Important periods covered including synagogue art and architecture from late antiquity to the Middle Ages; illuminated manuscripts, decorative arts, and songs from the Middle Ages; the emergence of important professional Jewish artists and musicians in the nineteenth century in Europe; Jewish artists in the forefront of political protest art in the early twentieth century; art and music during the Holocaust and to memorialize it; the flourishing of Jewish art and music in both traditional and new forms since World War II. The historical, social, and intellectual contexts of the development of music and art, rather than technical aspects of musical and artistic creation and perception, will be emphasized. In particular, the role of music and art in preserving Jewish pride and identity under two threatening circumstances – periods of persecution where survival was threatened and periods of toleration where conversion and conformity become alluring – will be considered.

In addition to looking at and listening to works of art and music, written texts describing the historical and social contexts and providing information about the works and their creators will be discussed.

**J ST 434 (COMM 434) Movies, Media, and the Jewish American Experience (3)** Study of Jewish American Film and Popular Culture.

### **J ST (COMM) 434 Movies, Media, and the Jewish American Experience (3)**

The course examines film and other popular media, including theater, radio, and television, as important sources for understanding the Jewish experience and its impact on and relationship with American culture more generally since the late 19th century. Topics to be considered include US film and popular media as representations of Jewish history, culture, and experience; the role of Jews as prominent directors, producers, actors, and writers in their social-historical context; and the history and function of the representational modes and techniques used in these texts. A major emphasis of the course will be on analyzing film and other media texts as lenses to reflect, refract, and focus on Jewish American identity. By way of analyzing the interrelationships between filmic and other media texts and Jewish American experience, the course will attend to a number of key themes in Jewish cultural history, including Jewish life in late 19th-early 20th century Europe; immigrant life in turn of the century America and questions such as assimilation, preservation of tradition, family life, social mobility, and male/female relations; Jews in show business, organized crime, and sports; American Jews and the Holocaust; American Jews and Israel; Jews in the modern age; generational and denominational differences among Jews; and Jews and anti-Semitism.

**J ST 439 (HIST 439, WMNST 439) Women and the Holocaust (3)** Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies.

### **J ST (HIST/WMNST) 439 Women and the Holocaust (3)**

Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust.

The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events?

Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

**J ST 450H (PL SC 450H) Genocide and Tyranny (3)** This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

### **J ST (PL SC) 450H Genocide and Tyranny (3)**

This course focuses on the etiology of mass killing, with an emphasis on the socio-political determinants and consequences of massacres, ethnic cleansings, and other crimes against humanity. It is designed to help students understand genocide as a phenomenon of political violence and to explore the epistemological issues associated with the

study of genocide. Students will learn to use the study of specific events (such as the Holocaust) to understand broader concepts and phenomena (in this case: genocide) as well as to develop analytical and communication skills through active discussion in class sessions.

The course is divided roughly into three parts: The objective of the introductory part of the course is to situate genocide as an act of political violence, and to create a working definition of the concept for the topics covered in subsequent weeks. In the second part various aspects of the Holocaust will be examined. Starting with a history of the Holocaust, we will cover philosophical, political, and military explanations for it. Some of the questions we will discuss in this part of the course include: (a) How does the Holocaust fit into the typologies of genocide? (b) Can extreme genocide that can be studied in a comparative context with the Holocaust? Does the "uniqueness" of the Holocaust influence the manner in which we study it? (c) Were the determinants of the Holocaust rooted in larger social and political factors? (d) Which contemporary political factors were associated with the Holocaust? During the last part of the course, we will discuss three other instances of genocidal violence: Armenia, Yugoslavia, and Rwanda. These events will be discussed using the same theoretical and analytical approaches as in the previous weeks. The concluding sessions will also focus on the questions of why it is important to study genocide, what lessons can be learned from understanding such events, and whether studying genocide is relevant to the current international system. Course topics will be discussed in light of assigned readings and films.

This course fulfills the distribution requirement for international relations, as well as the advanced and related course requirements for Political Science majors. The course fulfills the supporting course requirement for International Politics and Jewish Studies majors.

**J ST 457 (US;IL) (ANTH 457, SOC 457) Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3)** Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement.

**J ST (ANTH/SOC) 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL)**

This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

**J ST 468 (PHIL 468) Jewish Philosophy (3)** Explores major figures and trends in Jewish philosophy and their influences on other philosophical traditions.

**J ST (PHIL) 468 Modern Jewish Philosophy (3)**

The primary objective of this course is to encourage students to have a reflective stance on Jewish thought. Students will learn what comprises Jewish thought and how it is distinguished from theology. They will learn what role religion plays in philosophical thought and what is at stake for a philosophy that emerges from a particular religion. This course will give students perspective on how Judaism links to other philosophical movements, for example, the enlightenment of the modern period. It will enable to think about Judaism from a theoretical perspective, adding a new dimension to what they might study from historical, sociological, or literary viewpoints. Some questions we will consider include: In what ways does it converge/diverge, with the philosophical strains that influence it? In what ways have particular events in history shaped Judaic thinking? Does Judaism, or Judaic thinking, have an essence? If so, what is it? What does Judaism mean for the Jews, and what does it mean for others? And finally, what role does mysticism have in the play between religion and philosophy? Students will be evaluated by written work (short papers and a longer seminar paper) and a class presentation.

**J ST 478 (RL ST 478) Ethics After the Holocaust (3)** Explores the philosophical effects of the Holocaust for thinking about the primary question: Is ethics possible?

**J ST (PHIL/RL ST) 478 Ethics After the Holocaust (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is an examination of ethical theories before the Holocaust and how those theories have failed, philosophically and empirically. Course topics will include the history of ethical theory, the nature and problem of evil, goodness and suffering, witnessing and testimony, and the promise of an ethics. This course provides students with philosophical approaches to the issues that emerge out of the events of the Holocaust. The course will help students expand their knowledge of the events of the Holocaust through a philosophical approach that does not merely expose them to what happened, but asks them to think about the implications of what happened: most specifically, how do we understand ethical life, if it cannot stop or confront evil? This course provides students with the philosophical approaches to the issues that emerge out of the events of the Holocaust. It will encourage them to think critically, write effectively and express their thoughts logically. Student evaluation will be based on weekly reaction papers, group presentations, and a final seminar paper. This course covers material in the history of philosophy, contemporary philosophy, and writings pertaining to the Holocaust in various forms (historical, literary documentary, and so forth). It provides links to other major areas in the history of philosophy, postmodernism, ethics, philosophy of religion, and Jewish history. It will be offered every other year.

## **Kinesiology (KINES)**

**KINES 400** Adapted Physical Education (3) Basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments.

### **KINES 400 Adapted Physical Education (3)**

This is an undergraduate level course teaching students the basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments. This course will help the student to become more aware of the physical needs of children with disabilities and of the possibilities to professionally deal with these needs. The course requires the student to complete a 10-hour practicum, providing the opportunity to work with children with a disability. The practicum will be conducted in cooperation with physical education staff members working with various schools in State College. The children's difficulties may range from emotional problems to severe physical and mental handicaps. Students are free to identify alternative practicum sites (e.g., work with a friend or family member with a disability). The requirements for the practicum may include: select a child who has a physical, sensory, or intellectual disability; write an Individualized Education Program (IEP) using the guidelines presented in the textbook; implement the IEP in a two-on-one teaching situation (two students, one child); keep a log of all the practice sessions; after completing the 10-hour practicum, write a final report based on the IEP, this final report should state the definition of the problem, the etiology, the general characteristics, the teaching techniques specific to the disability, an evaluation of the actual teaching strategies and an evaluation of the outcome of the practice (did it work?); and, present the findings orally (10-15 minute talk).

The student will generally be evaluated by exam, teaching activity, an oral presentation, and a final report.

**KINES 411** Introduction to Musculoskeletal Injury and Rehabilitation (3) This course is designed to provide an overview of common musculoskeletal injuries and rehabilitation for pre-allied health and fitness professionals.

**KINES 411 Introduction to Musculoskeletal Injury and Rehabilitation (3)**

This course is designed to provide an overview of basic orthopaedic injuries and related musculoskeletal system dysfunctions as well as rehabilitation of those injuries and dysfunctions. Common orthopaedic injuries of all major musculoskeletal structures and tissues are discussed moving up the kinetic chain from the feet up the lower extremities, through the spine and out the upper extremities to the hands. Common injuries such as sprains, strains, fractures, tendinopathies, disc herniations, spinal stenosis, compartment syndromes, neural compression, carpal tunnel syndrome and thoracic outlet syndrome will be discussed. Anatomy and function of each body region will be reviewed prior to the discussion of injuries. Mechanisms of injury, tissue pathology and the tissue healing processes are reviewed. The role of inflammation in the healing of injured tissues will be explored and the variations in healing processes between tissues explained. Common surgical procedures for major injuries like anterior cruciate ligament tears will be presented. A general rehabilitation process is discussed and rehabilitation concepts unique to specific injuries are explored. Basic principles of the major components of a rehabilitation program are explained. These major components include the protection of healing tissue, pain control, swelling resolution, restoration of range of motion, facilitation of volitional control, enhancement of muscular strength and endurance, improvement of neuromuscular control, training of functional movement patterns and return to functional activities. The RICE (Rest, Ice, Compression, Elevation) method of treating pain and limiting swelling will be presented. Manual therapy, stretching and exercise activities used to regain range of motion will be explained. Exercises used to improve muscular strength and endurance will be discussed for each region of the body. Methods of facilitating balance and neuromuscular control will be demonstrated. Finally, the benefits of functional exercise in terms of three-dimensional exercise requiring the use of groups of synergistic muscles in a coordinated manner will be presented. In addition, return to sport programs that gradually reintroduce the patient to the real life stresses placed on their injured body part will be explained. Prioritization of addressing the different components of a rehabilitation plan will be discussed and differences between surgical and non-surgical rehabilitation plans presented. Criteria used to make return to play decisions for injured athletes will also be outlined. Modifications of common exercises to accommodate for injuries and allow continued participation in exercise routines will be presented. This course is appropriate for pre-allied health professionals and fitness professionals with an interest in orthopaedic injuries, musculoskeletal system rehabilitation and the construction of exercise programs that prevent, or accommodate for, musculoskeletal problems.

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 421 Exercise Psychology (3)** Psychological antecedents and consequences of physical activity behaviors.

**KINES 421 Exercise Psychology (3)**

Exercise Psychology is designed to introduce students to the psychological antecedents and consequences of exercise behaviors. The antecedents of exercise behaviors are the psychosocial and cognitive factors (e.g., beliefs, attitudes, personality traits) that facilitate and/or inhibit exercise behaviors. The consequences of exercise behavior are the physical, psychosocial, and cognitive outcomes (e.g., self-efficacy, body image, mental health) of exercise participation. The antecedents and consequences of exercise behaviors will be presented within the context of contemporary conceptual and theoretical models in exercise psychology. This course is designed to provide students with an overview and foundation of the important psychosocial phenomena related to these antecedents and consequences of exercise behaviors. Students will have the opportunity to apply their knowledge in selected areas within exercise psychology through class discussions and assignments.

**KINES 422 Physical Activity Interventions (3)** Principles of designing, planning, and implementing theory- and evidence-based physical activity interventions.

**KINES 422 Physical Activity Interventions (3)**

This course is designed to acquaint undergraduate students with the application of major theories and models used to design and guide the development of contemporary physical activity interventions. Students will be familiarized with empirically-supported principles of behavior change and will gain an understanding of the basic strategies and methods used in designing, planning, implementation, and evaluation of physical activity interventions. The course will cover a variety of approaches to physical activity promotion, ranging from clinical and community-based interventions to population-based approaches, while discussing practical strategies and concrete examples of contemporary, evidence-based physical activity interventions. The goal of the course is for students to demonstrate the ability to formulate well-conceived physical activity interventions across a variety of settings and participant populations and learn how to apply theoretical principles and research findings to intervention development.

**KINES 423 Psychology of Sports Injuries (3)** Psychological causes and consequences of sports related injuries in athletes.

**KINES 423 Psychology of Sports Injuries (3)**

Using lectures/whole class discussion formats, this course is intended to provide the students with the basic knowledge regarding psychological causes and consequences of sport-related injuries, including concussions. Specific course objectives include: (1) developing the proficiency in initiating interviews and observations of athletes suffering from sport-related injuries; (2) assessing psychological impact of injury on athletes; (3) developing critical-thinking skills related to the probability of developing of psychological trauma in athletes with injuries; (4) developing specific skills of psychological assessment of injured athletes; (5) stimulating thinking about temporary research questions as related to psychology of injury. Evaluation will be based on active engagement in class discussions and administration of quizzes and written examinations according to course syllabus. This class extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

**KINES 426** Physical Activity and Public Health (3) Examines the role of physical activity in public health. Includes population level strategies for promoting physical activity in communities.

**KINES 426 Physical Activity and Public Health (3)**

An examination of the role of physical activity in public health. The first half of the course will provide an introduction to public health and basic epidemiology, measurement, dose-response relationships, chronic disease prevention. We will examine the historical progression of physical activity as a part of public health, including landmark studies showing the relationships between physical activity and chronic disease morbidity and mortality. Current public health guidelines and national policies related to physical activity will be discussed in detail. Students will debate the scientific foundation for current issues in the field, including fitness vs. fatness as a predictor of health outcomes and comparing behavior vs. objectively measured variables. The role of physical activity in preventing cardiovascular disease, type 2 diabetes, obesity, and cancer, colon and prostate cancer will be discussed. We will focus on large scale epidemiologic studies that highlight prevention.

The second half of the class will focus on a social ecological framework for promoting physical activity and will address population level approaches through policy and environmental strategies, following the Centers for Disease Control and Prevention Task Force for Community Preventive Services guidelines. We will study how features of the built environment can encourage or discourage walking and biking and refer to current research in the field that examines these relationships in different populations (urban/rural, youth/older adults). We will learn about the challenges associated with assessment and measurement at a population level. Policy level approaches to physical activity promotion; including local, state and national; will also be discussed. We will discuss various community level approaches including: point-of-decision prompts, mass media campaigns, enhancing access to physical activity opportunities and other strategies outlined in the guidelines. Lastly, we will examine how physical activity promotion is addressed in other countries through community, policy and environmental strategies in Canada, Australia, Brazil and throughout Europe.

**KINES 427 (HD FS 427)** Developmental Sport & Exercise Psychology (3) Developmental changes in the antecedents and consequences of physical activity across the lifespan.

**KINES (HD FS) 427 Developmental Sport & Exercise Psychology (3)**

Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to

address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

**KINES 434** Rehabilitation of Injuries to the Lower Extremities (3) Theoretical foundation and laboratory experience in manual therapy techniques and therapeutic exercises for the lower extremities.

### **KINES 434 Rehabilitation of Injuries to the Lower Extremities (3)**

Rehabilitation of Injuries to the Lower Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured athlete; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact of pain on programs and therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to

injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on the basic principles of therapeutic exercise and rehabilitation of injuries to the lower extremities.

This course will be offered every Fall semester with an anticipated enrollment of 25. Evaluation includes quizzes, rehabilitation plan of care, proficiency notebook, mid-term and final practical exams, and written mid-term and final exams.

**KINES 438W** Administration and Issues in Athletic Training (3) Theoretical and practical aspects for management of an Athletic Training professional practice and identifying contemporary issues related to the profession.

**KINES 438W Administration and Issues in Athletic Training (3)**

This course is designed to instruct students in the concepts and skills required for successful administration of an athletic training program and to understand and discuss contemporary professional issues attendant to the Athletic Training profession. General topics to be covered include theoretical basis of management, program management, human resource management, financial resource management, facility design and planning, information management, athletic injury insurance, legal aspects of sports medicine, ethical considerations in sports medicine, preparticipation physical and drug-testing, professional preparation issues, professional practice issues, and clinical practice issues. Experts from the community are brought in to lecture on several of the topics. The course meets for three hours per week and utilizes both lecture and discussion formats. Student assessment includes written examinations, written homework assignments, class participation and debates. This is a writing intensive course. Writing will be used to facilitate critical thinking about course material. Written assignments are based on the technical writing requirements of an athletic training administrator and are graded on both their content and quality.

**KINES (AM ST) 441 History of Sport in American Society (3)**

Study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture. The course satisfies the "area" requirement in "society" for American Studies majors. It is offered once every two years and enrolls approximately 30 students.

**KINES (CAMS) 442 Sport in Ancient Greece and Rome (3)  
(IL)**

This course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process.

The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics[Kinesiology] as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics.

Typical topics include athletics during the Minoan /Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.

**KINES 446 (IL) History of Sport in the Modern World (3)** History of sport in modern world, ca. A.D. 1500 to present; concentrates on role of sport in societies outside United States.

**KINES 446 History of Sport in the Modern World (3)  
(IL)**

The History of Sport in the Modern World introduces students to the connections between sporting practices and the broader cultural, political, intellectual and economic patterns that shape societies during the modern period in world history (ca. A.D. 1500 to the present). The course begins with a foray into the transition from traditional to modern forms of sport and society and covers the development of a wide variety of athletic games and pastimes from the sixteenth through twentieth centuries. Students will encounter a variety of historic conceptions of sport and explore the role of sport in the development of European, North American, Latin American, Asian, African and Pacific cultures. Students will learn how sports have been shaped by and have shaped by multiple factors, including modern ideas, science, class structures, gender roles, constructions of race, urbanization, nationalism, political conflicts, international relations, and economic institutions.

This is a senior-level course that fills an important historical gap in the Kinesiology Department's sequence of offerings on the history of sport. Other courses in the sequence cover ancient sport, sport in American society, and the Olympic Games. While crucial American developments that impact sports in the modern world are incorporated into this course, this class offers students a global focus that concentrates on the role of sport in societies beyond the borders of the United States. This course also relates to the offerings in the philosophy of sport program by exploring the history of ideas about sport in modern thought. Additionally, the course connects to the science-based offerings in Kinesiology by providing students with an introduction to the history of the scientific study of human performance.

The course introduces students to basic readings and knowledge of the history of sport in the modern world. The class provides opportunities to practice the critical reading and thinking techniques that shape the historian's approach to knowledge. This course will be taught once every year with an anticipated enrollment of 50 students. Evaluation methods that test reading and critical thinking skills are employed. No special facilities are required.

**KINES 448** Coping with Life After Sport (1) Psychosocial concerns affecting student-athletes as they enter the transition period following sport disengagement, focusing on coping interventions.

### **KINES 448 Coping with Life after Sport (1)**

KINES 448 is designed for student athletes who have exhausted their eligibility for or will no longer be participating in their respective sport due to injury or other issues. It is also relevant for students in athletic training or those who plan to pursue a career in coaching. The focus of the course is on the identification of issues and stressors affecting the transition and the development of strategies and coping skills to deal with life after sport. This can often be a very emotional and difficult time for student athletes. Discussion is focused on intervention and coping strategies, goal setting, decision making, career planning, and transferable skills. Student athletes will be able to recognize how their athletic experience has helped them to acquire numerous skills and characteristics highly valued in the workplace. Two sections of the course will be offered each semester. Students will be required to submit a weekly reaction paper, do a review of literature, and compile a comprehensive career plan. The class will be highly interactive with regular in-class assignments and projects.

**KINES 452** Applied Cardiovascular Physiology (3) In-depth study of cardiovascular regulation during postural, environmental, and exercise stress.

### **KINES 452 Applied Cardiovascular Physiology (3)**

First, the course begins with an intensive review of hemodynamics and basic cardiovascular control mechanisms (neural, hormonal, and local regulation).

Second, students compare and contrast these general principles in six important circulations: splanchnic, renal, cerebral, coronary, cutaneous, and muscle.

Third, they examine the three stresses which affect the circulation: posture (gravity), environment (especially heat) and exercise. For each stress, students identify the regional circulation(s) most affected and how they contribute to an integrated (systemic) cardiovascular response that is unique for each stress.

Finally, combinations of posture, heat, and exercise stress are considered to illustrate competing cardiovascular control mechanisms.

At each step students are introduced to seminal research papers illustrating the concept being studied.

**KINES 454 Women's Health and Exercise Across the Lifespan (3)** In-depth study of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan.

### **KINES 454 Women's Health and Exercise Across the Lifespan (3)**

First, the course begins with a review of general principles of research conduct and publication, themes that will be carried throughout all material covered in this class. A review of the historical aspect of women's health research and a review of the state of knowledge in women's health in the wake of the contemporary scientific endeavors such as the Women's Health Initiative will also be explored. Second, students will learn physiology of puberty, menstrual function and bone health and the impact of exercise on these processes. Third, students will learn current concepts of exercise related to the female athlete and clinical implications of alterations in normal physiology. The impact of oral contraceptives on health and exercise performance will be also discussed. Fourth, students will learn menopausal physiology, alterations in clinical status associated with this life stage, and review current research related to the Women's Health Initiative. Finally, a discussion of the effects of gender differences on health and exercise will be discussed. At each step students will be exposed to relevant research methods issues, and introduced to seminal research papers illustrating the concept being evaluated.

This course is designed for students who wish to develop a richer understanding of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan. Particular attention will be given to the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan, including but not limited to childhood, adolescence, adulthood and later adulthood.

The course will expose students to the rich research literature in women's exercise and health across the lifespan. Students will improve their ability to read and summarize original research literature through in depth presentation and discussion of seminal studies. Moreover, students will develop an understanding of how research has informed the state of knowledge on issues covered in this class and students will develop "language understanding" appropriate for interpreting and reading research papers.

**KINES 455 Physiological Basis of Exercise as Medicine (3)** Reviews the physiological basis of exercise for enhancing health and protecting against chronic diseases.

### **KINES 455 Physiological Basis of Exercise as Medicine (3)**

This course is designed for students interested in developing a deeper understanding of the physiological mechanisms behind exercise as medicine. Course content will consist of a mixture of selected book chapters as well as contemporary review and primary research articles. This course begins with an overview of the current exercise deficiency problem, including the societal, behavioral, and economic changes of the past century which have contributed to the modern day epidemic of chronic inactivity-related disease. After developing an appreciation for the scope of these problems, students will be introduced to the "tools" needed to critically evaluate the association between exercise and/or inactivity on health and the mechanisms by which these associations may occur, including: basic principles of epidemiology, searching/reviewing scientific literature, and experimental design. The remainder of the course will be focused on how exercise/physical activity modifies molecular/tissue-level and integrative physiological function, and describes the extent to which these modifications confer either preventative or therapeutic benefit. This will be accomplished through a combination of lectures, in-class/take-home assignments, as well as student-led discussions. Students will also use the "tools" that they learned at the beginning of the semester to demonstrate and share knowledge with others; integration of

this information may include a thorough analysis of a chronic condition including the pathophysiology, strength of evidence for exercise is medicine, and physiological actions of exercise in prevention or treatment. Students may also be given the opportunity to translate their knowledge from this course into educational materials (e.g., flyers, pamphlets, screensavers, fitness center displays, social media, etc) for use during "Exercise is Medicine" week.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 456 Physical Fitness Appraisal (4)** The basic components of physical fitness, how it can be measured, and how it can be developed.

#### **Physical Fitness Appraisal (4)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 457 Exercise Prescription and Case Studies (3)** Principles of exercise prescription; application of fitness appraisal based on current practices using evaluation and discussion of case studies.

#### **KINES 457 Exercise Prescription and Case Studies (3)**

The major purpose of this course is to provide those students interested in allied medical careers (e.g., cardiac rehabilitation, hospital testing, wellness centers, corporate fitness centers, physical therapy) with skills and practical knowledge regarding exercise diagnostics and prescription. Particular emphasis is placed on clinical diagnostic procedures, interpretation and terminology and this course directly contributes to the knowledge base expected for future employment in this area. At the conclusion of KINES 457, the students will be able to demonstrate on written examinations and in discussions, a knowledge and understanding of basic exercise prescription principles for apparently healthy, at risk and diseased populations, with special- emphasis on the cardiac patient. Inherent in the course goals is an understanding of the chronic physiological adaptations that occur as a result of programs of endurance and resistance exercise in apparently healthy, at risk and diseased populations.

This course includes lectures as well as hands-on laboratory sessions. Evaluation is based on student performance on written examinations, written and oral case study presentations, and written assignments. This course will be taken after students have completed KINES 456 and will complete the learning scheme involving fitness appraisal and subsequent prescription of exercise programs.

The course is offered fall and spring semesters with an enrollment of 35 students.

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 461W Preparation for Research Project (2)** Planning and preparation for research project.

#### **KINES 461W Preparation for Research Project (2)**

This course prepares students to conduct a research project in KINES 462W. Students will begin by critically examining different research approaches. They will explore the development and assessment of research topics paying special attention to both scientific and philosophical justifications. They will learn how to identify research populations and how a human subjects review protects those involved in research studies. They will identify and critique the various inventories and assessment tools available for the kind of research they propose. Students will complete a research proposal including review of literature and method section, and submit an application to the Institutional Review Board. These goals will be achieved through a series of writing assignments.

Students are expected to demonstrate the following outcomes:

- 1) Communicating and writing ideas relevant to the field of Kinesiology.
- 2) Understanding and describing the major issues in the field.
- 3) Understanding the principles of how to conduct research in wellness, fitness and/or associated practice.
- 4) Understanding and communicating the methods of scientific discovery.

Students are evaluated on their research proposal (50% of final grade) which is drafted and revised during the semester. Further writing assignments (50%) assess and enhance student's competency in research methods and statistics. The course is offered every fall semester with a total enrollment of 25 each semester.

General Education: None

Bachelor of Arts: None

Effective: Fall 2006

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 462W Research Project (2)** Completion of research topic.

### **KINES 462W Research Project (2)**

During this course students will collect and analyze data for a research project. They will trouble shoot any data collection problems and learn how to use computerized programs for statistical analysis of data. They will learn about various presentation modes relevant to the written and oral presentation of research data. Students will prepare and be evaluated on a research paper that reports on their research project. In addition, they will present their work orally in showcase sessions to which fellow students and faculty members are invited. The goal is for students to produce as close as possible to publishable papers. This course is part of a two-course sequence and can only be taken upon successful completion of KINES 461W. It, along with the internship experience, are the culminating experiences in the Exercise Science - Science Emphasis. Facilitates needed will be determined based on the individual research project. This course will be offered only in the spring semester of each year. Enrollment will vary from 1 to 25.

Bachelor of Arts: None

Effective: Fall 2006

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**KINES 463 Acquisition of Motor Skills (3)** Examination of principles of motor learning; the application of strategic factors such as: practice types, schedules, augmented information, and motivation.

### **KINES 463 Acquisition of Motor Skills (3)**

This course is intended for students interested in the principles of motor learning (learning, retention and transfer) and the application of specific learning strategies such as, practice, feedback, demonstrations, and instructions. Through lectures, discussions, and course readings in addition to writing assignments, the goal is for students to develop a unified conceptual framework for motor learning and its facilitation through intervention strategies.

The evaluation for the final grade will be based upon a synthesis of assessment in three areas: a) Term Project (30% of final grade) - a report on a learning experiment or a synthesis paper on a learning principle or a learning strategy; b) Mid-Term Exam (30% of final grade) - questions requiring short 2-3 sentence answers; and, c) Final Exam (40% of final grade) - requiring essay length answers to selected questions that integrate key issues from all the course material.

This course will build on the concepts outlined in KINES 171 and 360. It will represent the culminating upper level undergraduate course in motor learning. This course will be an elective available to students who have completed the required KINES 360 course. It can be used to fulfill requirements for the Kinesiology major and the Movement Science, Teacher Preparation, and Athletic Training Options.

This course will be available to students outside of the Kinesiology major who may, upon approval, substitute the KINES 360 prerequisite requirement. The course will be offered every spring semester.

**KINES 464** Children's Physical Education Curriculum and Practicum (3) Curriculum for elementary school physical education emphasizing the skill theme approach.

### **KINES 464 Children's Physical Education Curriculum and Practicum (3)**

The purpose of this course is to introduce teacher candidates to the skill theme approach and developmentally appropriate physical education for children. Appropriate planning, instruction, and assessment make-up the foundation of this course. These techniques are then applied when they teach small groups of children from a local elementary school. Specifically, students will develop and implement developmentally appropriate lesson plans with children and then analyze and reflect on their teaching effectiveness. A primary focus of the class is using the skill theme approach to guide children to reach appropriate cognitive, affective and motor objectives as stated in state and national standards. Students also develop curricular scope and sequence overviews that are used to guide curriculum and lesson development from grades K-5.

Assessment of student performance in the course includes entrance and exit slips based on assigned readings, class lectures and discussion, and laboratory experiences. Students are also graded on their planning, analysis and reflection of their teaching in elementary schools. There is also a final exam that requires students to translate theory into practice as applied to elementary school physical education.

Assessment:

Entrance and exit slips 15%  
Teaching in the schools 40%  
Final exams 15%  
Project 15%  
Laboratories 15%

**KINES 465** Neurobiology of Sensorimotor Stroke Rehabilitation (3) This course is designed to expose students to the recent topics in motor stroke rehabilitation research through literature.

### **KINES 465 Neurobiology of Sensorimotor Stroke Rehabilitation (3)**

This 3-credit course is designed to expose students to the most recent topics in motor stroke rehabilitation research through reading of current literature. The course addresses the neurobiological foundations of motor deficits in stroke, including contralesional and ipsilesional effects, current research on mechanisms of motor recovery, and the most current research on intervention strategies, such as constraint induced therapy, robot aided rehabilitation, virtual reality therapy, and sensory motor interventions. The purpose of the course is to provide an understanding of the neurophysiological and biomechanical foundations of motor deficits that occur with stroke, and of current treatment approaches.

Stroke presents a significant social problem that is emphasized in current statistics reported by the American Heart Association indicating that each year, about 780,000 people in the United States experience a new or recurrent stroke. While stroke can produce deficits in perceptual, cognitive, and motor processes, this course is focused on sensorimotor deficits and associated rehabilitation interventions that tend to be employed by physical and occupational therapists in the rehabilitation environment.

Sensory-motor strokes often result in weakness and deficits in voluntary movement of the limbs on the opposite side of the body as the damaged hemisphere (Contralesional). These motor deficits currently receive primary focus in occupational and physical therapy treatment for stroke. However, regardless of improvements in contralesional arm function, most patients also show deficits in coordination of the ipsilesional arm that is on the same side of the body as the damaged hemisphere. For many hemiparetic patients, functional recovery relies heavily on this arm. This class will focus on understanding both ipsilesional and contralesional motor deficits in stroke. Physiological and biomechanical mechanisms of dysfunction will be emphasized. Recovery of function will be addressed through analysis of physiological and biomechanical measures that are used to track changes in neural function. In addition, current research that is focused on developing rehabilitation intervention protocols that systematically address remediation of dysfunction, and facilitation of recovery will be discussed.

Students will be guided in reading, critiquing, and presenting primary scientific manuscripts and review articles. Active discussions of presented material are encouraged, and grades are based on presentations, quizzes, and participation in class.

**KINES 466** Assessment and Evaluation in Physical Education and Health Education (2) Explores measurement as an important and distinct component in a variety of physical education and health education contexts.

