Prognosis Automation

Confidential

Agenda

Part 1

- Prognosis Automation
- My first workflow
- Core Node.js paradigms
- Executing process
- Retrieving Prognosis data

Part 2

- Solution study
- Display integration
- Parameters
- Advanced Node.js

Part 1 Learning Objectives

- After completing this course you should:
 - Know how to invoke a workflow
 - Know where a workflow will run
 - Understand the components of a workflow
 - Be able to modify an existing workflow
 - Execute a process within a workflow
 - Retrieve Prognosis data within a workflow

Prognosis works with Node.js.

- server-side JavaScript
- www.nodejs.org

Prognosis uses Node.js 6.x

- Node.js 8.x likely for P11.4
- requires AUT license key

```
[10.0.2] # Customer "IR JohnD (exp 31-Dec-17)" , Expires 2017123
[10.0.2] # NumNodes 250 , NumDevices 0 , NumDevices2 0 , NumDevi
[10.0.2] # OsType=AllWin=7838 0080
[10.0.2] # Products="PND PNI PNM PR ADI SRV AUT"
[10.0.2] CAE1 4701 8F61 A19B 26C9 888E BE97 A58C EACB F5C0 8940 .
[10.0.2] 8880 AD84 A6C1 888E BE95 A58C EACB F5C0 8880 AD84 A6C1
[10.0.2] A6C1 888E BE95 A58C EACB F5C0 8880 AD84 A6C1 888E BE95
```

The screenshot shows the official Node.js website at nodejs.org. The header features the Node.js logo and navigation links for HOME, ABOUT, DOWNLOADS, DOCS, FOUNDATION, GET INVOLVED, SECURITY, and NEWS. A prominent green banner at the top states: "Important security release for 8.x, please update now!". Below this, there are two large download buttons: "6.11.4 LTS" (Recommended For Most Users) and "8.7.0 Current" (Latest Features). At the bottom of the page, there's a footer bar with links to "LINUX FOUNDATION COLLABORATIVE PROJECTS", "Report Node.js issue", "Report website issue", and "Get Help".

Prognosis & Node.js

Prognosis can invoke Node.js via:

- the user interface
- a threshold

Node.js can interact with Prognosis:

- send trace information
- retrieve data through PQL
- create data in Prognosis records

Prognosis Workflows

A Workflow is a Prognosis concept

- Encapsulates everything Prognosis needs to know, to run a Node.js

From the WebUI you can

- See all available workflows
- Invoke a workflow

Exercise 1 – Run a Workflow

1. Log in to Prognosis
2. Switch to Admin view
3. Select Automation
4. “Ex 1 My First Workflow”
5. Click “Run Now”

Name	Description
Cisco OPCTest	Open Peripheral Controller (OPC) Test
Cisco RTTest	Cisco Intelligent Contact Management (ICM) rtest
Ex1 My First Workflow	Example of writing to the automation log.
Ex3 Find Google.com	Example of executing a process
Ex5 Get Prognosis Data	Example of retrieving Prognosis data via PQL
PingTest	Ping Test
PolTest	SNMP Poll Test
Skype for Business Address Book	Tests the ability of a user to access the server that hosts the Address Book Download Web service.
Skype for Business Server Services Status	Verifies the status of the Skype for Business Server services.
Skype for Business Synthetic Calls	Tests the ability of a pair of users to conduct a peer-to-peer audio/video (A/V) call.

Exercise 1 Output

Workflow Log Output

Time	Output
10/12/17 11:18:36 PM	Begin Workflow
10/12/17 11:18:36 PM	Hello Prognosis Users from Node.js
10/12/17 11:18:36 PM	End Workflow

Confidential

Storage

Prognosis Workflow are stored on the WebUI Server

- WebUI\IIS\Automation\Workflow\<workflow name>

Let's take a look...

Anatomy

workflow.js the node.js file Prognosis will invoke (entry point)

workflow.json meta information about the workflow (name)

instance.json parameters for execution of the workflow

workflow.json

```
{  
  "Description" : "Example of writing to the automation log"  
}
```

The screenshot shows the i-prognosis Administration interface. On the left, there's a navigation sidebar with Home, Navigation, Security, Web Reports, and Automation tabs. The Automation tab is selected and highlighted in blue. The main content area is titled 'Workflows' and lists three entries:

Name	Description
Cisco OPCTest	Open Peripheral Controller (OPC) Test
Cisco RTTest	Cisco Intelligent Contact Management (ICM) rttest
Ex1 My First Workflow	Example of writing to the automation log

Below the workflows, there's a section titled 'Ex1 My First Workflow' with a camera icon. To its right is a large text box containing the description: 'Example of writing to the automation log'. At the bottom of the page, there's a table with four rows, each containing a radio button, a name, and a status column.

Directory Name (highlighted with a red box) points to the 'Automation' tab in the sidebar. The 'Ex1 My First Workflow' section and its description are also highlighted with a red box.

