In this original and timely book, Ramin Jahanbegloo, one of the world's leading political philosophers, engages with the most pressing question facing all of us today: is it not our duty, as free and autonomous citizens of democracy, to question and speak out against all authority? Should we not take back the power from selfinterested political actors in the true spirit of Gandhi, for whom Swaraj was more than mere freedom from oppression? The core idea of Gandhi's philosophy of resistance, Jahanbegloo argues, is his unshakeable conviction that it is no longer possible to organize political action without disobedience. Democracy, to be worthy of obedience, he says, must be structured so that every citizen can question...

Behind India's recent economic growth lies a story of societal conflict that is scarcely talked about. Across its villages and production sites, state institutions and civil society organisations, the better and less well-off sections of society are engaged in antagonistic relations that determine the material conditions of one quarter of the world's 'poor'. Increasingly mobile and often with several jobs in multiple locations, India's 'classes of labour' are highly segmented but far from passive in the face of ongoing exploitation and domination. Drawing on long-term field work in the South Indian state of Karnataka this book analyses class relations between and among the dominant and...

Learning a foreign language is much easier when it is approached with a knowledge of language structure ('grammar'), but many students find grammar mystifying. This text explains points of grammar straightforwardly using examples from several widelystudied languages, including English, so that students can see how the same principles work across different languages, and how the structures of different languages correspond both formally and functionally. The use of concrete examples makes grammar less abstract and easier to grasp, allowing students to relate what they are learning to knowledge that they already possess unconsciously; it simultaneously brings that knowledge up to a conscious...

Within the Langland's programme, endoscopy is a fundamental process for relating automorphic representations of one group with those of another. In this book. Arthur establishes endoscopic an classification of automorphic representations of orthogonal and simplistic groups G. The representations are shown to occur in families (known as global Lpackets and A-packets), which are parametrised by certain self-dual automorphic representations of an associated general linear group GL(N). The central result is a simple and explicit formula for the multiplicity in the automorphic discrete spectrum of G for any representation in a family. The results of the volume have...