### **KINES 466 Assessment and Evaluation in Physical Education and Health Education (2)**

This course addresses measurement as an important and distinct component of other processes such as assessment and evaluation in a variety of physical education and health education contexts (i.e. student performance, teacher performance, program outcomes). Teacher candidates will explain the inter-relationships among objectives, learning activities, and measurement strategies. They will design performance-based and standards-based measurement plans and tools that are necessary when assessing, evaluating, researching or making decisions about performances in physical education and health education. These plans will be performance-based, include select response and constructed response measurement instruments; measure what matters most in all learning domains; and demonstrate that instruction and assessment are seamless. These performances can range from constructed-response or non-traditional performance tasks like motor skill performance, fitness assessments, oral presentations, written reports, portfolios, program evaluation, and teaching effectiveness. Teacher candidates will be expected to recognize many and develop a few authentic and traditional measurement techniques/tools (including peer and self-assessments). These techniques and tools will assess student understanding and performance, provide feedback, and communicate student progress. These tools will measure what matters most and be valid and reliable. These tools are to be embedded with instruction and used by self, peer and instructor. When available, these tools will be integrated with technology to enhance the management of data. In this course, teacher candidates will recommend strategies for implementing results of a measurement by identifying implications from findings for future curricula, instructions, and other activities. They will differentiate between formative and summative measurements and describe ways the lesson/unit/curricula can be improved based on measurement results. Teacher candidates will also demonstrate their ability to interpret results and infer implications from the findings. For example, identifying instructional gaps between learning activities and objectives and using learning and performance data to make informed curricular and/or instructional decisions. In doing so, teacher candidates will contrast the results of norm- and criterion-referenced evaluation. This course will complement existing Methods courses (field experiences) in our teacher preparation curriculum by aligning instructional planning and implementation with measurement of these learning experiences. Teacher candidates will be evaluated with quizzes, assessment plans, measurement tool development, data collection and data interpretation. One section of this course will be offered each semester with a projected enrollment of 25 students.

**KINES 467** The Science of Performance Enhancement (3) Evidence-based evaluation of performance enhancing substances and methods in sport.

### **KINES 467 The Science of Performance Enhancement (3)**

Students will describe and evaluate the evidence base for substances and methods used to improve aerobic power, strength, body composition, metabolism and thermoregulation as they relate to exercise and physical activity.

Students will study and develop a rating scheme to describe the quality of evidence and recommendation to use ergogenic aids. This rubric will be utilized throughout the course to evaluate recent and proposed techniques to enhance athletic performance. Topics include, but are not limited to:

- Blood boosting: Enhancement of oxygen transport
- Androgens, prohormones, and anabolics
- Substrate manipulation to increase strength
- Nutraceuticals to improve athletic performance and recovery.

General pacing of these topics may be modified depending on class interest and issues that emerge in the popular press.

Consideration will be given to the regulatory and ethical aspects of their use. Students will develop an understanding of the World Anti-Doping Code, administered by the World Anti-Doping Association and its subsidiaries. Prior familiarity with ethics is essential.

Science of Performance Enhancement is designed to emphasize team and individual scholarship in multiple domains, with emphasis on quantitative, qualitative and analytical skills.

**KINES 468** Health Instruction in the School--Content and Method (3) Methods, materials, and units of instruction.

KINES 468W

**KINES 468W Health Instruction in the School-Content and Method (3)**

This writing-intensive course is designed to provide students pursuing a health and physical education teacher certification in the Kinesiology degree with the conceptual foundation necessary to develop health instruction that aligns with the National Health Education Standards to students in preschool through twelfth grade (P-12). It will provide students with information on health education content, theory, and contemporary instructional practices. An understanding of how to effectively plan and sequence age-appropriate health content and deliver the content using multiple instructional strategies make up the foundations of the course. Emphasis is placed on the student's ability to create an effective lesson plan and deliver the content in a preschool through twelfth grade health education classroom.

The overarching objectives for this course are to develop students' health education planning skills, instructional skills, reflection skills, and writing skills. The overarching objectives for this course are to develop Pre-K-12 teacher candidates' health education skills in planning, delivery and instruction, and reflective writing. Students will learn these skills by designing comprehensive preschool through twelfth grade health instruction using interactive learning activities that lead to health literacy and reflecting on their own teaching as well as their peers' teaching abilities.

The purpose of this course is to enhance students' writing and oral communication skills for success in health education. Given the importance of clear communication in health and wellness instruction, this course will provide students with the skills necessary to effectively communicate with students, parents, school administrators, and the public. The course will begin with the basics of writing a comprehensive health education lesson plan and will progress to developing increasingly complex written communications and oral presentations.

**KINES 469W** Curriculum Development in Health and Physical Education (3) The content and process of K-12 school health and physical education curriculum development for public school students.

**KINES 469W Curriculum Development in Health and Physical Education (3)**

The purpose of this course is to prepare prospective health and physical education teachers to plan and design curricular content that meets the needs of students in grades K-12 and aligns with state and national standards. The philosophical and theoretical basis for curricular decision--making will be explored.

Instructional Objectives:

1. design a physical education curriculum outline for a selected school setting (elem, middle, secondary)
2. design a health education curriculum outline for secondary or middle school health
3. assess a current HPE program and the extent to which the program is consistent with good practices, national standards, and state standards

Relationship of course to other courses:

This is the only course that addresses Health and Physical Education Curriculum Design. Students take this course after or concurrently with three-- methods--intensive courses. This course serves as the capstone course in the Teacher Preparation option. It applies pedagogical content knowledge in health and physical education to curriculum models and design. Students take this course the semester before student teaching.

Projected offering and enrollment: this course is offered every semester and has an enrollment limit of 30

**KINES 488 Mechanics of Locomotion (3)** This course examines the forces and motions characteristic of locomotion, with emphasis on walking, the most common human activity.

**KINES 488 Mechanics of Locomotion (3)  
(GHA)**

Walking has been described as the most commonly performed human activity. Diseases or injuries that reduce the ability to walk independently and efficiently are especially likely to adversely affect quality of life. Kinesiology 488 introduces students to the elements of normal walking and how walking motions are affected by changes in age, walking speed, and pathological conditions. Advanced topics covered in this course include other forms of locomotion, including running and cycling, and the use of mathematical models to understand phenomena related to locomotion.

Students enrolled in this course learn the particulars of human locomotion, but in so doing they also gain an understanding of kinematics and kinetic analysis, joint mechanics, and the clinical treatment of movement disorders. Basic principles of mechanics are applied to establish how walking motions result from forces produced by muscles, gravity, and contact with the ground. Students planning to pursue graduate study in movement biomechanics or in clinical areas such as physical therapy are especially likely to benefit from the focus on these areas.

The requirements for Kinesiology 488 include two mid-term tests and a final examination, four laboratory reports, and a literature review. Laboratories (held during regularly scheduled class periods) introduce students to current experimental methods used to measure motions, forces, and muscle activity during locomotion. Completion of several case studies during the semester gives students practical experience with the interpretation of motion analysis data, the factors that influence clinical decisions in the treatment of movement disorders, and ethical considerations in biomechanics research.

**KINES 492W Programming for Business and Agencies (3)** Fundamentals of program development applied to corporate and private physical fitness businesses.

**KINES 492W Programming for Business and Agencies (3)**

This course will use an experiential approach to acquire knowledge and skills necessary to assess, plan, implement and evaluate health/wellness/fitness programs within a business/corporate setting. Students will actively participate in a process-oriented, student-centered learning environment that includes cooperative learning, critical thinking, effective communication, assessment, and problem solving. Students will assess, plan, implement and evaluate a health-related program (i.e., wellness fair, career fair, road race, fitness programs). Students will write business letters, operating plans, mini-grants, budgets, flyers, press releases, newspaper articles, surveys, and other written communication projects relevant to the fitness/wellness business. Students will access and evaluate health/wellness resources (i.e., agencies, Internet, media, speakers).

As indicated by the "W", this is a writing intensive course and will follow university guidelines for such courses. Most of the assignments will involve group-based problem solving. This course is offered Spring Semesters with a maximum enrollment of 35.

**KINES 493 Principles and Ethics of Coaching (3)** Integration of the practical and theoretical knowledge necessary for effective coaching through classroom and field experiences.

**KINES 493 Principles and Ethics of Coaching (3)**

The Principle and Ethics of Coaching examines the challenges of today's coaching profession through societal norms and expectations from the past and present. The course begins with a study of the coaching profession covering past and current coaches who have experienced success and failure in the profession. Students learn how the profession has developed as a result of changing values, demands, emphasis and expectations in the athletic world. Students will learn

how to work with Title IX, parents, high school and collegiate regulations, season structures and the various roles and responsibilities of today's coach. The course is a senior-level course providing students in Kinesiology with an in depth study of the profession that has historically been associated with careers in Kinesiology. This course relates to other courses in sport ethics, sport philosophy and history of sport as they provide the theoretical background for coaching decisions. In addition, this course demonstrates practical implementation of theories from nutrition as well as activity courses. The course offers students an in depth study of sport and gender specific differences as they relate to the coaching profession. The students observe, question and study current coaches while examining their own backgrounds to develop set of principles to handle today's coaching issues. A coaching experience is an optional opportunity afforded to students while writing skills must be demonstrated by all students through written exams, papers and/or projects. Enrollment is optimal at 20-25 students, however, larger numbers may be accommodated. The course will be taught during Fall and Summer semesters. The emphasis on class discussion and interaction with various athletic coaches introduces students to realities of today's coaching profession and the challenges of the 21<sup>st</sup> century coach. Video and power point enhance the multi media approach to this course and further enhance the learning environment. Evaluation of the students requires an understanding of assigned readings, class discussion, and the student's ability to demonstrate critical thinking skills.

**KINES 495A** Practicum in Student Teaching (12) Supervised teaching of health and physical education in K-12 public schools with seminars focused on transition from student to professional.

#### **KINES 495A Practicum in Student Teaching (12)**

The teacher candidate will be placed in either an elementary or secondary school setting for the first 8 weeks of the student teaching experience, followed by placement in the level not selected first for the last 7 weeks. The teacher candidate will be teaching both health and physical education during each placement. The teacher candidate will be assigned on-site cooperating teachers will be supervised by a university faculty member who makes a minimum of four on-site visits, plus review of teaching via two videotape.

During the 15-week semester, there are four seminars of approximately 5 hours each, during which all teacher candidates meet with the coordinator of the student teaching program to discuss topics related to the multiple roles of teachers in public schools and the transition to becoming a professional teacher. In addition, some time in each seminar is devoted to experience sharing and collaborative problem solving. The following topics are covered during the seminars: legal liability and sexual harassment, electronic portfolios, resume and cover letter writing, health and physical education professionals, preparation for employment, interviewing, best teaching practices and sharing, classroom management, and technology in physical education. In addition, the student teachers are required to complete a variety of assignments including: a professional portfolio, unpaid service activity reflection, daily notebook, videotapes and reflection, and Pennsylvania teaching application and essay.

**KINES 495E** Advanced Professional Development in Kinesiology (3) Professional development preparation focused on knowledge, skills and abilities to complete national certification; obtain internships, employment or graduate school admission.

**KINES 495E Advanced Professional Development in Kinesiology (3)**

This course is designed to provide undergraduate students the opportunities of fitness professional pre-certification preparation via lecture format, professional travel to acquire hands-on skills at a top caliber training facility, and an expert panel round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but are not limited to the following: faculty/professional/expert discussions, lectures, training sessions, quizzes and examinations that are designed to prepare students to pass a national certification. Students will enhance skills needed to develop exercise leadership characteristics, communicate information

effectively, and build a foundation of exercise testing and prescription guidelines which are safe, effective and motivating to clientele. Other class foundational principles include but are not limited to Exercise Programming; Health Risk Assessment; Serial Testing; Metabolic Calculations; Nutrition and Weight Management and Facility Administration. Students will take practical experience and knowledge gained from this professional course and apply principles into their proposed field of study in a safe and effective manner.

**KINES 532** Pathoetiology of Musculoskeletal Injuries (3) In-depth study of physiological, mechanical, and neuromuscular mechanisms of common musculoskeletal injuries with applications for injury prevention, evaluation, and treatment.

**KINES 532 Patheotiology of Musculoskeletal Injuries (3)**

This course is designed to provide the student with an in-depth understanding of the Pathoetiology of common musculoskeletal injuries. The pathoetiology of injuries will be approached from physiological, mechanical, and neuromuscular perspectives. The pathoetiology of injuries to bone, cartilage, ligament, muscle, tendon, and nerve will be explored, as will the processes of inflammation, tissue healing, and pain perception. Mechanisms of injuries to specific structures (lateral ankle sprains, ACL ruptures, intervertebral disc herniations,...) will also be studied extensively. Analysis of normal and abnormal movement mechanics as they relate to injury mechanisms will be discussed related to common athletic endeavors such as running and throwing. Clinical applications relating the pathoetiology of injuries to injury prevention, evaluation, and treatment strategies will also be explored. In addition to course lectures, an extensive reading list will be used to facilitate students' knowledge with the current literature related to injury mechanisms. Evaluation of student achievement will be based on written examinations, a literature review paper, and an oral presentation. This course is targeted towards athletic health care professionals (athletic trainers, physical therapists,...) and those interested in orthopedic injury research. A thorough background in gross musculoskeletal anatomy and common musculoskeletal injuries are prerequisites for this course. The course is expected to have an enrollment of approximately 10-15 students and will be offered every other spring semester.

**KINES 540** History of Sport: Cultural and Social Dynamics (3) This seminar explores the literature, methodologies, theoretical challenges, and research questions confronting the field.

**KINES 540 History of Sport: Cultural and Social Dynamics (3)**

The History of Sport: Social and Cultural Dynamics explores the significant literature, key methodologies, and major questions currently confronting scholars of sport and leisure. The class will survey a variety of national sporting cultures and a wide range of topics.

Students will read works in major research areas in the field. They will debate arguments and issues raised in those readings. They will write critiques of their readings. Students will undertake several research expeditions. The expeditions familiarize the students with the resources available at Penn State and other libraries and archives. The research expeditions also introduce them to the scholarly tools necessary for undertaking research in the social and cultural dynamics of sport. They will also produce a primary-source based research paper on a topic that they select in consultation with the professor.

This course seeks to prepare graduate students to explore the history of sport. The course also seeks to develop the basic academic skills necessary for success in scholarly endeavors. Students will read, debate, and write. Writing assignments include journal article summaries, book critiques, and a research paper. The completed research paper

should serve as a platform for producing a conference presentation and/or journal publication.

**KINES 574 Modeling in Biomechanics (3)** Examination of the philosophies and tools used in biomechanical modeling and the insights into the musculo-skeletal system these provide.

**KINES 574 Modeling in Biomechanics (3)** It is the objective of this course to introduce the student to the following:

- the philosophical principles which underpin modeling in biomechanics
- the tools used in biomechanics for modeling
- key models developed in biomechanics explaining aspects of human movement

At the end of the course students should have a good understanding of how models are used in biomechanics, and how they contribute to a greater understanding of the mechanisms underpinning human movement. Students should have attained the skills that are necessary for them to start formulating their own models of aspects of human movement.

The course will provide an introduction to the relevant philosophical issues when using models to analyze human movement. The software tools which can be used for the development of models will be studied. The basis for simulation models are the equations of motion of the system being studied, techniques for deriving and solving these equations will be reviewed. Muscles provide the forces which generate human movement, so the properties of muscles and their modeling will be examined. The control of simulation models relies on theories from optimization, and these techniques and their implementation will be studied. Human movement can take many forms, and models which cover various aspects of human movement will be examined including walking, running, reaching, throwing, and jumping.

The course is intended for graduate students and is well suited for students specializing in biomechanics or bioengineering, but may also be relevant to students studying motor control, and sports medicine. Students will be evaluated via three tests, presentations made in class, a project, and a final examination.

General Education: None

**KINES 575** Experimental Methods in Biomechanics and Motor Control (3) Introduces the theory and practice behind the primary experimental methods used in biomechanics and motor control.

### **KINES 575 Experimental Methods in Biomechanics and Motor Control (3)**

Biomechanics and motor control share a common methodology for recording and analyzing human movement. This course is designed to introduce students to the theory and practice behind the primary experimental methods used in biomechanics and motor control. At the end of the course students should have an increased understanding of the experimental methods used in biomechanics and motor control, and experience at implementing these methods. Topics to be covered include: signal processing, electromyography, motion analysis, force measurement, anthropometry, joint kinematics in two- and three-dimensions, joint kinetics, modeling, error propagation, and scaling and dimensional analysis.

Lectures will be used to introduce students to the theory behind a measurement technique. Readings will be used to provide supplementary examples of how these techniques are applied in the analysis of human movement. The techniques will be illustrated with MATLAB routines, with data sets provided so the students can experience how the data must be manipulated to provide meaningful results. Assessments will focus on students understandings of the techniques, their implementation, and interpretation of their output.

The course will provide a solid foundation for students wanting to understand how the data they are reading about has been produced, and the limitations in such data. Students will also have the background required to become independent in their data collection and processing in the analysis of human movement in both biomechanics and motor control.

Evaluation will include exams, class presentations and a portfolio. It is anticipated that this course will be offered every spring semester with a maximum enrollment of 15.

**KINES 588** Scientific Writing in Kinesiology (3) Instruct students in writing grant proposals, abstracts, manuscripts, and effective presentations in their respective scientific fields of study in Kinesiology.

### **KINES 588 Scientific Writing in Kinesiology (3)**

This course is intended to assist graduate students in writing grant proposals, abstracts, and manuscripts, as well as preparing effective presentations in their respective scientific field of study within the discipline of Kinesiology.

Course objectives are to:

1. Increase technical proficiency in scientific writing vice a versa a grammar, sentence structure, formatting, etc.
2. Promote the ability to write effective specific aims, hypotheses, and background statement portions of a grant proposals
3. Understand the formulaic approach to writing effective scientific abstracts and manuscripts
4. Expand the ability to prepare and present effective oral communications using a Power Point format
5. Develop an understanding and appreciation for the peer review process associated with grant proposals and manuscripts

Evaluation will be based on grading of the following brief writing assignments: a manuscript abstract, the Introduction section of a manuscript, the Specific Aims page of an NIH-style grant proposal, and a set of Power Point slides for an abbreviated oral presentation.

The course is to be offered every fall semester. Enrollment is limited to Kinesiology Department graduate students.

**LABOR 966** The Law of Employee Benefits (3) Employe-re-provided pension and health care programs play a critical role in the lives of individuals, families, and communities. They also affect corporations, financial markets, and the economy as a whole. Employee benefit programs are, in short, an important staple of modern law practice. This course surveys the Employee Retirement Income Security Act and relevant portions of the Internal Revenue Code. Classes examine what benefit plans must do regarding reporting and disclosure, accrual, vesting, funding, and fiduciary standards. The course covers health care reform, the shift from defined benefit to defined contribution programs, and the effect of stock market volatility on benefit programs. Throughout the semester, students examine the policy goals underpinning federal benefits law. The course surveys major issues in ERISA litigation, including that statute's claims and remedies provisions, as well as its preemption of state law.

## **Labor&Globwkrsrghs (LGWR)**

**LGWR 510** International Labor Law (3) Seminar exploring international labor law, including its standards, reviewing bodies, procedures, information sources, remedies, and overall strenghts and weaknesses.

### **LGWR 510 International Labor Law (3)**

Because globalized production systems call for globalized rules for workplace rights, a body of international labor law is rapidly developing. Designed principally for global labor activists, this course equips students to evaluate the role that international labor law -- its sources, participants, mechanisms, and remedies -- plays in the promotion of labor rights in the global economy. A centerpiece of the course looks at the International Labor Organization, whose complex processes introduce students to the generally "soft" rules of international workplace regulation. Beyond the ILO, the course looks at other bodies -- some global, others regional or bilateral - that require or encourage compliance with decent working standards. It also addresses how private parties can create either voluntary "codes of conduct" or negotiated framework agreements spelling out labor rights. Across all of these topics, students take up cases covering the broad range of labor struggles (affecting unions, children, women, immigrants, forced laborers, etc.). Critical to the course is the student's gaining familiarity with the surprising variety of information available on working conditions around the globe.

As the course progresses, students are asked to formulate opinions on which international labor law forum holds the greatest potential to help with selected worker rights issues in selected countries. Students will review evidence suggesting that labor activists make their best use of international labor law when they link legal action to outreach, education, research, and "on the ground" organizing to enhance chances for success.

**LGWR 520** Global Workers' Rights (3) Seminar course exploring the issues of work and workers' rights in the global economy.

### **LGWR 520 Global Workers' Rights (3)**

This course examines the multiple debates around the topic of workers' rights: taking political and social perspectives and linking them to contemporary debates and proposals to enhance and/or strengthen workers' rights in Multinational Corporations (MNCs) and Global Value Chains (GVCs). The course combines an initial discussion of both the nature and the breadth of workers' rights, both in terms of philosophical debates and institutional policy parameters. The course then examines how workers' rights have been defended through strategic corporate research and campaigns.

The course will analyze the extent to which the legal grounding of workers' rights comes into harmony, or perhaps discord, with the actual state-based institutions that are said to implement labor laws and monitor their compliance.

The course will also look at how workers' rights and labor standards are continuously challenged by MNCs and their supplier firms, especially in light of the hegemony of competition and economic liberalization of the present age. Taking cues from such developments, the course looks at how certain theories and perspectives may assist students in understanding more acutely how the gradually changing economic and industrial structures and production-distribution regimes impact on workers' rights. Answering this question will be done by examining recent theories derived from economic sociology and contemporary industrial relations, especially those that look at how GVCs impact lead firms, supply firms, states, workers and worker organizations. Specifically, the course will look at how workers' rights are impacted by types of foreign investment and types of economic upgrading processes taking place in developing countries and often being propelled by capital fractions that are headquartered in the industrialized world.

The last segment of the course will explore labor solidarity in GVCs. It will pay particular attention to how strategic corporate research can inform international solidarity campaigns.

**LGWR 895** Internship (1-6) Supervised, professionally-oriented, off campus, non-group instruction, including field experiences, practicums, or internships.

**LGWR 895 Internship (1-6)**

The Labor and Global Workers' Rights (LGWR) internship aims to provide MPS in LGWR students with hands-on experience in labor and global workers' rights. The internship will build and reinforce the students' skills by enabling them to apply what they have learned in the classroom to a real-world labor and global workers' rights setting. As the MPS in LGWR is a professional degree, an internship in a real-world labor and global workers' rights setting is critical to students' academic and professional success.

Students complete their internships with US or international labor unions or a labor-oriented organization such as a

worker center, labor NGO, or labor research institute. Through the internship, students will learn about priorities, policies and practices that these organizations have regarding workers' rights and/or international labor issues. Students may also gain insight, for example, into the challenges that American unions have with building working relationships and alliances with unions in other countries while also addressing global dynamics affecting working conditions and workers' rights.

Prior to the beginning of the internship, students will work with their internship adviser to develop individualized learning objectives. These learning objectives will shape a student's experience at the internship site and the types of projects the student will complete. The learning objectives will also provide the students with a metric by which they can evaluate their effort and performance.

Concurrent: LARCH 400A

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LARCH 414** Design and Theory V: Advanced Landscape Architectural Design (5 per semester/maximum of 15) Review of landscape architectural theories and issues; supports development of comprehensive design study and/or independent honors (Thesis-Based) design projects. LARCH Majors only.

**LARCH 414 Design and Theory V: Advanced Landscape Architectural Design (5-15)**

Fourth- and fifth-year design studios are designated "depth" studios. Each studio is aligned with one of the department's associated research centers or pursues special topical content and continues the development of site-scale planning and design skills for landscape architecture students with larger and more complex sites and programs. Students select a topic from the range of options. Students may choose to take a given topic on a maximum of two occasions.

Topics are related to issues that have been introduced in previous studios and are as varied as possible from studio to studio. This allows students to select a topic of interest to explore with great intensity and detail. The studio alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. To date, studio topics have ranged from historic preservation to recreational landscapes, urban ecology to community planning. The type of project is determined on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product.

Project types include regional master planning, large-scale site planning and medium-scale community/housing design. The design issues emphasize urban form, community identity and open-space systems in the United States as a follow-up to urban patterns experienced during the student's previous study abroad. The project types may include such topics as inner-city locations with mixed-use and complex programs that progress from research and planning to site-scale design. Often, students work with an actual client, such as an urban planning commission or a city economic development entity, etc. Issues of urban form as a setting for significant practice opportunities are emphasized. Locations such as brown fields, urban entertainment districts, waterfronts, housing infill, etc., form the basis for design response in context.

**Course Objectives:**

- To develop an in-depth understanding of one or another aspect of landscape architecture.
- To be exposed to the rigor and challenges of developing and implementing one's own design expertise in the context of a specific environmental concern.
- To exercise the design principles, technological tools and communication strategies developed during the course of the specific design studios.

General Education: None

Bachelor of Arts: None

Effective: Spring 2007

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LARCH 424** Design Theory Seminar (3 per semester/maximum of 9) Inquiry-based reading and discussion of design theory literature relevant to contemporary landscape architecture issues. Topics vary each semester.

**LARCH 424 Design Theory Seminar (1-3)**

LARCH 424, Design Theory Seminar, is a companion to the depth studios, LARCH 414. However, unlike the seminars offered during second and third years, LARCH 424 is not tied topically to any particular depth studio. Instead, this seminar provides a vehicle for rigorous and structured exploration of the theoretical and philosophical issues that face landscape architectural designers and planners. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design.

These seminars, offered to fourth- and fifth-year students, enable professors and students to take their investigations to greater depth. Seminars are offered by different professors each semester and the content is expected to be somewhat aligned with the faculty member's research and scholarship or pursues special landscape architectural topical content of the faculty's choosing. Students select seminars from the range of options offered. This allows students to select a topic of interest to explore with great intensity and detail. Students are required to take up to three seminars to achieve a minimum of three credits.

Topics are related to issues that have been introduced in previous studios and seminars and the department ensures that students have access to the widest range of topics. The seminar alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. Seminar topics related to our research centers include historic preservation, urban ecology, community planning and watershed stewardship. From time to time topics independent of our research centers, such as the impact of technology on design or the impact of public policy on design and planning, will be addressed. The type of seminar outcome is determined by instructors on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product.

**Course Objectives:**

- To further develop an in-depth understanding of the theoretical or socio-political context for one or another aspect of landscape architecture.
- To challenge students to articulate their own values in the context of a specific environmental concern.
- To examine the means by which designers reconcile their own, their clients', and society's values in the pursuit of particular design or planning goals.

**LARCH 450** Geodesign: Geospatial Technology for Design (3) Interactive geodesign and digital design studio.

**LARCH 450 Geodesign: Geospatial Technology for Design (3)**

This course addresses the role of continually evolving information technologies in landscape architectural research and practice by reference to long legacy of theoretical contributions from the field that have sought to reconcile and benefit from integrating the sciences of society and environment with art, design, and planning. This interactive digital design course is an advanced geodesign methods and principles class that applies digital tools to landscape research, modeling, analysis and design. This course presents a digital process for analyzing, managing, and ultimately designing landscape systems by allowing students to inventory, analyze and evaluate complex spatial datasets. Students will learn to critically evaluate and implement the interplay between various factors and design alternative futures.

Lectures will introduce key geodesign principles and techniques. The goal is to investigate an array of geospatial software as a powerful design tool in a broad and integrated manner for all the activities of the landscape architect, designer, planner and architect. Using a variety of geospatial and digital tools, students will develop a process to study, analyze, and plan landscape systems. They will utilize activities from each lesson to develop primary and alternative strategies for their proposed project. The problem-based approach used by this course will encourage cross-cultural contexts for student projects.

Geospatial design computing technology enables many alternate approaches to problem-solving, so that students will customize their own learning experiences within the concrete structure of the course. This course brings advanced geospatial and digital analysis and evaluation into the design process, where concepts and ideas are vetted for suitability against a wide array of physical and social, place-based information. This on-the-fly suitability analysis provides a framework for design, giving landscape architects, architects, land-use planners, and others involved with design the tools to directly leverage geospatial information within their design workflows.

**LARCH 499E (IL)** People and Protected Areas (3) LARCH 499E is a three-credit seminar that aims to introduce students to key issues associated with communities, community design, biodiversity conservation, and the interface of people and conservation in the vicinity of Udzungwa Mountains National Park in south-central Tanzania. The format of the course is reading and discussion, where students read assigned literature and then contribute to discussions led by faculty, both to demonstrate their understanding of the reading assignments and to begin to explore key issues introduced by those readings. Students also write two papers, the first examining the interface of rural land use planning, community design, and biodiversity conservation; and the second focusing on biodiversity conservation in the context of human settlement near Udzungwa Mountains National Park. Students evaluation is based on seminar participation and the two papers.

**People and Protected Areas (3)**

General Education: None  
Diversity: IL  
Bachelor of Arts: None  
Effective: Summer 2016 Ending: Summer 2016

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LARCH 499F (IL)** Community Design in the Vicinity of Udzungwa Mountains (5) LARCH 499F is a five-credit course that focuses on student research projects associated with communities along the eastern boundary of Udzungwa Mountains National Park. We have purposefully maintained a general definition for the course to allow students to design projects that best suit their interests and skills. For example, some students may focus on evaluating existing village configurations and propose new designs that help villagers better meet their daily needs. Other students, in turn, may focus on developing a more marketable park that attracts larger numbers of visitors who stay in or near the park for longer periods of time--generating more income that ultimately will find its way, in part, to local communities.

**LARCH 499G (IL)** The Contribution of Service-Learning to Students and Community (1) LARCH 499G is a one-credit course designed to enable students to reflect on what for most will be their first opportunity to visit and work in rural East Africa. It involves the development of daily journals to record reflections on their evolving awareness of Tanzania and the challenges that people and conservation face in the less-developed country. The journals provide a foundation for reflections about one or more issues that interest each--maybe (though not necessarily) something close to the focus of the specific education abroad experience involved (e.g., the relationship between people and protected areas in south-central Tanzania), maybe international development in general, or maybe another topic. The journals also should be important personally: In all likelihood, this six-week period will expose students to places, people, and challenges that they have never seen in person.

**The Contribution of Service-Learning to Students and Community (1)**

**LARCH 520** Design and Theory II: Introduction to Issues of Place (5) Studio design with a focus in addressing issues of nature and culture.

**LARCH 520 Design and Theory II: Introduction to Issues of Place (5)**

LArch 520 is the second of a four-class sequence of design studios at the core of the professional MLA design program. The course follows LARCH 515 and continues to develop the fundamental concepts and basic skills of landscape architectural design. The particular emphasis of this class is an introduction to site analysis encompassing both natural and cultural elements of place. The studio project types are small to moderate in scale and have basic programs. In many cases, site design projects include community projects (i.e. parks) with real human issues and sites. Group discussions and critiques will be important activities in the studio.

This course builds upon two previous classes: the ideas explored in LARCH 515 such as the basic design elements (landform, vegetation, structures), and the issues in LARCH 241 of landscape design and the ecology of site, via a series of studio projects, charrettes (intensive applied workshops) and field trips. LARCH 520 will engage students with design challenges on real sites in the State College/University Park community. Students will be challenged to develop the comprehensive understanding of site and activities (program) required to become an effective landscape architect. Included in the most important parts of that comprehension are natural, social, historical, and aesthetic site conditions; functions, activities and program requirements; site and community context; and relevant design concepts, theories and examples.