{workflow.json}.Description (highlighted with a red box) points to the 'Example of writing to the automation log' text in the 'Ex1 My First Workflow' section.

Summit
i-prognosis

instance.json

```
{  
    "node" : "\\\nIN-TS3KJED1PB3"  
}
```

The Prognosis Server to execute the workflow on

Can contain additional parameters
(more on that later)

workflow.js

```
//////////////////////////////  
// My First Workflow  
  
/*jslint node: true */  
/*jslint plusplus: true */  
"use strict";  
const wf = require('.././Engine/workflow_lib');  
  
try  
{  
    //Prelude
```

The workflow logic
starts here

1. wf.updateStatus(wf.status.completedOK);
2. wf.updateMessage('Completed successfully');
3. wf.logOutput('End workflow');

The screenshot shows the 'Automation Workflow Details' page from the Prognosis interface. At the top, there's a navigation bar with links for Home, Reports, Network, Admin, Community, Help, and a user icon. Below the navigation is a search bar and a toolbar with icons for Print, Export, and Refresh.

The main content area is titled 'Automation Workflow Details'. It displays a summary card with the following information:

Server	Workflow
WIN-TS3KJED1PB3	Ex1 My First Workflow
Status	Completed - OK
Message	Completed successfully

Three yellow arrows point to specific elements: arrow 1 points to the 'Status' column, arrow 2 points to the 'Message' column, and arrow 3 points to the 'Completed successfully' message in the status bar.

Below the summary card is a section titled 'Workflow Log Output' with a table:

Time	Output
10/12/17 11:18:36 PM	Begin Workflow
10/12/17 11:18:36 PM	Hello Prognosis Users from Node.js
10/12/17 11:18:36 PM	End Workflow

ii• wf.status

```
//Defintion
status = {
    completedOK:      1,
    completedError:   2,
    inProgress:       3,
    failed:           4,
    terminated:       5
};
```

Exercise 2 – Clone & Customize

1. File copy the entire folder
 - Rename to Ex2...

2. Edit files
 - Personalize the description & message

3. Run it

Use Cases (interaction)

Execute a process

E.g. Basic diagnostic checks: DNS, ping, tracert

Integrate a system

E.g. HTTPS into Time Management to find a person on duty

Interrogate an application

E.g. REST API into an otherwise unmanaged application

Interface to a device

E.g. Telnet into and reboot a Wi-Fi access point

Use Cases (internal)

Read Prognosis data

E.g. Complex state machine

Create Prognosis data

E.g. Download the weather and put in a record

Reconfigure Prognosis

E.g. Add a PBX / Server, stop/start database/threshold

Access Secure Prognosis Credentials

E.g. Credentials for Wi-Fi access point (for telnet)

Executing a Process

TraceRt (aka TraceRoute)

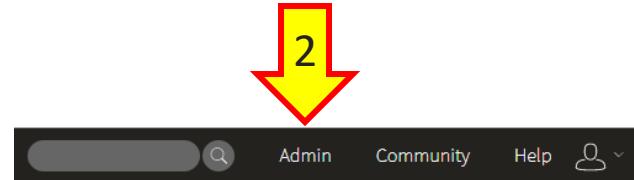

Simple diagnostic

- can the DNS be resolved?
- what is the network path?
- does it respond to ping?

Exercise 3 – Find Google.com

1. Log in to Prognosis
2. Switch to Admin view
3. Select Automation
4. “Ex3 Find Google.com”
5. Click “Run Now”

A screenshot of the Prognosis Automation interface. The URL in the address bar is https://13.58.232.113/Prognosis/Admin/Automation. The page title is "prognosis | Administration". The left sidebar shows navigation options: Home, Security, Web Reports, Automation (which is highlighted with a blue background), and Configuration Item Mapping. The main content area is titled "Workflows" and lists several entries:

Name	Description
Cisco OPCTest	Open Peripheral Controller (OPC) Test
Cisco RTTest	Cisco Intelligent Contact Management (ICM) rtest
Ex1 My First Workflow	Example of writing to the automation log.
Ex3 Find Google.com	Example of executing a process
Ex5 Get Prognosis Data	Example of retrieving Prognosis data via PQL
PingTest	Ping Test
PolTest	SNMP Poll Test
Skype for Business Address Book	Tests the ability of a user to access the server that hosts the Address Book Download Web service.
Skype for Business Server Services Status	Verifies the status of the Skype for Business Server services.
Skype for Business Synthetic Calls	Tests the ability of a pair of users to conduct a peer-to-peer audio/video (A/V) call.

At the bottom right of the interface, there are "Run Now" and "View History" buttons. Red arrows labeled "3", "4", and "5" point to the "Automation" tab, the "Ex3 Find Google.com" workflow entry, and the "Run Now" button respectively.

