Introduction

Introduction

Inepro has replaced it's line of Gladius cash registers with a new model; the AerPOS.

The AerPOS is a beautiful POS terminal with an ultra slim display, sleek chassis and small footprint design. The AerPOS looks elegant, yet it can endure the toughest retail and hospitality applications with its no venting design and aluminum chassis.

This document will inform you of the relevant differences between the two tills.

Buttons & connections

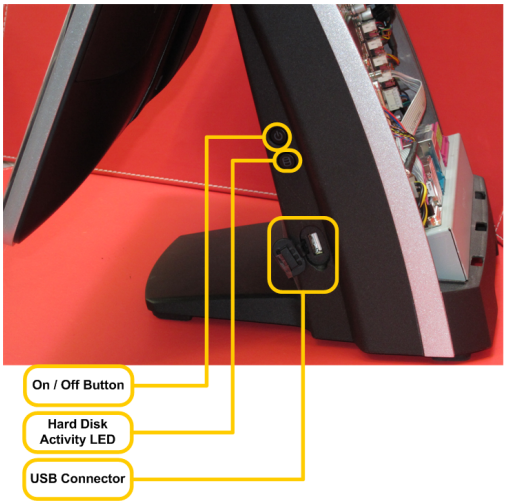
The last cash register had one on / off button used to power off (or power on) the machine. This cash register has two on / off buttons. It also has a USB connector on the right side so the USB extension cable is no longer needed.

Turn cash register on / off

On the right side of the cash register the on / off button, hard disk activity LED and USB connector can be found.
Use this button to turn off the machine when asked by the Inepro support team. Normally the cash registers will remain powered on to provide Inepro to service the machine out of operating hours.

Turn screen on / off

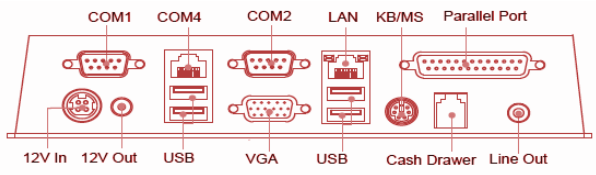
If you need to turn off your screen use the on / off button on the front of the screen. This can be used to save power and to indicate that the cash register is no longer in service at this time.



I/O Interface

Interface used	Default	Alternative
COM 1	PayCon or Xenta	Xenta
COM 2	Printer	PayCon
COM 4	<Not Used>	Printer
LAN	LAN	LAN
12V In	Power	Power

By default the cash register will have either a PayCon or an Xenta connected to provide EFT payments, but alternatively they can be both connected.



In that last case the PayCon will be used to identify the customer (and optionally it's online account), but the Xenta can still be used for EFT payments.