The subsequent challenge for students will be the development of design processes necessary to integrate site and program understandings into unified, successful design.

**LARCH 530** Design and Theory III: Landscape Systems (5) An introduction to regional planning, management, and design.

**LARCH 530 Design and Theory III: Landscape Systems (5)**

LARCH 530 considers the broader landscape and systems within the landscape. There are two very good reasons to learn to work at the broader landscape scale: to make informed planning, design and management recommendations at that level, and to enlighten site-scale design with a regional perspective. Students begin exploring ways to understand and address issues of regional context before focusing on local-scale site design in the spring semester. Projects include an emphasis on regional analysis, site and program analysis, and site design in the regional context. Studio work involves research and report writing and medium- to large-scale projects where site design and program are directly influenced by regional factors. Topography, geomorphology, land use, transportation, regional ecology, demographics, landscape history, visual analysis, etc., are introduced, all bound into current technological formats using such tools as Geographic Information Systems.

Students explore ideas about landscape-scale conservation, linkages and recreational programming - important types of regional-scale work with which landscape architects are involved. They apply knowledge of the landscape in considering public planning, design and management interventions, including exploration of alternatives for landscape conservation and recreation. Students become involved, through community outreach projects, with interactive and real (e.g. sometimes messy) public dialogue that may help build community-wide enthusiasm for a landscape project of regional significance.

**LARCH 540** Design and Theory IV: Site and Community Design (5) Large site and Community Design.

**LARCH 540 Design and Theory IV: Site and Community Design (5)**

LARCH 540 directly references the understanding of the regional context from the preceding studio courses to take students into community master planning issues. An introduction to those issues and the issues of sprawl and landscape history then allows a transition to community form and housing-type topics. In this class, students gain an understanding of designing communities and everyday human habitat - at several scales, including the interrelationships of natural, cultural and economic factors on the past, present and future development of communities. They develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts. To this end, they learn to assess physical and cultural geographies at regional and local scales and their implications for community design at the site scale.

## Language and Literacy Education (LL ED)

**LL ED 400** Teaching Reading in the Elementary School (3) Introduction to the reading program; acquaintance with materials and techniques; observations of reading instruction; correlation with human growth and development.

### **LL ED 400 Teaching Reading in the Elementary School (3)**

LLED 400 is intended to help teacher candidates become knowledgeable users of theory and language about language, literacy and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. Dealing specifically with reading, we recognize that text goes beyond print texts to include multimodal visual, auditory, digital, movement, and artifactual texts. In LLED 400, candidates learn to understand how children develop as readers and users of literacies in and out of school. Candidates learn how to teach in ways that support children's successful development and uses of multiple kinds of literacy, including reading. Literacy teaching is both an intellectual and practical matter in which teachers work with students in ways that recognize the complexities of language and its social uses, learning and its cultural contexts, and schooling as organizational phenomena. Children enter schools with multiple types of literacy knowledge and cultural experiences. Coming to understand these complexities requires the coordination of both theoretical awareness and applied knowledge. Candidates' practice is developed as they learn to address the puzzles children present as they construct their knowledge of language, literacy, and literature in various social situations. Developing practical strategies to teach literacy requires a dedication of head, hand, and heart to treat all people with dignity, acknowledging the contributions of all cultural groups and respecting diversity as it honors ideals of social justice.

In LLED 400, teacher candidates develop a repertoire of organizational, instructional, and evaluative strategies that are based on research and best professional practices. Candidates work on projects independently and in collaborative groups. Content is presented by the instructor through a combination of lectures, weekly readings and reflections on readings, class discussion, activities and demonstrations, and viewing and analyzing video. Projects include an analysis of children as readers and curriculum planning.

LLED 400 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LL ED 401** Teaching Language arts in Elementary School (3) Principles, problems, materials, and techniques involved in teaching speaking, listening, writing, and reading in the elementary school.

### **LL ED 401 Teaching Language Arts in Elementary School (3)**

The purpose of LLED 401 is to acquaint teacher candidates with theories and practices of teaching writing. Candidates are immersed in the study and experience of workshop and strategic models of writing instruction. Basic goals of this course are to help candidates to use language well and thoughtfully concerning writing instruction, literacy, literature and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. We also expect candidates to understand the roles which culture plays in literacy practices, literature, identifications of "ability," and schooling; to learn how people function effectively in groups; and to develop a repertoire of organizational, instructional, and evaluative strategies.

LLED 401 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.

**LL ED 402** Teaching Children's Literature (3) Survey of children's literature with an emphasis on the importance of literature in the development of the elementary school curriculum.

**LL ED 402 Teaching Children's Literature (3)**

The purpose of LL ED 402 is to familiarize teacher candidates with different theories and practices of teaching literature. Candidates are immersed in the study and experiences of literature and strategic models of literature instruction. Understanding that belief systems inadvertently determine the models of literature instruction educators adopt, LLED 402 asks candidates to be mindful of the diverse nature of our communities, and encourages them to strive to create literary communities that respect, value, and encourage multiple modes of expressions. The basic course goals are to help candidates to understand the importance of story in all human lives; to exhibit a wide repertoire of flexible strategies for interpreting literature; to understand socio-cultural influences upon writing and literature; to know and be able to use basic reference tools and selection guides for research; to become familiar with different genres, diverse texts, and styles; to read for sequence and for secrets; to articulate responses to literature across a variety of media; to weave into the exploration of each of these goals a struggle to understand and to accept human difference; and to understand the role that literature plays in the school curriculum.

The course presents theories of teaching literature and models of literature instruction that place at the center socio-cultural practices typical of democratic literary communities. This requires knowledge of how literature and texts work in real life and in a variety of social and cultural contexts. Informed by research, standards and current practices, LLED 402 exhibits the power of literature, the complexities of students' learning and experiences with texts, and the problem solving character of teaching.

LLED 402 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, children, and communities.

**LL ED 412W Teaching Language Arts in Secondary Schools II (3)** Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools.

**LL ED 412W Teaching Language Arts in Secondary Schools II (3)**

This three-credit course addresses the theory, practice, and implications of teaching the English language arts at the secondary level. The course is the discipline-specific component of the Secondary Education block taken by majors in Secondary Education prior to student teaching. In this course, students explore issues in language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. Through in-class and out-of-class activities completed both independently and in collaboration, students read about, talk about, and practice teaching all of the language arts—reading, writing, speaking, listening, and thinking. Activities highlight ways of planning for instruction and ways of assessing student learning as teachers implement those plans. In addition, students will take up the professional issues facing beginning teachers of the English language arts—issues of professionalism and the teaching role, relationships with students, and how teaching can fit into a life. The course builds upon content developed in other courses in the major, including theories of reading, composition, media literacy, and pedagogy. Students engage in a variety of writing tasks both in support of developing course content and as a means of making their work public. This writing includes (but is not limited to) lesson planning, reflective writing on experiences both in the course and in related field experience, and the development of a professional portfolio. During class sessions, informal writing is used for a variety of purposes such as brainstorming, facilitating collaborative work, or framing discussion. Throughout the semester, students draft and receive feedback on a variety of portfolio components, which are revised and incorporated into a final version of the portfolio due at the end of the course. Portfolio contents vary according to instructor, but examples might include statements of educational philosophy, analysis of student writing from field experience, commentary on unit and lesson materials, reflective writing on reading and writing processes, and professional documents such as lesson plans and letters to mentors and potential employers.

**LL ED 450** Content Area Reading (3) Study of reading skills and materials for specific content areas; diagnostic and instructional procedures for classroom teachers.

### **LL ED 450 Content Area Reading (3)**

LLED 450 is designed to explore the roles of texts and literacies within the daily lives of middle school age students. We will examine both in-school and out-of-school literacy practices related to meaning-making in specific communities of practice. In doing so, we will work from a broader definition of "text" that includes print, images, sound, hybrid combinations and artifacts from popular culture. In school, we examine how literacies are involved in the learning of content, emphasizing how social practices of thinking in different ways about the world have been organized into school subjects and how teachers can help students to engage productively in those practices. Out of school, we look at the ways in which this age group uses text and other forms of literacy to make sense of and in their lives. Toward that end, we look closely at the media that they use and the types of texts that are produced for and by them. Although we honor the traditional practices of academic disciplines, we recognize how new texts and tasks ford those boundaries in order to pose and address school and everyday problems.

The basic goals of this course are to help teacher candidates to use language well and thoughtfully concerning literacy, text, and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. We also expect candidates to understand the roles that culture plays in literacy practices, texts, schooling and assessments of "ability"; to learn how people function effectively in groups; and to develop a repertoire of organizational, instructional, and assessment strategies.

This course considers how intermediate grades and middle schools are communities of practice that connect disciplines through the use of language and texts to make sense of the world. The communities surrounding schools influence these uses, and this course follows the students' learning outside the classroom and schools as well as within.

**LL ED 462** The Art of the Picturebook 3 An in-depth study of picturebooks as art objects providing aesthetic experiences and contributing to our aesthetic development in literacy education.

### **LL ED 462 The Art of the Picturebook (3)**

The Art of the Picturebook explores a wide range of picturebooks with the idea that illustrations are visual art evoking thoughts and feelings. Because picturebooks provide aesthetic experiences and contribute to aesthetic development, they are rich and important sources for literacy education. This course provides opportunities to extend students' repertoire of strategies for making sense of picturebooks, to deepen knowledge about picturebooks and the artists who create them, and to consider ways to help children become more sophisticated readers of picturebooks.

While picturebooks are often emphasized as integral to the literacy development of young children, they can be engaging and desirable for older children as well. Course topics include picturebooks for the very young, as well as picturebooks that could appeal to elementary and middle school children. Whether picturebooks appear relatively simple and straightforward or contain innovatively complex or metafictional design elements, close readings of them with an understanding of terminology offer opportunities to express and discuss reactions and interpretations. The Art of the Picturebook provides students a forum for exploring preferences, ideas, insights, and questions about selected picturebooks, along with curricular and pedagogical considerations. Course readings include interviews with illustrators, selections about creating picture compositions, and scholarly essays presenting theoretical perspectives and ideas about picturebooks as literature and art for children's literacy development.

This course emphasizes that reading and interpreting picturebooks is an active, creative process that is socially, culturally, and historically situated. Authors and illustrators are influenced by culture, so their art reflects values of that culture, consciously or unconsciously. A reader's experience with a picturebook is also influenced by cultural and social contexts in a given moment. Because engaging in aesthetic experiences is an active, creative process, reading picturebooks is, as Jane Doonan (1993), author of *Looking at Pictures in Picture Books*, asserts, a form of play. The Art of the Picturebook approaches picturebooks as sources of deep play.

The course also provides opportunities to research selected illustrators, both for class discussions and an illustrator study project (e.g., a Wiki page). The culminating illustrator study project involves an in-depth investigation of a key children's book illustrator and a process of sharing works-in-progress with classmates for collaborative editing.

**LL ED 464** Nonfiction Literature for Children and Adolescents (3) A study of nonfiction literature for children and adolescents with an emphasis on inspiring curiosity and agency.

LL ED 464

### **LL ED 464 Nonfiction Literature for Children and Adolescents (3)**

Nonfiction Literature for Children and Adolescents explores a wide range of nonfiction literature in a variety of subject areas including social studies, math, science, and the arts. This course takes the position that reading nonfiction literature can inspire curiosity and a life-long love of learning, shape inquiry, nourish empathy and compassion, and inform agency.

Topics include nonfiction as literature, resources for locating nonfiction literature, nonfiction literature in different subject areas, nonfiction literature as a catalyst for inquiry, creative nonfiction and hybrid texts, biographies and autobiographies, and nonfiction literature for agency.

This course also examines techniques of writing nonfiction literature to develop an understanding of strategies that published authors use to create engaging works to inform readers and provide pleasurable reading experiences. This understanding can help adults who work with children and adolescents recognize and identify the qualities that they find desirable for selecting and sharing nonfiction literature with children and youths, whether shared for reading or serving specifically as mentor texts for writing.

**LL ED 465** Fantasy Literature for Children (3) A study of fantasy literature for children looking at a variety of fantasy stories and examining them from different perspectives.

### **LL ED 465 Fantasy Literature for Children (3)**

Fantasy Literature for Children explores a range of fantasy literature including literary fairy tales, toy fantasies, ghosts/horror/suspense, science fiction, reworked fairy tales, low fantasy, and high fantasy. This course will consider different rationalizations for fantasy literature and will examine some of the key stories that illustrate fantasy from different perspectives, such as literary, social, and psychological angles.

This course will look at, first, the beginnings of modern fantasy with the fairy tales of Hans Christian Andersen and Carlo

Collodi's classic, *Pinocchio*. Then the course reading will include ghosts and other supernatural fantasy stories, and "reworked" fairy tales, a current trend in fantasy literature. Despite of some scholarly debates on science fiction, that is, whether it should be categorized into fantasy or not, this course will consider science fiction as being similar enough to fantasy for it to be included. The course will also include a study of fantasy books currently popular with school-age readers.

Fantasy can be divided into two main groups: low fantasy and high fantasy. Several of the stories to be read in the course are perhaps best categorized as low fantasies, not because of what they are, but because they are not high fantasy, which has a mythic quality to it. High fantasy seems to go beyond the particulars of its story to explore the nature of good and of evil. Though high fantasies can be humorous at times, the overall tone is serious. Often characters are on quests and the stakes of success or failure usually involve saving the world from some great evil or preventing the tyranny of some powerful and evil ruler.

Reading the different types of fantasy literature and the literary critiques and analyses of those works, this course will be wrestling with the overall importance of those books in the lives of children by pondering imagination and its role in the lives of children throughout the course.

**LL ED 561** Cultural Pluralism in Children's and Adolescent Literature (3) Reading/discussing literature from multicultural/critical multicultural lenses and how this impacts literacy.

### **LL ED 561 Cultural Pluralism in Children's and Adolescent Literature (3)**

LLED 561 is a critical exploration of literature that addresses multicultural issues and their functions in the classroom. Emphasis is on cultural diversity in children's lives. The course focuses on four main areas. The first of these areas revolves around the concepts of multiculturalism and critical multiculturalism and how they serve as lenses through which students can ask questions about society as represented in literature. It addresses what multicultural literature is, who writes multicultural literature, and how this genre of literature serves as a window into and a mirror of culturally diverse societies. Race/ethnicity, gender, class, disability and cultural authenticity in multicultural literature are discussed. The primary objectives of the course are to enable students to expand their strategies for reading culturally diverse literature, become familiar with resources related to multicultural literature, explore cultural, literacy and socio-political issues related to children's/adolescent literature and to consider the role that multicultural literature plays in a literacy curriculum.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2012

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LL ED 563** Myths and Folktales in Children's Literature (3) An in-depth study of myths and folktales shared with children and how these stories are remade and disseminated today.

### **Myths and Folktales in Children's Literature (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2010  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LL ED 564** Writing for Children (3) Supervised workshop in the craft and techniques of writing picture books, short stories, longer fiction, and nonfiction literature for children.

### **LL ED 564 Writing for Children (3)**

This is a course in creative writing for those who wish to write for children. The course is intended to be creative practice in the art, craft, and techniques in a wide range of genres in children's literature: poetry, picture books, picture story books, short stories, and longer works. Students will learn about the field of literature for children, namely, how to develop their ideas into appropriate literary forms for the various age groups. Students will read and discuss contemporary writers and examine their work, and get responses to their own writing.

General Education: None

## Law Research Doctora (SJDLW)

**SJDLW 900** SJD Dissertation (1-12) SJD Dissertation.

### **SJD Dissertation (1-12)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2012

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SJDLW 901** Research Methods Seminar (2) Introduction into research methods for advanced dissertations in law.

### **SJDLW 901 Research Methods Seminar (1)**

#### **I. Designing an SJD Dissertation**

Each student as part of the admission process has submitted a dissertation topic and brief concise outline of a future dissertation. This section of the Seminar is intended to provide expert guidance on how to pursue dissertation research and to write an SJD dissertation. Required readings and written submissions will be required and advance preparation expected from all SJD students.

The intention is to accelerate your research design and assist you in refining the questions which your dissertation will pursue, formulate a research plan, and prepare what will eventually become a thorough bibliography of relevant sources. Specific guidance will be offered regarding access to library collections, University, regional, and national archives, online resources, interviewing techniques, and the like, with special reference to legal and social contexts.

Assistance will be given to formulate more precisely the scope of your chosen dissertation topic and clarify your precise and original contribution to the advancement of scholarship.

Individual sessions will address: what is an SJD and what constitutes an original and substantial contribution to the advancement of scholarship? How is a dissertation structured, and why? Formulating, elaborating, and refining your research questions. Articulating the thesis of your dissertation. Reviewing the existing literature. The process of research and writing.

Appropriate introductions will be given to some of the principal research methodologies widely used in legal research, together with more detailed comment on those relevant for individual dissertations being undertaken by Penn State SJD students. Attention will be given to structuring the dissertation, citation style, avoiding plagiarism, complying with copyright requirements. Introductions will be provided to the following: empirical methods of research, ethical standards and legal research, historical research, comparative legal research, case studies, and interdisciplinary research; presentation of the Candidacy Paper; and arranging for publication of dissertation chapters or a monograph.

As part of the Seminar students will be expected to read an SJD (or PhD) thesis and to be fully familiar with the Penn State Law School SJD Regulations.

Students will be encouraged to compile a set of SJD Research Notes. These Notes will be held on your computers and contain various written submissions prepared for the Seminar together with other materials useful as resources or reminders when writing your dissertation.

#### **Seminar Topics**

Session 1: What is an SJD and How Does One Commence (including Penn State Library resources)

Seminar 2: Structuring and Writing a Dissertation

Seminar 3: Introduction to Empirical Methods in Legal Research

Seminar 4: Ethical Aspects of Legal Research

Seminar 5: Legal History: Research Aspects

Seminar 6: Comparative Legal Studies

Seminar 7: Case Studies as Research

Seminar 8: "Law in Context" Approaches to Research

#### **II. Legal Theory and Dissertation Research**

This dimension of the Seminar is intended to introduce (or remind) students to some of the principal legal theorists and theoretical approaches to law drawn from the leading United States and foreign law schools. These will include natural law, post-structuralism, legal positivism, critical legal thought, globalism in legal doctrine, feminist legal theory, and other relevant approaches – all with a view to obtaining insight into how research methods and theory are connected and

to assist the SJD student in articulating the theoretical framework of the dissertation.

Particular attention will be given to techniques of legal research in Common Law and Anglo-American Statute Law and regulatory materials: how to use cases; what are precedents; how to construe statutes, the relationship between law and policy, and the like. In addition, a general introduction to methods of quantitative analysis will be included.

Legal translations as sources for dissertation research: techniques, pitfalls, resources.

#### Seminar Topics

Seminar 9-10: Comparative Legal Theory: Natural Law and Positivism

Seminar 11-12: Comparative Legal Theory: Individual Theories and Legal Development

Seminar 13-14: Legal Research in Common Law and Statute, including statutory interpretation

Seminar 15-16: Empirical Legal Studies: Quantitative methods, analysis, qualitative methods

#### III. Development of Research Skills

This section of the Seminar addresses some of the mechanics of preparing a dissertation: advanced introduction to Penn State library resources; Open Access publishing; data collection by downloading online sources, filming and editing materials, preparing draft legislation or treaties, using the media to publicize aspects of your dissertation, possible post-doctoral opportunities, and getting your dissertation published (including writing a book proposal, whom to approach for publication, law review publication, SSRN publication, and others).

#### Seminar Topics:

Seminar 17: Publishing: Open Access, Research Software

Seminar 18: Publishing the Dissertation (Penn State University Press)

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 2016 Future: Fall 2016

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

## Ldrshp Development (LEAD)

**LEAD 501** Leadership Across the Lifespan (3) Analysis and application of models, theories and strategies for developing an individual's full leadership potential at different life stages.

### LEAD 501 Leadership across the Lifespan (3)

LEAD 501 explores and analyzes the requirements for positive leadership of the self and others, recognizing the way people change along the way from early adulthood to old age. Students will be introduced to the various components of the self-leadership, including personal meaning, optimal experiences (flow), emotional intelligence, moral development, how a leader's (and his/her followers') life stream of biographic and deomgraphic elements influence leadership processes, and followers' perceptions the leader's behavior. Students will learn how to display psychologically empowering positive leadership based upon information obtained through discussions, 360-degree and moral development leadership assessments, participation in field projects observing leadership "in vivo," analysis of relevant popular movies by applying theories of leadership and adult development, and readings. Emphasis in this course is placed on learning from the life streams of "real world" leaders to bring t life the material covered in the course. As the course progresses, new knowledge and skills are integrated into a more sophisticated framework for understanding positive leadership across the lifespan.

**LEAD 519 (BUSAD 519)** Developing Creative High Performance Organizations (3) This course focuses on how to create high performing organizations based on models provided by business, science and the arts.

### LEAD (BUSAD) 519 Developing Creative High Performance Organizations (3)

#### Overview:

This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development.

Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements.

#### The way the course will run:

This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor's. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and on-line chats. We will have invited speakers for the class representing the arts, music, science and business.

General Education: None

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**LEAD 555 (BUSAD 555)** Full Range Leadership Development (3) Development of behavioral skills associated with outstanding leadership of individuals, teams, and organizations through advanced information technology, experimental exercises, and case analysis.

### LEAD (BUSAD) 555 Full Range Leadership Development (3)

Leadership is one of the world's oldest preoccupations. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased

globalization, diversity, restructuring, e-business and innovation in today's business environment, finding answers to this question is important for maintaining organizational competitiveness.

The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance.

The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lecturettes, case discussions, exercises and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students' organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

General Education: None

**LEAD 557 Leadership Models and Methods (3)** Design, analysis and application of leadership models and research methods for solving organizational problems.

### **LEAD 557 Leadership Models and Methods (3)**

LEAD 557 provides masters'-level graduate students with an initial understanding of the process of research methods, particularly within leadership and management-related disciplines and in organizational contexts. Students will survey a variety of leadership models and their application to leadership research and practice. They will learn how to evaluate and design research studies and apply them in organizational context in their consulting work, debate ethical and philosophy of science issues, and solve focused organizational problems by applying the scientific method. Emphasis in this course is placed on "learning by doing" in order to gain knowledge of how leadership theories are formulated, how data are analyzed to test theories, and how conclusions about data and theory are drawn. Students learn by critiquing a variety of key leadership models, identifying real organizational problems and applying the skills of theory and hypothesis formulation, measurement, sampling, and study design.

Students learn techniques of data collection and analysis using SPSS (Statistical Package for the Social Sciences), and how to write clear and concise research papers. As the course progresses, new knowledge and skills are integrated into a more sophisticated framework for understanding how leadership models and methods can solve organizational problems.

**LEAD 561 Dynamic Communication in Leadership Contexts (3)** Articulating and promoting a vision; facilitating interaction and communicating with groups; theory and techniques of persuasion.

### **LEAD 561 Dynamic Communication in Leadership Contexts (3)**

LEAD 561 is an advanced communication course that emphasizes leadership development and communication competency. Theories and models of interpersonal communication, transformational and charismatic leadership, group dynamics

persuasion, and creativity and innovation are addressed in relation to communication practice. Student evaluation methods will include individual and team projects, presentations, and essays. The course will be offered annually and is a required course in the Master of Leadership Development program.

**LEAD 562 Strategic Leadership (3)** Executive-level leadership of larger systems and organizations. Impact of developing human, intellectual, social, structural, financial and reputational capital as strategic tools.

### **LEAD 562 Strategic Leadership (3)**

LEAD 562 explores and analyzes the requirements for effective strategic leadership in organizations operating in today's technology-driven environments. Students will be introduced to the various elements of the strategic leadership system, including organizational context/environment, leader's life stream of biographic and demographic elements influencing leadership, and followers' perceptions the leader's behavior. Students will learn how to display outstanding strategic leadership based upon information obtained through discussions, field-based case studies, and readings. Discussions will be conducted face-to-face, email and/or on-line ANGEL bulletin board discussions. Emphasis in this course is placed on learning from "real world" senior managers/administrators to enhance the practicality and usefulness of the material covered in the course. As the course progresses, new knowledge and skills are integrated into a more sophisticated framework for understanding strategic leadership.

**LEAD 582 (BUSAD 582) Social Entrepreneurship and Community Leadership (3)** This course will provide an opportunity for students to explore concepts of developing and leading businesses that create social value.

### **LEAD (BUSAD) 582 Social Entrepreneurship and Community Leadership (3)**

This course uses entrepreneurial and leadership skills to craft innovative responses to social needs. Entrepreneurs are particularly good at recognizing opportunities, exploring innovative approaches, mobilizing resources, managing risks, and building viable, sustainable enterprises. Entrepreneurial skills are just as valuable in the social sector as they are in business. Social Entrepreneurship aims at social impact but does not exclude economic wealth creation. Therefore it is not limited to the non-profit sector. Despite a sustained economic boom in this country, numerous social problems remain and some seem to be getting worse. The course will focus on introducing business leadership and entrepreneurship principles to both profit and non-profit organizations whose products and services are designed to create social value.

## Learning Design&Tech (LDT)

**LDT 400** Introduction to Instructional Technology for Educators (3) Use of computers, video, and other media in education; models use technologies including video, audio, print, computer, and phone.

LDT 400

### **LDT 400 Introduction to Instructional Technology for Educators (3)**

This course introduces educators to technology and its educational applications. It is an introductory-level course and instruction is based on the premise that participants are novices. Participants will learn how to work in an online environment. They then work in that environment to develop the skills and perspectives needed for the effective application of technology in education, which involves becoming familiar with a wide range of additional educational computing applications and issues.

Although it is important for students to develop technology skills, technology must be viewed as more than simply a new subject in the curriculum. Teaching students to use technologies well is a means to a much more important set of ends. Today's technologies offer teachers and their students a powerful means for addressing learning-related issues, and potentially redefining teaching and learning.

**LDT 415B** Systematic Instructional Development for Teachers (3) Preparation of teachers to use a systematic model to design learning environments for K-12 classrooms.

**LDT 415B Systematic Instructional Development for Teachers (3)**

This course focuses on K-12 teachers who will learn how to use the systematic design process for creation of learning environments. This process includes goal, objective and test item writing; text selections; media selections; implementation plans; and evaluation plans for both formative and summative evaluation. Products are turned in each week for feedback and input into the next weeks' assignment. Consideration of the ID4T (Instructional Design for Teachers) model use with standards, constructivist, user-design, and learner-based classrooms is included.

**LDT 433 Teaching and Learning Online in K-12 Settings (3)** Explores uses of online technologies for K-12 settings including cybercharter and blended settings.

LDT 433

**LDT 433 Teaching and Learning Online in K-12 Settings (3)**

In this course, Teaching and Learning Online for K-12 Educators, students will receive an overview of the current status of K-12 Online Education, including criticisms of the movement and how cyber charter schools are impacting the general educational movement. Students will explore the complexities of school choice movement, the place of cyber charters in that movement and the ways that this movement can help and harm general educational progress. Students will critically examine the cyber charter school money trail so that they may identify various financial implications for the cyber charter movement on public schooling and learn how funding flows from the federal level to states to districts and finally to cyber charters. Students will be guided through the process of transforming their teaching when moving from traditional face-to-face classrooms to online settings.

**LDT 441 Design, Development, and Evaluation of Internet Resources (3)** Design, production, and evaluation of instructional materials for delivery on the Internet.

LDT 441

**LDT 441 Design, Development, and Evaluation of Internet Resources (3)**

This course is designed to provide you with a conceptual and experiential overview of the process of creating stand-alone computer or web-based instruction to facilitate your understanding of the role and potential of Internet technologies as learning systems. This course would be useful to anyone charged with providing online learning, is appropriate as a foundational overview for multi-media developers, and also would be valuable for supervisors of instructional designers and developers. A main feature of the course is a hands-on lesson project carried on throughout the course where you

will identify, design, develop, and then evaluate an online stand-alone lesson (e.g., a learning object). Emphasis will be placed on the following goals: Demonstrate research-based message design principles, including navigation, screen design, and the use of color and visuals. Demonstrate basic skills and competencies related to developing instructional materials to be delivered using Internet/intranet technologies to understand the current requirements and also limitations of these approaches. Describe the role of the instructional designer in Internet-based instruction. Describe the advantages and limitations of Internet delivery in order to make informed instructional design decisions. Apply an instructional design model during the design and development of Internet-based instructional materials.

**LDT 449 Video in the Classroom (3)** This is an applied skill course about production and use of video technologies in educational settings.

Untitled Document

### **LDT 449 Using Video in the Classroom (3)**

This course introduces video and multimedia production for educators based on the premise that participants are novices.

The course is intended for teachers and trainers who would like to acquire fundamental theory and skills in designing and producing video and multimedia to support teaching and learning. It introduces the tools of media production (i.e. video, audio, and lighting) and develops basic skills, including production and editing techniques, storyboarding and project planning.

Participants in this course will demonstrate: a basic proficiency in the operation and handling of media production tools, including video and audio editing; an understanding of appropriate media use for classroom use; a basic knowledge of the production processes, including conceptualization, storyboarding, scripting, and project management; and a basic proficiency in producing effective educational videos.

**LDT 467 Emerging Web Technologies and Learning (3)** This course examines emerging Web technologies and explores their application to learning and education.

LDT 467

### **LDT 467 Emerging Web Technologies and Learning (3)**

This course examines current and emerging web tools and evaluates their impact on learning and teaching. The growth of online social networks and collaborative technology tools is allowing individuals to become active participants and creators of content and content dissemination. This unprecedented level of participation and interaction has resulted in the formation of online "communities" around specific topics and interests, with an increased and visible use of tools to support knowledge building and sharing. Students will engage with various web tools as participants and observers, assess the specific practices of learning and knowledge sharing supported by individual tools, and apply that knowledge to their specific professional context.

**LDT 497B** (ADTED 497B, CI ED 497A) Culture, Education and Technology in Peru (1-9) This course focuses on current issues in culture, technology, and development in education. We will concentrate on how to apply research to practice within the Peruvian educational context. Along with a seminar to discuss current research in international education development, students will have 2 weeks of embedded experience in Peru with the opportunity to set up a small technology facility for a village school. We will examine broad education development models, including specific readings associated with development, technology, identity, and change, and apply them to the case of Peru, which serves as a case to learn about education and development "on the ground" and to provide a real service for a Quechua community. Through this work, students will experience how to bridge research and practice.

**LDT 505** Integrating Mobile Technologies into Learning Environments (3) Research on learning with mobile computers and models for mobile computer integration for K-12 schools, community organizations, and universities.

### **LDT 505 Integrating Mobile Technologies into Learning Environments (3)**

Integrating Mobile Technologies into Learning Environments examines how people use and learn with mobile computers in their everyday lives around the world.

The focus is on the uses and educational possibilities of mobile computers to serve as tools that can support people in various learning environments (such as schools, colleges and universities, training and professional development, museums, libraries, homes, and workplaces).