Child_Process

Spawn

- Any application
- stdout pipe
 - read as created
- detach available

https://nodejs.org/dist/latest-v6.x/docs/api/child_process.html#child_process_child_process_spawn_command_args_options

Exec

- Command line / console
- stdout string
 - at completion
- timeout available

https://nodejs.org/dist/latest-v6.x/docs/api/child_process.html#child_process_child_process_exec_command_options_callback

Second Instance

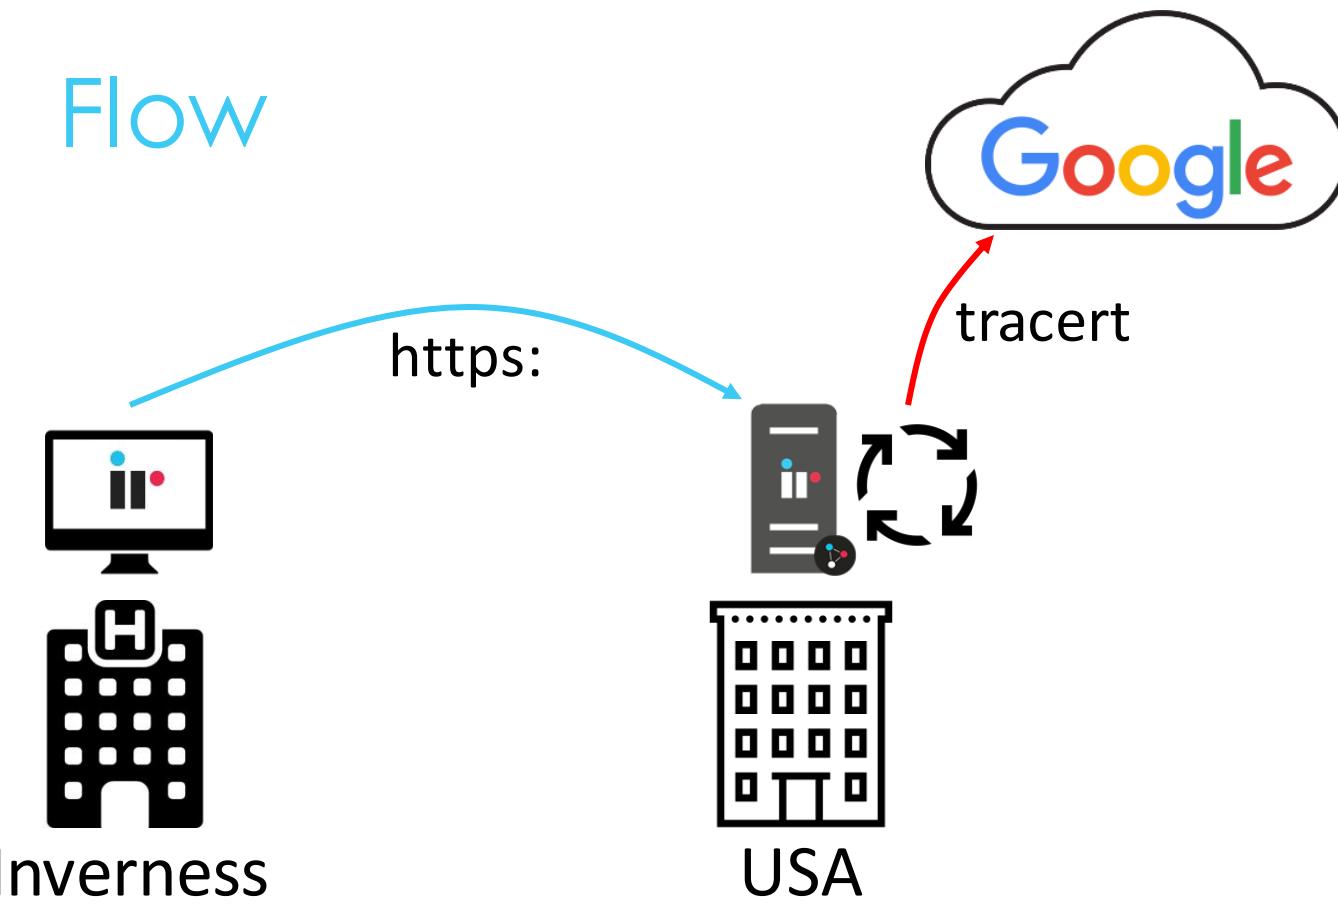

Fact: TraceRt takes time to run.

Q: What happens if I run a second instance of the workflow (on the same machine)?

A: The running instance is aborted, and the new instance is started.

