

ARTIFICIAL
INTELLIGENCE

Dr. Helen Crompton

- Professor of Instructional Technology at Old Dominion University Virginia USA.
- Director of the Virtual Reality Lab
- Director of the Technology Enhanced Learning Lab (TELL)
- Consultant for the United Nations and ISTE

Artificial Intelligence

Artificial Intelligence are technologies that display intelligence as it perceives its environment and takes actions to achieve a goal

(Legg and Hutter, 2007)

Artificial Intelligence Capabilities

1. Learning
2. Reasoning
3. Perception
4. Problem Solving
5. Language intelligence

Exponentially better

In 2016, a computer beat the best Go player in the world, 10 years earlier than expected

AI of the Future

Autonomous
vehicles

Health

- Health innovations: The Tricorder X is on the horizon.
- Companies are building a medical device (called the "Tricorder" from Star Trek) that works with your phone, which takes your retina scan, your blood sample, and you can breath into it.

AI Poop Analysis

AI Today

IBM Watson

- Assists with medical diagnoses
- Provides accurate legal advice
- Beats Jeopardy contestants

IBM **Watson**™

- Google photos
- Facebook
- Deep Fake

Facial Recognition

Telephone Systems

"Hello, how can I help you?"

AI and Your Learning

A stylized, abstract representation of the Google logo. It features a large, light gray 'G' shape composed of several segments. The segments are colored in a pattern of blue, green, and yellow, with some segments having a dotted texture. A small, solid yellow triangle is positioned near the top right of the 'G'. A dark gray vertical bar is on the left side of the image.

Google

- Search