Topical areas are covered that build from empirical studies about how people learn with mobile forms of computing: (1) how people use mobile computers in their everyday lives, (2) key theoretical perspectives on how people learn with mobile computers, and (3) research findings on integrating mobile computers into the design of learning environments.

In addition to activities for the whole class, students select one course strand to support their own interests and final project. The course strands are tailored to students' interest and can include (1) integrating mobile computers to support families and young people, in and out of school, (2) integrating mobile computers to support adult learners in higher education (includes distance education), (3) integrating mobile computers to support workforce development, vocational education, professional development, certification achievement, and on-the-job training, and (4) integrating mobile computers within community-based organizations, personal hobbies, and cultural institutions.

**LDT 832 Designing e-learning Within Course Management Systems (3)** Practical design of instructor-facilitated online lessons taking advantage of the affordances and within the constraints of course management systems.

**LDT 832 Designing e-learning Within Course Management Systems (3)**

This course is intended for professionals in corporate and non-profit settings including those in online cyber schools, but will be informative for anyone designing online learning. Participants in this course learn to use the internal features of a CMS and to find and incorporate external tools (i.e., go outside the CMS, create something, bring it back inside). By controlling access and records, course management systems (CMS) provide a safe haven for online learning that protects the learners, the teachers, and the institution. But as closed systems, the CMS limits learning approaches to what is available within the CMS.

This course requires directed hands-on experience with a CMS to develop understanding with the capability and limitations of management systems. Students who successfully complete this course will have an expanded repertoire for designing, developing, and implementing learning online and a skill set for integrating new tools and approaches into their instruction. This course provides professionals in corporate and non-profit and other settings with hands-on experiences with online management systems to gain command of, and extend its use.

Topical areas that you will read, discuss, and write about include the affordances and constraints of Course Management Systems, the tension between safety online versus access to open resources, mandates (i.e., FERPA and accessibility issues), the current and future forms of virtual classrooms, instructional design models for e-learning, the role of lesson plans as learning objects, evidenced-based didactic and constructivist delivery strategies including project-oriented approaches, problem-based learning, and case-based learning, and e-learning assessment. Subsidiary topics covered include games, simulations, mobile learning, and other breaking current topics related to online course design and delivery.

The role and significance of social learning approaches in online courses are emphasized as an essential dynamic in current online courses (e.g., asynchronous discussions, learning communities, and community of inquiry). You will be asked to prepare and then moderate a class discussion and also to participate in an external professional learning community.

A central outcome of this course is to actually design effective learning in a CMS. The final course project consists of a learning module that you develop within a course management system of your choice on a topic of your choice for an audience of your choice, and includes serving as instructor or facilitator of that module. You will also review lessons developed by others to provide formative feedback on those modules.

## Linguistics (LING)

**LING 402** Syntax I (3) Principles of grammatical analysis in the generative framework; an overview of syntactic structures across languages.

**LING 402 Syntax I (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The aim of this course is to provide students with the background needed to understand advances in modern generative syntactic theory and to encourage them to do creative and informed research in this area on English or other languages that they might know. The course provides a historical overview of the development of generative syntax. We explore in depth a number of topics that challenge any syntactic theory and we attempt to propose testable hypotheses concerning language structure.

**LING 404** Phonology I (3) The analysis of the sound systems of human languages; focus on common phonological processes across languages and on phonetics-phonology interface.

**LING 404 Phonology I (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course is about sound patterning in language. In particular, we will learn how human speech sounds are produced and how they function together as a system. We will learn the International Phonetic Alphabet applied to English. We will discuss phonological data from many different languages to seek common phonological processes that occur despite the apparent surface diversity of languages. We will do extensive work on phonological problems in order to master basic phonological analysis.

**LING 429 (PSYCH 426) Language and Thought (3)** Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism.

**LING (PSYCH 426) 429 Language and Thought (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer's patients in whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language.

The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

**LING 446 (PSYCH 427) L1 Acquisition (3)** How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development.

**LING 446 (PSYCH 427) L1 Acquisition (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and innateness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

**LING 447 Bilingualism (3)** Explores the social and psychological aspects of bilingualism; topics include languages in contact, transference, maintenance, and loss.

**LING 447 Bilingualism (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course presents a panoramic view of the major questions, research methods and results in bilingualism research. We will cover the following topics, in addition to those topics that emerge from students' research: bilingualism in society; political and social results of language contact; effects of social attitudes on bilinguals; how bilingualism affect language: transfer, code-switch, language contact and language change; the bilingual brain, psycholinguistic effects of having two grammars in sentence production, phonological perception and lexical storage; childhood bilingualism; developmental and educational consequences of bilingualism.

**LING 449 Semantics I (3)** The study of meaning in human language; methods of analysis; study of sense, reference, compositionality, quantification, presupposition, and sentence- level meaning.

**LING 449 Semantics I (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course examines our best understanding of how humans produce and understand utterances to have particular meanings. This course examines lexical semantics, which is concerned with word meaning, phrasal semantics, which examines phrase meanings and with pragmatics, the study of meaning in contexts. Because meanings cannot always be built up or deduced from the combined meaning of smaller elements, students will attempt to divulge the semantic principles at work in human language through a wide variety of problems and activities.

**LING 457 (PSYCH 457) Psychology of Language (3)** Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition.

**LING (PSYCH) 457 Psychology of Language (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do young children come to speak the language to which they are exposed? Why is it difficult to learn a second language as an adult? This course focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

**LING 493** Field Methods (3) Primary linguistic investigation of a language different from English; field work with a native speaker; data gathering; linguistic analysis.

### **LING 493 Field Methods (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

In this course, students work directly (in groups) with a native speaker of a foreign language with which no one in the class has any prior familiarity. The students will work to uncover the set of sounds relevant to the language in question by winnowing down possible sound contrasts made in human languages. They will begin to construct a lexicon (vocabulary) built with a phonetic alphabet to discover how words are formed in the language. They will refine their techniques of questioning their research participant based on principles of linguistic field work. Finally, groups will present their findings for discussion and revision.

**LING 500** Syntax II (3) Advanced topics in syntactic analysis and theory.

**LING 500 Syntax II (3)**

The aim of this course is to provide students with the skills necessary to contribute to our understanding of modern generative syntactic theory (although other theories may be introduced by professors from different theoretical backgrounds). An overview of the theory of early generative grammar and its attendant problems will be presented in this course. Attempts to resolve these issues in contemporary syntax via the minimalist program will be covered in as much depth as possible. Using the skills and arguments developed in this course, students will be required to do original research on a particular problem of syntax.

**LING 520 (PSY 520) Seminar in Psycholinguistics (3 per semester/maximum of 9)** Consideration of theoretical and research issues relevant to psychological aspects of language sounds, syntax and semantics, and other cognitive support.

**LING (PSY) 520 Seminar in Psycholinguistics (3 per semester/maximum of 9)**

In this seminar, psycholinguistic approaches to bilingualism will be examined. Bilingualism is of interest for a number of reasons. First, despite the prevalence of monolinguals in the United States, most people of the world are bilingual. To have a genuinely universal account of human cognition will therefore require a detailed understanding of the relations between language and thought in individuals who speak and understand more than one language. It will be essential that research on basic cognitive functions in bilinguals examines both the course and the consequence of second language acquisition. Second, bilingualism provides a unique vantage point from which the relations between thought and language may be viewed. Historically, this issue was the focus of the debate over the Whorfian hypothesis (i.e., does language determine thought?). In contemporary psychology, it has emerged as a central issue in the debate over modularity. Understanding the form of language and memory representation in the bilingual may provide an important set of constraints in modeling the fundamental categories of the mind. Finally, bilingualism can provide a research tool for examining cognitive functions that are sometimes impenetrable within an individual's first language. The examination of the mapping of form to meaning in constructing syntactically well-formed sentences in two languages with contrasting syntax, or in understanding the meaning of words that have similar form but differ in meaning in two languages, provides a tool for developing converging sources of evidence to test theories of language comprehension and memory. Topics to be covered include second language acquisition in children and adults, language comprehension and memory in second language, code switching and language mixing, the consequences of bilingualism, and the neuropsychology of bilingualism.

**LING 548 Sociolinguistics (3)** Study of social and linguistic aspects of language change, varieties, policy, social inequality, language communities, language, society, and thought.

**LING 548 Sociolinguistic (3)**

This course investigates the sociolinguistic bases of linguistic diversification. Linguistic diversity, that is, the process by which a single linguistic system spreads and changes over time into regional and social varieties, is found in all societies. It is through the study of linguistic variation that linguists gain access to issues in language change, dialects, language policy, social inequality, language communities, and language, society, and thought. The course contrasts traditional studies of linguistic change, which concentrate on system-internal factors, with sociolinguistically based approaches, which investigate factors from outside the linguistic system. The key to the approach is that the study of linguistic variation and change in real time allows a unique view of the system as it has developed and as it is currently structured. This is because linguistic variation can be viewed and studied as change in progress, and quantitative and qualitative methods have been developed which allow changes to be isolated and identified, and to which social significance can be attributed. A basic assumption behind the content of this course is that linguistic variation is the starting point of most linguistic change and that useful insights into the past can be achieved by exploring present-day linguistic systems. Students will be evaluated by data analysis assignments (30%), review of research literature (30%) and databased research project (40%). LING 548 Sociolinguistics will be a core requirement of the proposed Ph.D. in Applied Linguistics. In addition, LING 548 will be a required course for the Departments of German and Spanish Ph.D. options in Applied Linguistics.

Bachelor of Arts: None  
Effective: Summer 2013

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 952** Strategic Legal Research (3) This course is designed to provide students with an advanced understanding of ways lawyers use primary and secondary legal research sources and finding tools to successfully represent their clients. An emphasis is placed on the development of effective legal research strategies that take into account choice of format (e.g., the relative advantages and disadvantages of print and electronic sources), cost/benefit analysis of format choice, evolving approaches by law firms and private practitioners to billable research hours, use of computerized tools to organize research results, and presentation of research results to case supervisors. Course content will be presented in a hybrid format consisting of two hours per week of in-class meetings with the remaining credit to be completed by coursework outside scheduled class time through online and written assignments.

**SKILS 958** Conflict of Laws (3) This course examines the legal rules that have developed for resolving conflict-of-law problems. Specific topics include: domestic jurisdiction, international jurisdiction, domestic choice of law, extraterritorial application of national law, conflicts between state and federal law, and enforcement of judgments. Course time is split roughly equally between domestic and international topics.

**Conflict of Laws (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2016

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 959** Mediation (3) This course examines the legal and ethical issues involved in mediation and develops students' skills as mediators and as attorneys representing clients in the process.

**Mediation (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2004  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 960** Negotiation/Mediation (3) This course combines the law and ethics of negotiation, mediation and settlement with economic and psychological bargaining theory and regular hands-on practice in representing clients in negotiation

and mediation. Bargaining theory (including distributive and integrative bargaining), relevant socio-psychological research, negotiation and mediation ethics, the law of settlement, and the basics of contract drafting are all introduced. Instruction consists of assigned reading, a series of simulations and exercises (including drafting a resulting contract), written negotiation planning and self-evaluation, feedback, and group discussion.

**Negotiation/Mediation (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011

**SKILS 962** The U.S. Law of Arbitration (3) This course provides an introduction to the domestic law and practice of arbitration. It assesses the statutory and decisional law basis for arbitration, especially the provisions of the Federal Arbitration Act. It investigates the central doctrinal issues in the field: the enforceability of unilaterally-imposed arbitration agreements, the arbitrability of statutory rights - in particular, civil rights matters, and the use of contract to establish the law of arbitration between the arbitrating parties. Emphasis is placed upon practical problems that have emerged in the practice of arbitration law: the selection of arbitrators, the use of discovery and evidence-gathering in arbitral proceedings, and the content of arbitration agreements. The course also addresses the new uses of arbitration in the consumer, health, and employment fields.

**The U.S. Law of Arbitration (3)**

General Education: None

Effective: Spring 2010

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 964** Intensive Legal Writing and Drafting (2) This course develops students' skills in common legal writing formats other than memos and briefs. Not intended as a remedial course, this course rather provides an opportunity for students to sharpen legal writing skills with an emphasis on clarity and precision of expression. Weekly writing assignments include a few fully drafted documents (e.g., short will, a short contract, a statute), as well as letters, short pleadings, jury instructions, and other short pieces. Students will concentrate on re-writing and editing their work.

**Intensive Legal Writing and Drafting (2)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 965** Federal Courts (3) This course addresses the relationship of federal courts to administrative agencies and state courts.

**Federal Courts (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2005

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 966** Arbitration Workshop (3) The first part is the drafting of arbitral clauses in a variety of circumstantial settings (maritime, labor, commercial, consumer, and employment) in regard to CPR best practices standards and addressing the authority of the arbitrators and the configuration of the arbitral procedure. This process would take several sessions. The second branch would be to view and then construct an arbitration pursuant to one or several of the arbitral clauses. This would require the conduct and architecture of an arbitral trial along with the protocol for its management, both with the arbitrators and the parties. This would take some time as well. Third, the students would be asked to participate in a statutory drafting workshop that reflects their experiences in the two previous branches. They would be asked to evaluate the UNCITRAL Model Law and several national laws of arbitration and arrive at a new and better model law.

**Arbitration Workshop (3)**

General Education: None  
Diversity: None

Bachelor of Arts: None  
Effective: Summer 2011  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 967** Federal Court Practice (2) This course introduces contemporary issues in several topical areas of particular interest to litigating in federal courts. The course topics are varied, with the unifying theme being that each topic possesses either particular prominence or exclusive jurisdiction within the country's federal court system. These topics include: the history and organization of the federal courts, the courts' relationship with Congress, the practical dynamics of federal procedure, strategic considerations involved in a litigant's choice of federal court, employment discrimination, federal criminal matters, sentencing, civil rights cases, and habeas.

### **Federal Court Practice (2)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 2011

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 968** Judicial Opinion Writing (2) Students will learn about the role of a judicial clerk and how to draft judicial opinions. Students will recognize the impact of written advocacy on judicial opinion writing as they switch roles from advocating as a lawyer to deciding issues raised by the advocates and writing opinions that implement subtle persuasive writing techniques. Students will develop a deeper understanding of the process for creation of legal precedent through opinions, including the impact of standards of review and procedural posture. The course will cover the common forms of judicial writing. With individualized feedback, students will develop precision in self-editing and revision skills and will practice producing concise, clear, and accessible written work.

### **Judicial Opinion Writing (2)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2014  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 969** Legal Journalism (2) Students will learn journalistic writing styles to prepare them to contribute accurate and accessible legal information and analysis to general interest and legal trade media as legal analysts or professional journalists. For legal trade publication work, the emphasis will be on readability and appropriate depth for a professional audience. Students will learn journalistic standards of truth and interviewing techniques for print and broadcast media. Live broadcast techniques, including live interview hosting, will also be covered.

### **Legal Journalism (2)**

**SKILS 971** Scholarly Writing Workshop (1) This course provides students with the framework for developing a thesis, conducting research, and producing a significant scholarly paper. In an interactive workshop setting, students will discuss progress and receive feedback from faculty and fellow students on: (1) identification and refinement of a thesis; (2) developing and implementing a research plan; (3) appropriate use of authority, including legal citation form; and (4) developing and refining a critical perspective and scholarly argument. Students must be concurrently enrolled in a seminar (SEM) course or an independent study (PERSP 996) of at least two credit hours.

### **Scholarly Writing Workshop (1)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2014

Concurrent: SEM course at least 2 credits or PERSP 996 for at least 2 credits

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**SKILS 972** Mediation of Environmental and Public Conflicts (3) Conflicts between parties with different views of "the public good" are often difficult to resolve, especially in the environmental and natural resource arena. The judicial dispute resolution process is often not well-adapted to addressing conflicts among jurisdictions and meeting the interests of the public and private parties affected by the conflict. Mediation and other alternative dispute resolution techniques can be very useful tools in these cases. This experiential course uses case studies and simulations to explore techniques and strategies other than traditional litigation that lawyers can use to represent clients and resolve disputes in these settings.

**Mediation of Environmental and Public Conflicts (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2016

## **Management (MANGT)**

**MANGT 510** Project Management (3) A problem-based, interdisciplinary course in project management skills and techniques needed to manage projects in a modern business environment.

**MANGT 510 Project Management (3)**

Project Management has been labeled by *Fortune* magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, to respond to rapid time-to-market demands. This course would give business majors a competitive advantage in the job market, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential.

The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep to timetables and schedules.

The course itself would be set up around semester-long projects, either developed by the instructor, or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

Bachelor of Arts: None  
Effective: Fall 2000  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MANGT 515 Cost and Value Management (3)** A problem-based course that emphasizes project cost control and teaches students to apply techniques to control projects in business.

### **MANGT 515 Cost and Value Management (3)**

Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. At the same time, however, substantial interest has been generated in the methods for effective cost control in the project environment. How can an organization implement projects while maintaining control of its costs and value?

The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include the ability to understand "cost" and "value" as these terms apply to project management, to understand the nature of budgeting and financial analysis for project selection and control, and the ability to interpret control information as it allows for change (configuration) management of mid-stream projects.

**MANGT 520 Planning and Resource Management (3)** A problem-based course that addresses techniques for planning the project development process, including securing resources and resource management.

### **MANGT 520 Planning and Resource Management (3)**

Project management has been labeled by Fortune magazine the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. The key "front-end" processes associated with successful project management consist of planning and resource management--in effect, the need to first plan the work, ensure necessary resources are available, and thoroughly understand the components of the project plan, including activities and their interrelationships.

The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include the ability to understand planning and resources as these terms apply to project management, to understand the nature of developing comprehensive plans and schedules, manage resources for their maximum effect, and learn how to respond to crises or unanticipated events in terms of adjustments to plans and resource requirements.

**MANGT 525 Commercial Law and Project Procurement (3)** A problem-based course that addresses elements of commercial law and procurement practices and their implications for project management.

**MANGT 525 Commercial and Procurement (3)**

Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course looks at the key issues in contracts, contract law, negotiation, and procurement. In developing projects for external clients, it is vital that organizations and project team members understand some of the basics by which contracts are negotiated and enforced. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include the nature of contracts and contract law, the use of contracts as a procurement strategy, how to understand the nature of contracts, their use as a negotiation tool, and the use of bidding and negotiation in relationships between project organizations and their customer base.

**MANGT 535 Interpersonal and Group Behavior (3)** A human relations-based course that identifies the significant challenges that managing individuals on project teams represents.

**MANGT 535 Interpersonal and Group Behavior (3)**

Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course serves as an important linkage between the technical demands of project management and the behavioral challenges that await project teams in the form of interpersonal behavior and group interactions. The role of the instructor in this course is to promote student learning of a wide variety of behavioral knowledge and skills required for successful project management. These include understanding the impact of interpersonal behavior and team-based performance on project success as well as recognizing the impact of issues such as motivation and negotiation skills for managing projects.

**MANGT 540 Strategy: Corporate, Business and Project (3)** A problem-based course that focuses on linking projects to overall corporate strategy.

**MANGT 540 Strategy: Corporate, Business and Project (3)**

Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course provides a conceptual grounding in the role that projects play in furthering an organization's strategic goals. Projects are, in effect, the building blocks of strategy because they represent the operationalization of strategic plans. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include understanding the complex, widely diverse nature of the skills and knowledge required of modern project managers.

General Education: None

**MANGT 545 Project Team Leadership (3)** This course focuses on development of team leadership skills and the ability to solve team problems related to human interaction.

**MANGT 545 Project Team Leadership (3)**

The first half of this course consists of self-paced assigned readings which cover basic concepts of team leadership. Students will complete quizzes over each chapter which they read and begin writing a personal case analysis. The second half of the course utilizes case studies of project teams and includes extensive class and small group discussions. In addition, each student will present a case analysis to the class. Students will have the opportunity to develop basic team leadership skills and the ability to solve team problems as they arise.

**MANGT 575 Management of Projects (3)** A problem-based capstone course that integrates the themes necessary to appreciate the overall challenge of project management.

**MANGT 575 Management of Projects (3)**

Project management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course serves as a capstone experience intended to require students to be able to integrate the various elements from the previous set of project management courses they have covered. The course requires all other courses as prerequisites or co-requisites so that students may be sufficiently knowledgeable to synthesize all prior material. The role of the instructor in this course is to promote student learning of a wide variety of knowledge and skills required for successful project management. These include understanding the complex, widely diverse nature of the skills and knowledge required of modern project managers. In order to cover sufficiently the capstone material, students must have a thorough background in the various issues that comprise this capstone experience.

**MGMT 410** Project Management (3) A problem-based, interdisciplinary course in project management skills and techniques needed to manage projects in a modern business environment.

### MGMT 410 Project Management (3)

Project Management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course would greatly aid business majors, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential.

The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep timetables and schedules.

The course itself would be set up around semester-long projects, either developed by the instructor, or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

General Education: None

Bachelor of Arts: None  
Effective: Spring 2008  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MGMT 415** Project Portfolio Management and Organizations (3) An advanced course in project management focusing on portfolio planning and control within the context of specific organizational challenges.

### **MGMT 415 Project Portfolio Management and Organizations (3)**

Project Portfolio Management (PPM) is a strategically-focused course on the management of projects, programs, and portfolios in organizations. The management of individual projects is a complex, multi-level challenge involving myriad issues of planning, organizing, and controlling all project elements. Project portfolio management addresses a more strategic need; namely, the process of project selection in order to develop a balanced portfolio of projects designed to support organizational initiatives. As a result, this course addresses the critical issues of maximizing value in a portfolio, linking projects to organizational strategy, understanding the critical organization effects of structure, environment, and culture on project success, and creating a coherent PPM framework for the firm.

Because the focus is more strategic, the role of the instructor in this course is to go beyond the mechanics of planning and controlling a single project to training students how to think strategically where projects and programs are concerned; to recognize their role in creating a PPM plan for an organization, selecting projects for value, rebalancing a project portfolio, and maintaining this focus within the organization.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2013  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MGMT 418** Project Planning and Resource Management (3) Advanced course in project management focusing on a more in-depth approach to project planning and scheduling and resource management.

### **MGMT 418 Project Planning and Resource Management (3)**

Project Planning and Resource Management is a more in-depth look at some of the most important aspects of project management; the ability to accurately plan and schedule projects using the latest and most accurate methods. Further, the course addresses resource management within the context of planning, noting the important linkage between these two elements. Accurate planning can be done through a variety of techniques, including CPM, PERT, simulation, linear programming and other optimization methods. Students will learn when each of these methods are most useful, benefits and drawbacks of various planning and resource management techniques, and how to apply these techniques to their projects. In addition, students will learn about different types of project risks, and techniques for analyzing and managing these risks.

Because the focus is hand-on and problem-based. The role of the instructor in this course is to demonstrate these analytical techniques through classroom exercises and assignments and software packages, including MS Project, simulation, and Analytic Hierarchical Process (AHP).

**MGMT 425** (IST 425, ENGR 425) New Venture Creation (3) Via problem-based learning, teams define new business ventures to meet current market needs, develop business plans, and present to investors.

### **MGMT (IST/ENGR) 425 Introduction to Entrepreneurship (3)**

The goal of MGMT (IST/ENGR/ENTR) 425 is to better prepare undergraduate students to be business leaders in adaptive, globally-minded, technology-savvy companies. The course is structured so students develop skills that are of high value in any workplace: they develop improved leadership skills, higher self-efficacy, creativity and the ability to deal with ambiguity. On course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience and producing a convincing executive summary for internal or external financing and launch. Students who want to augment the skills and knowledge from their major with the ability to refine a new product/service process in an interdisciplinary team will find MGMT (IST/ENGR/ENTR) 425 a valuable course.

This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students develop ownership in their new business venture concept and are fully responsible for the genesis of the idea. The course leverages the on-line course management system (ANGEL) to define weekly learning objectives, support electronic delivery of assignments, robust video content with entrepreneurs is provided on CD-ROM or via ANGEL, providing additional insights into entrepreneurship. The technology or business segment focus of the class is easily adapted by using different case studies and course mentors.

This will be one of two courses in the new two-course sequence for business students in entrepreneurship. This course will be accepted as a supporting course in the Engineering Entrepreneurship Minor (E-SHIP) and in the Engineering Leadership Development Minor (ELDM). MGMT (IST/ENGR/ENTR) 425 can be used as a technical elective in many of the engineering departments. It will be accepted as a Support of Option course for the Information Sciences and Technology (IST) major.

This course will be offered each Fall and Spring semester with two sections each semester. Class enrollment per section will be set at 60 total.

General Education: None

**MGMT 426** (ENGR 426, IST 426) Invention Commercialization (3) Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology.

### **MGMT (IST/ENGR) 426 Invention Commercialization (3)**

The goal of MGMT (IST/ENGR/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - "not invented here".

Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome.

This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor.

Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary

teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at <http://guru.psu.edu/policies/RAG13.html>

The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

**MGMT 427 Managing an Entrepreneurial Start-Up Company (3)** Exploration of the tensions and experiences of starting and growing a new company.

### **MGMT 427 Managing an Entrepreneurial Start-Up Company (3)**

Start-up companies have a high failure rate. Acquiring and balancing limited resources, changing direction quickly, building a coherent team, managing intellectual property, and creating new markets all test a wide range of managerial skills not usually demanded in one person within a larger organization. Whereas a large company has a strong and well-defined structure and ample resources to deal with unexpected challenges, a start-up usually has insufficient resources, or management experience and yet must deal with daily important and often unpredictable forces. It is the tenacity of an entrepreneur that can take a company through the valleys of despair to eventually succeed.

Students will be exposed to these tensions and experience through problem-based learning methods what it is like to start and grow a new company. The course will provide students with knowledge and experience to increase the likelihood of success whether as a principal in a small company or an investor representative.

**MGMT 433 Leadership and Team Building (3)** Team-based learning approach to developing conceptual knowledge, skills sets, and personal competencies needed for leading and managing organizations.

### **MGMT 433 Leadership and Team Building (3)**

To lead effectively and to manage others in contemporary work contexts requires mastery not only of conceptual knowledge, but also of the intra- and inter-personal competencies and skills sets that are vital to successful performance in a work environment. This course emphasizes an experiential-based learning approach that is designed to impart skill sets and competencies in areas such as leadership, teambuilding, negotiating, communicating, valuing diversity, managing conflict, and more. The course thus uses assessment exercises, role playing techniques, group problem solving exercises,

and other experiential-based learning techniques in order to provide students with a framework for better understanding their own strengths and weaknesses, to enable them to practice, enhance, and to gain confidence in their competencies in these various areas, as well as to enable students to better appreciate when and how to effectively apply these skills sets and competencies in the workplace.

**MGMT 441** Organizational Staffing and Development (3) This course focuses on the skills and methods managers need to manage staffing and development activities in organizations.

#### **MGMT 441 HRM Professional Seminar (Part 1): Staffing and Development (3)**

The purpose of this course is to give students the skills and knowledge they need to contribute to organizational staffing and development activities. Students will learn technical and organizational aspects of making hiring decisions, designing and implementing training programs, and developing career management initiatives. Topics include strategic human resource management, HR planning, the contingency workforce, HR information systems and technologies, job design, recruitment, selection, employment legislation, diversity, training, management development, career planning, and the like. This course is normally taken in the first semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 442 (HRM Part One) and is typically taken as a precursor to MGMT 443 (HRM Proseminar, Part Two) and 444 (HRM Practicum, Part Two). These courses together constitute the core of the HRM Option for Management majors.

**MGMT 445** (US) Managing a Diverse Workforce (3) This course focuses on developing knowledge and skills for managing

demographic, functional, occupational and identity-based differences within and among organizations.

**MGMT 445 Managing a Diverse Workforce (3)**

This course focuses on developing knowledge and skills for managing differences within and among organizations. It provides an in-depth look at the sources of diversity-related conflicts in organizations, constructive approaches for managing these conflicts, and how corporations can leverage diversity for competitive advantage. The overall objective is to provide students with an understanding of the business case for diversity, the legal requirements surrounding the management of diversity in organizations, the structural dimensions of implementing diversity programs, skills for managing diversity in teams, as well as a general sensitivity to the kinds of issues that create conflicts within and between firms. Students will explore legal requirements including: EEOC, affirmative action, and the Americans with Disabilities Act and the implications of these for selection, compensation, promotion and dismissal. Examples of specific steps corporations have taken to address demographic, functional, occupational, and identity-based differences will be provided. Through the use of interactive case studies and experiential exercises, students will be given opportunities to learn about and appreciate their own and others' cultural heritages, reflect on constructive approaches for handling diversity-related conflicts (including those stemming from functional, occupational and identity-based differences as well as demographic ones) and for designing human resource management systems that capitalize on diversity and promotes inclusion.

**MGMT 466** Organizational Learning and Knowledge Management (3) Examination of the social processes through which organizations continuously develop, acquire, interpret, and apply information and knowledge for performance enhancement and continuous improvement.

### **MGMT 466 Organizational Learning and Knowledge Management (3)**

The primary focus of this course is to examine critically the social structures and processes through which organizations continuously acquire, develop, organize interpret, distribute and apply information and knowledge for performance enhancement and continuous improvement. Topics such as single-loop learning, double loop learning, and deuterolearning (i.e., learning how to learn) are considered, particularly as they apply to self managed work teams, process-based and network structural design, employee involvement approaches, impact of organizational culture and leadership practices. A second focus of the course is to examine the social processes and structures through which the key outcome of the learning process -- organizational knowledge -- usually expressed in terms of improved core competencies, and intellectual capital, can be leveraged across products, functions, business units, geographical regions, and competitive environments to improve organizational performance and competitive advantage and provide added value for customers. Particular emphasis is placed on knowledge management in support of the organization's competitive strategy, with a focus on the exchange of tacit, person-to-person knowledge that is difficult to codify and store. Additional emphasis is placed on the mechanisms available for organizational members to gain access to needed knowledge.

Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MGMT 471** Strategic Management (3) Issues that influence the competitive performance of the firm are identified and examined.

### **MGMT 471 Strategic Management (3)**

This course focuses on the management of the firm using a strategic perspective. The strategic perspective emphasizes the firm as the unit of analysis (e.g., analyzing how a firm competes in its industry), and it addresses key decisions that have a long-term impact on the structure and performance of the organization (e.g., diversifying into a new business or changing the company's strategy). The course draws heavily on prior business courses in accounting, marketing, finance, and international management. Key topics include industry analysis, competitor analysis, company analysis, corporate-level strategy, business-level strategy, strategy implementation, and firm performance. The course is normally taught using the case methods, but the course may include a computer simulation and/or oral group presentations.

**MGMT 475W** Strategic Product Development (3) Study of an organization, industry, and evaluation of the introduction to a new product. Preparation of proposal for industry product.

### **MGMT 475W Strategic Product Development (3)**

This course is the first of a two course sequence that will provide a capstone experience for the Interdisciplinary Business and Engineering BS degree. The tools of strategic management and cross-functional collaboration will be introduced and serve as a background for the design, development, and implementation of a new product within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the first semester, the evaluation of the product including feasibility of the product, design, manufacture, and intellectual property will be evaluated by student teams and presented to the firm. The final document will include a complete written assessment of each of the components of feasibility.

**MGMT 483** Compliance and Fairness in Organizations (3) Compliance with employment laws with respect to managing human resources and fair treatment in employer-employee relationships.