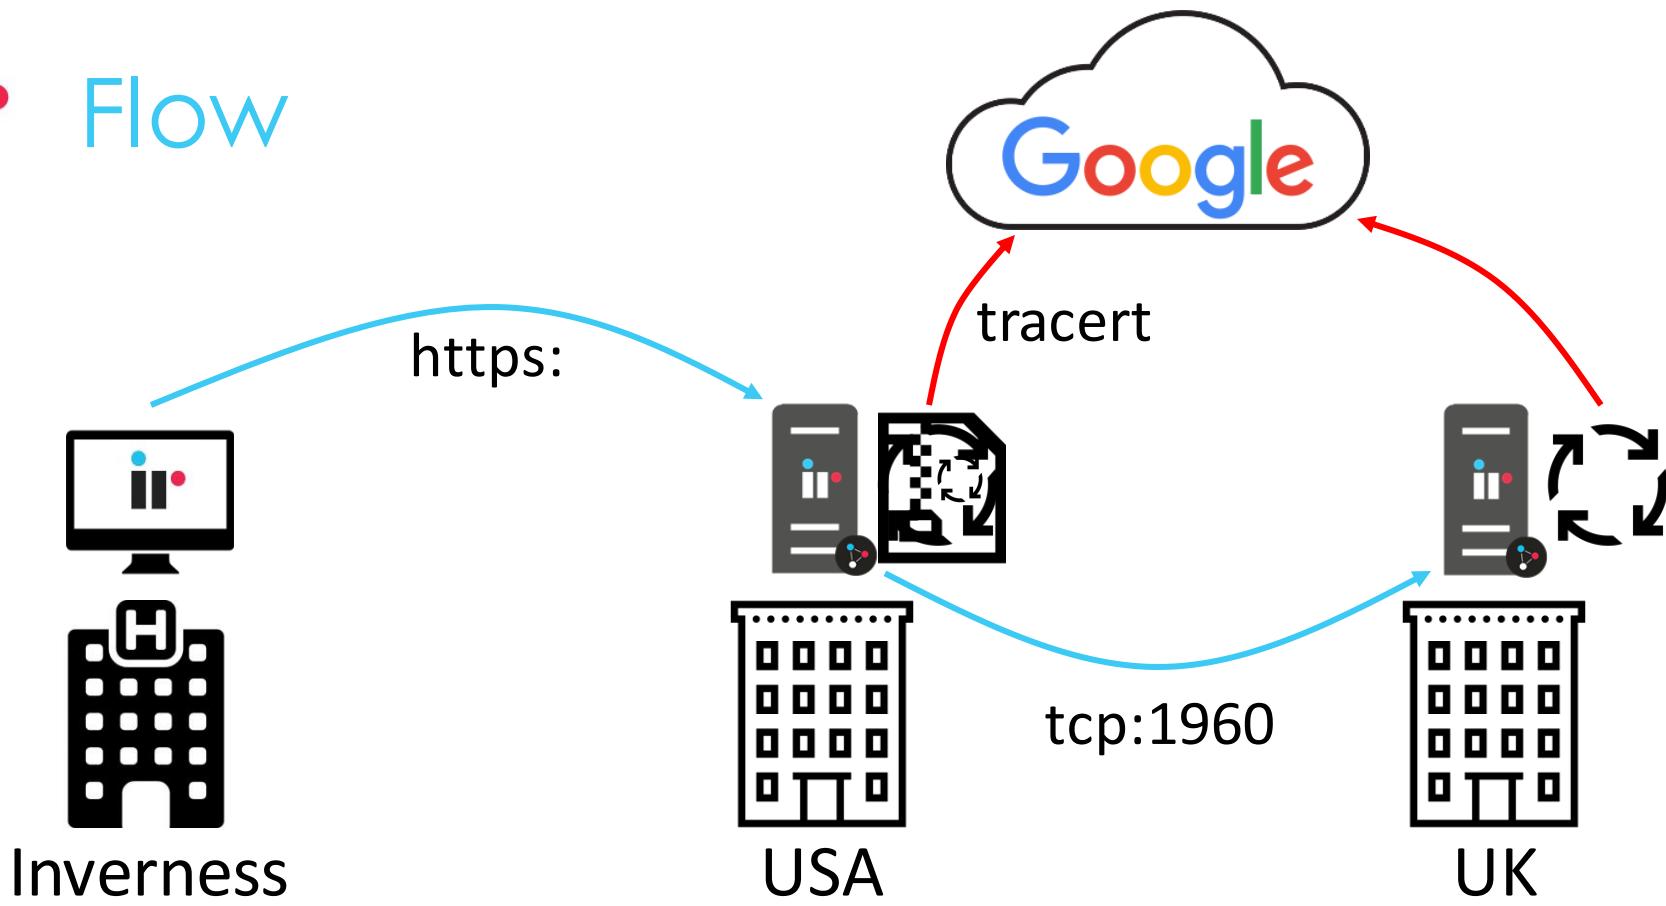

Flow

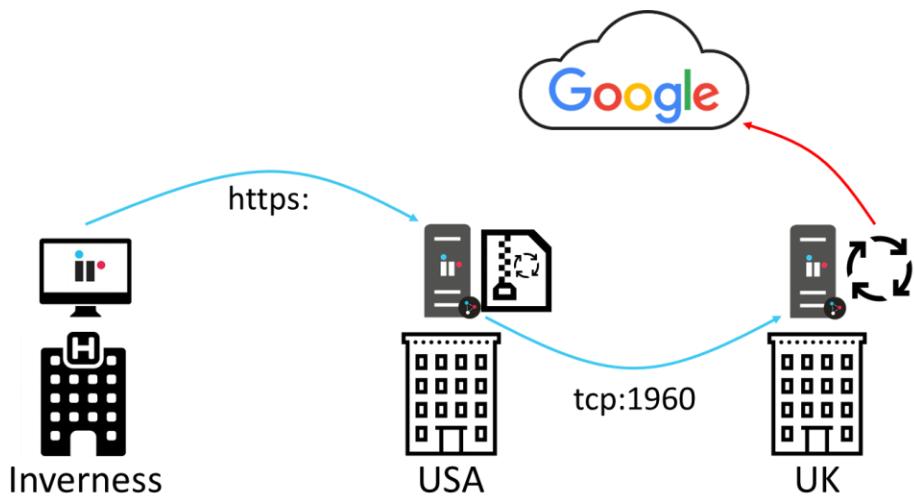

Flow

Exercise 4

London Server:
\\WIN-L7MFNG405G

Modify workflow...
name
instance.json

Node.js Paradigms

1. Template Literals
 - Simply formatting messages with data
2. Exceptions vs Errors
 - When to throw, when to return
3. Asynchronous Functions
 - Understanding code and it's order of execution, especially with Events
4. Paradigms for robust & simple code
 - Looping around asynchronous functions
 - Conditionally executing asynchronous functions

Template Literals

String concatenation:

```
'CPU ' + record.CpuNumber + ' = ' + record.BusyPercent + '%'
```

String template:

```
`CPU ${record.CpuNumber} = ${record.BusyPercent}%`
```

Enables:

- String interpolation (runtime evaluation of \${variable})
- Multi-line strings (just hit enter)

Errors

err is an instance of an Error class

- but sometimes a String if I'm lazy

Return err as a parameter in callbacks

- unable to succeed

Throw err on terminals issues only

- abort the workflow

Catch err at the root

- inform the user, contain the situation

```
return
```

```
process.nextTick(done, 'Opps!');
```

```
if (err)
```

```
return process.nextTick(done, err);
```

```
if (err) throw err;
```

```
try{ //Do stuff
```

```
}
```

```
catch(err){ //Handle err
```

```
}
```

Asynchronous Functions

```
const fs = require('fs');

console.log('Start');

fs.readFile('input.txt', (err, data) => {
    if (err) throw err;
    console.log(data);

});

console.log('Done');
```

Start
Done
data

Looping with Async Functions

```
var todoList = [...];      //list to process
var doIt = function(todoIndex, done) { //process one
    if (todoIndex >= todoList.size) return process.nextTick(done); //done
