

# Area of a Triangle

Lesson

## 6.2 Finding the Area of a Triangle

### Lesson Objective

- Find the area of a triangle given its base and its height.

### Vocabulary

area	acute triangle
right triangle	obtuse triangle

Area Rectangle =  $l \times w$

Learn

The **area** of a triangle is half the area of a rectangle with the same 'base' and 'height' or half its base times height.

The area of triangle  $ABC$  is half the area of rectangle  $ABCD$ .

$ABCD$  is a rectangle.

In triangle  $ABC$ ,  $\overline{AB}$  is perpendicular to  $\overline{BC}$ .

$\overline{BC}$  is the base and  $\overline{AB}$  is the height.

The length of the base  $\overline{BC} = 4$  cm and the height  $\overline{AB} = 8$  cm.

$$\begin{aligned}
 \text{Area of triangle } ABC &= \frac{1}{2} \times \text{area of rectangle } ABCD \\
 &= \frac{1}{2} \times 4 \times 8 \\
 &= \frac{1}{2} \times BC \times AB \\
 &= \frac{1}{2} \times \text{base} \times \text{height}
 \end{aligned}$$

The length 4 cm and the width 8 cm of rectangle  $ABCD$  are exactly the base and the height of triangle  $ABC$ .

$$\begin{aligned}
 \text{So, } \frac{1}{2} \times 4 \times 8 &= \frac{1}{2} \times BC \times AB \\
 &= \frac{1}{2} \times \text{base} \times \text{height}
 \end{aligned}$$

Triangle  
 $\frac{1}{2}b \cdot h$   
 $2 \cdot 8$   
 $16 \text{ cm}^2$

## Hands-On Activity

### WORKING TOGETHER

Triangles can be identified by type:

**Right triangle** — A triangle with exactly one right angle.

**Acute triangle** — A triangle with all angles measuring less than  $90^\circ$ .

**Obtuse triangle** — A triangle with one angle measuring greater than  $90^\circ$ .

On page 256, you saw that a right triangle  $ABC$  has an area that is half the area of the corresponding rectangle or  $\frac{1}{2} \times \text{base} \times \text{height}$ . You shall now check if the same is true of the area of the two other types of triangles.

**1** In triangle  $DEF$ ,  $\overline{EF}$  is the base and  $DG$  is the height.

**STEP 1** Use a copy of Figure 1. Cut out triangles  $DLM$  and  $DMN$ . Rearrange the two triangles as shown in Figure 2.

Figure 1

Figure 2

**STEP 2** Complete.

Area of triangle  $DEF$  = area of rectangle  

=  $\frac{1}{2} \times$  area of rectangle  

=  $\frac{1}{2} \times EF \times IF$

=  $\frac{1}{2} \times EF \times$   

=  $\frac{1}{2} \times \text{base} \times$

**2** In triangle  $PQR$ ,  $\overline{QR}$  is the base and  $PS$  is the height.

**STEP 1** Use a copy of Figure 3. Cut out triangles  $PVX$  and  $VRX$ . Then rearrange the two triangles as shown in Figure 4.

Figure 3

Figure 4

**STEP 2** Complete.

Area of triangle  $PQR$  = area of rectangle

=  $\frac{1}{2} \times$  area of rectangle

=  $\frac{1}{2} \times QR \times TR$

=  $\frac{1}{2} \times QR \times$

=  $\frac{1}{2} \times$  base  $\times$

What can you say of the area of triangle  $DEF$ ?  
How about triangle  $PQR$ ?

## Hands-On Activity

WORK IN PAIRS

### Try this.

In triangle  $ABC$ ,  $\angle BAC$  is a right angle and  $AD$  is perpendicular to  $BC$ .

STEP  
1

Measure the height  $AD$  in centimeters to the nearest tenth.

STEP  
2

Using each side  $AB$ ,  $AC$  and  $BC$  as the base, find the area of the triangle. Are all three answers the same?

## Practice 2 Finding the Area of a Triangle

Find the area of each shaded triangle. Show each step and give your answer using the correct units.

Example

$$\begin{aligned} \text{Area of triangle} &= \frac{1}{2} \times 23 \times 15 \\ &= 172\frac{1}{2} \text{ cm}^2 \end{aligned}$$

199

1.

$$\begin{aligned} A &= \frac{1}{2} b \cdot h \\ A &= 13 \cdot 17 \\ A &= 221 \text{ m}^2 \end{aligned}$$

$$\begin{array}{r} 17 \\ \times 13 \\ \hline 51 \\ + 170 \\ \hline 221 \end{array}$$

2.

$$\begin{aligned} A &= \frac{1}{2} b \cdot h \\ A &= \frac{1}{2} \cdot 72 \cdot 54 \\ A &= 36 \cdot 54 \\ A &= 1944 \text{ cm}^2 \end{aligned}$$

$$\begin{array}{r} 54 \\ \times 36 \\ \hline 324 \\ + 1620 \\ \hline 1944 \end{array}$$

3.

$$\begin{aligned} A &= \frac{1}{2} b \cdot h \\ A &= 19 \cdot 45 \\ A &= 855 \text{ ft}^2 \end{aligned}$$

$$\begin{array}{r} 45 \\ \times 19 \\ \hline 405 \\ + 450 \\ \hline 855 \end{array}$$

$$\begin{array}{r} 19 \\ \times 45 \\ \hline 95 \\ + 380 \\ \hline 855 \end{array}$$

$$\begin{array}{r} 19 \\ \times 45 \\ \hline 95 \\ + 380 \\ \hline 855 \end{array}$$

**Find the area of each shaded triangle.**

*Example*

$$\text{Area} = \frac{1}{2} \times 8 \times 6$$

$$= 24 \text{ cm}^2$$