### **MGMT 483 Compliance and Fairness in Organizations (3)**

This course is intended for undergraduate students who want to learn more about the laws governing the employment practices introduced in the survey course in human resource management. This course will clarify the legal context within which businesses in general, and managers in particular, manage their employees. Students will learn about the legal rights and responsibilities of both employers and employees. Objectives of the course include learning how to comply with workplace laws and regulations, learning how to legally and effectively implement these requirements in an organization, and, as managers of human resources, knowing how to run a safe and fair workplace. To accomplish these objectives, students will evaluate and analyze federal employment laws and regulations, state employment laws (where applicable), and U.S. Supreme Court rulings. The emphasis will be on providing an informed legal context for managerial behavior. Student achievement of these learning objectives will be evaluated using several methods: students will summarize, interpret, and analyze employment law cases, write and develop a portfolio of critical essays of corporate employment practices, research and present (with team members) a project analyzing a current legal challenge to a specific company employment practice, and prepare a comprehensive written examination of material covered in the course.

**MGMT 534** Leadership and Change in Organizations (2) Understanding yourself as a leader, particularly as a leader in organizations and especially a leader of organizations undergoing change.

#### **MGMT 534 Leadership and Change in Organizations (2)**

This course mixes concept with practical, workable knowledge. We will focus on how you think about leadership, how things get done, and how things might be improved in organizations. This is the course that will allow you to discover, consider, and alter your leadership tendencies and values. Self-management is the major emphasis. Another is learning to lead organizations and the people in them humanely. It is also a course that will allow you to see the differing viewpoints and perspectives of your peers concerning many leadership and organizational issues.

**MGMT 539** Seminar in Organizational Social Networks (3) Learn theory, concepts and methods for research on organizational social networks.

#### **MGMT 539 Seminar in Organizational Social Networks (3)**

This course familiarizes doctoral students with the theory, research and methodological issues connected with social network analysis in organizational contexts. The course encompasses topics from the micro level (e.g., cognition and networks) to the macro level (e.g., interorganizational networks) and introduces a range of network ideas concerned with

centrality, structural holes, embeddedness, and social capital. Class periods will consist mainly of focused discussion of academic papers, but will also include discussion of data analysis exercises, and student presentations. Upon completion of the course, students should have a good grasp of social network concepts and methods and be able to use them to conduct research. The course requirements include participation in discussion, the completion of data analysis exercises, and the writing of a research paper. The course is designed for 15 students and is likely to be offered once every two years.

**MGMT 561 Global Strategy and Organization (1-3)** Course focuses on three major aspects of international business: competitive strategy, organization design, and management processes.

### **MGMT 561 Global Strategy and Organization (2)**

The course focuses on three major aspects of international business: competitive strategy, organization design, and management processes. As multinational companies globalize, they rely on a variety of managerial and organizational arrangements to accomplish their strategic objectives. We will examine those arrangements according to several major corporate decisions: the decision to go abroad, doing business in a particular country or region, transforming a multinational firm into a global firm and so on.

**MGMT 565 Power and Influence (2)** Provides a pragmatic and ethical framework for analyzing the sources of power in organizations and its effective use.

### **MGMT 565 Power and Influence (2)**

Power and politics are ever-present and necessary features of organizational life. Without them, much of what gets done in organizations could never be accomplished. However, power can also be abused, and personal or political goals can overshadow organizational ones. This course provides a framework for intelligently analyzing the sources of power in organizations, and the circumstances that lead to its attainment and effective use. It also offers a framework for evaluating political behaviors on both pragmatic and ethical grounds.

## Management-CI (MNGMT)

**MNGMT 505** Managing Human Resources (3) Issues in human resource management including recruitment and selection, employee development, performance management, employee and labor relations, and employee safety.

### **MNGMT 505 Managing Human Resources (3)**

This course examines the primary functions and responsibilities of those who manage human resources in formal organizations. The emphasis of this course is on the practical application of the methods human resource specialists, generalists, and managers use to perform their duties. The course is designed to appeal not only to future (or current) human resource practitioners, but also to anyone who aspires to manage people in organizations. Topics covered include management practices, the legal and regulatory environment of human resources, employee recruiting, selection and placement, training and development, performance management, compensation and benefits, employee and labor relations, and employee health, safety, and security.

This course surveys the major functions and responsibilities of human resource managers. In doing so, a primary objective is to gain greater factual knowledge of human resource issues by studying organizational practices, analyzing cases, conducting research using the World Wide Web, and utilizing other sources of information. It is also hoped that each student will develop a philosophy concerning the relationships among the employee, employer, union, and government agencies involved in employment issues.

Students' knowledge is evaluated, in part, using written examinations. Each student is also typically the member of a small team that will research a specific challenge, trend, or issue that currently confronts human resource managers. Each team prepares a concise and focused presentation and written summary on its chosen topic. Other means of evaluating student knowledge may include case analyses, investigations of human resource practices within specific organizations, or other related projects.

**MNGMT 511** Organizational Behavior (3) Individual and group behavior in organizations; motivation, performance, rewards, satisfaction, decision processes, conflict; job and organizational design; structure and culture.

### **MNGMT 511 Organizational Behavior (3)**

The field of organizational behavior is intended to further our understanding of human behavior in work and organizational contexts. The field draws upon research emanating from any social science discipline (e.g., psychology, social psychology, sociology, anthropology, etc.) that might offer insight as to how individuals and groups function effectively within work contexts. The overall goal is 1) to explore how individuals' work experience can be made more satisfying and personally fulfilling to them, and 2) to explore how organizations can manage and shape human behavior in ways that optimize organizational effectiveness and organizational goal accomplishment. Particular emphasis is placed upon the study of individual and group-level dynamics within organizations, including topics such as motivation, individual differences, ethics, emotional intelligence, group dynamics, decision-making, stress, power and politics, leadership, and organizational culture and structure.

**MNGMT 514** Organizational Innovation and New Venture Development (3) Advanced study of the process of innovation from an organizational perspective. Includes analyses of individual, organizational, and environmental variables.

### **MNGMT 514 Organizational Learning (3)**

The subject of MNGMT 514 is the process of innovation in organizations and the factors associated with its successful implementation. Among the topics covered are the creative process as the wellspring of innovation and elements of organizational architecture (structure and culture) that influence the process of innovation. Entrepreneurial strategy is discussed as a means for creating competitive advantage through innovation. During the last third of the course, students will develop a new venture model for an innovation by applying the concepts developed in the first part of the course. New venture models will be developed using collaborative learning groups established at the beginning of the course.

**MNGMT 520** Organizational Transformation (3) Treats methods, practices, and theory of organizational empowerment, quality management, process redesign, re-engineering, restructuring, and planned change.

### **MNGMT 520 Organizational Transformation (3)**

The objective of this course is to review the current theory and practice of organizational development (OD), and applied field of social science. ODs primary aim is helping to improve the "alignment" between individuals and the organization,

and between the organization and its environment in order to achieve greater effectiveness, performance, and stakeholder satisfaction. The course provides an overview of theories, research findings, approaches, and concepts of OD. Particular attention is paid to discussing practitioner-centered cases in OD. Large-scale, system-wide organizational development - usually one that involves a paradigm shift is often referred to as Organizational Transformation or Re-engineering. The paradigm shift often involves a re-conceptualization of management philosophies, principles, practices, and behavior leading to a high performing, empowering organization.

**MNGMT 522 Operations and Supply Chain Management (3)** Design, development, management of manufacturing systems in a supply chain context; tools, techniques, and applications at tactical and strategic levels.

### **MNGMT 522 Operations and Supply Chain Management (3)**

The purpose of Operations and Supply Chain Management is to provide students with tools and knowledge that can help them increase productivity and profitability in a manufacturing environment. Both strategic and tactical aspects of operations management will be emphasized. The course is taught in supply chain context meaning that decisions made in manufacturing must consider the overall impact of the suppliers and customers in the supply chain. Students will be asked to read and participate in the discussion of articles dealing with progressive operations and supply chain methods. The course also incorporates the case study method, in order to provide students an opportunity to apply their knowledge in class.

**MNGMT 545 Employment Law for Business (3)** The regulation of the employer-employee relationship, discrimination in employment, and the employment environment with respect to managing human resources.

### **MNGMT 545 Employment Law for Business (3)**

This course is intended for graduate students who want to learn more about the laws governing the employment practices introduced in a graduate survey course in human resource management. This course will clarify the legal context within which businesses in general, and managers in particular, manage their employees.

Students will learn about the legal rights and responsibilities of both employers and employees. Objectives of the course include learning how to comply with workplace laws and regulations, learning how to implement these requirements legally and effectively in an organization, and, as managers of human resources, knowing how to run a safe and fair workplace. To accomplish these objectives, students will evaluate and analyze federal employment laws and regulations, state employment laws (where applicable), and U.S. Supreme Court rulings. The emphasis will be on providing an informed legal context for managerial behavior.

Student achievement of these learning objectives will be evaluated using several methods: students will summarize, interpret, and analyze employment law cases, write and develop a portfolio of critical essays of corporate employment practices, research and present (with team members) a project analyzing a current legal challenge to a specific company

employment practice, and prepare a comprehensive written examination of material covered in the course.

**MKTG 441** Sustainability in Marketing Strategy (3) This course examines sustainability in marketing strategy, including real- world applications, green solutions, and using marketing principles to solve social issues.

### **MKTG 441 Sustainability in Marketing Strategy (3)**

This course will examine the growing trend of sustainability and its implications for marketing in today's world and in the future. It will explore how businesses develop and implement marketing strategies to promote sustainability, and analyze how companies are performing.

Businesses are increasingly applying the concepts of sustainability to their decision-making for marketing strategy. Some firms are leaders in the sustainability movement, and are motivated by ethical conviction to do well for society and the environment. Others find themselves forced by pressure from shareholders, customers, governmental regulation, and peers.

Given this increased attention to the concepts of sustainability by stakeholders, businesses are also looking for future employees with an understanding of the phenomenon.

General Education: None

**MKTG 443** Sports Marketing (3) This course will focus on how companies develop, execute and measure marketing

strategies and tactics to use sports teams, families, leagues and other organizations to market their products and services domestically and internationally to consumers and business partners. The course will examine the marketing strategies employed by sports teams and leagues.

### **MKTG 443 Sports Marketing (3)**

"Sports Marketing" is designed to explore how various types of businesses and other organizations market products and/or service related to sports as well as how sports are used as marketing platforms for non-sports products. Unique aspects of the sports business will be explored including how strategies and tactics related to marketing in this sector differs from other industries. The purpose of this course is to provide an overview of various aspects of sports marketing. This will include the use of sports as a marketing tool for other products, the marketing of sports products and emerging considerations that are relevant for both marketing through and the marketing of sports. Since sports involves consumers, businesses and other organizations, this courses will cover B2C as well as B2B marketing.

How product, distribution, pricing and promotional programs are developed particular to this industry will be one of the primary focuses. Relationship marketing, the role of technology, sponsorships, ambush marketing, partnership leveraging, endorsements, venue naming rights, licensing and emerging legal and ethical issues will also be important focuses.

A guest speaker series will provide additional professional perspectives on a variety of unique aspects of marketing particular to sports. Reading Sports Business Journal, the most highly regarded source of news by sports industry employees, will further expand this knowledge base as will current news events related to the industry. Students will be provided an opportunity to network with guest speakers and those interested in considering sports among their job search, will also be able to receive internship and career counseling from the instructional team. Students enrolled in this class will also be able to submit resumes and requests to be interviewed for internships with various sports organizations being arranged in cooperation with the Smeal College Corporate and Career Services Office. Students will apply what is being learned in the class to the development of a project related to sports marketing, with the added benefit of having a deliverable which can be used to further the search for jobs and/or internships in the sports business.

**MKTG 445 (IL) Global Marketing (3)** Role of international marketing in the global environment; political, economic, geographic, historical, cultural conditions; developing and implementing international marketing strategies.

### **MKTG (I B) 445 Global Marketing (3) (IL)**

MKTG/I B 445 focuses on the wide range of issues, which face enterprises as they develop and execute marketing strategies and tactics, designed to support business activities in markets outside their home country. This course deals directly with these issues as they apply to firms, which concentrate on a few markets closer to home, or on many markets throughout the world, including via the Internet. This course also deals with the important role played by governments in shaping the global marketing environment, including through trade policies, treaties and marketing supports. Students successfully completing this course also gain a greater understanding of the cultural, technological, economic, political and social environments which international businesses and global marketers face as they seek to expand their product and/or service offerings into other nations. Understanding this important part of the challenge facing international businesses and global marketers is achieved through the text, lectures, and student group projects and presentations including some focused on specific countries, including both major trading partners of the United States and select emerging new markets. This course is designed for students who have an interest in these topics and/or who plan to enter fields such as international business or global marketing and/or who expect to work for businesses, which are active internationally. Class discussions and projects are designed to help students explore these topics in greater depth. A series of small group assignments and presentations will further help students apply what is being learned via problem-based learning. This is an interactive class. Therefore, a portion of the grade each student achieves will be based on class attendance and participation. Students are also expected to pay attention to examples of the issues discussed in class that they encounter during the semester in print broadcast, and online communications. Along with material from lectures and the text, issues discussed in class will be included in the exam.

**MKTG 475 Innovation and Product Management (3)** This course is an application-oriented interdisciplinary course on new product development concepts, and innovation management.

**MKTG 475 Innovation and Product Management (3)**

This course is designed to provide students the opportunity to examine and understand the new product development process. It takes the process from the strategy and ideation stage to the after-market product launch. The course blends the perspectives of marketing, management, and engineering into a single approach to product development. It provides students with an appreciation for the realities of industrial new product development practice. Therefore, case studies and other in-class assignments are designed in a way that students can apply the theoretical/abstract concepts to the real life phenomenon. The new product development projects are assigned to teams in real life, students have the opportunity to complete the case analyses and assignments in teams. Course aims to integrate micro level new product development issues (e.g., firm-level product strategy) to macro level issues (e.g., anti-trust regulations and legislations).

**MKTG 480 Intermediate Social Media Marketing (3)** Social Media Marketing tools, techniques, and strategies to build brands and customers.

**MKTG 480 Intermediate Social Media Marketing (3)**

In today's business world, marketers must become more creative in the ways in which they present their company on an Internet based platform such as Twitter, Facebook, and Linked-In in order to present increasingly relevant products and services to a more receptive customer base. The course, Intermediate Social Media Marketing, is designed to provide hands-on experiences with the use of Social Media Marketing tools and techniques while adhering to socially acceptable and ethical standards and protocols.

The technology tools and platforms include but not limited to: Facebook, LinkedIn, Twitter, YouTube, Google+, Pinterest, Foursquare, Friendster, Technorati, Blogs, Vlogs, Podcasts, Hootsuite, Radian6, various search engines, and QR codes. These social media tools can be used to find, reach, connect, and automate marketing messages to efficiently and effectively build relationships, stronger brands and loyalty. These technologies may be utilized with or without a fully realized marketing automation structure, allowing ideas to be shared on a global platform.

Students will learn and apply the major categories of Social Media tools, the how's and why's of their use, and decide what

venues to use to reach the social media marketing objectives of firms, which may include improving the content to increase online presence, brand awareness, fan likings, customer inquiries, and sales.

During this course, students will devise a social media marketing plan for a local firm (or firms) that addresses (1) platform, (2) content, and (3) interaction. This course will achieve academic excellence by having students research the latest techniques and practices of social media, mobile, and direct marketing to build a social media marketing plan for a local firm (or firms) to expand its markets. Students will be analyzing a firm's current traditional and social media marketing practices, and short-term and long-term goals for its target markets.

**MKTG 521** Scientific Marketing Analysis and Implementation (2) An introduction to the tools used, rationale for, and the practice and implementation of a variety of current marketing techniques.

### **MKTG (MS&IS) 521 Marketing Engineering (3)**

This course deals with concepts, methods, and applications of decision modeling to address such marketing issues as segmentation, targeting and positioning, new product design and development, advertising, sales force and promotion planning, and sales forecasting. The course is designed for MBAs as well as for students in engineering and related disciplines who have some background in or understanding of marketing principles, and exposure to spreadsheet programs such as EXCEL.

Unlike conventional capstone marketing courses that focus on conceptual material, this course will attempt to provide skills to translate conceptual understanding into specific operational plans--a skill in increasing demand in organizations today. Using market simulations and related exercises tied to PC-based computer software, students will develop marketing plans in various decision contexts.

Specifically, the course objectives are to:

- Provide students with an understanding of the role that analytical techniques and computer models can play in enhancing marketing decision making in modern enterprises.
- Improve students' skill in viewing marketing processes and relationships systematically and analytically.
- Expose students to numerous examples demonstrating the value of the analytic approach to marketing decision making.
- Provide students with the software tools that will enable them to apply the models and methods taught in the course to real marketing problems.

The course will be of particularly valuable to students planning careers in marketing and management consulting. The course is designed for students with some background in quantitative methods as well as some exposure to basic marketing concepts.

Class sessions will be devoted to probing, extending and applying the material in the readings and the cases. We will use the "Tell-Show-Do" sequence to give you hands-on experience in using the course materials for making marketing decisions. It is your responsibility to be prepared for each session as detailed in the course outline. Each one of you will benefit from belonging to a "study group" that meets and prepares for each session before coming to class.

**MKTG 556** Marketing Management (3) To explore the conceptual and applied dimensions of marketing management.

### **MKTG 556 Marketing Management (3)**

This course is a seminar course, so class involvement will be a major component. In addition, students will be expected to prepare two papers. The first will be a journal submission review; the second will be the written version of each student's research proposal. Academics need to understand journal reviewing, and they need to develop research ideas and write about them. Students will also be expected to prepare and perform two oral presentations. The first will be the presentation discussed in the session description below and will be a part of their class participation. The second will be an oral form of the student's research presentation. Students need to be able to communicate their ideas, and it is hoped that having an oral presentation of their proposals before the written presentation will also help them improve their proposal. Finally, there will be an examination at the end of the course.

Each class session, with the exception of the first and last class periods, will be devoted to an important topic in the marketing management domain.

For each class period, other than the two exceptions, students will read around 7 papers. The papers will be a mix of classical, seminal works and recent, cutting-edge works in the assigned area. The bulk of the class period will be devoted to discussion of the articles assigned. Discussion will be devoted to a) why the article is important, b) good points of the article, c) bad points of the article, and d) research ideas that the article might suggest or engender. In addition, one student per week will be responsible to find, prepare, and present another published paper that deals with the weeks' issues ; this presentation will be part of the student's participation grade. The last few minutes of each class will be devoted to a discussion by the instructors of where research in the assigned area is going and some interesting open research questions in the area.

The two exceptions among the class periods will be the first and last class. In the first class, we will have an introduction to research in marketing management and this particular Ph.D. seminar, while the last class will be devoted to allowing the remaining students to present their research proposals.

**MRKT 570** Marketing Strategy and Planning (3) Analysis of management's marketing problems, including marketing analyses, pricing, channels of distribution, promotion, competition, product strategies, and marketing research.

**MRKT 570 Marketing Strategy and Planning (3)**

This course is intended to provide graduate students with the conceptual background and the analytical tools that are used in solving strategic marketing problems. The text and assigned readings furnish the conceptual background for effective analysis of marketing problems; the cases utilize practical application tools for making strategic marketing decisions. To operationalize this objective, class discussion will be geared toward evaluating marketing information to comprehensive and integrated marketing strategies. These discussions will nurture students' understanding of the operation of marketing programs; will emphasize theory; and, will foster the integration of the various marketing management elements into a comprehensive marketing strategy.

**MRKT 571** Consumer Behavior (3) Factors influencing buyer behavior; contributions of the behavioral sciences to the study of selected phenomena.

**MRKT 571 Consumer Behavior (3)**

This course is intended to introduce graduate students to the basic theoretical ideas and techniques of investigations into consumer behavior phenomenon. Such a study will, it is hoped, provide an appreciation of the problems of consumer behavior and the techniques available for their solution. Specific objectives are:

(a) The prepared graduate students who will enter a wide range of careers with a substantial knowledge of consumer behavior theory, research, and state-of-the art conclusions, that will permit them to use more sophisticated analytical techniques in anticipating and meeting consumer needs and demand.

(b) To offer strategic how-to, and "insider" information for using theoretical concepts and techniques and give graduate students specific opportunities, within the course.

**MRKT 586** Internet Marketing (3) Concepts, techniques, and applications of Internet marketing; buyer behavior; Web site design; marketing plans; legal, ethical, and international environments.

### **MRKT 586 Internet Marketing (3)**

With the introduction of the Internet and the World Wide Web, the marketing field has moved to a new stage in meeting the demands of current and prospective customers. In this respect, many companies have added a new medium of delivery and promotional channel to their existing brick and mortar operations. This course will deal with marketing strategies of click-only and click-and-mortar firms. The course is a valuable addition to our marketing course offerings in our MBA program. It is a marketing course, and will not deal with technical aspects of the Internet. Students will be evaluated by using group assignments such as development of Web Marketing plans, case studies, mini research assignments, and a final exam. The course does not require special facilities except desktop computer and MS software, which are available in many of our classrooms. It may be offered once a year.

**MRKT 587** Global Marketing (3) Exploration of strategic marketing planning concepts and techniques from a global perspective within diverse overseas market environments.

### **MRKT 587 Global Marketing (3)**

This course is a systematic treatment and application of marketing management knowledge on a global scale. The objective of the course is to develop knowledge and understanding of the global marketing environment and of concepts, tools, and theory that will prepare students to take responsibility for successful global market penetration. The perspective of the course is managerial: i.e., the ability to identify market opportunities, develop plans/programs, resolve problems, and implement strategies. This course will provide graduate students with an understanding of marketing planning and strategy from a global perspective. The world should be viewed as a marketplace with a resulting need for familiarity with various environmental similarities and/or differences. These may necessitate adaptation and/or standardization of marketing programs, strategies and plans from region/nation to region/nation. A major focus of this course will be a strategic marketing management techniques, issues, strategies and problems within a global marketing framework. As well, an understanding and appreciation of world cultures, socioeconomic, and legal/political conditions which have a profound effect on a US firm's target market selection and marketing strategy development, will be established.

**MATSE 403 (BME 443)** Biomedical Materials (3) Describe properties of materials and composites and their in vivo interactions.

**MATSE 403 (BIOE 443) Biomedical Materials (3)**

Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone

(osteoporosis) and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

**MATSE 404 (IL) (BME 444) Surfaces and the Biological Response to Materials (3)** Focus is on the special properties of surfaces as an important causative and mediating agent in the biological response to materials.

#### **MATSE 404 (BIOE 444) Surfaces and the Biological Response to Materials (3)**

This course factors the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Biophysical mechanisms are emphasized that lead to formulation of structure property relationships and the biological response to materials. Contact activation of the blood plasma coagulation cascade, bioadhesion, and protein adsorption are used as example biological responses to material surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kind and intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, receives special emphasis. Course materials are drawn from a selection of relevant library reserve texts.

**MATSE 409 (NUC E 409) Nuclear Materials (3)** Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation.

#### **MATSE (NUC E) 409 Nuclear Materials (3)**

MATSE/NUC E 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials so they understand the limitations put on reactor operations and reactor design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomistic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

**MATSE 410** Phase Relations in Materials Systems (3) Phase rule; construction and interpretations of equilibrium diagrams; importance of nonequilibrium in materials.

### **MATSE 410 Phase Relations in Materials Systems (3)**

This course integrates three core components of materials science and engineering: thermodynamics, kinetics, and interface crystallography in understanding processing and development of inorganic materials. It is the key course bridging the fundamentals to practical materials processing. Phase equilibria, phase diagrams, phase transformations and heat treatments are addressed in great details through nucleation, transformation kinetics, crystal interface and diffusion. The complexity of materials is discussed in hierarchy from pure elements, binaries, ternaries to multicomponents.

**MATSE 411** Processing of Ceramics (3) Principles of ceramic processing, including powder preparation and characterization, forming operations, and the basic phenomena underlying these operations.

### **MATSE 411 Processing of Ceramics (3)**

This course covers the scientific and engineering principles of manufacturing of ceramic products. The course covers powder synthesis and characterization; surface and colloid chemistry; fabrication; and densification by sintering. There is an emphasis on the physical chemistry of particulate systems as relates to the various stages processing. The course is offered every fall semester and is required for BS graduates of the Ceramic Science and Engineering option in Materials Science and Engineering.

The course objectives are for the student to (1) become knowledgeable of all steps involved in ceramic manufacture from powder synthesis through final densification by sintering, (2) understand the rationale and compromises for selecting a given processing route, (3) understand and be able to apply the parametric relations for manufacture of a ceramic with a specified microstructure, and (4) understand the physical chemistry fundamentals responsible for the unique properties of fine powders.

**MATSE 412** Thermal Properties of Materials (3) Generation of high temperatures, measurement of temperature, heat transfer and furnace design, thermal stability of ceramic materials, applied thermodynamics.

### **MATSE 412 Thermal Properties of Materials (3)**

The fundamentals of achieving, measuring, and controlling high temperature for materials processing are addressed. The crystal physics underlying heat capacity, internal energy, phonon and photon conduction, and thermal expansion is used to rationalize the behavior of a wide variety of ceramic and metallic materials in severe thermal environments. Micro- and macroscopic thermal transport, thermal shock and fatigue behavior, and thermochemical durability are addressed insofar as their impact on the design of, and with, high performance materials in thermostructural applications.

Case studies on materials selection and design using the fundamentals of inorganic crystal chemistry, physics, thermodynamics, kinetics, elastic, and mechanical properties are widely employed. Students interested in disciplines such as metallurgy, ceramic science, electronic and photonic materials, mechanical engineering, aerospace engineering, industrial engineering, engineering science, and chemical engineering will benefit significantly from this course.

**MATSE 415 Introduction to Glass Science (3)** Composition, melting, fabrication, properties, and uses of glass; combinations of glass with metals and other materials.

### **MATSE 415 Introduction to Glass Science (3)**

This course aims to explain the unique characteristics of the glassy state, and to describe their role in the processing, application, and engineering performance of amorphous materials and glass products. The course teaches fundamental concepts of amorphous structure, and then utilizes them to establish structure-property relations in various glass systems. The viscosity, thermal expansion, chemical durability, strength behavior, and optical properties of silicate-based glasses are emphasized, although the important properties of phosphate, halide, and chalcogenide glasses are not overlooked. Also included are phenomenological descriptions of glass formation, liquid-liquid immiscibility, viscous flow, structural relaxation, stress relaxation, and crystallization in glass. Various methods for the synthesis of glass are reviewed (melting, CVD, and sol/gel), along with important manufacturing processes for commercial glass products. Throughout the course, the applications of glass and glass components in electronics, photonics, biomedicine, transportation, and energy are described to rationalize the use of glass (i.e., the materials selection), the specific glass composition, and the associated processing method.

**MATSE 417 (E SC 417) Electrical and Magnetic Properties (3)** Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics.

### **MATSE (E SC) 417 Electrical and Magnetic Properties (3)**

MATSE 417 is designed to provide students with a fundamental understanding of the different responses a material can have to applied electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.

**MATSE 419 Computational Materials Science and Engineering (3)** Introduction to computational material science and engineering. Overview of the computational methods for materials, from atomistic to the continuum scale.

**MATSE 419 Computational Materials Science and Engineering (3)**

Modeling is a critically important tool in the field of materials. This course is designed to inform students about all areas of materials modeling, and to explore the use of modeling in different research areas. This is a hands-on undergraduate level course, mandatory for all MATSE students, covering current methods for modeling soft and hard matter, at the atomistic, meso and continuum scale levels. It consists of an overview of individual techniques of modeling from atomistic molecular dynamics and Monte Carlo, coarse-grained molecular dynamics, and multiscale modeling, to the continuum (e.g. SAFT, CALPHAD). It also includes a computer laboratory component with hands-on exercises. At the conclusion of the course, students will understand the physical basis and basic procedures of each technique. Students will be able to understand the general literature in modeling and its connection with experimental work, as well as to communicate with experts in the field. From the laboratory practices, they will learn how the individual modeling techniques contribute to knowledge in each area, and to interconnect them with experimental information.

**MATSE 421 Corrosion Engineering (3)** Industrial forms of corrosion and preventive methods, and their description in terms of basic thermodynamic and kinetic considerations.

**MATSE 421 Corrosion Engineering (3)**

This variable 2 or 3-credit course is an introduction to the corrosion field and more broadly to the principles of electrochemistry and to the electrode reactions that occur during the undesirable corrosive degradation of metal, and also in various important commercial processes such as electroplating, electroless plating, battery and fuel cell operation, aqueous extraction metallurgy and corrosion prevention techniques. The objectives of this course are to introduce the student to the (1) principles of electrode reactions, (2) nature of commercial corrosion resistant alloys and their compositions, (3) various forms of corrosion and preventative measures, and (4) design of electrochemical laboratory and field procedures for detecting corrosion processes and determining their rates. Thermodynamic and rate data are used to make engineering decisions relative to the occurrence of corrosion, to the effectiveness of the various preventative measures, and to electrochemical design. Corrosion processes and electrode reactions more generally are primarily concerned with the surface properties of materials, but the bulk properties, such as microstructure, grain size, hardness, and composition, are discussed in terms of their impact on materials degradation. In-class closed-book exams and problem sets, and homework that allow student collaboration, are used for evaluation. Computer access to the course is available and includes all lecture material, old exams with answers, home works, and syllabus on the Web. This course is offered every year with typical class size of less than 20 students. The 2-credit version is required in the Metals Science and Engineering curriculum. The 3-credit version includes additional lecture material and some laboratory demonstrations; evaluation included a lab report.

**MATSE 422 Thermochemical Processing (3)** Physico-chemical aspects of high temperature extraction and processing of metals and alloys. Design and evaluation of processes and process options.

**MATSE 422 Thermochemical Processing (3)**

An important goal of materials engineering is to efficiently produce metals and alloys of specific composition. Familiar examples include the tonnage production of metals and alloys, the production of ultra high purity electronic materials such as silicon and germanium, and the deposition of thin films for various applications. In this course the students get an understanding of the physical and chemical principles underlying these operations and how these principles are applied in industrial practice. The students get ample opportunities to apply thermodynamics, kinetics, and transport phenomena to understand why the processes currently in use work. Furthermore, they learn how to marshal information for the design of projected new processes and process options.

Broadly stated, the topics include solid-state reactions, production of liquid metals, and processing, all carried out at high temperatures. The topics are covered in a set of lecture notes available from the instructor. The lectures are accompanied by about fifteen problems sets in the form of home work and class work so that the students experience first-hand how the principles of thermodynamics and rate processes are applied in solving important problems in thermochemical processing.

**MATSE 425** Processing of Metals (3) Modern methods of shaping metals in liquid and solid states: casting, joining, powder and deformation processing. Design of new technology.

### **MATSE 425 Processing of Metals (3)**

This course focuses on how metals and alloys may be processed into different shapes and how those processing procedures affect the metallurgical microstructure and properties. Consideration of shape, the alloy composition, and property goals are all factors in selecting an optimum processing "window". Such carefully selected processing conditions not only produce the desired component shape in a cost-efficient manner but also ensure acceptable properties and safe in-service performance. This course surveys the following metal processing procedures: (a) solidification processing, (b) heat treatment processing, (c) welding, (d) deformation processing, and (e) powder metallurgy.