    //do async operation
    doAsyncOperation(todoList[todoIndex], (err) {
        if (err) return process.nextTick(done, err); //error
        process.nextTick(doIt, todoIndex+1); //next
    })
}
doIt(0); //start processing
```

process.nextTick

```
process.nextTick(doIt, todoIndex+1);
```

//vs

```
doIt(todoIndex+1);
```

Add it to the end of the message queue for execution when idle

vs

Push it on the call stack now and execute

Using PQL

Any Prognosis record is accessible by PQL

- Prognosis Query Language (pretty close to SQL)

```
SELECT CpuNumber, BusyPercent  
FROM NTCPU
```

Exercise 5 – Get Prognosis Data

1. Log in to Prognosis
2. Switch to Admin view
3. Select Automation
4. “Ex5 Get Prognosis Data”
5. Click “Run Now”

The screenshot shows the Prognosis Administration interface. The left sidebar has links for Home, Navigation, Security, Web Reports, Automation (which is highlighted in blue), and Configuration Item Mapping. The main area is titled 'Workflows' and lists several entries:

Name	Description
Cisco OPCTest	Open Peripheral Controller (OPC) Test
Cisco RTTest	Cisco Intelligent Contact Management (ICM) rtest
Ex1 My First Workflow	Example of writing to the automation log
Ex3 Find Google.com	Example of executing a process
Ex5 Get Prognosis Data	Example of retrieving Prognosis data via PQL
PingTest	Ping Test
PolTest	SNMP Poll Test
Skype for Business Address Book	Tests the ability of a user to access the server that hosts the Address Book Download Web service.
Skype for Business Server Services Status	Verifies the status of the Skype for Business Server services.
Skype for Business Synthetic Calls	Tests the ability of a pair of users to conduct a peer-to-peer audio/video (A/V) call.

