Challenges for Economic Policy Design

Lessons from the Financial Crisis

LAP LAMBERT
Academic Publishing

The papers in this volume are deliberately chosen from different areas of economics in order to give an as broad overview of current areas of research as possible. They all have in common that in one way or another they question the current dominant neo-classical theory. The papers are arranged in five sections, with the first group looking into macroeconomic policies, the second group analyses economic growth, the third group looks into banking and moral hazard, the fourth group considers the welfare state and immigration and finally the last group is centred on heterodox economics.

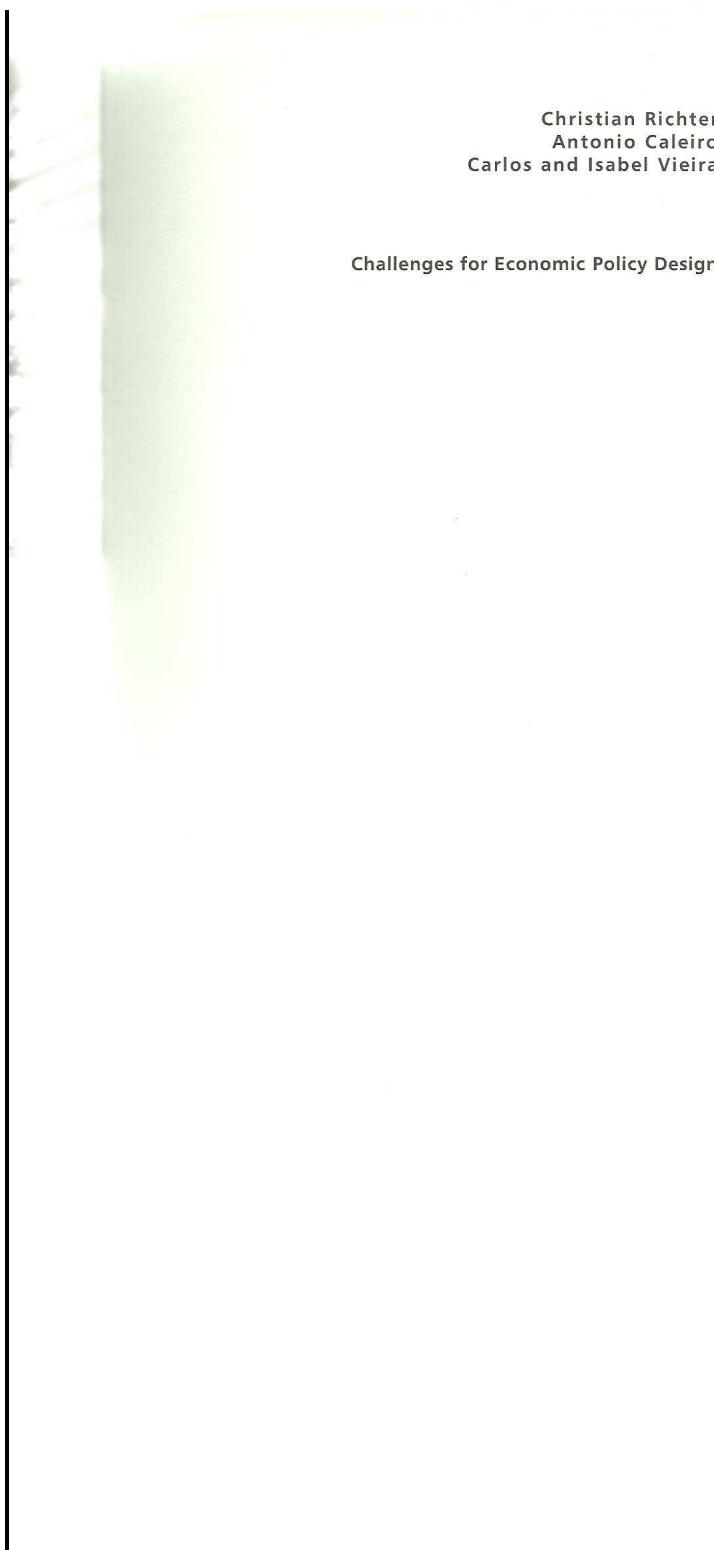

Christian Richter

Christian studied economics at the Universities of Mainz and Glasgow where he graduated in 1994 and 1997. Christian finished his PhD in 2001 at University of Strathclyde with Prof Andrew Hughes Hallett. Since 2008 Christian is a senior lecturer at Kingston University. His areas of research are econometrics, financial economics.