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATSE 426** (MN PR 426) Aqueous Processing (3) A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation.

### **MATSE (MN PR) 426 Aqueous Processing (3)**

This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.

1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrorefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.

2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).

3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy storage/conversion processes and system-integration of unit operations, industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

**MATSE 430** Materials Characterization (3) Elements of crystallography and the characterization of crystalline and non-crystalline materials using x-ray diffraction, electron microscopy, and other instrumental techniques.

### **MATSE 430 Materials Characterization (3)**

This course will introduce students to characterization techniques for quantifying microstructure, chemistry and atomic structure of solid state materials. Elastic and inelastic interactions of radiation (e.g. electromagnetic and electrons) with solid state materials are the basis for most characterization techniques. Utilizing these interactions it is possible to obtain structural and chemical information from materials, often at small length scales. In this course, students will be introduced to the most common imaging, diffraction and spectroscopy techniques used for materials characterization. They will develop an understanding of the underlying physics behind the techniques to enable interpretation of the data. The course will be beneficial for any student interested in solid-state materials, as it provides a key component of the processing-structure-properties process.

**MATSE 436** Mechanical Properties of Materials (3) Fundamental relationships between structure and mechanical behavior of materials.

### **MATSE 436 Mechanical Properties of Materials (3)**

The topics covered in this course are essential to students in the Materials Science and Engineering options, and these are also required for materials engineering courses nationally accredited by the professional societies. The course is taught at the 400 level because it requires the fundamental courses in mathematics and physics to be completed. The course also requires completion of an introductory course in materials science. This new course typically fits into the junior or senior year, when students in the major are understanding how the properties of materials can be changed by controlling the structure of materials. The course has also been designed such that students in other engineering majors can take this course as a technical elective. Some of the information in this course is used in laboratory courses for the major. The course is not required as a prerequisite for other courses.

**MATSE 444** Solid State Properties of Polymeric Materials (3) Structure/property relationships in the bulk solid state of polymers. Characterization of bulk properties and structure.

**MATSE 444 Solid State Properties of Polymeric Materials (3)**

Prerequisite is PLMSE 406. Understanding relationships between structure and properties in the bulk solid state of polymers is important in designing and utilizing polymers in many applications. In trying to understand 'structure' we also need to define what is meant by and important in 'structure' and review tools used to measure desired structural features. Two-thirds of the course addresses accepted general features of the polymeric solid state, with particular emphasis on characterization of semicrystalline polymers since semicrystalline polymers represent approximately 75% of industrially important polymers. In this portion of the course, we will be particularly concerned with defining and measuring percentage crystallinity and with defining and measuring orientation in polymers. Both of these parameters play important roles in establishing physical characteristics of polymers, in particular in mechanical properties. Mechanical properties continues to be an important feature for polymers since polymers possess the widest available range of mechanical properties of any material. The remainder of the course covers new and/or continuing topics selected from composition-branching distribution; barrier properties of thin films and recycle-degradation of polymers.

**MATSE 448 (CH E 442) Polymer Processing Technology (3)** Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations.

### **MATSE 448 (CH E 442) Polymer Processing Technology (3)**

MATSE 448 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, MATSE 448 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

Effective: Fall 2005  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details

check the specific course syllabus.

**MATSE 460** Introductory Laboratory in Materials (1) An introduction to comparative physical properties and characteristics of various materials including mechanical, electrical thermal, and structure/ morphology.

**MATSE 460 Introductory Laboratory in Materials (1)**

This is a lab course whose goal is to provide an integrated approach to materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics and polymers. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a "PowerPoint" presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material structures and properties, in order that students more fully appreciate the breadth of material science and engineering.

**MATSE 468** Ceramics Laboratory III (1) Cermaic processing and powder characteristics.

**MATSE 468 Ceramics Laboratory III (1)**

This course will demonstrate to students the experimental techniques by which the key powder characteristics and powder processes are determined, how to analyze the data from the measurements, and to reveal the interaction between properties, processing and structure. The course concentrates on the importance of powder characterization, forming techniques, sintering and microstructure characterization in the processing of ceramics.

General Education: None

**MATSE 471 Metallurgy Laboratory I (1)** A laboratory integrating experimental aspects of material contained in MATSE 402, 413, and 410, e.g. phase diagram determination, solidification micro- structures, etc.

**MATSE 471 Metallurgy Laboratory I (1)**

This course is largely an introduction to basic laboratory characterization techniques (optical microscopy, scanning electron microscopy, image analysis, hardness testing, thermal analysis). However, it also applies those characterization techniques in the context of Design of Experiments. This laboratory class also contains significant drills in technical writing.

General Education: None

**MATSE 472 Metallurgy Laboratory II (1)** Application of principles of mechanical metallurgy, pyroprocessing, corrosion and metal processing.

**MATSE 472 Metallurgy Laboratory II (1)**

This course provides a range on laboratory experiences ranging from metals processing to alloy properties. A primary course objective is to demonstrate important relationships between the processing, microstructure, and properties of metals. The individual laboratory practices include the following: powder metallurgy, metal casting, mechanical property testing and analysis, welding and weldment characterization, non-destructive testing, failure analysis and fractography, computational processing design, corrosion, and aqueous processing. The course requires hands-on involvement by the students in the design and planning of experiments as well as data acquisition and analysis of results. Students work in groups, and written reports are the primary basis for grading.

**MATSE 473 Polymeric Materials Laboratory--Synthesis (1)** Principles and practices of polymerization, including condensation, free radical (bulk, solution, suspension, emulsion), ionic, and Zeigler-Natta procedures.

**MATSE 473 Polymeric Materials Laboratory--Synthesis (1)**

This laboratory course provides students exposure to a variety of synthetic techniques basic to Polymer Science. From the polymerization of styrene to the preparation of urethane foams, students will see the role varied synthetic methods and chemistries play in determining the final form and properties of a given polymer. Students also learn the polymer structure characterization by examining the produced polymers with proper tools and instruments.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2003  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATSE 474 Polymeric Materials Laboratory--Characterization (1)** Principles and practices involved in determination of properties, structure and morphology, employing thermal, mechanical, spectroscopic, viscometric and computer techniques.

**MATSE 474 Polymeric Materials Laboratory--Characterization (1)**

Prerequisite for the course is MATSE 443. This course introduces the student to a series of simple physical and physical-chemistry tests on polymers that are the basis for a wide range of more complex tests routinely carried out in industry. In addition to the tests listed below students are also instructed in preparation of lab reports and in some of the

typical problems associated with presenting data. A final report utilizes data collected by a number of different student teams throughout the course of the lab. Finally, students are demonstrated a number of state-of-the-art characterization tools used specifically to determine properties of interest in the polymer area. Grading is based on written lab reports (10% for each of 8 separate reports and 20%) for a final comprehensive report using data from other groups as well as the student's own group.

#### Course content

**Injection Molding** - students work with a simple injection molder to find optimum molding conditions to prepare sample bars for mechanical testing.

**Static Mechanical Testing** - an Instron is used to determine modulus, yield, and elongation to break for samples prepared above and for other materials.

**Izod Impact Test** - injection molded samples are used to measure notched impact tests on what are typically tough materials.

**Dilute Solution Viscometer** - standard solution viscosity tests are used to measure intrinsic viscosity of polymer solutions and (viscosity average) molecular weight.

**Melt Viscometer** - melt index and 'die swell' are easily measured with a simple ram and die 'melt indexer' as a measure of processibility.

**Optical Microscopy** - some semi-crystallizable polymers produce large enough spherulites that rate of crystallization can be followed optically.

**Elasticity** - a simple experiment measuring the retractive force of an elastic band as a function of temperature shows the entropic origin of elasticity.

#### Copolymerization Computer

A computer program (VI) allows students to try a wide variety of 'what if' experiments to measure the effects of a range of copolymerization parameters.

**MATSE 483 (E SC 483)** Simulation and Design of Nanostructures (3) Introduction to computer simulation techniques and their applications at the physical/life sciences interface.

#### MATSE (E SC) 483 Simulation and Design of Nanostructures (3)

Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures.

The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules.

Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g. Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available at our high performance computing clusters (<http://gears.aset.psu.edu/hpc/>) Students will use the computing clusters to perform simulations which are accessible from any classroom or laboratory at Penn State.

The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

**MATSE 484W** (IL) International Internship in Materials: Research Definition and Methodology (3) A course focused on international research, specific design and methodology, facilitated through the International Internship in Materials and Program.

**MATSE 484W International Internship in Materials: Research Definition and Methodology (3)  
(IL)**

The objective of this course is to enrich our students' preparation for careers in materials science and engineering in a global environment. The course will emphasize the development of international communication skills as well as an appreciation of cultural and technical issues associated with conducting research in overseas laboratories. Students will select a research topic in collaboration with a Materials Science and Engineering faculty mentor and a mentor from an overseas laboratory or University. Students will perform and document a literature review encompassing the technical, economic, manufacturability, sustainability, environmental, safety/health, social and political issues of relevance to the topic, with emphasis on the cultural, social, and scientific differences and similarities in performing the research in an international venue. Students will articulate and document a research hypothesis, experimental approach and methodology necessary to comprehensively evaluate the topic, and commence laboratory research under the supervision of the mentor at the host institution.

**MATSE 485W International Internship in Materials: Experimentation and Documentation (3)  
(IL)**

The objective of this course is to enrich students' preparation for careers in materials science and engineering in a global environment. The course is intended as a follow-up to MATSE 484W: International Internship in Materials: Research Definition and Methodology, in which the student will complete the research and documentation on the topic developed in that course. It may be used as a direct substitution for MATSE 494W: Research and Design Senior Project in the degree requirements for Materials Science and Engineering. The course will continue the student's development of international communication skills and appreciation of cultural and technical issues associated with conducting research in overseas laboratories. Students will complete their research experimentation, data analysis and interpretation under the supervision of a Materials Science and Engineering faculty mentor and a mentor from their host overseas laboratory or University. Students will compile a written thesis encompassing their technical findings, with specific emphasis on the economic, manufacturability, sustainability, environmental, safety/health, social and political issues of relevance to the topic. It is expected that the students will carefully and comprehensively articulate and consider the cultural, social, and scientific differences and similarities they experienced in performing the research in an international venue.

**MATSE 492W** Materials Engineering Methodology and Design (3) Designed to familiarize students with the literature and technology developments in the use of, and design with, materials in industrial applications.

**MATSE 492W Materials Engineering Methodology and Design (3)**

The objective of this course is to teach students the skills to solve realistic problems related to the use of materials in industrial practice. This will be accomplished by considering alternatives for materials design or selection and proposing the most effective scientific or engineering solutions. The methodology will take into account other forces acting on the design process, such as economic, environmental, sustainability, manufacturability, ethical, health and safety, social and

political concerns. Students will develop these design skills by working in teams on projects defined by industry, and will learn to communicate their solutions in verbal and written form. Students will also learn the key features needed in developing a team approach to solving problems.

Typically, evaluation is based on written reports, performance in presentations, and instructors's assessment of the student's participation in design team activities. At the conclusion of the course, each student will select a design or independent research topic for their capstone senior-year design project.

**MATSE 493W** Materials Science and Engineering Multidisciplinary Capstone Design Project (3) This course focuses on multidisciplinary industry-sponsored and community service-based design projects offered in conjunction with the College of Engineering's Learning Factory.

### **MATSE 493W Materials Science and Engineering Multidisciplinary Capstone Design Project (3)**

This course will provide students with the opportunity to learn the design process in the context of an industry-sponsored or community service-based design project that demands they produce a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. The project sponsor will provide the technical expertise for the project, a clear definition of all project deliverables that are expected, and the financial support to cover needed materials and supplies and travel costs. Project sponsors will be invited to attend the Project Kickoff at the start of the semester to present their ideas and answer questions from the students as well as the Design Showcase at the end of the semester where teams display their results to the project sponsors and the public. The Center for Engineering Design and Entrepreneurship (CEDE) in Hammond Building and the Bernard M. Gordon Learning Factory will provide the facilities where the design teams can work together to develop the design concept and prototype solutions. Faculty members in the School of Engineering Design, Technology, and Professional Programs (SEDAPP) will administer the course, including reading, evaluating, and grading the final project report, provide lectures on topics including on project management, design, product manufacturing, intellectual property, engineering ethics, societal/global/contemporary/professional issues, and related technical topics, and organize invited technical lectures related to industry projects. In accordance with standard Learning Factory procedures, specific multidisciplinary projects will be selected for this course to provide challenging senior-year design experiences for all students, and the Director of the Learning Factory will coordinate the selection of these projects with the course instructor prior to the start of each semester of the course offering. Multidisciplinary teams will be formed based on specific project needs (i.e., expertise from two or more disciplines based on the project scope).

**MATSE 494W** Research and Design Senior Project (1-3) Continuation of a research problem in materials culminating in a bound thesis describing the work.

### **MATSE 494W Research and Design Senior Project (2)**

This course continues the senior thesis research topic addressed by the student in MATSE 493W. This is a capstone

research/design project which integrates: a) background literature search with articulation of a research hypothesis, b) design and implementation of an experimental plan to test the hypothesis, and c) conclusions regarding the validity of the hypothesis based on the experimental data obtained in the course of the research.

The main characteristic of this course is the performance of the research plan articulated in MATSE 493W, followed by interpretation of the data in the context of the original hypothesis(es). Laboratory research is generally performed in collaboration with faculty and graduate research assistants, using equipment and facilities in a wide range of laboratories throughout campus. Occasionally, the nature of the research may require the student to collaborate with researchers outside of Penn State, perhaps even spending some time in residence at other facilities.

The course culminates in the preparation of a bound thesis detailing the relevance and findings of the research. Assessment of the student's progress is via grading of all components of the thesis (literature review/background, statement of the problem, design of the experimental plan, results and discussion, conclusions, recommendations for future work, and references/appendices), as well as the diligence of the student in performing the experimental research in a professional and timely fashion. The course is offered each semester to allow for differing schedules for students following the conventional MATSE curriculum versus those who have elected to participate in the Cooperative Education program.

**MATSE 501** Thermodynamics of Materials (3) Application of thermodynamics to materials equilibria and processes, including solution theory, electrochemical processes, capillarity, and the effect of stresses.

#### **MATSE 501 Thermodynamics of Materials (3)**

The goal of this course is to teach the fundamental principles of thermodynamics of materials from a practical viewpoint - thermodynamics as a "toolbox" to help understand chemical behavior of materials. It attempts to integrate chemistry, phase equilibria, and thermodynamics of a materials system as different means of describing the same chemical behavior. It develops quantitative relationships among them. Thermodynamic terms/values are defined in terms of measurable quantities such as temperature, pressure (partial pressures), and concentrations to diminish the abstract nature of thermodynamics. The course emphasizes problem solving, and more specifically, developing explanations and understanding of chemical and thermal behavior observed in the laboratory/industry. A integral part of the course is to teach the use of state-of-the-art equilibrium thermodynamics computer software as an aid in performing calculations, particularly those involving chemically complex systems with many species.

**MATSE 505** Irreversible and Statistical Thermodynamics of Materials (3) Introduction to statistical and irreversible thermodynamics as applied to chemical and materials systems.

**MATSE 505 Statistical and Irreversible Thermodynamics (3)**

This course will introduce students to statistical and irreversible thermodynamics as models of describing equilibrium and rate process starting from the atomic/molecular level. The course will begin with a review of relevant concepts from classical thermodynamics, including the four laws, entropy, Gibbs and Helmholtz functions, and chemical and electrochemical equilibrium. The formulation of classical thermodynamics does not require the existence of atoms, as it is largely concerned with average, bulk properties and, indeed, much of classical thermodynamics was developed before the existence of atoms, and molecules was accepted unequivocally in the scientific disciplines. However, knowledge of the properties of atoms and molecules allows one to predict the thermodynamic properties of bulk materials through the discipline of statistical thermodynamics (statistical mechanics) in *ab initio* manner. Indeed, many tabulated thermodynamic properties, particularly for unstable systems, have been calculated rather than measured. Finally, we live in an irreversible world (i.e., one that evolves, such that the entropy of the system and surroundings continuously increases), and statistical thermodynamics cannot provide a satisfactory description of this change. Spontaneous change is best described in terms of the discipline of Irreversible Thermodynamics, which addresses the rate of generation of total entropy of the system plus surroundings. The framework of Irreversible Thermodynamics will be established in terms of coupled fluxes and Onsager's Reciprocity Principle and these concepts will be employed to explain thermal diffusion and electro-osmosis, among other phenomena.

**MATSE 506** Interfacial Electrochemical Processes (3) Survey of thermodynamic and kinetic fundamentals of electrochemical processes at interfaces.

**MATSE 506 Interfacial Electrochemical Processes (3)**

This course will introduce students to the thermodynamic and kinetic fundamentals of interfacial electrochemical processes, with emphasis on the atomic/molecular level. The course will begin with a review of relevant concepts from electrochemical thermodynamics and charge transfer theory and will progress to the application of these fundamental concepts to describe reaction mechanisms, mass transfer, and other important phenomena, such as passivity and passivity breakdown. These processes will be described analytically, by solving the appropriate equations subject to the relevant natural laws (e.g., conservation of mass and charge and Faraday's Law). The course will also emphasize the flexibility of analyzing electrochemical phenomena in different spaces, including temporal space and Laplace and Fourier frequency spaces, and will show how it is possible to transform between these various spaces to provide the most advantageous medium for mechanistic analysis. The mechanisms of actual charge transfer reactions will be analyzed, including the hydrogen electrode reaction and the oxygen electrode reaction to illustrate important concepts in mechanistic analysis, including the existence of adsorbed intermediates and pseudo-capacitance, the inhomogeneity of surface adsorption sites, surface structure, and quantum mechanical aspects of charge transfer ("partial" charge transfer). No prerequisites are specified, because the course begins with the very basics of electrochemistry. Furthermore, all of the students who would take this course have a background in materials science and engineering, chemistry, physics, mechanical engineering, chemical engineering, or engineering science and mechanics. Specification of prerequisites would only discourage enrollment. This course (with a 597 designation) has been taught several times in the past and no problems with the lack of prerequisites have been experienced.

**MATSE 507 (BIOE 517) Biomaterials Surface Science (3)** Special properties of surfaces as an important causative and mediating agent in the biological response to materials.

**MATSE 507 (BIOE 517) Biomaterials Surface Science (3)**

This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms, the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological responses to material surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject and to draw students from different specializations.

**MATSE 512** (GEOSC 512) Principles of Crystal Chemistry (3) Relation of structure to ionic size and nature; influence of pressure and temperature on structure; chemical-structural defects, crystalline solutions, phase-transitions.

**MATSE (GEOSC) 512 Principles of Crystal Chemistry (3)**

Crystal chemistry is concerned with the systematics of crystal structures as determined by ionic sizes and characteristics of chemical bonds and with changes in crystal structure with variations in temperature and pressure. The course begins with a short review of crystallography. It then proceeds to elements and ions as the building blocks of crystals. Models for the chemical bonds which bind elements and ions into crystals include classical electrostatic theory, crystal field theory, molecular orbital theory, and band theory. The principles underlying each model are explained. The next step in the buildup of crystals is to explain the principles of ionic packing, crystal defects, and the concepts of polymorphism and phase transitions.

With the underlying principles and theory in place, the second half of the course deals with a systematic presentation of the various families of crystal structures, their properties, and some indication of the practical utilization of the various structural families. The discussion proceeds from binary packing structures to packing structures of ternary and quaternary composition, to metal structures, to silicate structures, to organic crystals, to defect structures and non-crystalline solids.

The course is divided into seven parts, and grading is achieved by a 30-minute quiz following completion of each part. There is no suitable textbook, but a comprehensive set of printed notes is provided as are recommended readings of selected review articles and current literature. Students are also required to prepare a semester paper on a topic of their choice.

**MATSE 514** Characterization of Materials (3) Classical and new (microprobe, scanning microscope, magnetic resonance,

and Mossbauer) techniques for the characterization of composition, structure, defects, and surfaces.

**MATSE 514 Characterization of Materials (3)**

This course is designed for graduate and selected undergraduate students. The broad spectrum of the various materials characterization techniques will be briefly surveyed. Students will not be taught how to run specific instruments or be expected to be an expert on the analytical techniques. However, students will be given assignments that require a search of the literature and having discussions with the relevant experts to develop a detailed understanding of specific characterization techniques. Students will also be required to apply statistical methods in their assigned projects.

The objectives of the course include the presentation of a survey of material characterization techniques, lectures on experimental design and use of statistical techniques, as well as problem-solving techniques. The goal is to provide students with a foundation in the use of characterization techniques to solve and diagnose material problems that can be identified and potentially resolved with materials characterization.

The first part of the lectures provides a survey on many of the material characterization techniques. The second part of the course covers statistical analysis of experimental data including small population statistics, error analysis, curve fitting routines, and a brief survey of statistical experimental design. The third part of the course covers problem-solving techniques using materials characterization. Several characterization problems are given to the class that require the formation of project teams composed of 4 to 5 class members to resolve. Each project team prepares oral and written reports for the problem selected.

**MATSE 535 Geometrical Crystallography (3)** Derivation of lattices, types, point groups, and space groups; and group theory applied to crystallography and spectroscopy.

**MATSE 535 Geometrical Crystallography (3)**

Visual, mathematical, and group theory approaches are used to examine in detail the geometry of periodic, quasiperiodic, and incommensurate structures. From computer-assisted class discussions and weekly homework assignments, the student becomes familiar with the symmetry operations involved in translation, rotation, and color changes. Point groups, space groups, and color groups are derived through a combination of visual and mathematical considerations. The structure of group theory is then explored and applied to the derivation of space groups.

**MATSE 540 Crystal Anisotropy (3)** Symmetry aspects of crystals and physical properties. Matrix and tensor methods.

**MATSE 540 Crystal Anisotropy (3)**

In this course symmetry and tensors are used to describe the physical properties of materials as a function of direction, i.e., how a material will respond to different types of stimuli as a function of direction. A variety of thermal, mechanical, electric, magnetic, and optical properties are covered, including pyroelectricity, pyromagnetism, thermal expansion, dielectric constant, magnetic susceptibility, piezoelectricity, piezomagnetism, elastic stiffness and compliance, electrostriction, magnetostriction, index of refraction, and non-linear optical effects. At first the response of single crystals are considered, but this is later extended to polycrystalline samples with various types of texture.

As the course makes extensive use of symmetry, several weeks are dedicated to the development of the 32 crystallographic point groups using group theory. Symmetry operations are described using coordinate transformation matrices and stereographic projections. Both tensor quantities and tensor properties are described as a function of increasing tensor rank (up to fourth rank) for a multitude of polar tensors followed by axial tensors. For magnetic materials, the 90 magnetic point groups are introduced. For polycrystalline materials, the 7 Curie groups are utilized. A variety of practical examples illustrating the use of tensors to describe the properties of materials are covered in class and in in-depth homework sets involving both matrix and tensor form. The computer program Mathematica is used extensively in class and in the homework sets to visualize the physical properties of materials in three dimensions as well as to rapidly apply symmetry and tensor methods to high-rank tensor properties of low symmetry materials.

**MATSE 542 Polymeric Materials: The Solid State (3)** Introduction to the fundamental concepts necessary to understand solid state structure and properties of polymer materials.

**MATSE 542 Polymeric Materials: The Solid State (3)**

This course will cover concepts important to understanding polymer solids and their physical properties. We will begin with the concept of (partial) crystallinity, and the solid state microstructure of semi-crystalline polymers and copolymers. The fundamentals of crystallization kinetics of polymers will be covered, as will the concept of 'annealing'. Wide-angle x-ray diffraction and small-angle x-ray scattering methods will be discussed in the context of characterization of crystalline polymer structure. A discussion of nanoscale associations in both crystalline and non-crystalline ion-containing polymers will complete the first portion of the course. Several classes on the liquid crystalline state will follow, together with discussion of lyotropic and thermotropic liquid crystalline polymers. The fundamentals of binary and ternary polymer mixtures will come next. Concepts important to both miscible blends (e.g. concentration fluctuations) and immiscible blends (e.g. rubber toughening) will be covered. The origin of the morphology (phase diagrams) and properties of di-, tri- and multiblock copolymers will be discussed, as will their role as interfacial agents in multiphase systems. The latter portion of the course will be concerned with electrical and mechanical properties. The former will focus on dielectric relaxation, and conductivity (both electronic and ionic). The latter will focus on the relationship between solid state structure and mechanical (including viscoelastic) properties.

**MATSE 543 (CHEM 543) Polymer Chemistry (3)** This graduate course discusses recent advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties.

### **MATSE (CHEM) 543 Polymer Chemistry (3)**

This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers.

This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymer materials with controlled polymer structures, compositions, and properties, as well as economic and "green" processes.

This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course).

In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.

**MATSE 552 Sintering of Ceramics (3)** Design and interpretation of ceramic microstructures through an understanding of the physics and chemistry of sintering and grain growth.

### **MATSE 552 Sintering of Ceramics (3)**

This course is about the processing of ceramic-based materials by sintering processes. Sintering is the thermal processing of a porous material which results in a decrease in surface free energy, strengthening and usually densification. The first half of the course covers the thermodynamics, mechanisms, kinetics, and models for densification. The theory of grain growth and coarsening processes are also discussed. The relations between densification and grain growth are discussed as they influence microstructure evolution. Tools for characterizing sintering and grain growth processes are reviewed. Practical applications of sintering for the manufacture of ceramic-based components ranging from low temperature co-fired ceramics to transparent ceramics are discussed.

**MATSE 555 (PHYS 555) Polymer Physics I (3)** Introduction to the fundamental concepts needed to understand the physics applicable to polymer melts, solutions and gels.

### **MATSE (PHYS) 555 Polymer Physics I (3)**

This course develops fundamental understanding of the conformations of polymers in solution and melt states. We start with ideal chains that have random walk statistics. Next excluded volume is introduced to understand the self-avoiding walk conformation and collapsed conformation of real chains. The behavior ideal and real chains are studied in extension, compression and adsorption. While positive excluded volume leads to swelling, negative excluded volume leads to collapse and phase separation. The phase behavior of polymer mixtures and solutions is described in detail. Semidilute solutions are understood in terms of two length scales where each chain changes its conformational statistics. Scattering is used to determine the conformation of chains, their molar mass and their interactions with surroundings. Percolation theory is introduced to model the statistics of random branching and gelation. The rubber elasticity of fully developed networks is understood in terms of the stretching laws for network chains. Entanglement effects, swelling and viscoelasticity are discussed in detail. Once the conformations of polymers are understood, dynamics of polymer liquids are considered. In dilute solutions hydrodynamic interactions dominate and the viscoelasticity predicted by the Zimm model is derived. In unentangled melts of short chains, hydrodynamic interactions are screened and the Rouse model is used to understand viscoelasticity. Unentangled polymers in semidilute solutions have Zimm dynamics on small length scales and Rouse dynamics on longer length scales. Dynamic scattering techniques are discussed for measuring polymer dynamics. Entanglement effects are described using the tube model, where surrounding chains confine the motion of a given polymer to a tube-like region. The effects of concentration, chain length and polydispersity of linear chain polymer liquids are discussed in detail. The effects of branching on polymer dynamics are introduced at the level of simple structures such as star polymers and comb polymers.

The course assumes some prior knowledge of polymers, usually obtained through an introductory undergraduate course. The students should attain a working understanding of the basic concepts of polymer physics in this course, allowing them to tackle more difficult problems in their research. Such skills are reinforced through homework and take-home examinations.

**MATSE 562 Solid to Solid Phase Transformations (3)** Mechanisms and rate-determining factors in solid-phase reactions in metals; diffusion processes, nucleation theory, precipitations from solid solution, eutectoid decomposition and order-disorder phenomena.

### **MATSE 562 Solid to Solid Phase Transformations (3)**

This is the fundamental science of microstructural control in the solid state for inorganic materials. The course begins with a review of the crystallography of solid materials, from the simple concept of a lattice through the description of the stereographic projection to the point group notation.

Solid to solid nucleation theory is examined in detail as it forms the basis of microstructural development and control. Both "civilian" and "military" transformations are considered.

The theory of interface structure, the influence of orientation relationships, and the development of equilibrium precipitate morphologies are discussed in detail. It is argued that both thermodynamic and kinetic considerations may, however, dictate precipitate shapes. The kinetics of precipitate growth and coarsening are derived from first principles and employed to analysis overall transformation kinetics. Changes in precipitate shape during these kinetically driven processes are also examined.

The phenomena of nucleation, growth, and coarsening are all modified, and/or even controlled, by defects such as dislocations and grain boundaries. The course reviews dislocation theory and, e.g., the O-lattice description of high angle grain boundaries and interphase interfaces.

A series of prototypical phase transformations are described in detail. These include: homogeneous and heterogeneous precipitation reactions; spinodal decomposition; order-disorder transformations, discontinuous precipitation, the eutectoid reaction, bainite and martensite.

Finally, experimental methods for the quantitative characterization of microstructure are presented.

**MATSE 563 (E MCH 534) Micromechanisms of Fracture (3)** Mechanisms of fracture and their relationship to loading conditions, environment, flow behavior, processing history, and microstructure.

### **MATSE 563 (E MCH 534) Micromechanisms of Fracture (3)**

The in-service performance of structural materials relies on a combination of the mechanics of loading and of the material's ability to avoid fracture. Thus, modern mechanical design requires knowledge of fracture processes and fracture-based design criteria. This course addresses the mechanisms that control the fracture of structural materials. For the purposes of this course, structural materials are separated into two groups: "monolithic" materials (primarily polymers, metals, and alloys) and composite materials. An understanding of fracture mechanisms can serve as a basis for predicting failure conditions, performing failure analyses, or simply for recognizing when existing failure predictions may be wrong (i.e., "how to avoid bad surprises").

**MATSE 564 (E MCH 535) Deformation Mechanisms in Materials (3)** Deformation of crystalline/amorphous solids and

relationship to structure; elastic, viscoelastic and plastic response over a range of temperatures and strain rates.

**MATSE 564 (E MCH 535) Deformation Mechanisms in Materials (3)**

The course will study the relationship between the deformation mechanisms in materials and their structure. The types of deformation behavior considered in the course are linear elasticity (isotropic or anisotropic), viscoelasticity and plastic deformation. For the elastic behavior, the emphasis will be on the way elastic behavior is controlled by atomic structure and microstructure. The constitutive laws that describe this behavior and the assumptions on which they are based will be introduced. The next phase of the course considers the range of deformation behavior from purely viscous (linear or non-linear) to viscoelastic. Initially, the emphasis will be on the effects of temperature and strain history and the way this behavior is described by mechanical analogs. The effect of structure on creep and stress relaxation will be described. The use of linear viscoelasticity in describing the sintering process will also be included. In ductile crystalline materials, deformation is associated with the movement of dislocations. The types of dislocations, their stress fields and energies will be described. These aspects will then be combined with structural features by including considerations of slip geometry and obstacles to dislocation motion. This approach will allow strengthening methods to be identified and quantified. Finally, creep mechanisms in crystalline materials at high temperature will be discussed and quantified.