At the bottom right of the main area, there are 'Run Now' and 'View History' buttons. The 'Run Now' button is highlighted with a yellow arrow labeled '5'.

ii• Exercise 5 Output

10/13/17 12:10:40 AM	Selected data
10/13/17 12:10:40 AM	CPU 0 = 12.12%
10/13/17 12:10:40 AM	CPU 1 = 16.37%
10/13/17 12:10:40 AM	CPU 2 = 15.23%
10/13/17 12:10:40 AM	CPU 3 = 15.40%
10/13/17 12:10:40 AM	End Workflow

Confidential

Using PQL

Any Prognosis record is accessible by PQL

- Prognosis Query Language (pretty close to SQL)

```
SELECT CpuNumber, BusyPercent  
FROM NTCPU
```

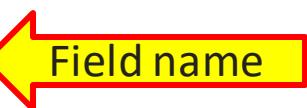

```
const PQL = require('./workflow-pql').PQL;
```

Prognosis 11.3 has a very raw PQL interface, so I created this wrapper class.

- It requires '[./workflow-logger](#)' (wraps default logger)
- Just include files in the workflow folder!

```
var pq1 = new PQL();  
  
pq1.connect( function(err, data) {});  
  
pq1.select('SELECT * FROM NTCPU', function(err, ntCPU) {});
```

ntCPU[0].CpuNumber 
 row

```
var pq1 = new PQL();
```

```
pq1.selectBatch( ['SELECT * FROM NTCPU',  
                  'SELECT * FROM NTCPU'],  
                  function(err, tables) {});
```

table

tables.NTCPU[0].CpuNumber

Field name

row

Test PQL

Command Prompt

```
C:\Prognosis\Server\Configuration>..\irpqlcli "SELECT CpuNumber, PercentBusy FROM NTCPU"
```

```
Error - Code '6' Token 'PercentBusy' Message 'Field not found 'PercentBusy''
```

```
C:\Prognosis\Server\Configuration>
```

Command Prompt

```
C:\Prognosis\Server\Configuration>..\irpqlcli "SELECT CpuNumber, BusyPercent FROM NTCPU"
```

CpuNumber	BusyPercent
0	34.08
1	42.04
2	44.54
3	37.50

```
C:\Prognosis\Server\Configuration>
```

What are the records?

1. Log in to Prognosis
2. Online Help
- 3. Prognosis Records**
4. Long Record Names

The screenshot shows the Prognosis 11.3 Help Center interface. At the top right is the Prognosis logo. Below it is a search bar with the placeholder '-Search-' and a magnifying glass icon. To the right of the search bar is a vertical navigation menu with links: Notices, Contact Us, Documentation Conventions, Documentation Feedback, and Technical Support. The main content area has a dark background with light blue circular icons. On the right side, there is a cluster of blue circles with one red circle in the center. A yellow arrow points to the 'Prognosis Records' link under the 'Using Prognosis' heading. The 'Using Prognosis' section also includes links for Operations, Security, User Interfaces, System Functions, and Prognosis Records.

- Introduction
- What's New in this Version

Deployment and Installation

- Deployment and Installation

Using Prognosis

- Operations
- Security
- User Interfaces
- System Functions
- Prognosis Records**

Product Guides

- Prognosis for Infrastructure
- Prognosis for Payments
- Prognosis for Unified Communications
- Prognosis for Contact Center
- Reporting and Analytics

Exercise 6

Get the Busiest Processes

1. Copy “Ex 5 Get Prognosis Data” to “Ex 6 Get Busiest Processes”
2. On the command line, verify a statement to get the busiest 20 processes
3. Update the Workflow
4. Run it!

Tip - Record

Record = NtProcess

- ProcessId
- ProcessName
- BusyPercent
- BusyUserPercent
- BusyPrivilegedPercent

Tip - PQL

```
SELECT TOP 10
    ProcessId, ProcessName, BusyPercent
FROM NtProcess
ORDER BY ProcessName DESC
```

Prognosis Automation

Workflows with Node.js

Wednesday, October 18, 2017

John Dunne

Agenda

Part 1

- Prognosis Automation
- My first workflow
- Core Node.js paradigms
- Executing process
- Retrieving Prognosis data

Part 2

- Solution study
- Display integration
- Parameters

Part 1 Learning Objectives

- After completing this course you should:
 - Familiar with display integration
 - Be able to pass parameters
 - Be able to read parameters

Test Your Knowledge

What license code enables Prognosis Workflows?

- a) WFL
- b) AUT
- c) WOR
- d) PWF

Test Your Knowledge

Which 3 files are required in a Workflow file?

- a) workflow.js
- b) workflow.json
- c) instance.js
- d) instance.json

Test Your Knowledge

What Node.js library enables sending status and messages to Prognosis?

- a) workflow_lib.js
- b) prognosis.js
- c) workflow.js
- d) prognosis_lib.js

Test Your Knowledge

Which command is best for executing a command and reading the entire output as a string?

- a) child_process.spawn
- b) child_process.exec
- c) child_process.run

Ping Get the Busiest Processes

1. Log into Prognosis
2. Second navigation tab
3. Prognosis Utility

The screenshot shows the Prognosis Utility Dashboard. The left sidebar lists various navigation tabs, with 'Prognosis Utility' highlighted. The main area displays a table of processes with columns for Node Name, Node Type, IP Address, Cluster, Customer, Source Node, Site, Launch, and Ping. A yellow arrow labeled '2' points to the second navigation tab in the top menu. A yellow arrow labeled '3' points to the 'Prognosis Utility' section in the left sidebar.

Node Name	Node Type	IP Address	Cluster	Customer	Source Node	Site	Launch	Ping

OK Refresh

How this works

1. Custom Dashboard
2. Modify field display
3. Add a drilldown to Automation Service

.dashboard

File name = URL

Stored in:

\WebUI\IIS\Dashboards\User

Created by:

- a) Publishing a Windows display & modify it

Columns to Initiate Workflow

```
<datafield  
    name="PrognosisNode_PingTest"  
    visible="true"  
    static="true"  
    precision="-1"  
    command="true"  
    automation="true"
```

Drilldown

```
<drilldown><query>  
SELECT 'Automation Service?' +  
'workflow=' + URIEncode('PingTest') +  
'&' + 'DefaultNode=' +  
    URIEncode(COALESCE(SourceNodeWhoRegisteredThisNode, '')) +  
'&' + 'ip=' + URIEncode(TcpIpAddress) +  
'&' + 'node=' + URIEncode(COALESCE(PrognosisNodeName, ''))  
AS PrognosisNode_PingTest,  
FROM User_Custom.UtilityDashboard_PNodesView  
^[_where_Interval]^  
^[_Latest]^  
</query></drilldown>
```

Challenge 1

1. Create a custom display (maybe clone one)
 - Ensure it has a data table
2. Publish it to web
3. Add to the navigation pane (for easy access)
4. Modify the .dashboard to include Automation

Installing additional node_modules

Node_modules are stored in:

<Prognosis>\Nodejs**node_modules**

From NodeJs directory use npm install

internet access required

<Prognosis>\Nodejs>npm install <package>

Invoking from a Threshold

Server\Configuration\Automation\workflow\runw.bat “**WorkflowName**”
Workflow needs to be on the server (already pushed to server)

Threshold Condition

Where Clause | Timing | Message Defaults | Message Destinations | Nodes to Monitor | Notes | Associate Names | Subsystem Configuration

Command

Execute command for: On Event

Details

Type: Shell on the server (Shell)

Command: cd Automation/Workflows && runw.bat "Cisco Video Quality Metrics" > ..\..\nrcisvideoautomation.log

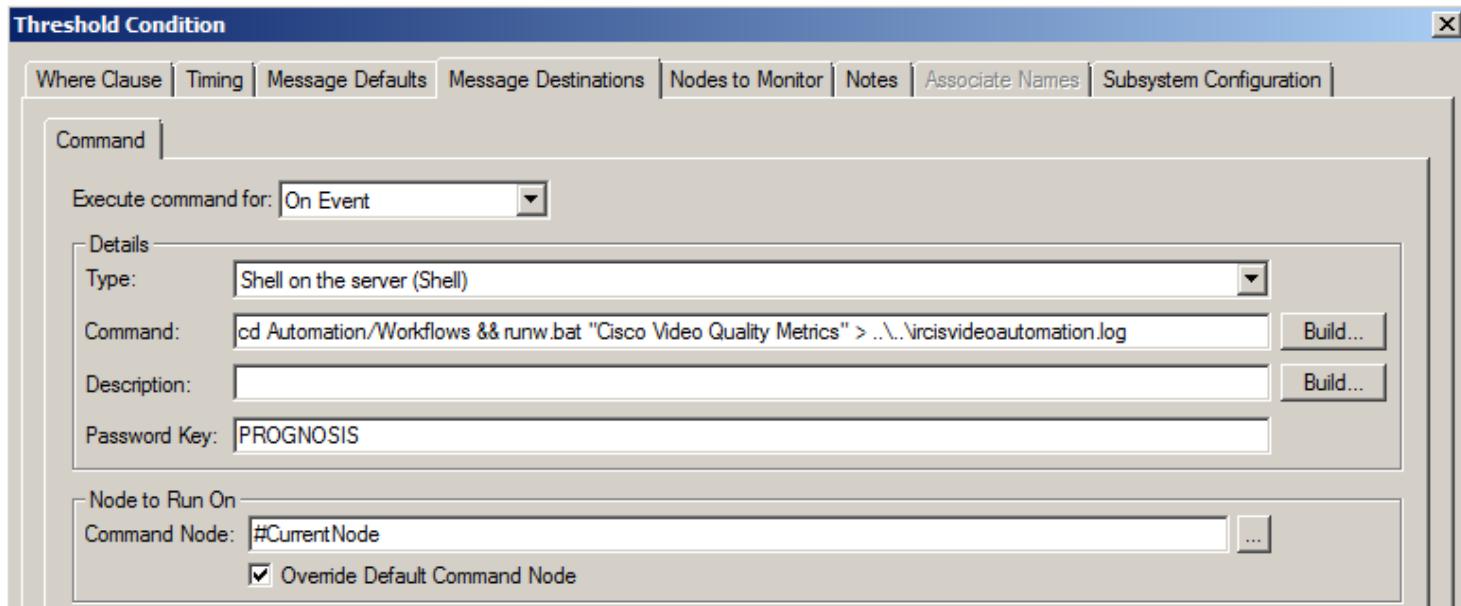

Description:

Password Key: PROGNOSIS

Node to Run On

Command Node: #CurrentNode

Override Default Command Node

Credentials from PQL

Retrieve credentials from the Passwords Config

```
pql.getCredentials(key);
```

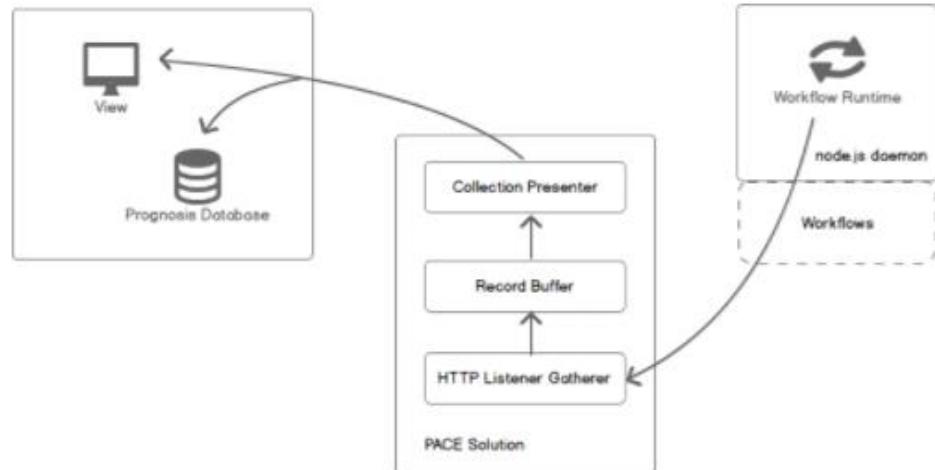

Only entries with AUTOMATION: prefix are accessible

Automation Collector

- lrautomation.exe (pace collector)
- Needs SDN Profile in AUTOMATION conf:

```
DEFINE SDN_PROFILE(Automation, "Url=http://*:1339/AutomationFeed", "site=Automation")
```

Troubleshooting

- License Key is present?
- irAutomation is running?
- Check the log file at
C:\Prognosis\WebUI\IIS\Logs\PrognosisAutomationLog.txt
- User has permission to run automation?
- Run from command line and use console logging.

Power Tips

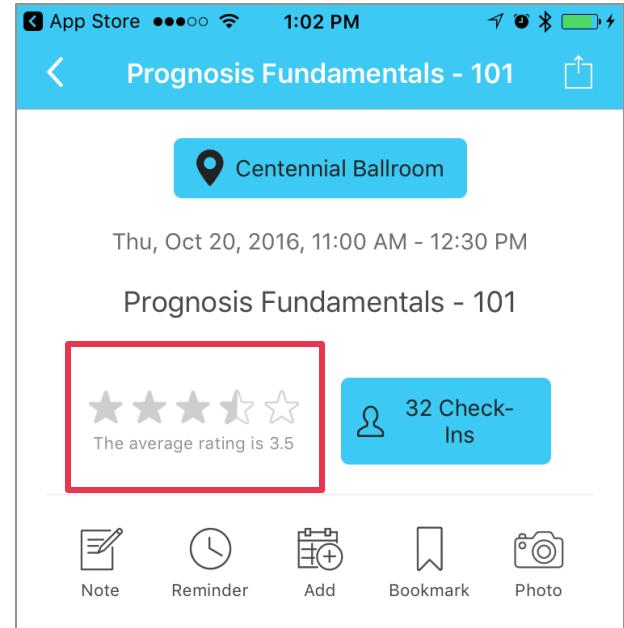

1. Asynchronous I/O, Trace & Crashes
 - assert wrapper to allow trace to be output before crash
2. Run from the console to debug
 - Encapsulated Prognosis Logger to support Console
3. 5 crashes rule
 - Many things could cause irAutomation.exe to crash (esp. logging)
 - Prognosis governor prevents restarting after 5
 - Restart Prognosis for a clean test run
4. Node.js is late bound & error code only runs when errors occur... so make errors to test
5. If the Node.js library is not shipped with Prognosis... you ship it!
6. Test PQL statements first
 - irPQLcli.exe (which must be invoked from the Configuration folder)
7. 2048 byte URL limit
 - Limits on parameters to Workflow (HTTP GET only)
8. Browser console.log
 - Enables F12 debugging

Next Steps

- **Please Rate the Class**
- **Take the Knowledge Reinforcement Test**
- **Log On to Online.Prognosis.com** to download slides & ask questions
- *Every class rating gets you a chance to win prizes!*