 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 403H** Honors Classical Analysis I (3) Development of a thorough understanding and technical mastery of foundations of classical analysis in the framework of metric spaces.

### **MATH 403H Honors Classical Analysis I (3)**

The central aim of this course is to develop thorough understanding and technical mastery of foundations of classical analysis in the framework of metric spaces rather than multidimensional Euclidean spaces. This level of abstraction is essential since it is in the background of functional analysis, a fundamental tool for modern mathematics and physics. Another motivation for studying analysis in this wider context is that many general results about functions of one or several real variables are more easily grasped at this more abstract level, and, besides, the same methods and techniques are applicable to a wider class of problems, e.g. to the study of function spaces. This approach also brings to high relief some of the fundamental connections between analysis on one hand and (higher) algebra and geometry on the other.

This course is a sequel to Math 312H; it is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars.

The following topics will be covered: Metric spaces (topology, convergence, Cauchy sequences and completeness); Maps between metric spaces (continuous maps and homeomorphisms, stronger continuity properties: uniform continuity, Hoelder and Lipschitz continuity, contraction mapping principle, points of discontinuity and the Baire Category Theorem); Compact metric spaces (continuity and compactness, connectedness, total boundedness, coverings and Lebesgue number, perfect metric spaces, characterization of Cantor sets, fractals); Function spaces (spaces of continuous maps, uniform continuity and equicontinuity, Arzela-Ascoli Theorem, uniform approximation by polynomials. Stone-Weierstrass Theorem).

### **MATH 410 Complex Analysis for Mathematics and Engineering (3)**

A succinct stand-alone course description (up to 400 words) to be made available to students through the on-line Bulletin and Schedule of Courses.

This is a complex analysis course designed for students in mathematics, applied mathematics, engineering, science, and related fields. Topics include complex numbers; analytic functions, complex differentiability, and the Cauchy-Riemann equations; complex exponential, logarithmic, power, and trigonometric functions; complex contour integrals; Cauchy's theorem; Cauchy's integral formula; Taylor and Laurent series; residue theory; and various applications in areas of science and engineering.

This course focuses on the definitions, concepts, calculation techniques, supporting theory, and examples of applications suited to the usage of complex analysis in mathematics, applied mathematics, science, and engineering.

Students who have passed MATH 406 or MATH 421 may not take this course for credit.

General Education: None

**MATH 412** Fourier Series and Partial Differential Equations (3) Orthogonal systems and Fourier series; derivation and classification of partial differential equations; eigenvalue function method and its applications; additional topics.

### **MATH 412 Fourier Series and Partial Differential Equations (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The purpose of MATH 412 is to introduce students to the origins, theory, and applications of partial differential equations. Several basic physical phenomena are considered - including flows, vibrations, and diffusions - and used to derive the relevant equations. The fundamentals of the mathematical theory of partial differential equations are motivated and developed for the students through the systematic exploration of these classic physical systems and their corresponding equations: the Laplace, wave, and heat equations.

In addition to treating the physical origins of the equations, this course focuses on solving evolution equations as initial value problems on unbounded domains (the Cauchy problem), and also on solving partial differential equations on bounded domains (boundary value problems). There is not one but many techniques for solving these equations, and the course presents some aspect of the expansion in orthogonal functions (including Fourier series), eigenvalue theory, functional analysis, and the use of separation of variables, Fourier transforms, and Laplace transforms to solve PDEs by converting them to ordinary differential equations.

This course currently serves a cross-section of students at the university with interests or the need for this advanced subject mathematics, including students majoring in the engineering program, meteorology, physics, and mathematics. This typically includes the most advanced physics, engineering, and meteorology students, as well as mathematics majors with interests in applied mathematics.

**MATH 417** Qualitative Theory of Differential Equations (3) Linear differential equations, stability of stationary solutions, ordinary bifurcation, exchange of stability, Hopf bifurcation, stability of periodic solutions, applications.

### **MATH 417 Qualitative Theory of Differential Equations (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The main objective of the course is the qualitative theory of ordinary differential equations such as existence and uniqueness of solutions, dependence on initial data and parameters, and basic stability of solutions for both linear and nonlinear equations. It is designed to introduce students to modern concepts including the bifurcation theory, intermittent (transitional) and chaotic behavior of solutions and dynamical system approach to differential equations. Along the way, a number of applications are discussed and students get familiar with some basic examples illustrating main principles of the theory, such as Lorenz attractor, predator-prey models, etc.

The course is completed by students majoring in engineering programs, the sciences, and mathematics.

General Education: None

**MATH 418 (STAT 418)** Introduction to Probability and Stochastic Processes for Engineering (3) Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH(STAT) 414 and 418 for credit.

### **MATH (STAT) 418 Introduction to Probability and Stochastic Processing for Engineering (3)**

This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

**MATH 437** Algebraic Geometry (3) Study of curves in the plane defined by polynomial equations  $p(x,y) = 0$ . Projective equivalence, singular points, classification of cubics.

### **MATH 437 Algebraic Geometry (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

The geometric study of algebraic equations is one of the oldest and deepest parts of mathematics, and it lies at the heart of modern developments in geometry, algebra, number theory and physics. Students completing MATH 437 will understand many new algebraic and geometric ideas by studying examples of curves defined by equations of degrees 2 and 3 in the plane.

First come conics (given by equations of degree 2 in two variables). Rigid motions, similarities, and affine transformations give different classifications of them. New ideas then show how to get a conic through any five points and prove Pascal's theorem about six points on a conic. Special cases suggest extension of the usual plane to the projective plane, with "points at infinity," homogeneous coordinates, and projective transformations.

The main part of the course turns to equations of degree 3 and their singularities, flex points, tangents, and degeneracies. Several new ideas, both algebraic and analytic, are brought in to prove the existence of complex flex points on singular cubics and then real flex points on nonsingular real cubics. There is then a classification on complex projective cubics by a single parameter and finally a full classification of all real projective cubics.

As time permits, relations to further topics are sketched: addition of points on a nonsingular cubic, Mordell's theorem, doubly periodic functions, and Fermat's last theorem.

The course is typically taken by mathematics majors.

**MATH 449** Applied Ordinary Differential Equations (3) Differential and difference equations and their application to biology, chemistry, and physics; techniques in dynamical systems theory.

### **MATH 449 Mathematical Modeling (3)**

Many phenomena that arise in the natural sciences, such as the motion of pendulum or signal conduction in neurons or oscillations in certain chemical reactions, can be modeled using nonlinear differential equations. This course will develop the mathematical techniques needed to investigate such differential equations. These techniques include the study of equilibria, stability, phase plane analysis, bifurcation analysis and chaos. The course will assume prior knowledge of ordinary differential equations at the MATH 250/251 level; this is the only prerequisite for the course. We will focus on understanding and interpreting the behavior of the solutions to the differential equation models rather than on deriving the model equations themselves. Evaluation will be based on midterm exams, a final exam, graded homework, and graded longer projects which may involve computer work. The course should be of interest to any science or engineering major and some models will be chosen to reflect the fields of interest of the class. The goal is for the students to be able to apply the techniques learned in the course to mathematical models that they will encounter in other classes or situations. The class will be offered every other year with an expected enrollment of 10-15 students.

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 2007  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 450** Mathematical Modeling (3) Constructing mathematical models of physical phenomena; topics include pendulum motion, polymer fluids, chemical reactions, waves, flight, and chaos.

### **MATH 450 Mathematical Modeling (3)**

The purpose of the course is to introduce mathematical modeling, i.e., the construction of mathematical structures which

capture relevant physical phenomena. The course will systematically explore mathematical ideas and tools used to study the natural world. Particular emphasis will be placed on the process of creating a mathematical model starting from a physical scenario. Typically this process will begin with an experiment either demonstrated in the W. G. Pritchard Lab or performed by the students in class.

Once a particular model has been developed, students will use mathematical analysis and experimentation to determine the properties and relevance of the model, and to make predictions. Often the model can be satisfactory; however, many times one also finds new features of the system that are not adequately accounted for in the model, and the process begins again. It is this cycle the course will focus on. For a given phenomenon (e.g., flow of viscous fluid, pendulum motion) several models may be compared and contrasted, and possible simplifications will be discussed.

A significant aspect of the course is its laboratory component, in which the students will perform experiments or observe demonstrations. However, the main emphasis will be placed on creating and rigorously analyzing the mathematical aspects of the models. Instead of presenting a finely tuned model for a given phenomenon, this course will try to convey some of the heuristic, intuitive, and mathematical ideas employed in modeling.

Examples of physical systems to be considered include: simple and compound pendulum motion, chemical oscillations, water waves, and elastic behavior of polymer solutions.

The course is open to a wide range of undergraduate as well as graduate students with majors in mathematics, biology, chemistry, engineering, and physics. The course should be accessible to students with some basic knowledge of mathematical analysis and differential equations. Main topics include: modeling with ordinary differential equations; bifurcation theory and stability; traveling waves in epidemics, chemical reactions, free fluid surfaces, and polymer solutions; fluctuations in nature, stochastic differential equations and chaos.

**MATH 457** Introduction to Mathematical Logic (3) Propositional logic, first-order predicate logic, axioms and rules of

inference, structures, models, definability, completeness, compactness.

### **MATH 457 Introduction to Mathematical Logic (3)**

Logic forms the foundation of all mathematical reasoning. To prove a mathematical theorem, one deduces them step by step from basic principles, called axioms, or from other statements previously deduced. Each step of a proof has to be a logically valid rule, such as, for example, the modus ponens: "If A holds, and A implies B, then B holds."

In Math 457, students will learn how concepts such as axiom, theorem, proof, and truth can be formulated as a mathematical theory, that is, logical reasoning will be studied as a mathematical subject.

The simplest kind of logical system is propositional logic. Here, the basic components are whole statements which are either true or false, and which can be combined using logical connectives such AND, OR, or NOT to form new statements. Its simple nature makes propositional logic a good system to introduce many of the basic ideas: syntax and semantics, proof systems, completeness and compactness.

However, propositional logic does not capture mathematical reasoning adequately. Therefore, one considers (first-order) predicate logic. Students will learn how formulas are formed according to syntactical rules. They will also study how a mathematical theory is defined as a set of formulas, how a proof is formally defined, and what constitutes a proof system.

The syntactical notions above are contrasted with mathematical semantics, which considers structures over which formulas can be interpreted. This way, one can rigorously define whether a formal statement is true in a given mathematical structure, in which case we say the structure is a model of the statement. For example, the integers with addition are a model of the statement "for every x there exists a y such that  $x+y=0$ ".

A central goal of mathematical logic is to explore how the syntactical side (formulas, axioms, proof systems) and the semantical side (mathematical structures such as the additive group of integers) interact. Two fundamental results in this regard will be covered: the completeness theorem says that one can prove a statement from a set of axioms if and only if the statement is true in any structure satisfying all axioms. The compactness theorem, in turn, is an important consequence of the completeness theorem. It has profound implications for the existence and construction of mathematical structures.

Students who would like to enroll in Math 457 are required to have some knowledge of mathematical proofs as provided in Math 311W.

**MATH 465 Number Theory (3)** Elements, divisibility of numbers, congruences, residues, and forms.

### **MATH 465 Number Theory (3)**

**(BA) This course meets the Bachelor of Arts degree requirements.**

This course serves as an upper-level introduction to the fundamentals of elementary number theory. A major emphasis in the course is placed on the role that the prime numbers play in the study of properties of the integers along with the related topics of divisibility and factorization of integers. Additional topics covered in the course include congruences (and the theorems of Euler and Fermat which are classics in this area), properties of arithmetic functions including those which are multiplicative, and other topics such as Pythagorean triples and representations of numbers as sums of squares.

This course is completed by a wide variety of students across the university, especially those majoring in mathematics. (In many of the options in the MTHBS degree, MATH 465 can be used to satisfy one of the major requirements.) The course is also taken quite frequently by non-mathematics majors who wish to use the course to satisfy an upper-level requirement for the mathematics minor.

### **Mathematical Coding Theory (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Fall 1983  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 470** Algebra for Teachers (3) An introduction to algebraic structures and to the axiomatic approach, including the elements of linear algebra. Designed for teachers and prospective teachers. Students who have passed Math 435 may not schedule this course.

### **Algebra for Teachers (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Fall 1988  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 471** Geometry for Teachers (4) Problem solving oriented introduction to Euclidean and non-Euclidean geometries; construction problems and geometrical transformations via "Geometer's Sketchpad" software. Intended primarily for those seeking teacher certification in secondary mathematics. Students who have passed MATH 427 may not schedule this course.

### **Geometry for Teachers (4)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 1996  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 475W** (US;IL) History of Mathematics (3) A global survey of the history of mathematics as viewed as a human response to cultural, political, economic, and societal pressures.

### **MATH 475W Introduction to the History of Mathematics (3) (DF)**

The primary goal of this course is to explore where mathematics comes from, how it was labored on, how ideas were perceived, and how theories developed. Development in algebra, geometry, arithmetic and calculus will be discussed.

A second goal is to help students understand the importance of written communication in mathematics and to provide opportunities for students to improve the quality of their writing. The primary means for accomplishing this goal will be four papers, 4-8 pages in length. These will be written for an audience of mathematically-knowledgeable readers. In

addition, each quiz will contain at least one essay question.

Students will be evaluated on quizzes, homework, papers, and a final exam. Quizzes will total 250 points, the papers 200 points, and the final exam 150 points.

This course is a required course in the Mathematical Science (MA SC) BS curriculum. This course is also available as an elective for students in the Computer Science (COMP) program.

No special facilities are required for this course. This course will be offered once per year, with an expected enrollment of 25-40 students.

General Education: None  
Diversity: US;IL  
Bachelor of Arts: Quantification  
Effective: Spring 2012  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 479** (PHYS 479) Special and General Relativity (3) Mathematical description, physical concepts, and experimental tests of special and general relativity.

### **MATH (PHYS) 479 Special and General Relativity (3)**

This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 482** Mathematical Methods of Operations Research (3) Survey of linear and nonlinear programming; mathematics of optimization; queues; simulation.

### **Mathematical Methods of Operations Research (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 484** Linear Programs and Related Problems (3) Introduction to theory and applications of linear programming; the simplex algorithm and newer methods of solution; duality theory.

### **Linear Programs and Related Problems (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 1987  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 485** Graph Theory (3) Introduction to the theory and applications of graphs and directed graphs. Emphasis on the fundamental theorems and their proofs.

### **Graph Theory (3)**

General Education: None  
Diversity: None

Bachelor of Arts: Quantification  
Effective: Spring 1987  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 486** Mathematical Theory of Games (3) Basic theorems, concepts, and methods in the mathematical study of games of strategy; determination of optimal play when possible.

### **MATH 486 Mathematical Theory of Games (3)**

This course covers several major classes of models and methods for analyzing multi-party strategic interactions, i.e. games. Specific topics include extensive and strategic form games, continuous games, cooperative games, strictly competitive games, repeated games and adaptive learning, and evolutionary models. The effects on outcomes of information, communication, and other modeling assumptions are discussed. Real-world examples drawn from economics, biology, anthropology, management and everyday life are discussed in detail. When appropriate, computer algebra systems are incorporated in the course. The course typically meets during either two 75-minute periods each week or three 50-minute periods each week. Evaluation methods may vary by instructor, but will typically include a combination of examinations, quizzes, homework, and projects.

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 2006  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 494** Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

### **Research Project (1-12)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 1995

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 494H** Research Project (1-12) Supervised student activities on research projects identified on an individual or small-group basis.

### **Research Project (1-12)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Fall 2007

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 495** Internship (1-18) Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

### **Internship (1-18)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Spring 2007  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 496** Independent Studies (1-18) Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

### **Independent Studies (1-18)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification

Effective: Fall 1983

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 497** Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Special Topics (1-9)**

General Education: None

**MATH 498** Special Topics (1-9) Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Special Topics (1-9)**

General Education: None  
Diversity: None  
Bachelor of Arts: Quantification  
Effective: Fall 1992

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 499** (IL) Foreign Studies (1-12) Courses offered in foreign countries by individual or group instruction.

**Foreign Studies (1-12)**

General Education: None  
Diversity: IL  
Bachelor of Arts: Quantification  
Effective: Summer 2005

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 501** Real Analysis (3) Lebesgue measure theory. Measurable sets and measurable functions. Lebesgue integration, convergence theorems.  $L_p$  spaces. Decomposition and differentiation of measures. Convolutions. The Fourier transform.

**MATH 501 Real Analysis I (3)**

This course develops Lebesgue measure and integration theory. This is a centerpiece of modern analysis, providing a key tool in many areas of pure and applied mathematics. The course covers the following topics: Lebesgue measure theory, measurable sets and measurable functions, Lebesgue integration, convergence theorems,  $L_p$  spaces, decomposition and differentiation of measures, convolutions, the Fourier transform.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2013  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 502** Complex Analysis (3) Complex numbers. Holomorphic functions. Cauchy's theorem. Meromorphic functions. Laurent expansions, residue calculus. Conformal maps, topology of the plane.

**MATH 502 Complex Analysis (3)**

This course is devoted to the analysis of differentiable functions of a complex variable. This is a central topic in pure mathematics, as well as a vital computational tool. The course covers the following topics: complex numbers, holomorphic functions, Cauchy's theorem, meromorphic functions, Laurent expansions, residue calculus, conformal maps, topology of the plane.

General Education: None  
Diversity: None  
Bachelor of Arts: None

Effective: Spring 2013

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 503** Functional Analysis (3) Banach spaces and Hilbert spaces. Dual spaces. Linear operators. Distributors, weak derivatives. Sobolev spaces. Applications to linear differential equations.

### **MATH 503 Functional Analysis (3)**

This course develops the theory needed to treat linear integral and differential equations, within the framework of infinite-dimensional linear algebra. Applications to some classical equations are presented. The course covers the following topics: Banach and Hilbert spaces, dual spaces, linear operators, distributions, weak derivatives, Sobolev spaces, applications to linear differential equations.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 2013

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 504** Analysis in Euclidean Space (3) The Fourier transform in  $L^1$  and  $L^2$  and applications, interpolation of operators, Riesz and Marcinkiewicz theorems, singular integral operators.

### **Analysis in Euclidean Space (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 1992

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 505** Mathematical Fluid Mechanics (3) Kinematics, balance laws, constitutive equations; ideal fluids, viscous flows, boundary layers, lubrication; gas dynamics.

### **Mathematical Fluid Mechanics (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 1992

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 506** Ergodic Theory (3) Measure-preserving transformations and flows, ergodic theorems, ergodicity, mixing, weak mixing, spectral invariants, measurable partitions, entropy, Ornstein isomorphism theory.

### **Ergodic Theory (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 1992

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 507** Dynamical Systems I (3) Fundamental concepts; extensive survey of examples; equivalence and classification of dynamical systems, principal classes of asymptotic invariants, circle maps.

### **Dynamical Systems I (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Spring 1992

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 508** Dynamical Systems II (3) Hyperbolic theory; stable manifolds, hyperbolic sets, attractors, Anosov systems, shadowing, structural stability, entropy, pressure, Lyapunov characteristic exponents and non-uniform hyperbolicity.

**Dynamical Systems II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 511** Ordinary Differential Equations I (3) Existence and uniqueness, linear systems, series methods, Poincare-Bendixson theory, stability.

**Ordinary Differential Equations I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 513** Partial Differential Equations I (3) First order equations, the Cauchy problem, Cauchy-Kowalevski theorem, Laplace equation, wave equation, heat equation.

**Partial Differential Equations I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 514** Partial Differential Equations II (3) Sobolev spaces and Elliptic boundary value problems, Schauder estimates. Quasilinear symmetric hyperbolic systems, conservation laws.

**Partial Differential Equations II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 515** Classical Mechanics and Variational Methods (3) Introduction to the calculus of variations, variational formulation of Lagrangian mechanics, symmetry in mechanical systems, Legendre transformation, Hamiltonian mechanics, completely integrable systems.

**Classical Mechanics and Variational Methods (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 516** Stochastic Processes (3) Markov chains; generating functions; limit theorems; continuous time and renewal processes; martingales, submartingales, and supermartingales; diffusion processes; applications.

**Stochastic Processes (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1995

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 517 (STAT 517) Probability Theory (3)** Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

**Probability Theory (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Summer 2000

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 518 (STAT 518) Probability Theory (3)** Measure theoretic foundation of probability, distribution functions and laws, types of convergence, central limit problem, conditional probability, special topics.

**Probability Theory (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 1983

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 519 (STAT 519) Topics in Stochastic Processes (3)** Selected topics in stochastic processes, including Markov and Wiener processes; stochastic integrals, optimization, and control; optimal filtering.

**Topics in Stochastic Processes (3)**

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Fall 1984

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 523 Numerical Analysis I (3)** Approximation and interpolation, numerical quadrature, direct methods of numerical linear algebra, numerical solutions of nonlinear systems and optimization.

**MATH 523 Numerical Analysis I (3)**

1. Approximation and interpolation. Weierstrass theorem, Bernstein polynomials, Jackson theorems, Lagrange interpolation, least squares approximation, orthogonal polynomials, piecewise Lagrange and Hermite interpolation, spline interpolation, the Fast Fourier Transform.
2. Numerical quadrature. Newton-Cotes rules, Peano Kernel Theorem, Euler-Maclaurin expansion, Romberg integration, Gaussian quadrature, adaptive quadrature.
3. Direct methods of numerical linear algebra. Gaussian elimination with pivoting, backward error analysis, conditioning of linear systems.
4. Numerical solution of nonlinear systems and optimization. One-point iterations, Newton's and quasi-Newton's method, Broyden's method, unconstrained optimization, line-search methods.

General Education: None

Diversity: None

Bachelor of Arts: None

Effective: Summer 2002

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 524 Numerical Linear Algebra (3)** Matrix decompositions. Direct method of numerical linear algebra. Eigenvalue computations. Iterative methods.

**MATH 524 Numerical Linear Algebra (3)**

This course provides a graduate level foundation in numerical linear algebra. It covers the mathematical theory behind numerical algorithms for the solution of linear systems of equations and eigenvalue problems. Specific topics include: matrix decompositions, direct methods of numerical linear algebra, eigenvalue computations, iterative methods.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2013  
 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 527 Metric and Topological Spaces (3)** Metric spaces, continuous maps, compactness, connectedness, and completeness. Topological spaces, products, quotients, homotopy, fundamental group, simple applications.

### **MATH 527 Metric and Topological Spaces (3)**

This course covers the classical theory of metric and topological spaces. It provides the background for several other courses in analysis, as well as a foundation in methods of algebraic topology. This course starts by covering foundational material, so it is accessible to all first-year graduate students. The following topics are covered: metric spaces, continuous maps, compactness, connectedness, completeness, topological spaces, products, quotients, homotopy, fundamental group, and provide simple applications.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2013  
 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 528 Differentiable Manifolds (3)** Smooth manifolds, smooth maps, Sard's theorem. The tangent bundle, vector fields, differential forms, integration on manifolds. Foliations. De Rham cohomology; simple applications. Lie groups, smooth actions, quotient spaces, examples.

### **MATH 528 Differentiable Manifolds (3)**

This course covers the foundations of differential geometry, developing the theory of differentiation and integration on manifolds. It provides tools for the study of nonlinear problems, combining techniques in analysis and geometry. Concepts and tools from differential geometry have found wide use in different areas of mathematics, including nonlinear differential equations, control and optimization problems, and numerical analysis. The goal is to cover the most important techniques of differential geometry in a concise way. The course will appeal not only to students who plan to do research in geometry, but also to those interested in analysis, or applied and computational mathematics, as well. It covers the following topics: smooth manifolds, smooth maps, Sard's theorem, the tangent bundle, vector fields, differential forms, integration on manifolds, foliations, de Rham cohomology, Lie groups, smooth actions, quotient spaces, examples.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2013  
 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 529 Algebraic Topology (3)** Manifolds, Poincare duality, vector bundles, Thom isomorphism, characteristic classes, classifying spaces for vector bundles, discussion of bordism, as time allows.

### **Algebraic Topology (3)**

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 1992  
 Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 530 Differential Geometry (3)** Distributions and Frobenius theorem, curvature of curves and surfaces, Riemannian geometry, connections, curvature, Gauss-Bonnet theorem, geodesic and completeness.

### **Differential Geometry (3)**

General Education: None

Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 533** Lie Theory I (3) Lie groups, lie algebras, exponential mappings, subgroups, subalgebras, simply connected groups, adjoint representation, semisimple groups, infinitesimal theory, Cartan's criterion.

### **Lie Theory I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 534** Lie Theory II (3) Representations of compact lie groups and semisimple lie algebras, characters, orthogonality, Peter-Weyl theorem, Cartan-Weyl highest weight theory.

### **Lie Theory II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 535** Linear Algebra (3) Vector spaces. Linear transformations. Bilinear forms. Canonical forms for linear transformations. Multilinear algebra.

### **MATH 535 Linear Algebra (3)**

This course reviews undergraduate linear algebra and proceeds to more advanced topics. Its purpose is to provide a solid understanding of linear algebra, which is needed throughout graduate mathematics. It covers the following topics: vector spaces, linear transformations, bilinear forms, canonical forms for linear transformations, multilinear algebra.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2013  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 536** Abstract Algebra (3) Groups. Sylow's theorems. Rings. Ideals, unique factorization domains. Finitely generated modules. Fields. Algebraic and transcendental field extensions, Galois theory.

### **MATH 536 Abstract Algebra (3)**

This course covers fundamental concepts, needed toward the study of advanced areas in abstract algebra. The course covers the following topics: groups, Sylow's theorems, rings, ideals, unique factorization domains, finitely generated modules, fields, algebraic and transcendental field extensions, Galois theory.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2013  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 537** Field Theory (3) Finite and infinite algebraic extensions; cyclotomic fields; transcendental extensions; bases of transcendence, Luroth's theorem, ordered fields, valuations; formally real fields.

### **Field Theory (3)**

General Education: None  
Diversity: None

Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 538** Commutative Algebra (3) Topics selected from Noetherian rings and modules, primary decompositions, Dedekind domains and ideal theory, other special types of commutative rings or fields.

### **Commutative Algebra (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Winter 1978  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 542** Group Theory I (3) Topics selected by instructor from abelian, solvable, and nilpotent groups; finite presentations; free products; group extensions; group representations.

### **Group Theory I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Fall 1983  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 547** Algebraic Geometry I (3) Affine and projective algebraic varieties; Zariski topology; Hilbert Nullstellensatz; regular functions and maps; birationality; smooth varieties normalization; dimension.

### **Algebraic Geometry I (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 548** Algebraic Geometry II (3) Topics may include algebraic curves, Riemann-Roch theorem, linear systems and divisors, intersection theory, schemes, sheaf cohomology, algebraic groups.

### **Algebraic Geometry II (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 1992  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 550** (CSE 550) Numerical Linear Algebra (3) Solution of linear systems, sparse matrix techniques, linear least squares, singular value decomposition, numerical computation of eigenvalues and eigenvectors.

### **Numerical Linear Algebra (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 551** (CSE 551) Numerical Solution of Ordinary Differential Equations (3) Methods for initial value and boundary value problems; convergence and stability analysis, automatic error control, stiff systems, boundary value problems.

### **Numerical Solution of Ordinary Differential Equations (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 552** (CSE 552) Numerical Solution of Partial Differential Equations (3) Finite difference methods for elliptic, parabolic, and hyperbolic differential equations; solutions techniques for discretized systems; finite element methods for elliptic problems.

### **Numerical Solution of Partial Differential Equations (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 553** (CSE 553) Introduction to Approximation Theory (3) Interpolation; remainder theory; approximation of functions; error analysis; orthogonal polynomials; approximation of linear functionals; functional analysis applied to numerical analysis.

### **Introduction to Approximation Theory (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 555** (CSE 555) Numerical Optimization Techniques (3) unconstrained and constrained optimization methods, linear and quadratic programming, software issues, ellipsoid and Karmarkar's algorithm, global optimization, parallelism in optimization.

### **Numerical Optimization Techniques (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 1996  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MATH 556** (CSE 556) Finite Element Methods (3) Sobolev spaces, variational formulations of boundary value problems; piecewise polynomial approximation theory, convergence and stability, special methods and applications.

### **Finite Element Methods (3)**

General Education: None  
Diversity: None  
Bachelor of Arts: None

## Mathematics Education (MTHED)

**MTHED 411 Teaching Secondary Mathematics I (3)** Conditions for learning mathematics; problem solving; subject matter types; curriculum; learning goals; nature and history of mathematics at secondary level

### MTHED 411 Teaching Secondary Mathematics I (3)

This is the first of two secondary mathematics methods courses. In this course, participants look at mathematics teaching and learning from a teacher's perspective as well as from a student's perspective. Course participants engage in mathematical problem solving and in the study of the history and nature of mathematics as the foundation for understanding current curriculum and standards. Lesson planning follows from the consideration of different types of mathematical content, including skills and concepts. Looking specifically at the learning of mathematics and questioning to promote higher-level thinking prepares students for field experiences in subsequent semesters.

The goals for the course are:

- To improve understanding of some of the mathematical concepts which are important in secondary school mathematics.
- To improve understanding of the nature of mathematics: what is important, how it is practiced, how mathematical validity is determined.
- To improve understanding of the historical development of selected topics from secondary school mathematics.
- To develop a vision of good school mathematics.
- To see mathematics, mathematics learning, and mathematics teaching as problematic and to develop an inquiry approach to and an ability to reflect on these domains.
- To increase understanding of secondary school students' mathematical thinking and understanding.
- To increase ability to specify subject matter involved in a specific mathematics topic and make distinctions among them.
- To improve understanding of various teaching strategies and their strengths and weaknesses.
- To increase ability to choose among lessons and curriculum materials based on the intended mathematical subject matter and the current understandings of the students.
- To increase insight into creating a thriving, supportive mathematics classroom culture.

Students are evaluated through written assignments, examinations, classroom performance, presentations, and lesson plans.

General Education: None  
 Diversity: None  
 Bachelor of Arts: None  
 Effective: Spring 2007  
 Prerequisite:  
 Concurrent: MTHED 427

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MTHED 412W Teaching Secondary Mathematics II (3)** Assessing learning and instruction; methods of evaluation and grading; long- term planning; accommodating needs of diverse learners; connecting theory and practice.

### MTHED 412W Teaching Secondary Mathematics II (3)

MTHED 412 is an inherently cumulative experience. This course builds upon ideas developed in MTHED 411 and MTHED 427. In particular, students continue to consider types of subject matter, problem solving, lesson planning, technology use, questioning, history and nature of mathematics, and curriculum and standards. MTHED 412 then links understanding of mathematics education with other education courses and with field experiences as well as with understanding of K-16 mathematics. Students focus on lesson and unit development and implementation, assessment and evaluation, classroom management and organization within school communities, and continued professional growth as reflective practitioners. Students are encouraged to draw whenever possible on education psychology, adolescent psychology, educational theory and policy, mathematics, and other bodies of knowledge. In other words, course participants live as teachers with a wealth of knowledge and responsibility to draw on that knowledge in the service of their students.

Student goals are to:

- Develop an expanded view of the process of teaching mathematics;
- Develop a deeper understanding of what it means to learn mathematics and the processes by which mathematics is learned;
- Be able to reflect on the instruction and one's learning in MTHED 412 and to relate it to students' learning of secondary mathematics;
- Be able to plan and teach appropriate mathematics lessons and reflect on one's teaching;
- Be familiar with and be able to draw on a variety of teaching resources;
- Investigate current issues influencing evaluation in the secondary mathematics curriculum;

- Choose goals and content for middle school and high school mathematics courses;
- Develop strategies for assessing and evaluating what students have learned
- Create and implement assessment instruments for middle school and high school mathematics courses;
- Develop insights into student understanding, especially in relationship to exceptional students as well as to mathematically talented and challenged students;
- Identify the needs of diverse learners and to develop strategies to address these needs;
- Create classroom environments that are conducive to learning; and
- Incorporate appropriate technology in the teaching and learning of mathematics.

Students are evaluated through written assignments, examinations, classroom performance, unit lesson and evaluation plans. Throughout the course writing is a process to help students learn course content as well as to help students learn ways of writing needed in the work of the secondary mathematics teacher.

The course is offered each Fall and Spring semester with typical enrollment of 20-25 students in each of 1 or 2 sections. Through co-requisite course, CI 495C, students spend approximately five full weeks in secondary school classrooms.

General Education: None

**MTHED 420 Teaching Mathematics in the Elementary Schools (3)** Strategies for teaching mathematics at the elementary school level; analysis of the philosophy and content of contemporary programs of instruction.

### **MTHED 420 Teaching Mathematics in the Elementary Schools (3)**

MTHED 420 is designed to help teacher candidates: 1) to come to see mathematics, mathematics learning, and mathematics teaching as complex and to develop an inquiry approach to these domains; 2) to improve their understanding of the mathematical concepts and procedures they will teach, and to improve their understanding of children's mathematical learning and thinking about these concepts and procedures; 3) to increase their ability to choose among tasks, lessons, and curriculum materials from a variety of print and electronic sources based on intended mathematical understandings; 4) to develop a productive mathematics culture in the classroom; and 5) to explore key educational issues, such as equity, assessment, and technology, with respect to mathematics teaching and learning. In the course, teacher candidates explore important mathematical ideas and their development. They will become familiar with important pedagogical principles and questions. To help candidates develop an inquiry approach toward teaching mathematics, course assignments engage them in reflecting on readings and class discussions, their previous experiences as a learner of mathematics, and their ongoing experiences observing and teaching in classroom settings. MTHED 420 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

Diversity: None

Bachelor of Arts: None

Effective: Summer 2010

Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MTHED 427 Teaching Mathematics in Technology-Intensive Environments (3)** Interaction among pedagogy, content, and technology in mathematics teaching and learning in technology-intensive environments; secondary, early college curricula; laboratory experience.

### **MTHED 427 Teaching Mathematics in Technology-Intensive Environments (3)**

Students should expect to learn something about each of several common types of mathematics software, new things

about secondary school mathematics, and a lot about how to make decisions about how to use technology as an effective mathematics teacher. Students will also use communication software (e.g., word processors, e-mail, PowerPoint) not as objects of our discussion but in simple ways to generate and share products, assignments, and ideas.

The course has a significant lab component. Students will be assessed based on written assignments, lesson plans, oral presentations, class participation, and examinations. The course is offered each fall and spring semester with an approximate enrollment of 20 students per semester. Students must enroll concurrently in MTHED 411.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Spring 2007

Concurrent: MTHED 411

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MTHED 428** Fundamentals of Middle Grades Mathematics 1 (3) This course develops essential understanding of number and algebra for teaching middle grades mathematics and builds on earlier mathematics courses.

### **MTHED 428 Fundamentals of Middle Grades Mathematics 1 (3)**

MTHED 428 builds upon experiences in early undergraduate courses to enhance prospective and/or practicing teachers' mathematical knowledge by supporting them to build deep and connected understandings of rational number, ratio, proportion, variable, expressions, and equations and be able to call upon those understandings in order to interpret grades 4-8 students' mathematical understandings. In particular, students in this course will learn that rational number arise as an extension of whole numbers and can be represented in many forms and interpreted as ratios, measures, quotients, operators, and part-whole relationships. Students will also build understandings of equivalence and the mathematical concepts and relationships that underlie previously learned computational algorithms. Students will understand that ratios involve coordinating two quantities and multiplicative relationships, and that a proportion is a statement of equality between two ratios. Students will learn how number concepts in prekindergarten–grade 4 connect to algebra topics in grades 4-8. Topics in this area include different views and uses of variable, the nature of and use of algebraic expressions and how expressions and equations differ, multiple strategies for manipulating and representing algebraic expressions and equations, and how expressions and equations can be used to represent real-world situations.

Students will also learn what research has documented about how the concepts of rational number, ratio, proportion, variable, expressions, and equations develop in grades 4-8; the challenges that grades 4-8 learners face in learning this content; connections to previously-learned mathematical content from grades PreK-3; and how grades 4-8 students' understandings of the targeted concepts form essential foundational understandings for mathematical learning in grades 9-12. Students will engage in mathematical reasoning and justification and utilize technological tools appropriate for use in grades 4-8 mathematics.

**MTHED 431** Data Analysis in Secondary School Mathematics (3) Intense development of foundations of data analysis for secondary mathematics as a process using statistical concepts for predictions and inferences.

### **MTHED 431 Data Analysis in Secondary School Mathematics (3)**

As prospective secondary mathematics teachers, students will develop broad and deep understanding of measures of and representations for center, measures of spread, distribution, and correlation. They will become fluent in using dynamic statistics programs, various physical models, and representations to convey the essence of these statistical concepts to secondary school students. They will compare various statistical methods and measures and make and defend claims both in terms of the discipline and in terms of how these ideas unfold for learners in school mathematics. They will connect these statistical concepts to the broader study of secondary school mathematics.

In particular, students will see data analysis as a process. It involves the systematic application of statistical techniques, as well as logical techniques, to summarize, interpret, and compare data. Although the emphasis of the course will be on statistical concepts, one of the main themes of the course will involve understandings the mathematical structure of these statistical concepts. For example, students should be able to answer, from a mathematical perspective, why some data analysis techniques are more useful than other techniques.

Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. In particular, it helps to build prospective teachers' understanding of statistics as a vital part of secondary mathematics. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, dynamic statistics environments, and graphing calculators), as appropriate.

Students in this course would be expected to complete weekly assignments and exams and to participate in classroom investigations of statistical concepts. Course grades depend on students' performance on all of these measures.

General Education: None  
Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MTHED 432** Mathematical Modeling in Secondary School Mathematics (3) Students work from teaching and curricular perspective to explore and apply school and undergraduate mathematics to model real-world phenomena.

### **MTHED 432 Mathematical Modeling in Secondary School Mathematics (3)**

Given the attention to mathematical modeling and applications in secondary school mathematics, prospective teachers need to be able to recognize situations that allow secondary school students to use relevant mathematics to apply mathematics and to model real-world phenomena as a means to learn about various mathematical topics. This course provides experiences in generating, interpreting, and evaluating geometric, discrete, stochastic, and function models. The course also helps prospective teachers develop an understanding of how mathematical modeling arises in school mathematics and how students learn mathematics through modeling.

Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate.

Students in this course would be expected to complete a major modeling project and paper in addition to weekly assignments, exams, quizzes, and written reflections of classroom participation. Course grades depend on students' performance on all of these measures.

Diversity: None  
Bachelor of Arts: None  
Effective: Summer 2006  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MTHED 433** Function Concept in Secondary School Mathematics (3) This course develops the concept of function as an essential topic that underlies and connects school and collegiate mathematics.

### **MTHED 433 Function Concept in Secondary School Mathematics (3)**

Prospective teachers as students need to understand the concept of function deeply as an essential topic of school and collegiate mathematics. In this course, they develop greater facility in using multiple representations and encounter function ideas as they unfold in multiple areas of mathematics, thus extending their understanding of collegiate

mathematics and its connection to school mathematics. The students become conversant in current state and national expectations about functions as a mathematical entity. They plan appropriate instruction to develop secondary school student's understanding of function.

Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. In particular, it helps to build prospective teacher's conceptual understanding of function so that they may draw more strongly on this understanding to engage secondary students in mathematics. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate.

Students in this course would be expected to complete a major project and paper in addition to weekly assignments, exams, quizzes, and written reflections of classroom participation. Course grades depend on students' performance on all of these measures.

**MTHED 501** Foundations of Mathematics Education I: Learning (3) This course focuses on understanding and application of theories of mathematical thinking and learning in research and practice.

**MTHED 501 Foundations of Mathematics Education I: Learning (3)**

An understanding of what it means to learn mathematics, knowledge of extant theories of learning mathematics, and knowledge of the nature of students' mathematical thinking at various grade levels are central to the work of mathematics educators. Research, curriculum development, classroom interactions with mathematics students, development of assessments, and many other activities in which mathematics educators engage all draw heavily on understanding and knowledge of mathematical thinking and learning.

Students in this course will develop a deeper understanding of classical and contemporary theories of mathematical learning and thinking and comparisons among these theories. Assignments in the course support students' growth in applying these theories to frame research, to enhance instruction, to consider curriculum, to support teacher development, and to effect policy. A major project in the course builds students' skills in investigating mathematical thinking and learning.

This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 502 Foundations of Mathematics Education II: Teaching; MTHED 503 Foundations of Mathematics Education III: Curriculum; and MTHED 504 Foundations of Mathematics Education IV: Teacher Development and Policy.]

Students in this course would be expected to participate in class discussion, complete weekly assignments, conduct two major projects, and respond to a final examination. Course grades depend on students' performance on all of these measures.

Bachelor of Arts: None  
Effective: Summer 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**MTHED 502** Foundations of Mathematics Education II: Teaching (3) Teaching is the object of study encountered through connections among classical and contemporary theories of teaching and research on teaching.

**MTHED 502 Foundations of Mathematics Education II: Teaching (3)**

Teaching mathematics and developing knowledge, skills, and dispositions of mathematics teachers are central tasks in the work of mathematics educators. Thus acquiring deeper theoretical knowledge and practical skills in teaching are fundamental objectives for doctoral students in mathematics education. The focus of this course is on teaching - and not the teacher - as an object of study.

In this course, students explore and connect classic and contemporary research and theories of teaching, come to know the nature of mathematics teaching in tradition and vision, relate theories of teaching to theories of learning, develop ability and disposition to study and improve mathematics teaching and hone ability to evaluate and conduct research on teaching.

This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 501 Foundations of Mathematics Education I: Learning; MTHED 503 Foundations of Mathematics Education III: Curriculum; and MTHED 504 Mathematics Education IV: Teacher Development and Policy. This course would typically follow MTHED 501.]

Students in this course would be expected to participate in weekly discussions, articulate their emerging philosophies of teaching, and analyze teaching episodes. Course grades depend on students' performance on all of these measures.

**MTHED 503** Foundations of Mathematics Education III: Curriculum (3) Study of mathematics curriculum blends historical trends and current issues with research literature and techniques to study effects of innovations.

**MTHED 503 Foundations of Mathematics Education III: Curriculum (3)**

Mathematics educators who are active in leadership of school systems, teacher education, research and development projects, and formulation of education policy are frequently called on for analytic or creative work related to the school and collegiate curriculum. They are asked for advice on the content, organization, presentation, and evaluation of mathematics curricula and to conduct research directly related to curricula and the effects of their implementation.

Students in this course will develop a connected current and historical view of the nature of K-16 mathematics curriculum materials, movements, and guidelines. They will develop skills and dispositions to critique, conceptualize, design, conduct and report research on curriculum development and implementation efforts.

This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 501 Foundations of Mathematics Education I: Learning; MTHED 502 Foundations of Mathematics Education II: Teaching; and MTHED 504 Foundations of Mathematics Education IV: Teacher Development and Policy.]

In addition to participation in class discussions, students in this course would be expected to conduct a historical analysis of the treatment of a mathematical theme or topic in K-16 curricula, analyze and synthesize research related to an important issue, analyze instruments used in curriculum research, and propose a research study in some aspect of the mathematics curriculum. Course grades depend on students' performance on all of these measures.

**MTHED 504** Foundations of Mathematics IV: Teacher Development and Policy (3) Nature and study of teacher education and professional development programs and projects coupled with policy and impact in mathematics education.

### **MTHED 504 Foundations of Mathematics IV: Teacher Development and Policy (3)**

One of the principal day-to-day responsibilities of mathematics educators is teaching of content and pedagogy courses for prospective teachers. This work often leads to opportunities for leadership through professional development courses and projects with in-service teachers and to consulting work with local, state, and national school, governmental, and professional organizations concerned about educational policy. Effective work in these arenas requires knowledge and practical skills about professional development and institutional change as well as awareness of policies and the role of policy in influencing practice.

Students study research and practice in teacher education and professional development of mathematics teachers. They come to know the research and the issues that confront those who prepare teachers and support teachers' continued professional development. Students become familiar with governmental and professional organizations and the critical issues that impact the direction of mathematics education. They also learn how to study local, state, and national policies and publications.

This course would be one of four required Mathematics Education courses for all doctoral students in the Mathematics Emphasis Area/Curriculum and Instruction Ph.D. program. [The other required courses are MTHED 501 Foundations of Mathematics Education I: Learning; MTHED 502 Foundations of Mathematics Education II: Teaching; and MTHED 503 Foundations of Mathematics Education III: Curriculum.]

In addition to participation in class discussions, students in this course would be expected to articulate a policy regarding a critical issue in mathematics education, evaluate a teacher education or professional development program, propose a professional development or teacher education project, and complete a final examination. Course grades depend on students' performance on all of these measures.

**MTHED 511** Connections Between Mathematics and Mathematics Education (3) Course connects college-level mathematics with secondary school mathematics in terms of curriculum content and research on teaching and learning.

### **MTHED 511 Connections Between Mathematics and Mathematics Education (3)**

The course is organized around key areas of college-level mathematics. In each area, the college-level mathematics focus is on critical ideas, such as fundamental concepts, powerful techniques, and important theorems. These ideas are then explored as abstractions of secondary school mathematics content and as justifications for procedures taught in secondary schools. Resulting new mathematics understandings will be used to understand research on learning and teaching mathematics and to apply research to secondary school mathematics instruction. Mathematics curriculum expectations will include both mathematics content topics and mathematical practices and processes.

**M E 400** Thermodynamics of Propulsion and Power Systems (3) Analysis and modeling of propulsion and power systems, including combustion, compressible flow through nozzles, chemical equilibrium, and moist air systems.

### **M E 400 Thermodynamics of Propulsion and Power Systems (3)**

This course is specifically designed to take advantage of the senior level standing of the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in "thinking like an engineer."

**M E 402** Power Plants (3) A study of fossil-fuel steam generation and utility plants, including cogeneration, gas turbine, and combined cycles.

### **M E 402 Power Plants (3)**

This course serves as an introduction to fossil-fuel plants for both steam generation and electricity production. Following

an overview of an entire plant and an introduction to combustion processes, each subsystem of a fossil-fuel plant will be considered. The subsystems include fuel preparation and handling, boiler types and the fundamentals of steam generation, water systems (condensate-feedwater, makeup, cooling, and waste), and turbomachinery. Consideration will be given to environmental aspects of steam and power generation as well as operations, maintenance, and controls issues. Students will spend time at the West Campus Steam Plant (WCSP) to observe the various systems discussed in class. Data taken from the WCSP will be used in problem solving and in an assessment of the plant.

**Course Objectives:**

To acquaint students with both steam generation and electricity production and to present some of the engineering calculations encountered in practice.

Objectives that students will meet at the end of the course:

1. list the subsystems of a plant, indicating the function of each subsystem
2. sketch typical subsystems of a power plant (example: sketch the coal and ash handling system)
3. perform basic analyses associated with each subsystem
4. sketch the flow of water-steam, fuel, and air through a plant
5. analyze a heat balance, perform an availability analysis, and interpret the results of those analyses
6. select the type of plant appropriate for a given application
7. perform an energy audit on the auxiliary systems
8. perform a water audit on the plant
9. use DoE Best Practices (or equivalent program) to assess a steam plant

Students will be required to draw on material from core undergraduate courses in thermodynamics (M E 030 and M E 031), fluid mechanics (M E 033), and heat transfer (M E 412). Students must be able to:

- sketch the configuration and draw a T-s diagram for a Rankine cycle and a Brayton cycle
- indicate the general trends for the ideal cycles (example: for a Brayton cycle, how does the efficiency depend on the pressure ratio, inlet temperature, etc.)
- define the basic modifications to the simple Rankine cycle and simple Brayton cycle
- discuss the significance of the modifications
- state the definition of the adiabatic efficiency for turbines and pumps
- perform an energy balance given a particular cycle
- use the Darcy-Weisbach equation to determine the friction losses in pipes and ducts
- perform simple analysis of a heat exchanger

**M E 403 Polymer Electrolyte Fuel Cell Engines (3)** Introduction to Fundamentals of Polymer Electrolyte Fuel Cells (PEFCs). Includes fundamentals of electrochemistry, thermodynamics, fluid mechanics, heat transfer materials, and manufacturing issues of PEFCs. A brief survey of other fuel cell types is also included.

**M E 403 Polymer Electrolyte Fuel Cell Engines (3)**

This course is intended for the engineering student interested in obtaining a fundamental background required for polymer electrolyte fuel cell (PEFC) modeling and diagnosis. Those students with interest in the basic design, operation, and characteristics of PEFC systems should also benefit.

This course serves as an introduction to the fundamental principles of electrochemistry, thermodynamics, heat and mass transfer, materials and manufacturing issues related to PEFC engines. The various types of PEFC components and technologies are dissected in detail, including direct inject alternative fuel systems. A survey of cutting-edge issues in fuel cell technology including the future direction of PEFC technology will be presented as time permits. The student will also participate in an experimental lab study to aide in the understanding of these systems, a computer-based simulation project, and a group-based fuel cell system design project. Issues of specific interest to mechanical engineers, including water management and heat and mass transfer in thin film porous media, will be dealt with in depth. A brief survey of other fuel cell types is also presented.

**M E 404 Gas Turbines (3)** Thermodynamic cycles relating to gas turbines; analysis and performance of compressors, combustion chambers, single- and multi-stage turbines; recent developments.

**M E 404 Gas Turbines (3)**

This course enables students with the proper background to gain specialized knowledge as a step towards becoming practitioners in the field of gas turbines. The information imparted covers from basic cycles to properties of materials required to put together these impressive machines. Competent course performance requires knowledge of basic thermodynamics, fluids and heat transfer. The homework is carefully graduated in order to highlight key aspects already covered in the lectures, with new thinking an unavoidable part. As an optional part of the course, students can run and acquire data in an actual gas turbine. Additionally, those with a strong background in fluids can design blades and study the flow around them with CDF.

Course Objectives: Upon completion of this course, students should be able to:

1. Analyze cogeneration plants.
2. Analyze turbofans, jets and turbojets.
3. Specify a typical gas turbine installation, including auxiliaries.
4. Carry out conceptual design of gas turbine engines for different applications.
5. Specify construction materials to withstand typical operating conditions.
6. Demonstrate professionalism in interactions with colleagues, faculty, and staff.

Program Objectives: This course covers the following program objectives:

1. demonstrate ability to solve differential equations
2. demonstrate familiarity with linear algebra
3. perform analysis of thermal/fluids components
4. perform analysis of thermal/fluids systems
5. work effectively on multidisciplinary teams
6. demonstrate ability to communicate effectively with the written word
7. demonstrate ability to communicate effectively in oral communications
8. demonstrate professionalism in interactions with colleagues, faculty, and staff

**M E 405 Indoor Air Quality Engineering (3)** Prediction of the motion of contaminants (both gaseous particulate) in gas streams; analysis of ventilation systems and air pollution control systems; comparison of experimental sampling techniques.

### **M E 405 Indoor Air Quality Engineering (3)**

This course serves as an introduction to environmental health engineering, which presents the quantitative relationships describing generation, movement, and control of pollutants inside the workplace. Although some aspects of the course can be applied to outdoor air pollution, the course concentrates on applications related to indoor air quality. In particular, students are taught how to measure and predict concentrations of air pollutants, both gaseous and particulate, in rooms. In addition, they are taught how to design both local and general ventilation systems to maintain acceptable indoor air quality. In addition, the design of air pollution control systems that remove both gaseous and particulate contaminants from the air is discussed.

The relationships are described by mass and energy balances that relate pollutant generation and movement to process parameters. The course is designed for seniors and graduate students in Mechanical, Chemical, Environmental and Civil Engineering, and Meteorology.

To work effectively in environmental health engineering, students must be proficient in applying the thermal sciences. The course uses principles of mathematics and thermal sciences included in accredited programs of engineering. Most students will have mastered some of these principles, but few will have mastered them all. The course reviews all the necessary thermal science principles before using them, but some students will need to review this material in more detail than others.

This course is offered once per year.

Course Objectives:

- a. Demonstrate the ability to analyze and compare risks associated with various activities and with exposure to hazardous chemicals.
- b. Demonstrate a working knowledge of the physiology and function of the respiratory system, including diseases of the lung.
- c. Demonstrate the ability to estimate pollutant emission rates using emission factors and fundamental mass balance techniques.
- d. Analyze practical problems of general and local ventilation requirements.
- e. Design local ventilation systems using standard guidelines from ACGIH and ASHRAE.
- f. Predict the motion of particles in air, and analyze pollution control devices which remove particles from the air.
- g. Demonstrate professionalism in interactions with colleagues, faculty, and staff.

Program Objectives:

- a. demonstrate knowledge of chemistry
- b. demonstrate ability to solve differential equations
- c. demonstrate familiarity with statistics

- d. perform analysis of thermal/fluids components and thermal/fluids systems
- e. demonstrate an appreciation of the economic, global, social, and ethical context of their work
- f. demonstrate professionalism in interactions with colleagues, faculty, and staff
- g. make effective use of spreadsheets as an analysis and design tool
- h. use software such as Matlab and MathCAD to solve engineering problems including ODE'S, systems of linear equations, and numerical integration

**M E 406** (NUC E 406) Introduction to Statistical Thermodynamics (3) Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics.

### **M E (NUC E) 406 Introduction to Statistical Thermodynamics (3)**

This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as "statistical thermodynamics." In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation.

This course covers the following program objectives:

1. Demonstrate knowledge of basic chemistry and physics.
2. Demonstrate a knowledge of atomic and nuclear physics.
3. Demonstrate a knowledge of thermodynamics, heat transfer, and fluid flow.
4. Understand and apply the basic concepts of particle transport.
5. Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

**M E 408 Energy Systems (3)** Theory, analysis, design, selection, and application of energy conversion systems.

### **M E 408 Energy Systems (3)**

This course is intended for mechanical engineering students to reinforce the topics taught in thermodynamics, fluid mechanics, and heat and mass transfer; gives students familiarity with energy conversion systems using traditional and renewable energy sources which are typically encountered by mechanical engineers, and improves students' analytical and design skills. Coverage of materials include heat exchanger analysis, selection, and design with respect to heat transfer, pressure drop, and fluid pumping requirements; analysis and design of power cycles based on thermodynamic principles; fundamentals of combustion processes; introduction to wind energy and wind turbine aerodynamic analysis; fuel cell fundamentals and analysis of fuel cell problems and systems based on thermodynamics and heat transfer principles. Students will be evaluated by homework assignments; individual and small team projects; and exams.

**M E 410 Heat Transfer (3)** Thermal energy transfer mechanisms: conduction (steady, transient), convection (internal, external), radiation; lumped parameter method; heat exchangers; introduction to numerical methods.

**M E 410 Heat Transfer (3)**

M E 410, Heat Transfer, is a required course for mechanical and nuclear engineering students. The course presents the three modes of heat transfer: conduction, convection, and radiation. One-dimensional steady and transient conduction is studied for planar, cylindrical, and spherical geometries. The lumped capacitance analysis is used for transient conduction when appropriate. Analytical and numerical methods are presented for two-dimensional conduction problems, including the analysis of extended surfaces. Convection heat transfer is studied in both internal and external geometries and under laminar and turbulent flow regimes. External flows include cooling on flat plates due to laminar and turbulent boundary layer flows, and cooling of cylinders due to cross flow. The convection heat transfer analysis in internal flows considers laminar and turbulent pipe flows. Free convection is also considered where heat transfer is due to flow induced by fluid buoyancy. Boiling and condensation considers the effect of two-phase flows on surface heat transfer. Radiation heat transfer is studied by considering both the general characteristics of radiation as well as the properties of radiating surfaces and radiation heat transfer between surfaces. Methods for solving multi-mode heat transfer are presented throughout the course. Heat exchangers and heat transfer from extended surfaces are two applications studied in the course.

**M E 421 Viscous Flow Analysis and Computation (3)** Apply analytical and computational methods to solve the differential equations describing fluid flow. Incompressible external flows past objects and internal flows in pipes and ducts are some problems considered.

**M E 421 Viscous Flow Analysis and Computation (3)**

M E 421 is an intermediate course in fluids mechanics that bridges between the required undergraduate fluid mechanics course and the graduate fluid mechanics courses. Steady and unsteady flows are considered past objects and in pipes, ducts, and annuli. Analytical and numerical methods are used to solve the boundary layer and Navier-Stokes equations that describe fluid motion. Analytical methods include solutions for steady and unsteady internal flows with heat transfer. Similarity equations for boundary layer flows are derived and then solved numerically using the Runge-Kutta method. Finite difference methods for viscous flows are introduced and applied. Turbulence modeling is presented and applied in a boundary layer code. The stages of transition from laminar to turbulent flow and methods for the prediction of transition are introduced.

Topics in M E 421 include:

1. Analytical solutions for one-dimensional viscous flows in Cartesian and cylindrical coordinates with heat transfer.
2. Unsteady viscous flow solutions using Separation of Variables.
3. Boundary layer similarity solutions using the Runge-Kutta method.
4. Panel method for incompressible inviscid flows.

5. Finite-differenced equations for viscous flows and the accuracy and stability of the schemes.
6. Using a commercial CFD code for a simple geometry.
7. Algebraic turbulence models and the approximations of each.
8. Higher-order turbulence models and the approximations used.
9. Stages of transition from laminar to turbulent flow.
10. Methods to predict boundary layer stability and transition.

Bachelor of Arts: None  
Effective: Fall 2007  
Prerequisite:

**Note :** Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**M E 427** Incompressible Aerodynamics (3) Analysis of lift and drag using potential flow theory, effects of viscosity on potential flow calculations, wind tunnel testing.

### **M E 427 Incompressible Aerodynamics (3)**

The primary objective of this course is to teach students how to determine aerodynamic lift and drag using a variety of techniques, including potential flow theory, viscous flow analysis, and wind tunnel testing. Students also learn the limitations of each technique and how they can be used together to obtain better results. Fundamental concepts in aerodynamics are also discussed, including lift, drag, aerodynamic moment, induced drag, viscous drag, pressure drag, separation, stall, circulation, downwash, camber, thickness ratio, and lift distribution. Students should be able to use knowledge gained in this course to solve aerodynamic design problems.

Students will be evaluated through the use of written exams during the semester, a comprehensive written final, and weekly homework assignments. This course is a technical elective in the Mechanical Engineering program and allows students who have completed ME BD 240, Elementary Fluid Mechanics, to improve their understanding of fluids by covering the subject in more detail and applying it specifically to aerodynamics problems. It will usually be offered annually in the spring semester.

**M E 428** Applied Computational Fluid Dynamics (3) Introduction to theory and application of computational techniques for solving fluid flow and heat transfer.

### **M E 428 Applied Computational Fluid Dynamics (3)**

The purpose of this course is to teach students how to use a commercial CFD code to solve real-world engineering fluid flow problems. The definition of appropriate problem domain, set of governing equations, boundary conditions, and fluid properties is discussed. Sufficient theory of CFD is covered so that students are able to select appropriate elements or interpolation techniques and options, mesh size, pressure-correction technique and solution technique. Students are also taught how to interpret the results of a CFD simulation, including determination that the solution is physically realistic, conforms to the governing equations, is converged and grid independent, and determination of important engineering quantities such as net force, pressure drop and flow rate. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a semester project. This course is a technical elective in the Mechanical Engineering program and allows students who are interested in fluid mechanics and heat transfer to further their study. It is offered periodically.

**M E 430 (EGEE 430) Introduction to Combustion (3)** Concepts related to laminar and turbulent premixed and nonpremixed combustion with applications to propulsion and stationary systems.

**M E (EGEE) 430 Introduction to Combustion (3)**

This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that Kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NO<sub>x</sub>. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in internal combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

**M E 431 Internal Combustion Engines (3)** Thermodynamic aspects of internal combustion engine design and performance; two- and four-stroke cycle, supercharged and non-supercharged, diesel and spark-ignition types.

**M E 431 Thermodynamics of Propulsion and Power Systems (3)**

This course is specifically designed to take advantage of the senior level standing of the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in "thinking like an engineer."

**M E 440W Mechanical Systems Design Project (3)** Design and analysis of mechanical components and systems. Application of fundamental design and analysis methods to open ended engineering problems.

#### **M E 440W Mechanical Systems Design Project (3)**

Students develop and practice skills and techniques for managing and executing engineering design projects. These skills are applied to an industry-sponsored project. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students will visit industrial sites to gain an understanding of existing processes and problems and to assess the customer's needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

Bachelor of Arts: None  
Effective: Spring 2015  
Prerequisite:

**Note** : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

**M E 441W Thermal Systems Design Project (3)** Design of thermal systems through component design and/or selection, system simulation and optimization. Assessment of system economics and energy efficiency.

#### **M E 441W Thermal Systems Design Project (3)**

Students develop and practice skills and techniques for managing and executing engineering design projects related more to thermal design but not excluding mechanical design. These skills are applied to projects mostly sponsored by the industry. Project teams perform all facets of product and process design either on paper via use of computer models and/or as a physical product. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, design computations, drawings and performance via use of CFD and analysis and documentation of results. Students will visit industrial sites when possible to gain an understanding of existing processes and problems and to assess the customer's needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages and reports.

**M E 442W Advanced Vehicle Design I (2)** Part one of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with M E 443W).

#### **M E 442W Advanced Vehicle Design I (2)**

Students develop and practice skills and techniques for managing and executing engineering design projects. This is done in the context of an international University-level engineering design competition that is sponsored by government agencies and/or by industry. The competitions are structured to span a full calendar year, with the competition itself taking place in late Spring. For that reason, the course is spread over two semesters. In the Fall semester, there is approximately equal emphasis on classroom lectures and hands-on laboratory activities; in the Spring semester, the emphasis is on hands-on laboratory activities. The focus is advanced powertrain technology for personal transportation vehicles. Broader aspects of energy efficiency, security, and sustainability also will be discussed. The specific technologies that are targeted will evolve with time to remain ahead of what is available in current production vehicles. Project teams perform all facets of product and process design. This includes problem identification, planning of the project,

formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students also will participate in broader aspects of the design competition. This may include securing sponsorship and funding, participating in outreach and public relations events, developing a business plan, developing a web site, and traveling to competition workshops and to the annual competition. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.
